FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended **June 30, 2013**

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number: **000-31203**

NET 1 UEPS TECHNOLOGIES, INC.

(Exact name of registrant as specified in its charter)

Florida
(State or other jurisdiction
of incorporation or organization)

98-0171860
(I.R.S. Employer
Identification No.)

**President Place, 4th Floor, Cnr. Jan Smuts Avenue and Bolton Road
Rosebank, Johannesburg 2196, South Africa**

(Address of principal executive offices)

Registrant's telephone number, including area code: **27-11-343-2000**

Securities registered pursuant to section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
<u>Common Stock,</u> <u>par value \$0.001 per share</u>	<u>NASDAQ Global Select Market</u>

Securities registered pursuant to section 12(g) of the Act:

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
Yes No

Edgar Filing: NET 1 UEPS TECHNOLOGIES INC - Form 10-K

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act.

Yes [] No [X]

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filings requirements for the past 90 days.

Yes [X] No []

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes [X] No []

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. []

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act (Check one):

[] Large accelerated filer

[X] Accelerated filer

[] Non-accelerated filer

[] Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes [] No [X]

The aggregate market value of the registrant's common stock held by non-affiliates of the registrant as of December 31, 2012 (the last business day of the registrant's most recently completed second fiscal quarter), based upon the closing price of the common stock as reported by The Nasdaq Global Select Market on such date, was \$129,885,719. This calculation does not reflect a determination that persons are affiliates for any other purposes.

As of August 20, 2013, 45,592,550 shares of the registrant's common stock, par value \$0.001 per share were outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Certain portions of the definitive Proxy Statement for our 2013 Annual Meeting of Shareholders are incorporated by reference into Part III of this Form 10-K.

FORWARD LOOKING STATEMENTS

In addition to historical information, this Annual Report on Form 10-K contains forward-looking statements that involve risks and uncertainties that could cause our actual results to differ materially from those projected, anticipated or implied in the forward-looking statements. Factors that might cause or contribute to such differences include, but are not limited to, those discussed in Item 1A Risk Factors. In some cases, you can identify forward-looking statements by terminology such as may, will, should, could, would, expects, plan, anticipates, believes, estimates, predicts, potential or continue or the negative of such terms and other common terminology. You should not place undue reliance on these forward-looking statements, which reflect our opinions only as of the date of this Annual Report. We undertake no obligation to release publicly any revisions to the forward-looking statements after the date of this Annual Report. You should carefully review the risk factors described in other documents we file from time to time with the Securities and Exchange Commission, including the Quarterly Reports on Form 10-Q to be filed by us in our 2014 fiscal year, which runs from July 1, 2013 to June 30, 2014.

ITEM 1. BUSINESS

Overview

We are a leading provider of payment solutions and transaction processing services across multiple industries and in a number of emerging economies.

We have developed and market a comprehensive transaction processing solution that encompasses our smart card-based alternative payment system for the unbanked and under-banked populations of developing economies and for mobile transaction channels. Our market-leading system can enable the billions of people globally who generally have limited or no access to a bank account to enter affordably into electronic transactions with each other, government agencies, employers, merchants and other financial service providers. Our universal electronic payment system, or UEPS, uses biometrically secure smart cards that operate in real-time but offline, unlike traditional payment systems offered by major banking institutions that require immediate access through a communications network to a centralized computer. This offline capability means that users of our system can conduct transactions at any time with other card holders in even the most remote areas so long as a smart card reader, which is often portable and battery powered, is available. Our off-line systems also offer the highest level of availability and affordability by removing any elements that are costly and are prone to outages. Our latest version of the UEPS technology has been certified by the EuroPay, MasterCard and Visa global standard, or EMV, which facilitates our traditionally proprietary UEPS system to interoperate with the global EMV standard and allows card holders to transact at any EMV-enabled point of sale terminal or ATM. The UEPS/EMV technology has been deployed on an extensive scale in South Africa through the issuance of MasterCard-branded UEPS/EMV cards to our social welfare grant customers. In addition to effecting purchases, cash-backs and any form of payment, our system can be used for banking, health care management, international money transfers, voting and identification.

We also provide secure transaction technology solutions and services, by offering transaction processing, financial and clinical risk management solutions to various industries. We have extensive expertise in secure online transaction processing, cryptography, mobile telephony and integrated circuit card (chip/smart card) technologies.

Our technology is widely used in South Africa today, where we distribute pension and welfare payments, using our UEPS/EMV technology, to over nine million recipient cardholders across the entire country, process debit and credit card payment transactions on behalf of a wide range of retailers through our EasyPay system, process value-added services such as bill payments and prepaid airtime and electricity for the major bill issuers and local councils in South Africa, and provide mobile telephone top-up transactions for all of the South African mobile

carriers. We are the largest provider of third-party and associated payroll payments in South Africa through our FIHRST service that processes monthly payments for approximately 1,300 employer groups representing over 900,000 employees. Our MediKredit service provides the majority of funders and providers of healthcare in South Africa with an on-line real-time management system for healthcare transactions. We perform a similar service in the US through our XeoHealth subsidiary.

Internationally, through KSNET, the second largest transaction processor by volume in Korea, we offer card processing, payment gateway and banking value-added services in that country.

Our Net1 Mobile Solutions business unit is responsible for the worldwide technical development and commercialization of our array of web and mobile applications and payment technologies, such as Mobile Virtual Card, or MVC, Chip and GSM licensing and VTU and has deployed solutions in many countries, including South Africa, Namibia, Nigeria, Cameroon, the Philippines and Colombia.

