FORWARD-LOOKING STATEMENTS

This quarterly report on Form 10-QSB contains forward-looking statements that involve risks and uncertainties. Forward-looking statements in this quarterly report include, among others, statements regarding our capital needs, business plans and expectations. Such forward-looking statements involve risks and uncertainties regarding the market price of copper, availability of funds, government regulations, common share prices, operating costs, capital costs, outcomes of ore reserve development and other factors. Forward-looking statements are made, without limitation, in relation to operating plans, property exploration and development, availability of funds, environmental reclamation, operating costs and permit acquisition. Any statements contained herein that are not statements of historical facts may be deemed to be forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as *may*, *will*, *should*, *expect*, *plan*, *intend*, *anticipate*, *believe*, *estimate*, *predict*, the negative of such terms or other comparable terminology. Actual events or results may differ materially. In evaluating these statements, you should consider various factors, including the risks outlined in our annual report on Form 10-KSB for the year ended December 31, 2006, this quarterly report on Form 10-QSB, and, from time to time, in other reports that we file with the Securities and Exchange Commission (the "SEC"). These factors may cause our actual results to differ materially from any forward-looking statement. Given these uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements.

PART I FINANCIAL INFORMATION**Item 1. Financial Statements**

**NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)**

1. FINANCIAL STATEMENTS

The accompanying financial information of Nord Resources Corporation (the Company) is prepared in accordance with the rules prescribed for filing condensed interim financial statements and, accordingly, does not include all disclosures that may be necessary for complete financial statements prepared in accordance with U.S. generally accepted accounting principles. The disclosures presented are sufficient, in management's opinion, to make the interim information presented not misleading. All adjustments, consisting of normal recurring adjustments which are necessary so as to make the interim information not misleading, have been made. Results of operations for the three and six months ended June 30, 2007 are not necessarily indicative of results of operations that may be expected for the year ending December 31, 2007. The Company recommends that this financial information be read in conjunction with the complete consolidated financial statements included in the Company's Annual Report on Form 10-KSB for the year ended December 31, 2006 previously filed with the Securities and Exchange Commission.

2. STOCK-BASED COMPENSATION

Stock Options

Beginning January 1, 2006, the Company adopted the fair value recognition provisions of Statement of Financial Accounting Standards (SFAS) No. 123(R), Share-Based Payment, using the modified prospective application method. The Company has granted incentive and non-qualified stock options to its directors under terms of its 2006 Stock Incentive Plan. The Company has also granted non-qualified, non-plan stock options, which have been authorized by the Company's board of directors. Stock options are generally granted at an exercise price equal to or greater than the quoted market price on the date of grant.

There are 5,965,001 stock options outstanding at June 30, 2007, of which 3,715,001 are non-qualified, non-plan stock options and 2,250,000 have been issued pursuant to the Company's 2006 Stock Incentive Plan. The outstanding options expire at various dates from 2008 to 2017.

The Company granted 1,650,000 stock options to employees and directors during the three months ended June 30, 2007. The Company did not grant any stock options during the three months ended March 31, 2007, but it recognized \$37,740 in compensation expense during that period related to employee stock options that vest over time. Accordingly, the Company recognized \$334,851 and \$372,594 in compensation expense related to employee and director stock options for the three and six month periods ended June 30, 2007, respectively. During the three months ended June 30, 2006, the Company granted 1,300,000 stock options to employees and directors and recognized \$121,966 in compensation expense. During the six months ended June 30, 2006 the Company granted 1,975,000 stock options to employees and directors and recognized \$351,918 compensation expense.

NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)

As summarized in the following table, no stock options were exercised during the three and six months ended June 30, 2007, and a total of 283,333 and 449,999 stock options either expired or were cancelled in accordance with their terms during the three and six month period ended June 30, 2007, respectively:

	Number of Shares	Weighted Average Exercise Price
Three Months Ended June 30, 2007		
Options outstanding at March 31, 2007	2,758,332	\$.79
Granted	3,490,002	.72
Exercised	-	-
Cancelled/Expired	(283,333)	2.21
Options outstanding at June 30, 2007	5,965,001	\$.69
Six Months Ended June 30, 2007		
Options outstanding at December 31, 2006	2,924,998	\$.79
Granted	3,490,002	.72
Exercised	-	-
Cancelled/Expired	(449,999)	1.61
Options outstanding at June 30, 2007	5,965,001	\$.69

The following table summarizes certain additional information about the Company's total and exercisable stock options outstanding as of June 30, 2007:

	Number Outstanding	Weighted Average Remaining Contractual Life in Years	Weighted Average Exercise Price	Intrinsic Value
Total stock options	5,965,001	5.0	\$.69	\$ 86,750
Exercisable stock options	4,665,001	3.7	.67	134,750

The market price of the Company's common stock on June 30, 2007 was \$0.70 per share. The weighted average exercise price of the total and exercisable stock options was \$0.69 and \$0.67, respectively. Accordingly, the intrinsic value of such total stock options and exercisable stock options was \$86,750 and \$134,750, respectively.

The following table summarizes the unvested stock options outstanding as of June 30, 2007:

NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)

	Number of Options	Weighted Average Grant Date Fair Value
Three Months Ended June 30, 2007		
Non-vested options outstanding at March 31, 2007	200,000	\$.78
Granted	3,490,002	.39
Vested	(2,390,002)	.33
Cancelled/Forfeited	-	-
Non-vested Options outstanding at June 30, 2007	1,300,000	\$.55
Six Months Ended June 30, 2007		
Non-vested options outstanding at December 31, 2006	533,333	\$.78
Granted	3,490,002	.39
Vested	(2,656,668)	.38
Cancelled/Forfeited	(66,667)	.78
Non-vested Options outstanding at June 30, 2007	1,300,000	\$.55

The total grant date fair value of options vested during the three and six months ended June 30, 2007 was \$794,099 and \$1,002,824, respectively. The Company recognizes stock option compensation expense on stock options with a graded vesting schedule on a straight line basis over the requisite service period for each separately vesting portion of the award as if the award was, in substance, multiple awards. As of June 30, 2007, 1,300,000 stock options remained unvested, resulting in \$538,925 in compensation expense to be recognized over 1.9 years.

The Company uses the Black-Scholes option pricing model to estimate the fair value of stock options granted. When determining the fair value of stock options, the expected forfeiture rate is based on historical employee rates. The expected term of the options granted is estimated using the formula set forth in Securities and Exchange Commission Staff Accounting Bulletin No. 107. The risk-free interest rate is based upon the U.S. Treasury yield curve in effect at the date of grant and, in connection with the adoption of SFAS 123(R), Share-Based Payment, the expected volatility is based on the weighted historical volatility of the Company's common stock and that of its peer group.

The Company granted 3,490,002 and 2,074,999 (including 99,999 stock options issued pursuant to the Coyote Springs property option agreement) stock options during the six month periods ended June 30, 2007 and 2006, respectively. The fair values for the stock options granted during the six month periods ended June 30, 2007 and 2006 were estimated at the respective dates of grant using the Black-Scholes option pricing model with the following assumptions:

NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)

	Six Months Ended June 30, 2007	Six Months Ended June 30, 2006
Risk-free interest rate	4.9% to 5.0%	4.5% to 4.9%
Expected life	2.0 to 5.5 years	1.5 to 5.5 years
Expected volatility	78% to 91%	60% to 90%
Expected dividend yield	0%	0%

Deferred Stock Units

During the three and six months ended June 30, 2007 and 2006, certain equity-based fees have been paid to the Company's non-executive directors in the form of awards issued pursuant to the Company's 2006 Stock Incentive Plan. The non-executive directors have limited rights, exercisable within applicable time limits, to elect to have any percentage of such awards, and any percentage of cash fees, payable in deferred stock units (DSUs). Each of the Company's non-executive directors exercised such rights in respect of the equity-based fees payable to them for the three and six months ended June 30, 2007 and 2006. Accordingly, during the three and six months ended June 30, 2007, the Company credited a total of 36,706 and 87,750 DSUs, respectively, to its non-executive directors, and recognized expenses of \$25,694 and \$61,680, respectively, related to the issuance of these DSUs. During the three and six months ended June 30, 2006 the Company credited a total of 67,969 deferred stock units to its non-executive directors, and recognized expense of \$54,373 related to the issuance of these DSUs. The DSUs were granted under the 2006 Stock Incentive Plan. As of June 30, 2007, there were 143,964 DSUs outstanding.

Common Stock

During the three and six months ended June 30, 2007, the Company issued 40,000 and 100,000 shares of fully paid and non-assessable common stock to employees of the Company with a weighted average grant date fair value of \$0.75 and \$0.80 per share, respectively. Stock-based compensation related to these awards of \$30,000 and \$80,000 is included in operating expenses for the three and six months ended June 30, 2007, respectively. During the three and six months ended June 30, 2006, the Company issued 310,000 and 546,471 shares of fully paid and non-assessable common stock to employees of the Company with a weighted average grant date fair value of \$1.00 and \$0.67 per share, respectively. Total stock based compensation of \$405,817 and \$664,016 was included in operating expenses for the three and six months ended June 30, 2006, respectively.

3. STOCKHOLDERS EQUITY

Special Warrants

The Company completed an unregistered private placement offering of 30,666,700 special warrants on June 5, 2007. The special warrants were offered and sold at a price of \$0.75 per special warrant, for aggregate gross proceeds of \$23,000,025. Each special warrant is convertible into one fully-paid and non-assessable share of common stock and one-half of one common share purchase warrant for no

**NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)**

additional consideration. The special warrants are governed by the terms of a special warrant indenture dated June 5, 2007 among the Company, Computershare Trust Company of Canada, as the special warrant trustee, and Blackmont Capital Inc. The holder of a special warrant will not be deemed a holder of the underlying common stock or warrants until the special warrant is converted.

Under the terms of the special warrant indenture, the Company is required to:

- (a) file and obtain a receipt for a Canadian non-offering prospectus to qualify the issuance in Canada of (i) the shares of common stock and the warrants issuable upon conversion of the special warrants, and (ii) the shares of common stock issuable upon exercise of the warrants, and
- (b) file a registration statement under the *Securities Act of 1933*, as amended, in order to register the resale of (i) the shares issuable upon conversion of the special warrants, and (ii) the shares issuable upon exercise of the warrants.

If the Company fails to obtain a receipt for a final Canadian prospectus and effectiveness of the U.S. registration statement by December 3, 2007, being the 180th day following the closing date of the special warrant offering, the Company will be liable for a liquidity incentive payment to the investors equal to 1% per month (pro-rated), subject to a maximum liquidity incentive payment equal to an aggregate of 12% of the gross proceeds of the offering.

The special warrants will expire on the earlier of:

- (a) the third business day following the date on which the Company obtains a receipt for the final Canadian prospectus;
- (b) the date that is four months and one day following the date on which the Company becomes a reporting issuer under the securities legislation of any province or territory of Canada; and
- (c) June 5, 2009, being the date which is two years following the date of the special warrant indenture.

The holder of a special warrant that has not expired in accordance with its terms may elect to convert its special warrant into the underlying shares of common stock and warrants at any time after December 3, 2007. Each special warrant that has not been converted by the holder will be converted by the special warrant trustee immediately prior to the time of its expiry without the need for any action on the part of the holder.

A total of 15,333,350 warrants are issuable upon conversion of the special warrants. Each warrant, when issued, will entitle the holder to purchase one share of common stock until June 5, 2012 at a price of \$1.10 per share. The warrants are governed by the terms of a warrant indenture dated June 5, 2007 between the Company and Computershare Trust Company of Canada, as the warrant agent.

**NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)**

In connection with the special warrants offering the Company entered into an agency agreement whereby the Company paid a cash commission of 6% of the gross proceeds realized from the sale of the special warrants to the agents and issued 1,840,002 stock options to the agents entitling them to acquire one share of common stock of the Company at anytime within the subsequent 24 month period at an exercise price of \$0.75. For financial reporting purposes, these stock options were valued at \$513,436.

Increase in Authorized Shares

On May 8, 2007 the Company amended its Certificate of Incorporation to increase its authorized capital from 50,000,000 to 100,000,000 shares of common stock with a par value of \$0.01 per share.

4. PROJECT FINANCING

The Company entered into a Credit Agreement dated June 28, 2007 (the Credit Agreement) with Nedbank Limited (Nedbank), as administrative agent and lead arranger.

The Credit Agreement provides for a \$25 million secured term loan credit facility that will be used by the Company to assist in financing the construction, start-up and operation of the Johnson Camp Mine. The Credit Agreement contemplates a series of term loans to be funded from time to time by a syndicate of lenders in response to draw-down requests by the Company, with the aggregate amount of all term loans being \$25 million. The term loans will be available until the earlier of: (i) the date of termination of the lender commitments; (ii) the first principal repayment date; and (iii) June 30, 2008. The loans bear interest, payable in arrears, at an annual rate equal to the London Interbank Offered Rate (LIBOR) for the interest period in effect plus a margin of 3.0% (3.5% during the initial reactivation period). In the event that the Company defaults under the Credit Agreement, an additional 3.0% interest will be payable in addition to such annual rate and all interest will be payable on demand. Additionally, the Company has agreed to pay a \$500,000 loan fee on the lenders \$25 million term loan commitment, of which \$50,000 has been credited from a previously expired commitment.

The Credit Agreement is collateralized by substantially all of the Company s assets, restricts the company from incurring certain additional debt, limits the Company s ability to pay dividends and will be repaid beginning one year after the first draw down and ending four years after the date of the first draw down, subject to certain prepayment obligations set forth in the Credit Agreement.

The obligations of each lender to fund the term loans under the Credit Agreement are subject to certain conditions as set forth in the Credit Agreement, including among other items, the implementation of a hedging program with respect to a specified percentage of copper output from the Johnson Camp Mine. The Company commenced implementation of the hedging program in August 2007.

5. BASIC AND DILUTED EARNINGS PER SHARE

Basic earnings (loss) per common share is computed by dividing net earnings (loss) by the weighted average number of common shares outstanding during the period. Diluted earnings (loss) per share is calculated based on the weighted average number of common shares outstanding adjusted for the dilutive effect, if any, of stock options, warrants and other dilutive securities outstanding. Outstanding special warrants, options, warrants and other dilutive securities to purchase 57,485,445 and 9,896,863 shares of common stock for the three and six month periods ended June 30, 2007 and 2006, respectively, are not included in the computation of diluted loss per share as the effect of the assumed exercise of these options and warrants would be anti-dilutive.

6. PLATINUM DIVERSIFIED SETTLEMENT

The Company entered into a settlement agreement dated March 7, 2007 with Platinum Diversified Mining, Inc. (“Platinum”) and Platinum’s direct and indirect subsidiaries, Platinum Diversified Mining USA, Inc. (“PDM USA”) and PDM Merger Corp. (together with Platinum and PDM USA, the “PDM Parties”), in connection with the agreement and plan of merger dated October 23, 2006 (the “Merger Agreement”) among the parties. Under the settlement agreement, the PDM Parties have agreed to pay the Company an amount up to \$3.6 million in full and final settlement of all claims and disputes between the parties, as follows:

- (a) The PDM Parties agreed forthwith to pay the sum of \$1.1 million to the Company (the “Initial Payment”), to be paid by way of the release to the Company of the \$1 million previously deposited by Platinum with American Stock Transfer & Trust Company (“AST”), as escrow agent, pursuant to the Merger Agreement (including interest, but net of AST’s expenses), with any shortfall to be paid from Platinum’s working capital; and
- (b) Platinum has agreed to pay the sum of \$50,000 to the Company each calendar month, beginning on April 1, 2007 (the “Monthly Payments”) until the earlier of (i) the completion of an acquisition by Platinum that meets certain prescribed criteria (a “Qualifying Acquisition”), or (i) the actual liquidation of Platinum if it has not entered into a letter of intent or agreement in principle to effect a Qualifying Acquisition, or if it has not completed a Qualifying Acquisition, by certain prescribed dates.

The Company received the Initial Payment of \$1.1 million and the Monthly Payments due since the execution of the settlement agreement. If Platinum completes a Qualifying Acquisition, Platinum will be required to pay the balance owing on the settlement sum of \$3.6 million (the “Balance of Settlement Funds”), net of the Initial Payment and any Monthly Payments actually received by the Company. The Balance of Settlement Funds will be payable to the Company out of certain funds being held in trust (the “Trust Funds”) as a condition of Platinum’s listing as a special purpose acquisition corporation on the AIM market (“AIM”) of the London Stock Exchange. If the Trust Funds are insufficient to pay the Balance of Settlement Funds, Platinum will be required to pay to the Company the greater of: (i) the funds available and (ii) \$1 million. Thereafter, Platinum will continue to be obligated to make the Monthly Payments, plus interest, until the Balance of Settlement Funds has been paid.

According to Platinum’s public disclosure record, it was admitted to trading on AIM on March 13, 2006 (the “Admission Date”), and it must be dissolved and the Trust Funds returned to its security holders, if it has not: (a) effected a Qualifying Acquisition or signed a letter of intent, agreement in principle or definitive agreement to effect a Qualifying Acquisition within the 12 months following the Admission Date; or (b) (having signed a letter of intent or an agreement in principle within 12 months following the Admission Date) effected an acquisition within 18 months following the Admission Date. In the event that Platinum is dissolved for having failed to meet these conditions, it will not be required to pay the Balance of Settlement Funds to the Company and shall be relieved of any further obligations to make payments under the settlement agreement. Platinum issued a press release on March 14, 2007 announcing that it had entered into two separate letters of intent on mining projects which, taken in aggregate, it believes would constitute a Qualifying Acquisition eligible for submission to Platinum’s shareholders for approval.

On June 5, 2007, Platinum provided an update in which it confirmed that the two letters of intent related to:

- (a) the acquisition all of the assets of Moen Builders, M & W Milling and Roy and Marlene Moen in the Virginia City District of Madison County, Montana (the "Virginia City Acquisition:"); and
- (b) the acquisition of all interests held by a private Santiago family for two copper properties in northern Chile (the "Chilean Acquisition").

However, Platinum disclosed that the results of the due diligence it had undertaken in connection with the Virginia City Acquisition had indicated lower resource estimates than previously expected, and, as a result, Platinum had terminated the letter of intent in respect of the Moen Acquisition. In respect of the Chilean Acquisition, Platinum announced that a third party purchase contract to which the property was subject had been exercised, and that accordingly, Platinum is not likely to gain full control of the property. It indicated that it instead will acquire the underlying passive ownership interests, amounting to a net smelter royalty of two per cent.

On June 5, 2007, Platinum also disclosed that it had entered into a non-binding term sheet with Golden Eagle International Inc. ("Golden Eagle"), a company quoted on the OTC Bulletin Board, in respect of the following transactions:

- (a) the acquisition of Golden Eagle's Buen Futuro gold and copper project in eastern Bolivia consisting of 2,500 acres located 186 miles north of Santa Cruz, Bolivia;
- (b) a joint venture on Golden Eagle's Precambrian Properties ("Joint Venture"); and
- (c) an option for the acquisition by the Company of Golden Eagle's Gold Bar Mill located in Eureka, Nevada.

On June 28, 2007, Platinum announced that it had terminated its earlier-announced talks to buy Golden Eagle's Buen Futuro gold and copper project in eastern Bolivia, but that it had signed a letter of intent to acquire International Consolidated Minerals Ltd., which holds the Pachapaqui Mine, a silver, lead, zinc and copper asset in Peru.

Platinum's ability to complete a Qualifying Acquisition remains unclear to the Company's management at this time.

7. RECENTLY ISSUED ACCOUNTING STANDARDS

In February 2006, the Financial Accounting Standards Board (FASB) issued SFAS No. 155, Accounting for Certain Hybrid Financial Instruments An Amendment of FASB Statements No. 133 and 140 . SFAS No. 155 resolves issues addressed in Statement 133 Implementation Issue No. D1, Application of Statement 133 to Beneficial Interests in Securitized Financial Assets . This Statement permits fair value re-measurement for any hybrid financial instrument that contains an embedded derivative that otherwise would require bifurcation. It clarifies which interest-only strips and principal-only strips are not subject to the requirements of Statement 133. It also establishes a requirement to evaluate interests in securitized financial assets, clarifies that concentrations of credit risk in the form of subordination are not embedded derivatives, and amends Statement 140 to eliminate the prohibition on a qualifying special-purpose entity holding a derivative financial instrument that pertains to a beneficial interest other than another derivative financial instrument. SFAS No. 155 is effective for all financial instruments acquired or issued after the beginning of an entity s first fiscal year that begins after September 15, 2006. Early adoption is permitted as of the beginning of an entity s fiscal year, provided the entity has not yet issued financial statements, including financial statements for any interim period, for that fiscal year. The Company adopted this standard beginning January 1, 2007; it has had no material impact on the Company s consolidated financial statements.

In June 2006, the FASB issued Interpretation No. 48, Accounting for Uncertainty in Income Taxes An Interpretation of FASB Statement No. 109 . This interpretation clarifies the accounting for uncertainty in income tax recognized in an enterprise s financial statements in accordance with FASB Statement No. 109, Accounting for Income Taxes . This interpretation prescribes a recognition threshold and measurement attribute for financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. It also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. This interpretation is effective for fiscal years beginning after December 15, 2006. The Company adopted this standard beginning January 1, 2007; it has had no material impact on the Company s consolidated financial statements.

In June 2006, the FASB issued EITF Issue No. 06-3, "How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement". EITF Issue No. 06-3 applies to any taxes assessed by a governmental authority that is both imposed on and concurrent with a specific revenue-producing transaction between a seller and customer, and may include but is not limited to sales, use, value added and some excise taxes. EITF Issue No. 06-3 requires an entity to disclose if taxes are presented in the income statement on a gross or net basis. Additionally, an entity that reports any such taxes on a gross basis should also disclose the amounts of those taxes in interim and annual financial statements for each period an income statement is presented if those amounts are significant. EITF Issue No. 06-3 applies with respect to any interim and annual reports filed after December 15, 2006. The Company adopted EITF Issue No. 06-3 in January 2007. The Company uses the net basis for accounting for taxes imposed in connection with a specific-revenue producing transaction.

**NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)**

In September 2006, the FASB issued SFAS No. 157, Fair Value Measurements . SFAS No. 157 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles and expands disclosures about fair value measurements. This Statement does not require any new fair value measurements. SFAS No. 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. The Company plans to adopt this standard beginning January 2008, and does not anticipate it to have a material impact on the Company's consolidated financial statements.

In September 2006, the FASB issued SFAS No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plan - an amendment of FASB Statements No. 87, 88, 106, and 132(R) . SFAS No. 158 requires an employer to recognize the over-funded or under-funded status of a defined benefit postretirement plan as an asset or liability in its statement of financial position and to recognize changes in that funded status in the year in which the changes occur through comprehensive income. SFAS No. 158 is effective for an issuer of publicly traded securities for financial statements issued for fiscal years beginning after December 15, 2006. The Company adopted this standard beginning January 1, 2007; it has had no material impact on the Company's consolidated financial statements.

In September 2006, the SEC issued SAB 108 which was issued to address diversity in practice in quantifying financial statement misstatements and the potential under current practice for the build up of improper amounts on the balance sheet effective for any fiscal year beginning after November 15, 2006. The Company adopted this bulletin beginning January 1, 2007; it has had no material impact on the Company's consolidated financial statements.

In February 2007, the FASB issued SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities - Including an Amendment of FASB No. 115 . SFAS No. 159 permits entities to choose to measure many financial instruments and certain other assets at fair value. The objective is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. SFAS No. 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. The Company plans to adopt this standard beginning January 2008; at this time, it is uncertain if doing so will have a material impact on the Company's consolidated financial statements.

8. SUBSEQUENT EVENTS

Copper Hedging Program

In connection with the Credit Agreement with Nedbank dated June 28, 2007, the Company has agreed to implement a hedging program with respect to a specified percentage of copper output from the Johnson Camp Mine. The hedging program will consist of a synthetic put structure whereby the Company will enter into a combination of forward and call option contracts for copper quantities, based on a portion of the estimated production from the Johnson Camp Mine during the term of the loan. Once fully

**NORD RESOURCES CORPORATION AND SUBSIDIARY
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(UNAUDITED)**

implemented it is envisaged the hedging program will cover approximately 25% of the estimated copper production from the Johnson Camp Mine during the term of the loan. The Company commenced implementation of the hedging program in August 2007, by entering into forward sales contracts for 9% of its estimated copper production in 2009, and 13% of its estimated copper production for 2010 and 2011 at a net forward price of \$6,085, \$5,200 and \$4,437 per ton of copper, respectively. The program also included the purchase of long call options for the same quantities with an average strike prices of \$9,945, \$9,303 and \$8,713 per ton of copper, respectively, thereby permitting the Company to participate in price increases in the event that copper prices exceed the strike price of the long call options. The program requires no cash margins, collateral or other security from the Company.

Purchase of Fixed Assets

During July 2007 the Company incurred expenditures of approximately \$1,395,922 related to the construction and purchase of equipment for the restart of the Johnson Camp Mine.