All references to the Company, we, us, or our are references to Net 1 UEPS Technologies, Inc. and its consolidated subsidiaries, collectively, and all references to Net1 are to Net 1 UEPS Technologies, Inc. only, except as otherwise indicated or where the context indicates otherwise.

Market Opportunity

Services for the Under-banked: According to the World Bank, three quarters of the world's poor, living on less than \$2 a day, have no bank account. As a result, 2.5 billion adults around the world, or 50% of the world's adult population, do not have bank accounts or access to financial services. This situation arises when banking fees are either too high relative to an individual's income, a bank account provides little or no meaningful benefit or there is insufficient infrastructure to provide financial services economically in the individual's geographic location. We refer to these people as the unbanked and the under-banked. These individuals typically receive wages, welfare benefits, money transfers or loans in the form of cash, and conduct commercial transactions, including the purchase of food and clothing, in cash.

The use of cash, however, presents significant risks. In the case of recipient cardholders, they generally have no secure way of protecting their cash other than by converting it immediately into goods, carrying it with them or hiding it. In cases where an individual has access to a bank account, the typical deposit, withdrawal and account fees meaningfully reduce the money available to meet basic needs. For government agencies and employers, using cash to pay welfare benefits or wages results in significant expense due to the logistics of obtaining that cash, moving it to distribution points and protecting it from theft.

Our target under-banked customer base in most emerging economies, and particularly in South Africa, has limited access to formal financial services and therefore relies heavily on the unregulated informal sector for such services. By leveraging our smart card and mobile technologies, we are able to offer affordable, secure and reliable financial services such as loans and insurance products to these consumers and alleviate some of the challenges they face in dealing with the informal sector.

With over 30 million cards issued in more than ten developing countries around the world, our track record and scale uniquely positions us to continue further geographical penetration of our technology in additional emerging countries.

Online transaction processing services: The continued global growth of retail credit and debit card transactions is reflected in the March 2013 Nilson Report, according to which worldwide annual general purpose card purchase dollar volume increased 14.8% to \$17.3 trillion in 2012, while transaction volume increased by 9.3% to 178 billion transactions and cards issued increased by 13.2% to 7.4 billion cards during the same period. General purpose cards include the major card network brands such as MasterCard, Visa, China UnionPay and American Express. In South Africa we operate the largest bank-independent transaction processing service through EasyPay, where we have developed a suite of value-added services such as bill payment, airtime top-up, gift card, money transfer and pre-paid utility purchases that we offer as a complete solution to merchants and retailers. In Korea, through KSNET, we operate the second largest transaction processor by volume, where we provide card processing, banking value-added services and payment gateway functionality to the retail industry. Our expertise in on-line transaction processing and value-added services provides us with the opportunity to participate globally in this rapidly growing market segment.

Mobile Payments: Despite lacking access to formal financial services, large proportions of the under-banked customer segment own and utilize mobile phones. The World Bank's research has confirmed the rising popularity of using mobile phones to transfer money and for banking that often does not require setting up an account at a brick-and-mortar bank. The World Bank has stated that mobile banking, which allows account holders to pay bills, make deposits or conduct other transactions via text messaging, has expanded to 16 percent of the market in Sub-Saharan Africa, where traditional banking has been hampered by transportation and other infrastructure problems.

Mobile phones are therefore increasingly viewed as a channel through which this underserved population can gain access to formal financial and other services. Today, most mobile payment solutions offered by various participants in the industry largely provide access to information and basic services, such as allowing consumers to check account balances or transfer funds between existing accounts with the financial institution, but they offer limited functionality and ability to use the mobile device as an actual payments and banking instrument. Our UEPS and Virtual Card solutions are enabled to run on the SIM cards in mobile phones and provide our users with secure payment and banking functionality.

Healthcare: Given the lack of broad-based healthcare services in many emerging economies, governments are increasingly focused on driving initiatives to provide affordable and accessible healthcare services to their populations. Similarly, countries such as the United States are embarking on expansive overhauls of their existing healthcare systems.

Through our MediKredit and XeoHealth services we combine our payments expertise with our real-time rules engine and claims processing technology to offer governments, funders and providers of healthcare a comprehensive solution that offers a completely automated healthcare rules adjudication and payment system, reducing both cost and time.

Our Key Products

UEPS and UEPS/EMV

We developed our core UEPS technology to enable the affordable delivery of financial products and services to the world's unbanked and under-banked populations. Our native UEPS technology is designed to provide the secure delivery of these products and services in the most under-developed or rural environments, even in those that have little or no communications infrastructure. Unlike a traditional credit or debit card where the operation of the account occurs on a centralized computer, each of our smart cards effectively operates as an individual bank account for all types of transactions. All transactions that take place through our system occur between two smart cards at the point of service, or POS, as all of the relevant information necessary to perform and record transactions reside on the smart cards.

The transfer of money or other information can take place without any communication with a centralized computer since all validation, creation of audit records, encryption, decryption and authorization take place on, or are generated between, the smart cards themselves. Importantly, the cards are protected through the use of biometric fingerprint identification, which is designed to ensure the security of funds and card holder information. Transactions are generally settled by merchants and other commercial participants in the system by sending transaction data to a mainframe computer on a batch basis. Settlements can be performed online or offline. The mainframe computer provides a central database of transactions, creating a complete audit trail that enables us to replace lost smart cards while preserving the notional account balance, and to identify fraud.

Our UEPS technology includes functionality that allows the following:

- Transparent and automatic recovery of transactions;
- Transaction cancellation;
- Refunds;
- Multiple audit trails;
- Offline loading and spending;
- Biometric identification;
- Continuous debit;
- Multiple wallets;
- Morphing of other common payment systems, such as EMV;
- Automatic credit;
- Automatic debit;
- Interest calculations; and
- Milking / batching of large transaction volumes in an off-line environment.

Our UEPS technology incorporates the software, smart cards, payment terminals, back-end infrastructure and transaction security to provide a complete payment and transaction processing solution.

Within industry verticals, our UEPS technology is applied to electronic commerce transactions in the fields of social security, wage distribution, banking, medical and patient management, money transfers, voting and identification systems. Market sectors include government and non-government organizations, or NGOs, healthcare, telecoms, financial institutions, retailers, petroleum and utilities.

Our latest version of the UEPS technology is interoperable with the global EMV standard, allowing the cards to be used wherever EMV cards are accepted, while also providing all the additional functionality offered by UEPS. This UEPS/EMV functionality is especially relevant in areas where there is an established payment system and provides flexibility to our customers to be serviced at any POS, including point of sale devices and ATMs.

Payment Transaction Management

Our payment transaction management service incorporates the entire electronic funds transfer, or EFT, and non-EFT transactions suites, allowing merchants to accept a range of payment tokens/instruments and banks to acquire those payment tokens/instruments. This encompasses conventional magnetic-stripe cards, credit, debit and private label cards, card-not-present transactions and contact and contact-less smart cards with PIN and/or biometric cardholder verification.

The service utilizes a complex set of processing rules defined by the card associations, central banks and local issuers governing the acceptance or rejection of the payment token/instrument presented to a merchant. These rules are applied for goods or services and vary by merchant category as background tasks of the transaction management service.

We provide a complete end-to-end reconciliation and settlement service to our business partners, including dynamic reconciliation, report and screen-query tools for down-to-store-level management and control purposes, backed by 24x7x365 monitoring and support, reconciliation, settlement, reporting, full disaster recovery and redundancy services.

Our flexible transaction management solutions enable simple integration to various hardware platforms and pay-point applications within large retail groups, smaller stores and franchises. These platforms include: retail POS, EFT terminals, standalone PCs, self service terminals and kiosks, ATMs, mobile phones and the internet.

We also provide a range of value-added services as part of our transaction management offering, such as bill payments, gift cards, prepaid airtime, prepaid utilities and money transfers.

Healthcare Transaction Management

We offer financial and clinical risk management solutions to both funders and providers of healthcare, through online real-time management of healthcare transactions. Our adaptable healthcare claims processing and managed care services are designed to accommodate the complex benefit design as well as other processing requirements of our clients and our functionality extends to all healthcare claim types, including pharmacy, doctor, public and private hospital claims. Our service is enabled by our proprietary claims processing and managed care systems that adjudicate medical claims allowing patients and healthcare providers to have immediate and accurate information on the financial and clinical impacts of, and payment responsibilities for services and products provided by healthcare providers.

Our proprietary software allows for real-time claim adjudication involving the submission of an electronic data interchange claim and receipt of a response with the adjudication details within seconds. Our system allows for real-time messaging with an immediate response to an enquiry within a single, synchronous communication session. Our intellectual property incorporates rule stacking technology that allows for the creation of a rule for a specific patient for a specific healthcare product or service, which rule is then used to adjudicate against in real-time. This unique technology offers complex rule applications in a scalable and flexible manner on all medical claim types it is a heuristic computerized framework that dynamically creates scenario-specific rules.

Payroll Transaction Management

Our payroll transaction management service offers employers an easy and flexible method of making payments to creditors arising from payroll processing. Our solution enhances the electronic movement of money in the business and financial community, assisting our clients to manage net pay, third party, garnishee order and creditor payments correctly, promptly and securely. In addition, we provide the relevant information to the recipient organization via predefined schedules or payment remittance advices, thus simplifying the process of reconciliation.

Mobile Virtual Card

We have developed an innovative mobile phone-based payment solution, namely MVC, which enables secure purchases with no disruption to existing merchant infrastructures and significant incentives for all stakeholders.

The MVC solution utilizes existing and traditional payment methods but enhances them by replacing plastic card data with a one-time-use virtual card data, hence eliminating the risk of theft, phishing, skimming, spoofing, etc. The virtual card data replaces digit-for-digit the credit (or debit) card number, the expiration date and the card verification value with only the issuer bank identification number (first 6-digit) remaining constant.

The MVC solution uses the mobile phone to generate virtual cards offline. The mobile phone is the most available, cost-effective, secure and portable platform for generating virtual cards for remote payments (online purchasing, money transfers, phone and catalogue orders). Following a simple registration process, the virtual card application is activated over-the-air, enabling the phone to generate virtual card numbers completely off-line. MVCs are used like traditional plastic credit or debit cards, except that as soon as the transaction is authorized, the generated card number expires immediately. While MVC has been focused primarily on card-not-present transactions for internet payments in our initial deployments, we have the ability to customize the software as industry acceptance

increases to incorporate new trends such as presentation through near field communication, or NFC, or Quick Response, or QR, Codes.

Consumers can easily generate a new card on their mobile phone to shop on the internet or to place a catalogue or telephone order. MVCs are completely secure and can also be sent in a single click to family, friends, and service providers. Once the authorization request reaches the issuing bank processor, our servers decrypt the virtual card data, authenticate the consumer and pass the transaction request to the card issuer for authorization. MVC can be offered as a prepaid solution or directly linked to a subscriber's credit or debit card or other funding account. Subscribers can load prepaid virtual accounts with cash at participating locations, or electronically via their bank accounts or via direct deposit.

The benefits of MVC include, for:

- *Card issuers* - increased transactional revenues from existing accounts, driving more transactional revenues and elimination of fraudulent card use.
- *Mobile network operators*- revenues from payments, reduced churn, opportunities for powerful co-branding schemes.
- *Consumers*- convenience, peace of mind, ease of use, rewards.
- *Merchants*- elimination of charge-backs and fraud at no extra cost.