Performance Incentive Plan

On July 31, 2007 the Company adopted a performance incentive plan for the purpose of retaining and providing an incentive to certain key employees involved in restarting and commissioning the Johnson Camp Mine. The Plan covers the period of time from July 1, 2007 to December 31, 2008 and bases its cash payouts on the achievement of certain key targets and milestones associated with the restart and commissioning of the Johnson Camp Mine.

Item 2. Management's Discussion and Analysis

The following discussion of our financial condition, changes in financial condition and results of operations for the three and six months ended June 30, 2007 should be read in conjunction with our unaudited consolidated interim financial statements and related notes for the three and six months ended June 30, 2007.

The following discussion contains forward-looking statements that involve risks, uncertainties and assumptions. Our actual results may differ materially from those anticipated in these forward-looking statements as a result of many factors, including, but not limited to, those set forth below under the heading "Risk Factors".

Overview of Our Business

We are in the business of exploring for and developing mineral mining properties. Our principal asset is the Johnson Camp property located in Arizona. The Johnson Camp property includes the Johnson Camp Mine and a production facility that uses the solvent extraction, electrowinning (SX-EW) process. The Johnson Camp Mine is an existing open pit copper mine; it includes two existing open pits, namely the Burro and the Copper Chief bulk mining pits.

We acquired the Johnson Camp Mine from Arimetco, Inc. in June 1999. Although Arimetco had ceased mining on the property in 1997, we, like Arimetco before us, continued production of copper from ore that had been mined and placed on leach pads until August 2003 when we placed the Johnson Camp Mine on a care and maintenance program due to weak market conditions for copper at that time. Although mining had ceased in 1997, the Johnson Camp Mine leach pads and SX EW operation remained active until 2003, producing approximately 6.7 million pounds of copper cathode from residual copper in the heaps over the period 1998 to 2003. Since 2003, we have been rinsing the existing Johnson Camp leach dumps in a limited manner with the goal of managing solution inventories.

We believe that the strengthening market for copper has created an opportunity for us to reactivate the Johnson Camp Mine, despite the anticipated high costs that this will involve. The market for copper is cyclical and over the last fifteen years the price of copper has fluctuated between \$0.60 and \$3.98 per pound. In its most recent cycle the price fell to a low of \$0.62 per pound in 1999, due primarily to increased supply with the commissioning of several new mines while demand decreased, largely due to a reduction of consumption in Asia. Although there has been a slight decline in the price of copper over the past twelve months, it remains relatively high: the average price of copper was \$3.62 per pound in July 2007 (as reported by the London Metal Exchange). This increase in the price of copper since 1999 is due to an increase in worldwide demand for copper. However, we caution investors that the market price for copper has historically been cyclical and there is a significant risk that copper prices will not remain at current high levels.

On June 5, 2007, we completed an unregistered private placement offering of 30,666,700 special warrants for aggregate proceeds of approximately \$23 million (net proceeds of approximately \$21.5 million). In addition, we have entered into a Credit Agreement dated as of June 28, 2007 with Nedbank Limited, as administrative agent and lead arranger, which provides for a \$25 million secured term loan credit facility that will be used by our company to assist in financing the construction, start-up and operation of mining and metal operations at the Johnson Camp Mine.

We believe that the proceeds of the special warrant financing and the credit facility available under the Credit Agreement will be sufficient to meet the capital requirements to reactivate the Johnson Camp Mine. Accordingly, on June 28, 2007, our Board of Directors adopted a resolution authorizing our company to proceed with the reactivation of the Johnson Camp Mine.

We have a feasibility study containing a mine plan for the Johnson Camp Mine that was completed by The Winters Company, called Nord Copper Corporation Feasibility Study, Johnson Camp Copper Project, Cochise County, Arizona, dated March 2000. We also obtained an update to the feasibility study prepared by Winters, Dorsey and Company called Johnson Camp Copper Project, Arizona, United States of America, 2005 Feasibility Study, dated October 11, 2005. In June 2006, Winters, Dorsey provided us with an addendum to the 2005 feasibility study. We refer to the 2005 feasibility study and the June 2006 addendum in this quarterly report as the updated feasibility study.

The Winters Company no longer exists. Winters, Dorsey is not a successor company to The Winters Company, but certain authors of the 2000 feasibility study were also involved in the preparation of the updated feasibility study. In preparing the updated feasibility study in 2005 and the addendum thereto in 2006, Winters, Dorsey utilized much of the earlier data contained in the 2000 feasibility study after concluding, in its professional judgment, it was reasonable to adopt and rely on such data.

The updated feasibility study contains an economic assessment of the Johnson Camp Mine based on the mine plan included in the 2000 feasibility study, capital and operating cost estimates as of the third quarter of 2005, and 36 month average copper prices ending on September 30, 2005 of \$1.14 per pound (although our reserve estimates are based on a copper price of \$0.90 per pound to maintain consistency with the pit design used in the 2000 feasibility study and adopted by Winters, Dorsey in the updated feasibility study). Winters, Dorsey concluded that resumption of operations at the Johnson Camp Mine in accordance with the mine plan will generate positive discounted cash flows over an eleven year mine life at 8%, 10% and 15% discount rates.

In addition to the Johnson Camp property, we have options to acquire interests in three exploration stage projects, Coyote Springs and the Texas Arizona Mines project, both located in Arizona, and Mimbres located in New Mexico. We are conducting preliminary exploration activities at the Coyote Springs property, and are planning to initiate preliminary exploration activities on the Mimbres property, to help us determine whether we should exercise the options. We do not believe that these properties are material to our overall operations at this time.

We are also planning on expanding the existing decorative and structural stone operation on the Johnson Camp property within the first year of bringing the Johnson Camp Mine into operation. We are currently leasing this landscape and aggregate rock operation to JC Rock, LLC. Our current contract expires October 31, 2007, and we plan to renew the contract on a short-term basis until we are ready to take over the operation. JC Rock has the right to remove the landscape and aggregate rock from the Johnson Camp property and pays us a royalty of \$1.50 per ton, subject to reduction to \$1.00 per ton where the wholesale price realized by JC Rock upon resale is less than \$6.00 per ton.

Our Plan of Operations

Overview

We commenced the reactivation process at the Johnson Camp Mine in late June 2007. Our current reactivation plan includes estimated production of 25 million pounds of copper cathodes per annum.

Our mine operating plan calls for residual leaching of the existing old dumps, and an active leach program of newly mined ore. In order to resume full mining operations, we will have to complete the mine development plan outlined in the updated feasibility study. Our business and our ability to realize our business objectives and implement our operating plan is subject to a number of additional risks and uncertainties, including those discussed under the heading Risk Factors .

Estimated Capital Costs

At the time the updated feasibility study was completed, the initial capital costs to be incurred within the first two years following start-up under our mine development schedule were expected to exceed \$22 million (including working capital). We now expect that the initial capital costs will exceed \$28 million. Such costs relate primarily to: (a) the rehabilitation of solution ponds (which will account for approximately \$2.4 million of the anticipated initial capital costs); (b) refurbishment and a modest expansion of the SW-EX copper production facility (approximately \$7.4 million); (c) completion of the installation of our primary stage crusher, and the purchase and installation of two secondary stage crushers and conveying equipment (approximately \$12.2 million); and (d) other project-related items (approximately \$5.8 million).

The increase in our capital cost estimate is primarily due to inflation and the fact that our original capital cost estimate was premised in part on the availability of used crushing and conveying equipment which is increasingly becoming difficult to find; we anticipate that we will have to purchase new crushing and conveying equipment during the initial start-up period.

We estimate we will incur a further \$3 million in capital costs in the following two years, which is less than the \$9 million in such capital costs that we had originally projected due to our intention to defer the construction of a planned leach pad until seven years after the start-up date, as we now anticipate that we will be able to accommodate any ore that is mined during the intervening period by expanding one or more of our existing leach pads. These cost figures do not include estimated reclamation bonding requirements, and do not account for inflation, interest and other financing costs.

Planned Residual Leach Operations

We anticipate it will take approximately five months to complete sufficient rehabilitation of the Johnson Camp Mine to allow the production of copper from the existing heaps. Accordingly, our goal is to complete the first copper cathode sale no later than December 2007. In order to achieve this objective, we will first have to complete the following at an estimated aggregate cost of approximately \$10 million (which is included in our estimate of initial capital costs of approximately of \$28 million):

- reconstruction of three solution ponds and their related pump stations;
- rehabilitation of one-half of the solvent-extraction plant;

- rehabilitation of the tank farm;
- rehabilitation of leach solution pumps and pipelines;
- resumption of the application of sulfuric acid to the existing heaps;
- movement of approximately 800,000 tons of material from heap number 1 to other leach areas; and
- minor refurbishment of the eastern portion of the electro-winning plant.

Planned Mining Operations

We anticipate that it will take approximately eleven months from the start of construction to begin producing copper from new ore placed on the heaps. Specifically, we are targeting:

- completion of installation of the two-stage crusher and conveying equipment for April 2008;
- commencement of mining for May 2008; and
- initial production from newly mined ore for June 2008.

We commenced further exploratory drilling on the Johnson Camp property in mid-July, 2007.

We plan to use a mining contractor to mine both the Burro and Copper Chief deposits, and our own employees for process activities.

Liquidity and Financial Resources

In the opinion of management, completion of the special warrant financing and execution of the credit facility with Nedbank has alleviated the company's risk as to its ability to continue as a going concern as disclosed in our annual report on Form 10-KSB for the year ended December 31, 2006 and our quarterly report on Form 10-QSB for the period ended March 31, 2007.

Cash and Working Capital

The following table sets forth our cash and working capital as of June 30, 2007 and 2006:

	As of June 30, 2007	As of June 30, 2006
Cash reserves	\$ 12,844,943	\$ 860,321
Working capital surplus (deficiency)	\$ 11,345,693 ⁽¹⁾	\$ (7,111,453) ⁽¹⁾

(1) Includes \$64,551 and \$5,654,958 in current portion long-term debt for 2007 and 2006, respectively.

Special Warrant Financing

We completed an offering of 30,666,700 special warrants on June 5, 2007. The special warrants were offered and sold at a price of \$0.75 per special warrant, for aggregate gross proceeds of \$23,000,025. Our net proceeds after payment of the costs of the offering, including agents' commissions, were \$21,281,676. Following completion of the offering, we applied a portion of the proceeds to fully repay the \$5,000,000 secured bridge loan to Nedbank Limited. We also paid a total of \$3,035,474 to certain officers and directors in satisfaction of various accrued and outstanding amounts payable to them including repayment of the \$564,812 outstanding amount under the \$600,000 revolving credit facility, \$315,000 associated with the TMD settlement, repayment of the 50% portion of the related party convertible notes as stipulated in the related debt agreement, as amended, and \$2,023,633 in accrued and outstanding consulting fees, salaries, bonuses and fees to certain senior officers and directors which have been accrued over the last four years.

Credit Agreement With Nedbank Limited, as Lead Arranger

We have also entered into a Credit Agreement dated as of June 28, 2007 with Nedbank Limited, as administrative agent and lead arranger, which provides for a \$25 million secured term loan credit facility that we plan to use to assist in financing the construction, start-up and operation of the Johnson Camp Mine. The Credit Agreement contemplates a series of term loans to be funded from time to time by a syndicate of lenders in response to draw-down requests by the Company, with the aggregate amount of all term loans being \$25 million. The term loans will be available until the earlier of: (i) the date of termination of the lender commitments; (ii) the first principal repayment date; and (iii) June 30, 2008. The loans bear interest, payable in arrears, at an annual rate equal to the London Interbank Offered Rate (LIBOR) for the interest period in effect plus a margin of 3.0% (3.5% during the initial reactivation period). In the event that we default under the Credit Agreement, an additional 3.0% interest will be payable in addition to such annual rate and all interest will be payable on demand. Additionally, the Company has agreed to pay \$500,000 on the lenders \$25 million term loan commitment, of which \$50,000 has been credited from a previously expired commitment.

The Credit Agreement is collateralized by substantially all of our assets, restricts the company from incurring certain additional debt, limits the Company's ability to pay dividends and will be repaid beginning one year after the first drawdown and ending four years after the date of the first draw down, subject to certain prepayment obligations set forth in the Credit Agreement.

The obligations of each lender to fund the term loans under the Credit Agreement are subject to certain conditions as set forth in the Credit Agreement including among other things the implementation of a hedging program with respect to a specified percentage of copper output from the Johnson Camp Mine. The Company commenced implementation of the hedging program in August 2007, refer to Footnote 8 Subsequent Events of the Financial Statements for further information.

We have not yet drawn down any principal under the Credit Agreement, but anticipate that we will draw down some funds in the third quarter of 2007.

Results Of Operations Three and Six Months Ended June 30, 2007 and 2006

The following table sets forth our operating results for the three and six months ended June 30, 2007, as compared with our operating results for the three and six months ended June 30, 2006.