Financial services

We have developed a suite of financial services that is offered to customers utilizing our payment solutions. We are able to provide our customers with competitive microfinance, life insurance and money transfer products based on our understanding of their risk profiles, earning and spending patterns, demographics and lifestyle requirements. Our expertise in payment processing, MVC and mobile phone application development has enabled us to provide our customers with financial services by utilizing the convenient mobile phone transactional channel.

Hardware solutions

We provide hardware solutions that have been developed to optimize the performance of our payment and transaction processing solutions. These hardware solutions include cryptographic solutions for the financial, retail, telecommunication, utilities and petroleum sectors; chip and GSM licensing for South Africa and international markets; POS solutions; and virtual top-up for mobile phone-based prepaid airtime vending.

Our Strategy

We intend to provide the leading transacting system for the billions of unbanked and under-banked people in the world to engage in electronic transactions, as well as to provide our transaction processing, value-added services processing, new secure mobile payment technologies and health care processing services globally. To achieve these goals, we are pursuing the following strategies:

Build on our significant and established South African infrastructure In South Africa, we are one of the leading independent transaction processors, the national provider of social welfare payment distribution services to the country's large unbanked and under-banked population, the largest third-party processor of retail merchant transactions, the leading processor of third-party payroll payments and the leading processor of health care claims. We believe that our large cardholder base, specialized technology and payment infrastructure, together with our strong government and business relationships, position us at the epicenter of commerce in the country.

We believe that we are well-positioned to continue to gain market share and build upon the critical mass that we have developed in South Africa and have identified the following opportunities to continue to drive growth in our South African business:

Government focus on expansion of social benefits As a result of the South African government's focus on the provision of social grants as a core element of its social assistance and poverty alleviation policies, and our five-year contract to distribute such grants on a national basis, we believe that we are in a position to provide services to over 50% of the country's adult population. Through our national distribution platform and relationships with a number of leading companies across multiple industries, we believe we can provide many of the services consumed by our cardholders who would otherwise have to rely on the informal sector.

Government focus on implementing a national health insurance system The South African government is in the process of designing a national health insurance system to bring affordable quality health care to all South

Africans. Through our MediKredit healthcare rules adjudication engine and transaction processing switch, we believe we are well-placed to assist the South African government with a secure, real time solution for the high volume of anticipated healthcare transactions that the envisaged new system will generate.

Increasing adoption of existing services Our technology supports a variety of other products and smart card to smart card, or S2S, services that expand the use of our technology and provide us with new sources of transaction-based revenues. During the last several years, we have introduced these new products and services in South Africa for existing and newly-enrolled cardholders. We have installed our POS terminals in thousands of mostly rural merchant locations throughout the country, which allows recipient cardholders to receive their grants at these locations and transact business with the retailers using our smart card.

Introduction of new services We are also poised to benefit from the introduction and adoption of new services across our various platforms, which we believe will generate significant incremental transaction fee revenue from current and new users at a relatively low cost to us. Some of these services include:

- o Acceptance of UEPS cards in traditional POS terminals and bank ATMs We have enabled our cards to be compliant with international EMV standards, which will allow our cardholder base to purchase goods and services at merchant POS locations that currently accept MasterCard-branded cards and all South African ATMs. This additional functionality allows us to significantly expand the number of terminals and ATMs that use our smart card, capturing fees from new transactions and positioning our cards to be used by a larger share of the banked population.
- o Value-added services through multiple EasyPay channels EasyPay is the largest bank-independent financial switch and merchant processor in South Africa for credit and debit card transactions. EasyPay processed 420 million transactions with a total value of ZAR 97.0 billion during fiscal 2013. Our technology also allows us to provide a variety of additional, value-added payment services, such as bill payment, prepaid mobile top- up, prepaid utility services and gift cards, that we can sell into our existing card holder base as well as to new customers. We have developed additional platforms to access EasyPay's offerings such as a self service kiosks, or EasyPay Kiosk, and web and mobile phone applications to create a larger, seamless, value-added payments eco-system.
- o Third-party payments from payroll processing through FIHRST Through our FIHRST service, we offer employers an easy and flexible method of making payments to employees and payroll-related creditors. By combining the FIHRST service and the EasyPay product suite, we can provide employees with the ability to pay their bills or purchase prepaid airtime and utilities as a payroll deduction or by providing them with credit facilities.

Our Business Units

Our company is organized into the following business units.

Cash Paymaster Services (CPS)

Our CPS business unit is based in Johannesburg, South Africa, and deploys our UEPS/EMV Social Grant Distribution technology to distribute social welfare grants on a monthly basis to over nine million recipient cardholders in South Africa. These social welfare grants are distributed on behalf of the South African Social Security Agency, or SASSA. During our 2013, 2012 and 2011 fiscal years, we derived approximately 42%, 41%, and 47% of our revenues respectively, from CPS social welfare grant distribution business.

CPS provides a secure and affordable transacting channel between social welfare grant recipient cardholders, beneficiaries, SASSA and formal businesses. CPS enrolls social welfare grant recipient cardholders and, as appropriate, the respective beneficiaries by issuing the recipient cardholder with a UEPS/EMV smart card that digitally stores their biometric fingerprint templates on the card, enabling them to access their social welfare grants securely at any time or place.