	Three Months Ended			Six Months Ended		
	June 30, 2007 (unaudited)	June 30, 2006 (unaudited)	Change (Increase/ Decrease) (unaudited)	June 30, 2007 (unaudited)	June 30, 2006 (unaudited)	Change (Increase/ Decrease) (unaudited)
Net sales	\$ -	\$ -	\$ -	\$ -	\$ -	\$ -
Operating expenses	1,472,713	1,178,793	293,920	2,430,614	2,675,870	(245,256)

Net loss per share of common stock	\$ (0.04)	\$ (0.04)		\$ (0.04)	\$ (0.11)	

Net Sales

We did not have any sales during the three and six months ended June 30, 2007 and 2006 due to the fact that the Johnson Camp Mine was on a care and maintenance program during these periods.

Operating Expenses

Our operating expenses increased from \$1,178,793 for the three months ended June 30, 2006, to \$1,472,713 for the three months ended June 30, 2007. This increase was primarily due to an increase of

- 7 -

\$486,031 in drilling costs at Coyote Springs and an increase in labor costs of \$237,297 resulting primarily from the bonuses earned as a result of the completion of the recent financings. These increases were partially offset by a reduction of \$480,687 in professional fees primarily related to the preparation in 2006 of our SEC filings under the Exchange Act, and other activities undertaken by us with the ultimate objective of enabling us to pursue financing to bring the Johnson Camp Mine into production.

Our operating expenses decreased from \$2,675,870 for the six months ended June 30, 2006 to \$2,430,614 for the six months ended June 30, 2007. This decrease was due primarily to a reduction of \$909,799 in professional fees primarily related to the preparation during the first half of 2006 of our SEC filings under the Exchange Act, and other activities undertaken by us with the ultimate objective of enabling us to pursue financing to bring the Johnson Camp Mine into production. This decrease was partially offset by an increase of \$626,170 in drilling costs at Coyote Springs we incurred during the first half of 2007.

Depreciation, Depletion and Amortization

Our depreciation and amortization expense of \$20,836 and \$41,673 remained the same for the three and six months ended June 30, 2007, respectively, as compared to the three and six months ended June 30, 2006.

Interest Expense

Interest expense is attributable to interest, amortization of debt issuance cost and accretion of warrants issued in conjunction with the loans that we have obtained to fund our operating expenses.

Interest expense decreased by \$176,983 for the three months ended June 30, 2007 compared to the three months ended June 30, 2006. This decrease was due primarily to a reduction in the amortization of debt issuance costs of \$80,811 and \$102,406 related to our outstanding \$5,000,000 secured bridge loan from Nedbank Limited and the outstanding \$600,000 revolving line of credit from related parties, respectively, as well as the accretion of expenses related to the issuance of warrants in conjunction with these transactions.

Interest expense decreased by \$593,249 for the six months ended June 30, 2007 compared to the six months ended June 30, 2006. This decrease was due primarily to a reduction in the amortization of debt issuance costs of \$243,706 and \$409,626 related to our outstanding \$5,000,000 secured bridge loan from Nedbank Limited and the outstanding \$600,000 revolving line of credit from related parties, respectively, as well as the accretion of expenses related to the issuance of warrants in conjunction with these transactions.

Gain on Investment

During the three and six months ended June 30, 2006 we recognized a gain of \$50,165 and \$263,477, respectively, on our investment in Allied Gold. These gains were partially offset by declines in the value of the copper put options we purchased in conjunction with the bridge loan from Nedbank during the three and six months ended June 30, 2006, in the respective amounts of \$3,185 and \$142,738. We liquidated our holdings in Allied Gold and our copper put options during the year ended December 31, 2006.

Miscellaneous Income

Miscellaneous income increased by \$168,856 for the three months ended June 30, 2007 as compared to the three months ended June 30, 2006. This increase was due primarily to \$150,000 we received from Platinum Diversified Mining pursuant to the PDM Settlement Agreement entered into during the first quarter of 2007 and a \$50,917 increase in interest income.

Miscellaneous income increased by \$1,287,476 for the six months ended June 30, 2007 as compared to the six months ended June 30, 2006. This increase was due primarily to \$1,250,000 we received from Platinum Diversified Mining pursuant to the PDM Settlement Agreement entered into during the first quarter of 2007.

Net Loss

We experienced a net loss of \$1,515,987 for the six months ended June 30, 2007 as compared to a net loss of \$3,521,229 for the six months ended June 30, 2006. The decrease in net loss between these periods is primarily related to:

- reduction in operating costs and interest expense, as discussed above; and
- increase in miscellaneous income associated with the PDM Settlement Agreement during the first quarter of 2007, as discussed above.

Cash Flows From Operating Activities

Our cash flows from operating activities during the six months ended June 30, 2007 and 2006 were (\$3,774,432) and \$28,098, respectively. The Johnson Camp Mine was on a care and maintenance program during these periods. Our cash flows from operating activities for the six months ended June 30, 2007 include a decrease in accounts payable and accrued liabilities of \$2,976,886 primarily for the payment of obligations that became due upon the completion of our special warrant financing and \$1,250,000 in net proceeds from our settlement with Platinum Diversified Mining. Our cash flows from operating activities during the six months ended June 30, 2006 includes \$1,729,391 in proceeds we received from the sale of our investment in Allied Gold.

Cash Flows From Investing Activities

Our cash flows from investing activities during the six months ended June 30, 2007 were (\$19,839) due to capital expenditures during this time period. During the six months ended June 30, 2006 our cash flows from investing activities were (\$35,221) due primarily to the release of \$126,063 of restricted cash for the purchase of copper put options and \$105,032 in capital expenditures.

Cash Flows From Financing Activities

Our cash flows from financing activities during the six months ended June 30, 2007 was \$15,631,379 compared to \$726,247 for the same period in 2006.

In February 2007, we received an additional \$100,000 loan from Auramet which had been added to the outstanding principal under the Nedbank bridge loan. After payment of \$75,000 in debt issuance costs associated with the extensions of the Nedbank bridge loan, we received \$25,000 in net loan proceeds.

As discussed above, in June 2007 we completed the special warrant offering for gross proceeds of \$23,000,025 of which \$1,718,349 was used to pay the direct offering expenses incurred as a result of the special warrant financing. We then used \$5,668,313 of those proceeds to repay our then existing debt of \$5,771,813 which consisted of the Nedbank bridge loan, the revolving credit facility and convertible notes.

Each special warrant is convertible into one fully-paid and non-assessable share of common stock and one-half of one common share purchase warrant for no additional consideration. The special warrants are governed by the terms of a special warrant indenture among our company, Computershare Trust Company of Canada, as the special warrant trustee, and Blackmont Capital Inc. The holder of a special warrant will not be deemed a holder of the underlying common stock or warrants until the special warrant is converted.

Under the terms of the special warrant indenture, we are required to:

- (a) file and obtain a receipt for a Canadian non-offering prospectus to qualify the issuance in Canada of (i) the shares of common stock and the warrants issuable upon conversion of the special warrants, and (ii) the shares of common stock issuable upon exercise of the warrants, and;
- (b) file a registration statement under the *Securities Act of 1933*, as amended, in order to register the resale of (i) the shares issuable upon conversion of the special warrants, and (ii) the shares issuable upon exercise of the warrants.

If we fail to obtain a receipt for a final Canadian prospectus and effectiveness of the U.S. registration statement by December 3, 2007 we will be liable for a liquidity incentive payment to the investors equal to 1% per month (pro-rated), subject to a maximum liquidity incentive payment equal to an aggregate of 12% of the gross proceeds of the offering.

The special warrants will expire on the earlier of:

- (a) the third business day following the date on which we obtain a receipt for the final Canadian prospectus;
- (b) the date that is four months and one day following the date on which we become a reporting issuer under the securities legislation of any province or territory of Canada; and
- (c) June 5, 2009, being the date which is two years following the date of the special warrant indenture.

The holder of a special warrant that has not expired in accordance with its terms may elect to convert its special warrant into the underlying shares of common stock and warrants at any time after December 3, 2007. Each special warrant that has not been converted by the holder will be converted by the special warrant trustee immediately prior to the time of its expiry without the need for any action on the part of the holder.

A total of 15,333,350 warrants are issuable upon conversion of the special warrants. Each warrant, when issued, will entitle the holder to purchase one share of common stock until June 5, 2012 at a price of \$1.10 per share. The warrants are governed by the terms of a warrant indenture between our company and Computershare Trust Company of Canada, as the warrant agent.

In connection with the special warrants offering the Company entered into an agency agreement whereby the Company paid a cash commission of 6% of the gross proceeds realized from the sale of the special warrants to the agents and issued 1,840,002 stock options to the agents entitling them to acquire one share of common stock of the Company at anytime within the subsequent 24 month period at an exercise price of \$0.75. For financial reporting purposes, the stock options have been valued at \$513,436.

Critical Accounting Policies And Estimates

Our consolidated financial statements and accompanying notes have been prepared in accordance with U.S. generally accepted accounting principles applied on a consistent basis. The preparation of financial statements in conformity with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods.

We regularly evaluate the accounting policies and estimates that we use to prepare our consolidated financial statements. In general, management's estimates are based on historical experience, on information from third party professionals, and on various other assumptions that are believed to be reasonable under the facts and circumstances. Actual results could differ from those estimates made by management.

We believe that our critical accounting policies and estimates include the accounting for marketable securities and long-lived assets, valuation of stock options and warrants, income taxes, reclamation costs, and accounting for legal contingencies.

Marketable Securities

Marketable securities consist of common stock and are stated at market value as determined by the most recently traded price of each security at the balance sheet date. All marketable securities are defined as trading securities or available for sale securities under Statement of Financial Accounting Standards (SFAS) No. 115. Management determines the appropriate classification of its investments in marketable debt and equity securities at the time of each purchase and re-evaluates such determination at each balance sheet date. Securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and unrealized gains and losses are included in earnings. Debt securities, for which our company does not have the intent or ability to hold to maturity, and equity securities are classified as available for sale. Available for sale securities are carried at fair value, with unrealized gains and losses, net of tax, reported as a separate component of stockholders' equity. The cost of investments sold is determined on the specific identification or the first-in, first-out method.

Long-Lived Assets

Our company reviews and evaluates its long-lived assets for impairment when events or changes in circumstances indicate that the related carrying amounts may not be recoverable. An impairment loss is

measured as the amount by which the asset carrying value exceeds its fair value. Fair value is generally determined using valuation techniques such as estimated future cash flows. An impairment is considered to exist if total estimated future cash flows on an undiscounted basis are less than the carrying amount of the asset. An impairment loss is measured and recorded based on discounted estimated future cash flows. Future cash flows for the Johnson Camp Mine include estimates of recoverable pounds of copper, copper prices (considering current and historical prices, price trends and related factors), production rates and costs, capital and reclamation costs as appropriate, all based upon detailed life-of-mine engineering plans and feasibility studies. Assumptions underlying future cash flow estimates are subject to risks and uncertainties. No impairment losses were recorded during the year ended December 31, 2006 and the six months ended June 30, 2007.

Valuation of Stock Options and Warrants

From time to time our company issues stock options and warrants. We use the Black-Scholes option pricing model to estimate the fair value of stock options and warrants issued. The Black-Scholes option pricing model utilizes the risk free interest rate on the date of issuance for a term that is equivalent to the expected term of the options and warrants issued, the expected forfeiture rate based on historical employee turnover rates, the volatility is based on the weighted historical volatility of the Company's common stock and that of its peer group and the projected dividend yield of the Company's common stock.

Income Taxes

Our company uses the liability method to account for income taxes. Under the liability method, deferred tax assets and liabilities are recognized for the estimated future tax effects of temporary differences between the tax basis of assets and liabilities and amounts reported in the financial statements. Under applicable accounting rules, we are considered to be unlikely to recognize sufficient operating income to realize the benefit of these assets over time until we have had a reasonable history of net profits, which in some circumstances has been interpreted as requiring at least two consecutive years of net profits. Accordingly, we have recorded a deferred tax valuation allowance in 2007 and prior years to offset the entire deferred tax asset arising from our tax loss carry forward. Valuation allowances are established when necessary to reduce deferred tax assets to the amount expected to be realized, based upon criteria that include a recent history of demonstrated profits. We will continue to review this valuation allowance and make adjustments as appropriate. Income tax expense consists of the tax payable or refundable for the current period and the change during the period in net deferred tax assets and liabilities. A change of over 50% of our equity ownership will result in a change in ownership as defined in the Internal Revenue Code and underlying regulations, and will have the effect of limiting the availability of the tax loss carry forward.

Reclamation Costs

In August 2001, the FASB issued SFAS No. 143, *Accounting for Asset Retirement Obligations*, which established a uniform methodology for accounting for estimated reclamation and abandonment costs. This statement was adopted January 1, 2003, when we recorded the estimated present value of reclamation liabilities and adjusted the carrying amount of the related asset. Reclamation costs are allocated to expense over the life of the related assets and are adjusted for changes resulting from the passage of time and revisions to either the timing or amount of the original present value estimate.

We have estimated our asset retirement obligations using an expected cash flow approach, in which multiple cash flow scenarios were used to reflect a range of possible outcomes. We estimated the aggregate undiscounted obligation to be approximately \$400,000 for the Johnson Camp Mine. To calculate the fair value of this obligation, the projected cash flows were discounted at our company's estimated credit-adjusted, risk free interest rate of 10%. At June 30, 2007 the recorded value of accrued reclamation costs was \$191,228. We will recognize increases to our asset retirement obligation concurrently with the impact of our mining activity, if and when such additional mining activity occurs.

Litigation

Our company is currently subject to various claims and legal proceedings arising in the ordinary course of business. If any adverse decisions or settlements occur, they may have a material adverse effect on our financial position, or results of operations. Litigation, is inherently uncertain and we can make no assurance as to the ultimate outcome or effect.

Recently Issued Accounting Guidance

In February 2006, the FASB issued SFAS No. 155, *Accounting for Certain Hybrid Financial Instruments* An Amendment of FASB Statements No. 133 and 140 . SFAS No. 155 resolves issues addressed in Statement 133 Implementation Issue No. D1, *Application of Statement 133 to Beneficial Interests in Securitized Financial Assets* . This Statement permits fair value re-measurement for any hybrid financial instruments that contains an embedded derivative that otherwise would require bifurcation. It clarifies which interest-only strips and principal-only strips are not subject to the requirements of Statement 133. It also establishes a requirement to evaluate interests in securitized financial assets, clarifies that concentrations of credit risk in the form of subordination are not embedded derivatives, and amends Statement 140 to eliminate the prohibition on a qualifying special-purpose entity holding a derivative financial instrument that pertains to a beneficial interest other than another derivative financial instrument. SFAS No. 155 is effective for all financial instruments acquired or issued after the beginning of an entity's first fiscal year that begins after September 15, 2006. Early adoption is permitted as of the beginning of an entity's fiscal year, provided the entity has not yet issued financial statements, including financial statements for any interim period, for that fiscal year. We adopted the provisions of this standard beginning January 1, 2007; this has had no material impact on our company's consolidated financial statements.

In June 2006, the FASB issued Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* An Interpretation of FASB Statement No. 109 . This interpretation clarifies the accounting for uncertainty in income tax recognized in an enterprise's financial statements in accordance with FASB Statement No. 109, *Accounting for Income Taxes* . This interpretation prescribes a recognition threshold and measurement attribute for financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return. It also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. This interpretation is effective for fiscal years beginning after December 15, 2006. We adopted the provisions of this standard January 1, 2007; such adoption has had no material impact on our company's consolidated financial statements.

In June 2006 the FASB issued EITF Issue No. 06-3, *How Taxes Collected from Customers and Remitted to Governmental Authorities Should Be Presented in the Income Statement* . EITF Issue No. 06-3 applies to any taxes assessed by a governmental authority that is both imposed on and concurrent with a specific revenue-producing transaction between a seller and customer, and may include but is not

limited to sales, use, value added and some excise taxes. EITF Issue No. 06-3 requires an entity to disclose if taxes are presented in the income statement on a gross or net basis. Additionally, an entity that reports any such taxes on a gross basis should also disclose the amounts of those taxes in interim and annual financial statements for each period an income statement is presented if those amounts are significant. EITF Issue No. 06-3 applies with respect to any interim and annual reports filed after December 15, 2006. We adopted the provisions of EITF Issue No. 06-3 in January 2007. The Company uses the net basis for accounting for taxes imposed in connection with a specific-revenue producing transaction.

In September 2006, the FASB issued SFAS No. 157, Fair Value Measurements . SFAS No. 157 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles and expands disclosures about fair value measurements. This Statement does not require any new fair value measurements. SFAS No. 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. We plan to adopt this standard beginning January 2008, and we do not anticipate that it will have a material impact on our company's consolidated financial statements.

In September 2006, the FASB issued SFAS No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plan-an amendment of FASB Statements No. 87, 88 106, and 132(R) . SFAS No. 158 requires an employer to recognize the over-funded or under-funded status of a defined benefit postretirement plan as an asset or liability in its statement of financial position and to recognize changes in that funded status in the year in which the changes occur through comprehensive income. SFAS No. 158 is effective for an issuer of publicly traded securities for financial statements issued for fiscal years beginning after December 15, 2006. We adopted this standard beginning January 1, 2007; it has had no material impact on our company's consolidated financial statements.

In September 2006, the SEC issued SAB 108 which was issued to address diversity in practice in quantifying financial statement misstatements and the potential under current practice for the build up of improper amounts on the balance sheet effective for any fiscal year beginning after November 15, 2006. We adopted this bulletin beginning January 1, 2007; it has had no material impact on our company's consolidated financial statements.

In February 2007, the FASB issued SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities-Including an Amendment of FASB No. 115 . SFAS No. 159 permits entities to choose to measure many financial instruments and certain other assets at fair value. The objective is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. SFAS No. 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. We plan to adopt this standard beginning January 2008; at this time, it is uncertain if doing so will have a material impact on our consolidated financial statements.

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements.

Item 3. Controls and Procedures

Disclosure controls and procedures are controls and other procedures that are designed to ensure that information required to be disclosed by our company is recorded, processed, summarized and reported,

within the time periods specified in the rules and forms of the Securities and Exchange Commission. Our Chief Executive Officer and Chief Financial Officer, John Perry, is responsible for establishing and maintaining disclosure controls and procedures for our company.

Our management has evaluated the effectiveness of our disclosure controls and procedures as of June 30, 2007 (under the supervision and with the participation of the Chief Executive Officer and Chief Financial Officer), pursuant to Rule 13a-15(b) promulgated under the *Securities Exchange Act of 1934*, as amended. As part of such evaluation, management considered the matters discussed below relating to internal control over financial reporting. Based on this evaluation, our company's Chief Executive Officer and Chief Financial Officer have concluded that our company's disclosure controls and procedures were not effective as of June 30, 2007, due to certain material weaknesses in internal control over financial reporting.

The term "internal control over financial reporting" is defined as a process designed by, or under the supervision of, the registrant's principal executive and principal financial officers, or persons performing similar functions, and effected by the registrant's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the registrant;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the registrant are being made only in accordance with authorizations of management and directors of the registrant; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the registrant's assets that could have a material effect on the financial statements.

During the second quarter of 2007, we identified the following material weakness with respect to our company's internal control over financial reporting: We valued a stock option grant to third parties using the incorrect expected term of the stock option. This issue was identified and corrected prior to the filing with the SEC of our company's quarterly report on Form 10-QSB for the quarter ended June 30, 2007.

We use a third party consulting firm to assist us with the estimation of the variables that are required to be calculated in connection with the valuation of stock option and warrant transactions. In order to address this material weakness, subsequent to the quarter ended June 30, 2007, we implemented a procedure to clearly identify to our third party consulting firm if the stock option holder is an employee, director, or third party.

Additionally, prior to completion of our special warrant financing in June 2007 we did not have sufficient financial resources to add additional personnel to our accounting department and, as a result, our Chief Financial Officer and only one other person have been responsible for booking of entries in our financial records. We have concluded that this continues to represent a material weakness with respect to our company's internal control over financial reporting. We are in the process of recruiting and hiring the necessary accounting personnel.

PART II OTHER INFORMATION

RISK FACTORS

Much of the information included in this quarterly report includes or is based upon estimates, projections or other forward-looking statements. Such forward-looking statements include any projections or estimates made by us and our management in connection with our business operations. While these forward-looking statements, and any assumptions upon which they are based, are made in good faith and reflect our current judgment regarding the

direction of our business, actual results will almost always

- 15 -

vary, sometimes materially, from any estimates, predictions, projections, assumptions, or other future performance suggested herein. We undertake no obligation to update forward-looking statements to reflect events or circumstances occurring after the date of such statements.

Such estimates, projections or other forward-looking statements involve various risks and uncertainties as outlined below. We caution readers of this quarterly report that important factors in some cases have affected and, in the future, could materially affect actual results and cause actual results to differ materially from the results expressed in any such estimates, projections or other forward-looking statements. In evaluating us, our business and any investment in our business, readers should carefully consider the following factors.

Risks Related to Our Company

We have a history of losses, and expect to incur losses in the future as we currently have no commercial production at the Johnson Camp Mine.

We have a history of losses and expect to incur losses in the future. We had no revenues and net losses of \$6,283,878 for the year ended December 31, 2006, and additional net losses of \$1,515,987 during the six months ended June 30, 2007. As of June 30, 2007, we had working capital of \$11,345,693, but we expect to incur in excess of \$28 million in initial capital costs within the first two years of start up (including working capital), and an additional \$3 million in capital costs in the following two years. The Johnson Camp Mine produced copper during the 1975 to 2003 period, but we currently have no commercial production at the Johnson Camp Mine. Accordingly, we expect to continue to incur losses until such time as the Johnson Camp Mine enters into commercial production and generates sufficient revenues to fund our continuing operations. We cannot guarantee that we will successfully bring the Johnson Camp Mine or any of our other properties into commercial production or, if we do, that we will be able to generate sufficient revenues to fund our operations or achieve or sustain profitability.

Our future profitability will depend on the successful reactivation and operation of the Johnson Camp Mine, which cannot be assured.

We are focused on the reactivation of the Johnson Camp Mine. Accordingly we are dependent upon the success of the Johnson Camp Mine as a source of future revenue and profits, if any. We cannot provide any assurance that we will successfully commence mining operations on the Johnson Camp property. Even if we are successful in achieving production, an interruption in operations of the Johnson Camp Mine may have a material adverse impact on our business.

The reactivation of the Johnson Camp Mine and the development of new mining operations on the Johnson Camp property will require the commitment of substantial resources for operating expenses and capital expenditures, which may increase in subsequent years as consultants, personnel and equipment associated with advancing exploration, development and commercial production are added. The amounts and timing of expenditures will depend in part on the progress of ongoing exploration and development, the results of consultants' analysis and recommendations, the rate at which operating losses are incurred, the execution of any joint venture agreements with strategic partners, our acquisition of additional properties, and other factors, many of which are beyond our control.

There are numerous activities that need to be completed to facilitate reactivation of the Johnson Camp Mine, including, without limitation, optimizing the mine plan, negotiating contracts for the supply of

power, for sale of copper and for shipping, and handling any other infrastructure issues. At the same time, we must recruit and train personnel, and hire and mobilize a mining contractor who will purchase all the required large scale mining equipment we do not already own. There is no certainty that we will be able to retain a suitable mining contractor on a timely basis, if at all, or that we will be able to negotiate supply and sales agreements on terms acceptable to us.

Most of these activities require significant lead times and must be advanced concurrently. We will be required to manage all of these matters using our existing resources while at the same time expanding our permanent staff and using outside consultants to assist in these matters. Because all of these matters must be completed before any production begins, a failure or delay in the completion of any one of these matters may delay production, possibly indefinitely, at the Johnson Camp Mine. Any delay in the restart process will cause an increase in costs for us and could have a material adverse affect on our financial condition or operations.

Unforeseen conditions may affect our mining and processing efficiency, and we may not be able to execute the leaching operation as planned if we do not maintain proper control of ore grade.

The parameters used in estimating mining and processing efficiency are typically based on testing and experience with previous operations. Various unforeseen conditions can occur that may materially affect the estimates. In particular, unless proper care is taken to ensure that proper ore grade control is employed and that other necessary steps are taken, we may not be able to achieve production forecasts as planned. In addition, our projected production is based on anticipated copper recoveries at the Johnson Camp Mine that are in excess of historical experience, which may result in an overestimation of our mining and processing efficiency.

We may never achieve our production estimates, as they are dependent on a number of assumptions and factors beyond our control.

We have prepared estimates of future copper production. We cannot assure you that we will ever achieve our production estimates or any production at all. Our production estimates depend on, among other things: the accuracy of our reserve estimates; the accuracy of assumptions regarding ore grades and recovery rates; ground conditions and physical characteristics of the mineralization, such as hardness and the presence or absence of particular metallurgical characteristics; the accuracy of estimated rates and costs of mining and processing; and our ability to obtain all permits to proceed with the expansion of our SX-EW plant on the Johnson Camp property. We plan to process the copper mineralization using SX-EW technology. These techniques may not be as efficient or economical as we project, and we may never achieve profitability. Our actual production may vary from our estimates if any of these assumptions prove to be incorrect.