The smart card is issued to the recipient cardholder on site and utilizes optical fingerprint sensor technology to identify and verify a recipient cardholder. The recipient cardholder simply inserts a smart card into the POS device and is prompted to present his fingerprint. If the fingerprint matches the one stored on the smart card, the smart card is loaded with the value created for that particular smart card. Additionally, during enrolment we capture the recipient cardholder's voice print to perform biometric verification when using channels such as ATMs and traditional POS terminals that normally do not have fingerprint readers.

The smart card provides the holder with access to all of the UEPS functionality, which includes the ability to have the smart card funded with pension or welfare payments, make retail purchases, enjoy the convenience of pre-paid facilities and qualify for a range of affordable financial services, including insurance and short-term loans as well as standard EMV transactional capabilities to operate wherever MasterCard is accepted. The smart card also offers the card holder the ability to make debit order payments to a variety of third parties, including utility companies, schools and retail merchants, with which the holder maintains an account. The card holder can also use the same smart card as a savings account.

Our UEPS/EMV Social Grant Distribution technology provides numerous benefits to government agencies, recipient cardholders and beneficiaries. The system offers government a reliable service at a reasonable price. For recipient cardholders and, as appropriate, the beneficiaries, our smart card offers convenience, security, affordability, flexibility and accessibility. They can avoid long waiting lines at payment locations and do not have to get to payment locations on scheduled payment dates to receive cash. They do not lose money if they lose their smart cards, since a lost smart card is replaceable and the biometric fingerprint or voice identification technology helps prevent fraud. Their personal security risks are reduced since they do not have to safeguard their cash. Recipient cardholders have access to affordable financial services, can save money on their smart cards and can perform money transfers to friends and relatives living in other provinces. Finally, recipient cardholders pay no transaction fees when they use our infrastructure to load their smart cards, perform balance inquiries, purchase goods or effect monthly debit orders. For us, the system allows us to reduce our operating costs by reducing the amount of cash we have to transport.

This business unit has been allocated to our South African transaction-based activities and smart card accounts reporting segments.

KSNET

Our KSNET business unit is a significant payment solutions provider in Korea, has the broadest product offering in the country, a base of approximately 220,000 merchants and an extensive direct and indirect sales network. KSNET is based in Seoul, Korea. KSNET's core operations comprise of three project offerings, namely card value-added network, or VAN, payment gateway, or PG, and banking VAN. KSNET is able to realize significant synergies across these core operations because it is the only payment solutions provider that offers all three of these offerings in Korea. Over 90% of KSNET's revenue comes from the provision of payment processing services to merchants and card issuers through its card VAN.

KSNET's core product offerings are described in more detail below:

- *Card VAN* KSNET's card VAN offering manages credit and other non-cash alternative payment mechanisms for retail transaction processing for a wide range of merchants and every credit card issuer in Korea. Non-cash alternative payment mechanisms for which KSNET provides processing services include all credit and debit cards and e-currency (K-cash and TMoney). KSNET also records cash transactions for the Korean National Tax Service in the form of cash receipts.
- *PG* KSNET offers PG services to the rapidly growing number of merchants that are moving online in Korea. PG provides these merchants with a host of alternative payment solutions including the ability to accept credit and debit cards, gift and other prepaid cards, and bank account transfers. PG also provides virtual account capabilities. PG offers us an attractive growth opportunity as e-commerce transactions represent an increasing

share of payments, driven by increased wire-line and wireless broadband penetration, an increasing number of merchants moving online, and the enhanced security of online transactions driving consumer acceptance. We believe that KSNET can become the leading provider in the PG industry by leveraging its existing merchant base and entering into new markets earlier than competitors.

- *Banking VAN* KSNET's banking VAN operations currently include account transaction processing services, payment and collections to banks, corporate firms, governmental bodies, and educational institutions. We distinguish card VAN from banking VAN because in the Korean VAN market, banking VAN is recognized as a distinct service from card VAN. We are the only card VAN provider that also provides banking VAN services. Because the banking VAN business industry is at a nascent stage, the market at this time is relatively small.

This business unit has been allocated to our international transaction-based activities reporting segment.

EasyPay

Our EasyPay business unit operates the largest bank-independent financial switch in South Africa and is based in Cape Town, South Africa. EasyPay focuses on the provision of high-volume, secure and convenient payment, prepayment and value-added services to the South African market. EasyPay's infrastructure connects into all major South African banks and switches both debit and credit card EFT transactions for some of South Africa's leading retailers and petroleum companies. It is a South African Reserve Bank, or SARB, approved third-party payment processor. In addition to its core transaction processing and switching operations, EasyPay provides a complete end-to-end reconciliation and settlement service to its customers. This service includes dynamic reconciliation as well as easy-to-use report and screen-query tools for down-to-store-level, management and control purposes.

The EasyPay suite of services includes:

- *EFT* EasyPay switches credit, debit and fleet card transactions for leading South African retailers and petroleum companies;
- *EasyPay bill payment* EasyPay offers consumers a point-of-sale bill payment service which is integrated into a large number of national retailers, the internet, self service kiosks and mobile handsets. EasyPay processes monthly account payment transactions for almost 400 different bill issuers including major local authorities, telephone companies, utilities, medical service providers, traffic departments, mail order companies, banks and insurance companies;
- *EasyPay prepaid electricity* This service enables local utility companies such as Eskom Holdings Limited and a growing number of local authorities on a national basis to sell prepaid electricity to their customers;
- *Prepaid airtime* EasyPay vends airtime at retail POS terminals for all the South African mobile telephone network operators;
- *Electronic gift voucher* EasyPay supports the electronic generation, issuance and redemption of paper or card-based gift vouchers;
- *EasyPay licenses* EasyPay enables the issuance of new South African Broadcasting television licenses and the capturing of existing license details within retail environments via a web-based user interface;
- *Third party switching and processing support* EasyPay switches transactions from retail POS systems to the relevant back-end systems;
- *Hosting services* EasyPay's infrastructure supports the hosting of payment or back-up servers and applications on behalf of third parties, including utility companies;
- *EasyPay Kiosk* We have developed a biometrically enabled self service kiosk that allows our customers to access all the value-added services provided by EasyPay and to create and load their EasyPay virtual wallets with value; and
- *EasyPay Web and Mobile* This service enables EasyPay customers to access all the value-added services provided by EasyPay, such as bill payments and the purchase of prepaid airtime and utilities through a secure website that may be accessed through personal computers or through mobile handsets.

EasyPay provides 24x7 monitoring and support services, reconciliation, automated clearing bureau settlement, reporting, full disaster recovery and redundancy services.

EasyPay is also responsible for marketing our secure, integrated POS payment products and systems in South Africa.

This business unit has been allocated to our South African transaction-based activities reporting segment.

MediKredit/ XeoHealth

Our MediKredit business unit operates and markets our Healthcare Transaction Management systems and solutions in South Africa and is based in Johannesburg, South Africa. We estimate that MediKredit's products affect

4.2 million of the seven million health-insured lives in South Africa. We also service the claims-processing needs of certain public hospitals, 100 medical scheme plans and ten of the major healthcare administrators in South Africa. Our functionality caters for all healthcare claim types which include pharmacy, doctor, private and public hospital claims.

MediKredit has been allocated to our South African transaction-based activities reporting segment.

Our XeoHealth business unit operates from Frederick, Maryland, and offers our XeoRules real time adjudication, or RTS, solutions for the end-to-end electronic processing of medical claims information in the U.S. XeoHealth has won a number of projects in the U.S. either as the primary contractor for the provision of our RTS solution to customers, or as a sub-contractor to parties contracted to provide an adjudication solution.

XeoHealth has been allocated to our international transaction-based activities reporting segment.

FIHRST

FIHRST offers South African employers our payroll transaction management service and is based in Johannesburg, South Africa. FIHRST currently processes payments exceeding R82.8 billion on behalf of our clients every year, enabling salaries departments to achieve greater levels of efficiency and employee service. We have been chosen as the preferred payments partner by more than 1,300 employer groups of all sizes across all sectors of the economy, representing 900,000 employees. FIHRST is recognized by and works in partnership with the majority of third party payroll organizations including pension fund and medical aid administrators.

This business unit has been allocated to our South African transaction-based activities reporting segment.

Universal Electronic Technological Solutions (UETS)

Our UETS business unit is based in Johannesburg, South Africa and focuses on the sale, implementation and support of our UEPS technology, ranging from large scale, national projects to smaller, product specific regional projects. UETS focuses on identifying, defining and activating an entry point to commence operations in Africa (excluding South Africa).

UETS markets the following solutions and products:

- The UEPS national switching, settlement, clearing and smart card solutions offering interoperability with existing banking infrastructure;
- Wave 2 opportunities, such as financial services in countries with an established UEPS infrastructure;
- Individual stand-alone UEPS applications, with processing outsourced to Net1 regional offices, similar to the model deployed for the payment of welfare grants in Iraq;
- UEPS mobile banking solutions targeted at banks and/or mobile operators;
- E-Government applications such as multi-purpose national identity cards and national welfare & healthcare solutions; and
- Secure verification of existing EMV Debit / credit card transactions using Net1's biometric identification technology.

Our UETS team also provides business development support in territories where UEPS systems have been sold and implemented, namely as Ghana, Malawi, Namibia and Botswana.

This business unit has been allocated to our international transaction-based activities and hardware, software and related technology sales reporting segments.

Net1 Mobile Solutions

Our Net1 Mobile Solutions business unit is managed from Johannesburg, South Africa with business development support branches in the USA, Austria and India. This business unit is responsible for the technical development and commercialization of our array of web and mobile applications and payment technologies, such as MVC, Chip and GSM licensing and VTU.

Our MVC technology provides a completely secure, off-line payment solution for card-not-present transactions, such as payments made for internet purchases. The MVC technology runs as an application on any mobile phone and utilizes Net1's patented cryptographic card generator to secure any payment transaction. The advent of new technologies such as NFC or QR Codes also enables the utilization of our MVC technology for card present payments.

Our Chip and GSM licensing business is a supplier of chip cards and GSM licenses into the South African and international markets. We license numerous mobile network operators, card manufacturers and semiconductor manufacturers to provide card technology, solutions and software that enable mobile telephony, mobile transactions and value-added services.

Our Net1 Mobile Solutions business unit is also responsible for the global marketing and support of our Cryptographic solutions comprising of our Incognito range of PIN encryption devices, card acceptance modules and hardware security modules. These solutions are used globally by numerous customers in the financial, retail, telecommunication, utilities and petroleum sectors and by all other Net1 business units that operate payment and transaction processing services.

This business unit has been allocated to our South African transaction-based activities, international transaction-based activities, and hardware, software and related technology sales reporting segments.

Net1 UTA

Net1 UTA is based in Vienna, Austria, with operations in Moscow, Russia and provides smart card-based payment systems to banks, enterprises and government authorities in Russia, Ukraine, Uzbekistan and Oman.

This business unit has been allocated to our hardware, software and related technology sales reporting segment.

Financial Services

This business unit is responsible for identifying financial services products that can be provided to our UEPS cardholders in South Africa and then marketing and implementing the provision of those products. We currently provide micro-loans to our UEPS/EMV cardholders who receive social welfare grants through our system in the KwaZulu-Natal, Northern Cape and Gauteng provinces. We provide the loans ourselves and generate revenue from the service fees charged on these loans.