Our operating expenses and capital expenditures will be significant and will likely increase in the future. Our ability to execute our mine plan for the Johnson Camp Mine may be hampered if we are unable to cope with such increases in our operating expenses and capital expenditures.

The reactivation of the Johnson Camp Mine and the development of new mining operations on the Johnson Camp property will require the commitment of substantial resources for operating expenses and capital expenditures, which may increase in subsequent years as consultants, personnel and equipment associated with advancing exploration, development and commercial production are added. The amounts and timing of expenditures will depend in part on the progress of ongoing exploration and development,

the results of consultants' analysis and recommendations, the rate at which operating losses are incurred, the execution of any joint venture agreements with strategic partners, our acquisition of additional properties, and other factors, many of which are beyond our control.

Our planned SX-EW operations will require significant amounts of sulfuric acid. A prolonged interruption in the supply of sulfuric acid or a major increase in the price of sulfuric acid may have an adverse effect on our financial condition.

The Johnson Camp Mine will require an average of 36,500 tons of sulfuric acid per year. Sulfuric acid supply for SX-EW projects in the Southwest U.S. is produced primarily as a smelter by-product at smelters in the Southwest U.S. and in Mexico. We hope to negotiate a long term supply contract with the owner of one or more of these smelters for sulfuric acid, however there can be no assurances that we will be successful. Any prolonged interruption in the supply of sulfuric acid, or any significant increase in the costs over those estimated in the feasibility study, may have an adverse impact on our financial condition.

A major increase in our input costs, such as those related to electricity, fuel and reagents, may have an adverse effect on our financial condition.

Our operations are affected by the cost of commodities and goods such as electrical power, fuel and supplies, including tires and reagents. Management prepares its cost and production guidance and other forecasts based on its review of current and estimated future costs. A major increase in any of these costs may have an adverse impact on our financial condition.

Our operations at the Johnson Camp Mine are dependent on certain equipment that may not be available.

We intend to use equipment we already own for operations at the Johnson Camp Mine. However, our mine plan calls for the acquisition or installation of certain additional equipment, including an overland conveyor system and certain equipment needed to rehabilitate and upgrade the existing SX/EW plant at the Johnson Camp Mine. There can be no assurance that we can source the additional equipment that we require, that the transportation costs of equipment to be relocated to the Johnson Camp Mine will not be higher than anticipated by us, or that such equipment will arrive in good working condition.

Our estimates of reserves are inherently subject to error, particularly since we have no recent operating history on which to base such estimates. Our actual results may differ due to unforeseen events and uncontrollable factors that can have significant adverse impacts.

The Johnson Camp Mine has no recent operating history upon which to base estimates of proven and probable ore reserves and estimates of future cash operating costs. Estimates are, to a large extent, based upon the interpretation of geological data obtained from drill holes and other sampling techniques performed by third parties, the methodologies and results of which we have assumed are reasonable and accurate, which results form the basis for, and constitute a fundamental variable in, the updated feasibility study. Winters, Dorsey derived estimates of cash operating costs based upon information provided by our company and anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates of the mineral from the ore, comparable facility and equipment operating costs, anticipated climatic conditions and other factors.

As a result, actual cash operating costs and economic returns based upon development of proven and probable ore reserves may differ significantly from those originally estimated. Moreover, significant decreases in actual or expected copper prices may mean reserves, once found, will be uneconomical to produce and may have to be restated. Until reserves are actually mined and processed, the quantity of reserves must be considered as estimates only.

Our estimates of reserves are based in large part on sampling data produced by third parties and on amounts of metallurgical testing that are less extensive than normal. In addition, our expected copper recovery rates at the Johnson Camp Mine significantly exceed historical experience at the property. There is no assurance that we will be able to meet these expectations and projections at an operational level.

We caution that our expectations with respect to copper recovery rates significantly exceed historical experience at the Johnson Camp Mine, as we plan to crush the ore to a smaller size with the view to increasing leaching efficiency. In addition, our projections of copper recovery are based on amounts of metallurgical testing that are less extensive than are commonly used in the industry for evaluating oxide copper deposits. Furthermore, our estimates of ore reserves reflect consumption projections for sulfuric acid and other consumable items that were developed using a limited number of samples taken by the former operators of the mine on the Johnson Camp property, which may not be representative of the characteristics of the copper deposits. There is no assurance that we will be able to meet these expectations and projections at an operational level.

Copper recovery rates for approximately 15% of our estimated total reserves may be less than optimal due to the presence of copper sulfide mineralization below the elevation of 4,560 feet.

Copper sulfide minerals are not as amenable to heap leach recovery techniques as copper oxides. Since copper sulfide mineralization is evident below an elevation of 4,560 feet in both the Burro and Copper Chief Pits, we caution that copper recovery rates for ore anticipated to be mined below that elevation (approximately 15% of estimated total ore reserves) may be inhibited. In addition, although the column test on the sample of Abrigo ore taken from an elevation of 4,620 feet which contained 4.49% sulfides exhibited good copper recoveries, the leaching of copper from ore mined at this depth may be less than optimal.

We have evaluated the commercial viability of the Johnson Camp Mine based on an estimate of ore reserves that is premised on a geologic resource model and estimate previously prepared that was based largely on drilling, sampling and assay data that had been developed by Cyprus, Arimetco and Summo, the accuracy of which cannot be assured.

We have evaluated the commercial viability of the Johnson Camp Mine based on an estimate of ore reserves contained in the updated feasibility study. The resource model and estimate previously prepared and used as the basis for the updated feasibility study is based largely on drilling, sampling and assay data that had been developed by the previous operators of Johnson Camp Mine, Cyprus and Arimetco, and by Summo. The validity of the estimates assumes the accuracy of the underlying drill hole electronic database.

We and Winters, Dorsey have conducted additional limited due diligence, such as reviews of historical project geological drill logs and assay certificates that have recently been located, but no additional drilling. However, complete accuracy of the drill hole electronic database cannot be assured.

Cyprus, Arimetco and Summo used different approaches to drilling, sampling and assay analysis, with the result that their respective results may not be comparable and thereby increase the risk of an over-estimation of ore reserves.

Cyprus Mines Corporation (which owned the Johnson Camp property until 1989, operating under the name Cyprus Johnson Copper Company), Arimetco and Summo used different approaches to drilling, sampling and assay analysis which may not be comparable. In particular, the soluble copper assay techniques used by Arimetco for ore grade estimation is not directly comparable to the soluble copper assay techniques used by Cyprus. The use of two incomparable approaches by Cyprus and Arimetco could have led to inconsistencies in or the skewing of the data underlying our estimates, thereby increasing the risk of an overestimation of ore reserves at Johnson Camp Mine, as well as increasing the risk of a material inaccuracy in the updated feasibility study.

Winters, Dorsey performed limited sampling work at the Johnson Camp Mine, and Winters, Dorsey concluded that it is therefore not possible at this time to verify the entire drill hole electronic database used for the current resource model and ore reserve estimates. Winters, Dorsey has largely assumed the reasonableness and accuracy of the drilling, sampling and assay methodologies and data which constitute a fundamental variable input in the updated feasibility study.

Winters, Dorsey was only able to perform limited sampling work at the Johnson Camp Mine in January and February 2006. Winters, Dorsey concluded that it is not possible for them to verify the entire original drill hole electronic database used for the current mineral resource model and ore reserve estimates because of the following reasons: (i) missing core and cuttings for the Arimetco drilled holes; (ii) missing or limited original core and cuttings logs for the Arimetco drilled holes; (iii) missing core and cuttings for the Cyprus Mines Corporation drilled holes; (iv) check assaying of old reverse circulation drill cuttings for acid soluble copper may be of limited value due to oxidation over the years they have been in storage, and (v) there are no acid soluble copper assays against which to compare the acid soluble assays of the Winters, Dorsey's samples. Although the limited sampling done by Winters, Dorsey shows good correlation on average to the existing electronic database, it cannot be completely verified at this time. Consequently, we and Winters, Dorsey have largely assumed the reasonableness and accuracy of the drilling, sampling and assay methodologies and data. Accordingly, there is a risk that results would vary if additional sampling work were undertaken. This, in turn, could adversely impact the current mineral resource model and ore reserve estimates, as well as increase the risk of a material inaccuracy in the updated feasibility study completed by Winters, Dorsey.

Our estimate of ore reserves at the Johnson Camp Mine is based on total copper assays rather than on soluble copper assays, and our expectations with respect to copper recovery are based on results of metallurgical testing that may not be duplicated in larger scale tests under onsite conditions or during production. As a result, there is a risk that we may have over-estimated the amount of recoverable copper.

Our estimate of ore reserves at the Johnson Camp Mine is based on total copper assays rather than soluble copper assays. A reserve estimate based on total copper is an indirect measurement of the amount of copper that is metallurgically available for recovery. There can be no assurance that metallurgical recoveries in small scale laboratory tests will be duplicated in larger scale tests under onsite conditions or during production. Accordingly, there is a risk that we may have over-estimated the amount of recoverable copper.

We will require additional permits and renewals of permits to reactivate the Johnson Camp Mine, the availability of which cannot be assured.

Although we have secured a number of permits for the restart and operation of the Johnson Camp Mine, we still need to obtain certain permits. Some permits have expired and have been re-applied for, certain permits will be required to be renewed from time to time during the life of the project, and certain permits may be suspended or require additional applications in the event of a significant or substantial change to the Johnson Camp Mine operations or prolonged inactivity. To the extent other approvals are required and not obtained, we may be curtailed or prohibited from commencing or continuing mining operations or from proceeding with planned exploration or development of mineral properties.

We will incur substantial debt and have granted a security interest in our assets. If we are unable to repay our loans when they become due, the lenders would be entitled to realize upon their security.

We have entered into a Credit Agreement dated as of June 28, 2007 with Nedbank Limited, as administrative agent and lead arranger, which provides for a \$25 million secured term loan credit facility that will be used our company to assist in financing the construction, start-up and operation of mining and metal operations at the Johnson Camp Mine. The Credit Agreement contemplates a series of term loans to be funded from time to time by a syndicate of lenders in response to draw-down requests by our company, with the aggregate amount of all term loans being \$25 million. The term loans will be available until the earlier of (i) the date of termination of the lender commitments; (ii) the first principal repayment date and (iii) June 30, 2008. The loans bear interest, payable in arrears, at an annual rate equal to the LIBOR rate for the interest period in effect plus a margin of 3.0% (3.5% during the initial reactivation period). If we default under the Credit Agreement, an additional 3.0% interest will be payable in addition to such annual rate and all interest will be payable on demand.

The Credit Agreement must be repaid beginning one year after the first draw down and ending four years after the date of the first draw down, subject to certain prepayment obligations set forth in the Credit Agreement. We have delivered a deed of trust, a collateral account agreement and certain other security agreements that grant to the lenders a first priority lien encumbering all of the real and personal property associated with the Johnson Camp property, including patented mining claims, fee lands and unpatented mining claims. The lenders would be entitled to realize upon their security interests if we are unable to repay or refinance the loans as they become due and seize our assets. In addition, pursuant to the terms of the Credit Agreement, we are restricted from paying dividends or making distributions on shares of our common stock, and from incurring exploration expenses on the Coyote Springs and Mimbres properties during the period that the term loans are available of more than \$1,500,000 and \$100,000, respectively. There is no assurance that we will be able to raise sufficient financing to repay this loan as it becomes due, or upon our ability to refinance the loans on acceptable terms, if at all.

We may require additional financing to complete the development and reactivation of the Johnson Camp Mine, the availability of which cannot be assured.

We expect that the initial capital costs within the first two years of start-up of the Johnson Camp Mine will exceed \$28 million (including working capital). Our estimated capital costs, and our estimated operating expenses, may change with our actual experience as our mine plan is implemented. We may still require additional financing to carry out our mine plan. We cannot guarantee that we will be able to obtain any additional financing on commercially reasonable terms or at all. If we fail to obtain the

necessary financing when needed, we may not be able to execute our mine plan and we may be forced to place the Johnson Camp Mine on care and maintenance status.

Title to the Johnson Camp property may be subject to other claims.

Although we believe we have exercised commercially reasonable due diligence with respect to determining title to properties we own or control, we cannot guarantee that title to these properties will not be challenged or impugned. The Johnson Camp property may be subject to prior unrecorded agreements or transfers or native land claims and title may be affected by undetected defects. There may be valid challenges to the title of the Johnson Camp property which, if successful, could impair development and/or operations.

The Johnson Camp property consists of 59 patented lode mining claims, 102 unpatented lode mining claims and 617 acres of fee simple lands. The copper processing facilities and the Copper Chief and Burro bulk mining pits that serve as focal points for our mine plan are located on the patented mining claims or fee simple parcels. However, we may in the future mine areas that are on unpatented mining claims. Unpatented mining claims are unique property interests, and are generally considered to be subject to greater title risk than other real property interests because the validity of unpatented mining claims is often uncertain. This uncertainty arises, in part, out of the complex federal and state laws and regulations under the United States General Mining Law, including the requirement of a proper physical discovery of a valuable lode mineral within the boundaries of each claim and proper compliance with physical staking requirements. Also, unpatented mining claims are always subject to possible challenges by third parties or validity contests by the Federal government. The validity of an unpatented mining or millsite claim, in terms of both its location and its maintenance, is dependent on strict compliance with a complex body of United States Federal and state statutory and decisional law. In addition, there are few public records that definitively determine the issues of validity and ownership of unpatented mining claims.

We do not insure against all risks, and we may be unable to obtain or maintain insurance to cover the risks associated with our operations at economically feasible premiums. Losses from an uninsured event may cause us to incur significant costs that could have a material adverse effect upon our financial condition.

Our insurance will not cover all the potential risks associated with a mining company's operations. We may also be unable to obtain or maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, we expect that insurance against risks such as environmental pollution or other hazards as a result of exploration and production may be prohibitively expensive to obtain for a company of our size and financial means. We might also become subject to liability for pollution or other hazards which may not be insured against or which we may elect not to insure against because of premium costs or other reasons. Losses from these events may cause us to incur significant costs that could have a material adverse effect upon our financial condition and results of operations.

We compete with larger, better capitalized competitors in the mining industry. This may impair our ability to maintain or acquire attractive mining properties, and thereby adversely affect our financial condition.

The mining industry is competitive in all of its phases. We face strong competition from other mining companies in connection with the acquisition of properties producing, or capable of producing, base and precious metals. Many of these companies have greater financial resources, operational experience and technical capabilities than us. As a result of this competition, we may be unable to maintain or acquire attractive mining properties on terms we consider acceptable or at all. Consequently, our revenues, operations and financial condition could be materially adversely affected.

We are dependent on our key personnel, and the loss of any such personnel could adversely affect our company.

Our success depends on our key executives, John Perry and Erland Anderson, and key operating personnel at the Johnson Camp Mine, Eric Ivey and Mathew Williams. We face intense competition for qualified personnel, and the loss of the services of one or more of such key personnel could have a material adverse effect on our business. Our ability to manage exploration and development activities, and hence our success, will depend in large part on the efforts of these individuals. We cannot be certain that we will be able to attract and retain such personnel in the future.

If we succeed in reactivating the Johnson Camp Mine, we will have to significantly expand our workforce. We may not be successful in recruiting the necessary personnel, or in managing the new challenges that we will face with any significant growth.

Our plan to reactivate the Johnson Camp Mine requires us to expand our workforce at the Johnson Camp Mine to approximately 60 employees, and hire various contractors. This growth will place substantial demands on our company and our management. Our ability to assimilate new personnel will be critical to our performance. We will be required to recruit additional personnel and to train, motivate and manage employees. We will also have to adopt and implement new systems in all aspects of our operations. We have no assurance that we will be able to recruit the personnel required to execute our programs or to manage these changes successfully.

The actual costs of reclamation are uncertain, and any additional amounts that we are required to spend on reclamation may have a material adverse effect on our financial condition.

The costs of reclamation included in the updated feasibility study are estimates only and may not represent the actual amounts which will be required to complete all reclamation activity. It is not possible to determine the exact amount that will be required, and the amount that we will be required to spend could be materially different than current estimates. Reclamation bonds or other forms of financial assurance represent only a portion of the total amount of money that will be spent on reclamation over the life of the Johnson Camp Mine operation. Although Winters, Dorsey has included estimated reclamation amounts provided by us in the updated feasibility study, it will be necessary to revise the planned expenditures, and the operating plan for the mine, in order to fund required reclamation activities. Any additional amounts required to be spent on reclamation may have a material adverse affect on our financial condition and results of operations.

Our directors and officers may have conflicts of interest.

Some of our directors and officers have served as officers and directors for other companies engaged in natural resource exploration and development and may also serve as directors and/or officers of other companies involved in natural resource exploration and development in the future. We do not believe that any of our directors and officers currently have any conflicts of interest of this nature.

New legislation, including the Sarbanes-Oxley Act of 2002, may make it difficult for us to retain or attract officers and directors.

We may be unable to attract and retain qualified officers, directors and members of board committees required to provide for our effective management as a result of the recent and currently proposed changes in the rules and regulations which govern publicly-held companies. The Sarbanes-Oxley Act of 2002 has resulted in a series of rules and regulations by the Securities and Exchange Commission that increase responsibilities and liabilities of directors and executive officers. The perceived increased personal risk associated with these recent changes together with the risks associated with our business may deter qualified individuals from accepting these roles.

We will be required to evaluate our internal controls over financial reporting under Section 404 of the Sarbanes-Oxley Act of 2002, which could result in a loss of investor confidence in our financial reports and have an adverse effect on the price of our shares of common stock.

We expect that beginning with our annual report on Form 10-KSB for the year ended December 31, 2007, we will be required to furnish a report by management on our internal controls over financial reporting. Such report will contain, among other matters, an assessment of the effectiveness of our internal control over financial reporting, including a statement as to whether or not our internal control over financial reporting is effective. This assessment must include disclosure of any material weaknesses in our internal control over financial reporting identified by our management.

We have identified certain material weaknesses in our internal controls over financial reporting that we are in the process of addressing. We cannot be certain that we will be able to complete our evaluation of our internal controls, testing and any required remediation in a timely fashion once we become subject to the requirements mandated by Section 404 of the Sarbanes-Oxley Act of 2002. During the evaluation and testing process, if we identify one or more material weaknesses in our internal control over financial reporting, we will be unable to assert that such internal control is effective. If we are unable to assert that our internal control over financial reporting is effective as of December 31, 2007 (or if our auditors are unable to express an opinion on the effectiveness of our internal controls beginning with the year ending December 31, 2008), we could lose investor confidence in the accuracy and completeness of our financial reports, which may have a material adverse effect on our stock price.

Failure to comply with the new rules may also make it more difficult for us to obtain certain types of insurance, including director and officer liability insurance, and we may be forced to accept reduced policy limits and coverage and/or incur substantially higher costs to obtain the same or similar coverage. The impact of these events could also make it more difficult for us to attract and retain qualified personnel to serve on our board of directors, on committees of our board of directors, or as executive officers.

We have a limited market for our securities.

Although certain market makers facilitate trades of our company's common stock on the Pink Sheets LLC, there is currently a limited market for shares of our company's common stock and we cannot be certain that an active market will develop. The lack of an active public market could have a material adverse effect on the price and liquidity of our common stock.

Broker-dealers may be discouraged from effecting transactions in our common shares because they are considered a penny stock and are subject to the penny stock rules.

Rules 15g-1 through 15g-9 promulgated under the Exchange Act impose sales practice and disclosure requirements on certain brokers-dealers who engage in certain transactions involving a penny stock. Subject to certain exceptions, for the purposes relevant to us, penny stock includes any equity security that has a market price of less than \$5.00 per share or with an exercise price of less than \$5.00 per share. The additional sales practice and disclosure requirements imposed upon broker-dealers may discourage broker-dealers from effecting transactions in our shares, which could severely limit the market liquidity of the shares and impede the sale of our shares in the secondary market.

Risks Related to Our Industry

The feasibility of our mine plan is based on certain assumptions about the sustainability of the current price of copper. We may be adversely affected by fluctuations in copper prices.

The value and price of our common shares, our financial results, and our exploration, development and mining activities may be significantly adversely affected by declines in the price of copper and other metals. Copper prices fluctuate widely and are affected by numerous factors beyond our control such as interest rates, exchange rates, inflation or deflation, fluctuation in the value of the United States dollar and foreign currencies, global and regional supply and demand, and the political and economic conditions of copper producing countries throughout the world. The aggregate effect of these factors on copper price is impossible to predict. Because mining operations are conducted over a number of years, it may be prudent to continue mining for some periods during which cash flows are temporarily negative for a variety of reasons including a belief that the low price is temporary and/or the greater expense incurred in closing a property permanently.

In addition to adversely affecting our financial condition and our reserve estimates, declining metal prices can impact operations by requiring a reassessment of the commercial feasibility of a particular project. Such a reassessment may be the result of a management decision related to a particular project. Even if the project is ultimately determined to be economically viable, the need to conduct such a reassessment may cause substantial delays in development or may interrupt operations, if any, until the reassessment can be completed.

Our operations will involve the exploration, development and production of copper and other metals, with the attendant risks of damage to or loss of life or property and legal liability. In addition, unforeseen conditions or our failure to ensure ore grade may have a material adverse effect on our estimated processing efficiency and our ability to carry out our planned leaching operations.

Our operations will be subject to all the hazards and risks normally encountered in the exploration, development and production of copper and other base or precious metals, including unusual and unexpected geologic formations, seismic activity, pit-wall failures, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and legal liability.

The parameters used in estimating mining and processing efficiency are based on testing and experience with previous operations. Various unforeseen conditions can occur that may materially affect the estimates. In particular, unless proper care is taken to ensure that proper ore grade control is employed and that other necessary steps are taken, we may not be able to execute the leaching operation as planned.

Government regulation impacting the mining industry, such as those respecting mining, taxes, labor standards, occupational health and land, may adversely affect our business and planned operations.

Our mining, processing, development and mineral exploration activities, if any, are subject to various laws governing prospecting, mining, development, production, taxes, labor standards and occupational health, mine safety, toxic substances, land use, water use, land claims of local people and other matters. New rules and regulations may be enacted or existing rules and regulations may be applied in such a manner as to limit or curtail our exploration, production or development. Amendments to current laws and regulations governing operations and activities of exploration, development mining and milling or more stringent implementation of these laws could have a material adverse impact on our business and financial condition and cause increases in exploration expenses, capital expenditures or production costs or reduction in levels of production assuming we achieve production or require abandonment or delays in development of new mining properties.

Certain groups opposed to mining may interfere with our efforts to reactive the Johnson Camp Mine.

In North America there are organizations opposed to mining, particularly open pit mines such as the Johnson Camp Mine. We anticipate that there may be opposition to the restart of operations at the Johnson Camp Mine. We believe our company has the support of representatives from the communities in the immediate vicinity of Johnson Camp Mine including the city of Tucson and the community of Dragoon, and from various levels of government in Arizona having jurisdiction over the Johnson Camp Mine. Although we intend to comply with all environmental laws and permitting obligations in conducting our business, there is still the possibility that those opposed to the operation of the Johnson Camp Mine will attempt to interfere with the restart and operation of the Johnson Camp Mine, whether by legal process, regulatory process or otherwise. Such interference could have an impact on our ability to restart and operate the Johnson Camp Mine in the manner that is most efficient or appropriate, if at all, and any such impact could have a material adverse effect on our financial condition and results of operations.

Our operations are subject to environmental risks and environmental regulation. Our failure to manage such risks or comply with such regulation will potentially expose us to significant liability.

All phases of our operations, if any, will be subject to Federal, state and local environmental regulation. These regulations mandate, among other things, the maintenance of air and water quality standards and land reclamation. They also set forth limitations on the generation, transportation, storage and disposal of solid and hazardous waste. Environmental legislation is evolving in a manner which we anticipate will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. Future changes in environmental regulation may adversely affect our operations, if any. Environmental hazards may exist on the Johnson Camp property or on properties which we hold or may acquire in the future that are unknown to us at present and that have been caused by previous or existing owners or operators of the properties.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in mining operations or in the exploration or development of mineral properties may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Our failure to contain or adequately deal with hazardous materials may expose us to significant liability for which we may not be insured.

Production, if any, at the Johnson Camp Mine will involve the use of hazardous materials. Should these materials leak or otherwise be discharged from their containment systems, we may become subject to liability for hazards that we may not be insured against or for clean up work that may not be insured.

Item 1. Legal Proceedings

Other than as set forth below, we know of no material, existing or pending legal proceedings against our company, nor are we involved as a plaintiff in any material proceeding or pending litigation. There are no proceedings in which any of our directors, officers or affiliates, or any registered or beneficial shareholder, is an adverse party or has a material interest adverse to our interest. The outcome of open unresolved legal proceedings is presently indeterminable. Any settlement resulting from resolution of these contingencies will be accounted for in the period of settlement. We do not believe the potential outcome from any legal proceedings that remain unresolved will significantly impact our financial position, results of operations or cash flows.