Our wage payment system offers wage earners a UEPS card that allows them to receive payment, transact and access other financial services in a secure, cost-effective way.

Smart Life is a licensed South African life insurance company however, during January 2013, the South African Financial Services Board, or FSB, suspended Smart Life's life insurance license and prohibited it from writing any new long-term insurance policies in South Africa. We have prepared a submission to the FSB to uplift the suspension and the FSB is currently conducting an investigation into the affairs of Smart Life, but we cannot predict what the outcome will be.

Smart Life provides us with an opportunity to offer relevant insurance products directly to our existing customer and employee base in South Africa. We intend to offer this customer base a full spectrum of products applicable to this market segment, including credit life, group life, funeral and education insurance policies.

These business units have been allocated to our financial services reporting segment.

Corporate

The Corporate unit provides global support services to our business units, joint ventures and investments for the following activities:

- *Group executive* responsible for the overall company management, defining our global strategy, investor relations and corporate finance activities.
- *Finance and administration* provides company-wide support in the areas of accounting, treasury, human resources, administration, legal, secretarial, taxation, compliance and internal audit.
- *Group information technology* defines our overall IT strategy and the overall systems architecture and is responsible for the identification and management of the group's research and development activities.
- *Joint ventures and investments unit* provides governance support to our joint ventures and assists with the evaluation of new investment opportunities.

Competition

In addition to competition that our UEPS system faces from the use of cash, checks, credit and debit cards, existing payment systems and the providers of financial services, there are a number of other products that use smart card technology in connection with a funds transfer system. While it is impossible for us to estimate the total number of competitors in the global payments marketplace, we believe that the most competitive product in this marketplace

is EMV, a system that is promoted by most of the major card companies such as Visa, MasterCard, JCB and American Express. The competitive advantage of our UEPS offering is that our technology can operate real-time, but in an off-line environment, using biometric identification instead of the standard PIN methodology employed by our competitors. We have enhanced our competitive advantage through the development of our latest version of the UEPS technology that has been certified by EMV, which facilitates our traditionally proprietary UEPS system to interoperate with the global EMV standard and allows card holders to transact at any EMV-enabled point of sale terminal or ATM. The UEPS/EMV technology has been deployed on an extensive scale in South Africa through the issuance of MasterCard-branded UEPS/EMV cards to our social welfare grant recipient cardholders. We estimate that we process less than 1% of all global payment transactions in the international marketplace.

In South Africa, and specifically in the payment of salaries and wages, our competitors include the local banks and other transaction processors. The South African banks and the South African Post Office, or SAPO, also offer employees the option to open low cost bank accounts that enable the employees to receive their salaries or wages through the formal banking payment networks.

The payment of social welfare grants in South Africa is determined through a highly competitive tender process managed by SASSA. The participants in SASSA's tender processes have historically included the local banks, other payment processors, SAPO and mobile operators. We compete primarily on the basis of the innovative nature and security of our technology as well as the broadest distribution footprint.

We are able to load social welfare grants on behalf of the South African government directly onto a biometrically secured UEPS/EMV smart card in rural areas where there is little or no infrastructure or in semi-urban areas through our merchant acquiring system. Our UEPS/EMV-enabled smart cards are therefore used as a means of identification, security and as a transacting instrument. Grants loaded onto our UEPS/EMV-enabled smart cards can be used both online and offline and recipient cardholders pay no monthly account or transaction fees. The usefulness of a traditional bank card to its holder is dependent on the availability of a branch network, ATM infrastructure and merchants accepting the card. Access to bank branches, ATMs and merchants accepting traditional bank cards are limited or non-existent in the rural areas of South Africa. We believe the security, functionality and simplicity of our UEPS/EMV smart card provides us with a unique ability to service these rural areas of South Africa, as well as all urban areas through the existing POS and ATM infrastructure. Our technology eliminates the risk associated with receiving social welfare grants in cash as well as the costs associated with transaction fees charged by banks when recipient cardholders exceed the minimum number of free transactions per month.

We believe that SASSA considers the technology utilized, pricing of the payment service rendered and other factors such as black economic empowerment, or BEE, rating as the most important factors when considering potential service providers. We compete with other service providers on these aspects through SASSA's tender processes, when applicable, or through contract extension negotiations. Following the award of the SASSA tender to us in January 2012 to pay all social welfare grants in South Africa for a period of five years commencing April 1, 2012, we believe that the next competitive tender process will commence during 2016.

We have identified 10 major card VAN companies in Korea, of which KSNET is one of the four largest. The other three large VAN companies are NICE Information & Telecommunication Inc., First Data Korea Limited and Korea Information & Communications Company, Limited. Entities operating in the VAN industry in Korea compete on pricing and customer service.

EasyPay's competitors include BankservAfrica, UCS, eCentric and Transaction Junction. BankservAfrica is the largest transaction processor in South Africa which processes all transactions on behalf of the South African banks and claims to have processed in excess of 2.2 billion transactions during the twelve months ended July 2013 valued at trillions of ZAR. During fiscal 2013, EasyPay processed 420 million transactions with a total value of ZAR 97.0 billion.

In addition to our traditional competitors, we expect that we will increasingly compete with a number of emerging entities in the mobile payments industry. While the industry is still in its infancy, a number of entities are establishing their presence in this space. Specifically identified entities include traditional payment networks such as Visa, MasterCard and American Express; commercial banks such as Barclays and Citigroup; established technology companies such as Apple, Google and PayPal; mobile operators such as AT&T, Verizon, Vodafone and Bharti Airtel; as well as companies specifically focused on mobile payments such as M-Pesa, Monetise and Square.