Arizona Department of Environmental Quality (ADEQ) Compliance Order and Stipulated Judgment

As previously disclosed in our annual reports on Form 10-KSB for the years ended December 31, 2006, 2005 and 2004, ADEQ issued a Compliance Order on September 7, 2002, requiring our company to bring the Johnson Camp Mine into compliance with Arizona's aquifer protection laws. Pursuant to the Compliance Order, we entered into a stipulated judgment with ADEQ which assessed civil penalties against us in the amount of \$4,325,000. The stipulated judgment can only be entered should a default notice issued pursuant to the Compliance Order not be cured within 60 days after notice is received. The Compliance Order further provides that any future violations of Arizona's aquifer protection laws would subject us to additional civil penalties, including the entry of the stipulated judgment and the assessment of the civil penalties described in the stipulated judgment. We have not received a default notice under the Compliance Order, and the stipulated judgment has not been entered against us.

In response to the Compliance Order, we applied \$1.5 million in escrowed funds to environmental remediation activities at the Johnson Camp Mine, and to the preparation and filing of an Aquifer Protection Permit application with ADEQ in June 2003. ADEQ responded to the Aquifer Protection Permit application by letter dated September 2, 2003 which included a comprehensive list of specific deficiencies. We submitted a partial response on September 28, 2006, but could not provide certain financial assurances required by ADEQ. In reply, ADEQ issued an Administrative Review Notice dated May 18, 2007 which included among other new items, lack of the required financial assurances as a deficiency. We submitted a response on July 2, 2007, but due to technical reasons were unable to provide certain financial assurance in a form required by ADEQ. On July 6, 2007 we received a notice of violation because financial assurance was not provided. We fully responded to the notice of violation on August 10, 2007 including documentation evidencing our submission of financial assurance submitted to ADEQ on August 1, 2007.

Settlement Agreement with Platinum Diversified Mining, Inc. and its Subsidiaries

As disclosed in our quarterly report on Form 10-QSB for the period ended March 31, 2007, we entered into a settlement agreement dated March 7, 2007 with Platinum Diversified Mining, Inc. (*Platinum*) and Platinum's direct and indirect subsidiaries, Platinum Diversified Mining USA, Inc. (*PDM USA*) and PDM Merger Corp. (together with Platinum and PDM USA, the *PDM Parties*), in connection with the agreement and plan of merger dated October 23, 2006 (the *Merger Agreement*) among the parties. Under the settlement agreement, the PDM Parties have agreed to pay our company an amount up to \$3.6 million in full and final settlement of all claims and disputes between the parties, as follows:

- (a) The PDM Parties agreed forthwith to pay the sum of \$1.1 million to our company (the *Initial Payment*), to be paid by way of the release to our company of the \$1 million previously deposited by Platinum with American Stock Transfer & Trust Company (*AST*), as escrow agent, pursuant to the Merger Agreement (including interest, but net of AST's expenses), with any shortfall to be paid from Platinum's working capital; and
- (b) Platinum has agreed to pay the sum of \$50,000 to our company each calendar month, beginning on April 1, 2007 (the *Monthly Payments*) until the earlier of (i) the completion of an acquisition by Platinum that meets certain prescribed criteria (a *Qualifying Acquisition*), or (i) the actual liquidation of Platinum if it has not entered into a letter of intent or agreement in principle to effect a *Qualifying Acquisition*, or if it has not completed a *Qualifying Acquisition*, by certain prescribed dates.

As previously reported, we received the *Initial Payment* of \$1.1 million. If Platinum completes a *Qualifying Acquisition*, Platinum will be required to pay the balance owing on the settlement sum of \$3.6 million (the *Balance of Settlement Funds*), net of the *Initial Payment* and any *Monthly Payments* actually received by our company. The *Balance of Settlement Funds* will be payable to our company out of certain funds being held in trust (the *Trust Funds*) as a condition of Platinum's listing as a special

purpose acquisition corporation on the AIM market (AIM) of the London Stock Exchange. If the Trust Funds are insufficient to pay the Balance of Settlement Funds, Platinum will be required to pay to our company the greater of: (i) the funds available and (ii) \$1 million. Thereafter, Platinum will continue to be obligated to make the Monthly Payments, plus interest, until the Balance of Settlement Funds has been paid.

According to Platinum's public disclosure record, it was admitted to trading on AIM on March 13, 2006 (the Admission Date), and it must be dissolved and the Trust Funds returned to its security holders, if it has not: (a) effected a Qualifying Acquisition or signed a letter of intent, agreement in principle or definitive agreement to effect a Qualifying Acquisition within the 12 months following the Admission Date; or (b) (having signed a letter of intent or an agreement in principle within 12 months following the Admission Date) effected an acquisition within 18 months following the Admission Date. In the event that Platinum is dissolved for having failed to meet these conditions, it will not be required to pay the Balance of Settlement Funds to our company and shall be relieved of any further obligations to make payments under the settlement agreement. Platinum issued a press release on March 14, 2007 announcing that it had entered into two separate letters of intent on mining projects which, taken in aggregate, it believes would constitute a Qualifying Acquisition eligible for submission to Platinum's shareholders for approval.

On June 5, 2007, Platinum provided an update in which it confirmed that the two letters of intent related to:

- (a) the acquisition all of the assets of Moen Builders, M & W Milling and Roy and Marlene Moen in the Virginia City District of Madison County, Montana (the Virginia City Acquisition:); and
- (b) the acquisition of all interests held by a private Santiago family for two copper properties in northern Chile (the "Chilean Acquisition").

However, Platinum disclosed that the results of the due diligence it had undertaken in connection with the Virginia City Acquisition had indicated lower resource estimates than previously expected, and, as a result, Platinum had terminated the letter of intent in respect of the Moen Acquisition. In respect of the Chilean Acquisition, Platinum announced that a third party purchase contracts to which the property was subject had been exercised, and that accordingly, Platinum is not likely to gain full control of the property. It indicated that it instead will acquire the underlying passive ownership interests, amounting to a net smelter royalty of two per cent.

On June 5, 2007, Platinum also disclosed that it had entered into a non-binding term sheet with Golden Eagle International Inc. ("Golden Eagle"), a company quoted on the OTC Bulletin Board, in respect of the following transactions:

- (a) the acquisition of Golden Eagle's Buen Futuro gold and copper project in eastern Bolivia consisting of 2,500 acres located 186 miles north of Santa Cruz, Bolivia;
- (b) a joint venture on Golden Eagle's Precambrian Properties (Joint Venture); and
- (c) an option for the acquisition by the Company of Golden Eagle's Gold Bar Mill located in Eureka, Nevada.

On June 28, 2007, Platinum announced that it had terminated its earlier-announced talks to buy Golden Eagle's Buen Futuro gold and copper project in eastern Bolivia, but that it had signed a letter of intent to acquire International Consolidated Minerals Ltd., which holds the Pachapaqui Mine, a silver, lead, zinc and copper asset in Peru.

Platinum's ability to complete a Qualifying Acquisition remains unclear to our company's management at this time.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

We issued securities in the following transactions without registering the securities under the Securities Act:

To date, certain equity-based fees have been paid to our non-executive directors in the form of awards issued pursuant to our company's 2006 Stock Incentive Plan. The non-executive directors have limited rights, exercisable within applicable time limits, to elect to have any percentage of such awards, and any percentage of cash fees, payable in deferred stock units. Each of our non-executive directors has exercised such rights in respect of the equity-based fees payable to him for the current year. Our non-executive directors earned the following additional deferred stock units during the three months ended June 30, 2007: T. Sean Harvey earned 1,884,921 deferred stock units, Douglas Hamilton earned 14,285,714 deferred stock units, John Cook earned 11,607,143 deferred stock units, and Stephen Seymour earned 8,928,571 deferred stock units. We issued these securities to the directors, each of whom is an accredited investor, relying on Rule 506 of Regulation D and/or Section 4(2) of the Securities Act of 1933, as amended.

Mr. Nesmith voluntarily resigned as a director of our company effective March 29, 2007. At the time of his resignation, Mr. Nesmith was Nord's Lead Director and the Chairman of Nord's Executive Committee. He was also a member of Nord's Audit Committee, Corporate Governance and Nominating Committee, and Compensation Committee. Upon his resignation, Mr. Nesmith became entitled to receive 64,376 shares of common stock in exchange for the 64,376,651 deferred stock units that he held immediately prior to this resignation. We issued these securities to Mr. Nesmith in May 2007 pursuant to section 3(a)(9) of the Securities Act of 1933, as amended.

During the second quarter of 2007, we issued 40,000 shares of our common stock valued at \$30,000 to John Perry pursuant to his employment agreement. Mr. Perry was recently appointed as our President and Chief Executive Officer, and continues to serve as our Chief Financial Officer, Secretary and Treasurer until a suitable replacement to fill those offices can be found. We issued these securities to Mr. Perry, an accredited investor, relying on Section 4(2) of the Securities Act of 1933, as amended.

On June 11, 2007 we issued a total of 900,000 stock options to our six directors, 500,000 stock options to John Perry, our Chief Executive Officer and 250,000 stock options to Erland Anderson, our Chief Operating Officer, pursuant to our 2006 Stock Incentive Plan. The options granted to the non-executive directors and officers of the Company will vest as to one-third at time of grant, as to one-third on June 11, 2008 and as to the balance on June 11, 2009. The options are exercisable for a period of ten years at an exercise price of \$0.68 per share. We issued these securities to the directors, each of whom is an accredited investor, relying on Rule 506 of Regulation D and/or Section 4(2) of the Securities Act of 1933, as amended.

During the second quarter of 2007, we issued a total of 150,000 shares of common stock upon exercise of certain outstanding common stock purchase warrants at an aggregate exercise price of \$52,500. We issued these securities to accredited investors, relying on Rule 506 of Regulation D and/or Section 4(2) of the Securities Act of 1933, as amended.

On June 29, 2007, we issued: (a) 130,000 fully paid and non-assessable shares of common stock to Mr. Hirsch upon conversion of 50 percent of the outstanding principal and interest under a \$35,000 convertible promissory note dated June 29, 2004, at a conversion price of \$0.175 per share; (b) 212,195 fully paid and non-assessable shares of common stock to Mr. Seymour upon conversion of 50 percent of the outstanding principal and interest under a \$66,000 convertible promissory note dated August 19, 2004, at a conversion price of \$0.20 per share; (c) 337,458 fully paid and non-assessable shares of common stock to Mr. Hirsch upon conversion of 50 percent of the outstanding principal and interest under a \$106,000 convertible promissory note dated October 4, 2004, at a conversion price of \$0.20 per share. We issued these securities to accredited investors, relying on section 3(a)(9) of the Securities Act of 1933, as amended.

On June 5, 2007, we completed an offering of 30,666,700 special warrants on June 5, 2007. The special warrants were offered and sold at a price of \$0.75 per special warrant, for aggregate gross proceeds of approximately \$23 million. Each special warrant is convertible into one share of common stock and one-half of one common stock purchase warrant for no additional consideration. Each warrant, when issued, will entitle the holder to purchase one share of common stock for a period of five years following the date of closing of the private placement at a price of \$1.10 per share. A total of 3,948,800 special warrants were sold to institutional accredited investors (as defined in Rules 501(a)(1), (2), (3) and (7) of Regulation D under the Securities Act of 1933, as amended), pursuant to Rule 506 of Regulation D and/or Section 4(2) of the Securities Act of 1933. The balance of 26,717,900 special warrants were sold in offshore transactions to persons who are not U.S. persons (each as defined in Rule 902 of Regulation S under the Securities Act of 1933), pursuant to Rule 903 of Regulation S under the Securities Act of 1933, and in accordance with applicable local securities laws.

In connection with the special warrants offering, we entered into an agency agreement whereby, on June 5, 2007 we issued 1,840,002 stock options to the agents entitling them to acquire one share of common stock of the Company at anytime within the subsequent 24 month period at an exercise price of \$0.75. These options were issued to non-U.S. persons in an offshore transaction, pursuant to Rule 903 of Regulation S under the Securities Act of 1933, and in accordance with applicable local securities laws.

Purchases of Equity Securities by the Issuer and Affiliated Purchasers

We have not purchased any of our shares of common stock or other securities since January 1, 2006.

Item 3. Defaults Upon Senior Securities

None.

Item 4. Submission of Matters to a Vote of Securities Holders

None.

Item 5. Other Information

In April 2007, our Board of Directors authorized the filing of an amendment to our company's Amended Certificate of Incorporation to increase our authorized capital from 50,000,000 to 100,000,000 shares of stock, par value \$0.01 per share. The amendment was filed with the Secretary of State for the State of Delaware with effect from May 8, 2007. This increase in our company's authorized capital was approved by our stockholders at the annual meeting held on October 18, 2006.