Research and Development

During fiscal 2013, 2012 and 2011, we incurred research and development expenditures of \$1.3 million, \$3.9 million and \$5.7 million, respectively. These expenditures consist primarily of the salaries of our software engineers and developers. Our research and development activities relate primarily to the continual revision and improvement of our core UEPS and UEPS/EMV software and its functionality and the design and development of our MVC concept and mobile payment applications. For example, we continually advance our security protocols and algorithms as well as develop new UEPS features that we believe will enhance the attractiveness of our product and service offerings.

Our research and development efforts also focus on taking advantage of improvements in the hardware platforms that are not proprietary to us but which form part of our system.

Intellectual Property

Our success depends in part on our ability to develop, maintain and protect our intellectual property. We rely on a combination of patents, copyrights, trademarks and trade secret laws, as well as non-disclosure agreements to protect our intellectual property. We seek to protect new intellectual property developed by us by filing new patents worldwide. We hold a number of trademarks in various countries.

Financial Information about Geographical Areas and Operating Segments

Note 22 to our consolidated financial statements included in this annual report contains detailed financial information about our operating segments for fiscal 2013, 2012 and 2011.

Revenues based on the geographic location from which the sale originated and geographic location where long-lived assets are held for the years ended June 30, are presented in the table below:

	Revenue			Long-lived assets		
	2013 \$ 000	2012 \$ 000	2011 \$ 000	2013 \$ 000	2012 \$ 000	2011 \$ 000
South Africa	317,916	272,063	264,485	117,858	140,308	115,809
Korea	129,338	114,096	68,392	213,589	224,272	258,791
Europe	2,738	2,413	10,465	86	38	139
Rest of world	2,155	1,692	78	7,590	6,873	6,817
Total	452,147	390,264	343,420	339,123	371,491	381,556

Employees

As of June 30, 2013, we had 4,307 employees, which included approximately 1,392 temporary employees contracted to assist with the implementation mop up and ongoing enrollment of recipient cardholders and beneficiaries related to our SASSA contract. On a segmental basis, 253 employees were part of our management, 3,109 were employed in South African transaction-based activities, 205 were employed in international transaction-based activities, 361 were employed in financial services and 379 were employed in smart card, hardware, software and related technology sales and corporate activities.

Excluding the impact of rolling out our financial service offering nationally in South Africa, as we conclude our SASSA contract implementation we expect our employee base to gradually decline to approximately 3,400 people at the end of the first quarter of fiscal 2014.

We expect to employ an additional 1,400 permanent employees to facilitate the growth of our financial services offering nationally during fiscal 2014. Accordingly, we expect our permanent employee base to stabilize around approximately 4,800 employees at the end of fiscal 2014.

On a functional basis, four of our employees were part of executive management, 176 were employed in sales and marketing, 225 were employed in finance and administration, 330 were employed in information technology and 3,572 were employed in operations.

As of June 30, 2013, approximately 87 of the 3,109 employees we have in South Africa who were performing transaction-based activities were members of the South African Commercial Catering and Allied Workers Union and approximately 164 of the 187 employees we have in Korea who perform international transaction-based activities were members of the KSNET Union. We believe we have a good relationship with our employees and these unions.

Corporate history

Net1 was incorporated in Florida in May 1997. Until June 2004, Net1 was a development stage company and its business consisted only of holding a license to payment systems intellectual property and an exclusive marketing agreement for the UEPS technology outside South Africa, Namibia, Botswana and Swaziland. In June 2004, Net1 acquired Net1 Applied Technologies Holdings Limited, or Aplitec, a public company listed on the JSE Limited, or JSE. Aplitec owned the payment systems intellectual property in South Africa, Namibia, Botswana and Swaziland and one of its subsidiaries was the other party to the marketing agreement described above. The primary purpose of the Aplitec transaction was to consolidate all intellectual property into one company, to establish a first-mover advantage in developing economies for the commercialization of the UEPS technology, and to exploit market opportunities for growth through strategic alliances and acquisitions. The transaction permitted Aplitec's shareholders to reinvest the sale proceeds in Net1, but under South African exchange control regulations, those shareholders were not permitted to hold Net1's securities directly. In 2005, Net1 completed an initial public offering and listed on the Nasdaq Stock

Market. In October 2008, Net1 listed on the JSE, in a secondary listing, which enabled the former Aplitec shareholders (as well as South African residents generally) to hold Net1 common stock directly.

Available information

We maintain an Internet website at www.net1.com. Our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports are available free of charge through the SEC filings portion of our website, as soon as reasonably practicable after they are filed with the Securities and Exchange Commission. The information posted on our website is not incorporated into this Annual Report on Form 10-K.

Executive Officers and Significant Employees of the Registrant*Executive officers*

The table below presents our executive officers, their ages and their titles:

Name	Age	Title
Dr. Serge C.P. Belamant	59	Chief Executive Officer, Chairman and Director
Mr. Herman G. Kotzé	43	Chief Financial Officer, Treasurer, Secretary and Director
Mr. Phil-Hyun Oh	54	Chief Executive Officer and President, KSNET, Inc.
Mr. Nitin Soma	46	Senior Vice President Information Technology

Dr. Belamant is one of the founders of our company and has been our Chief Executive Officer since October 2000 and the Chairman of our board since February 2003. He was also Chief Executive Officer of Aplitec. Dr. Belamant spent ten years working as a computer scientist for Control Data Corporation where he won a number of international awards. Later, he was responsible for the design, development, implementation and operation of the Saswitch ATM network in South Africa that rates today as the third largest ATM switching system in the world. Dr. Belamant has patented a number of inventions, ranging from biometrics to gaming-related inventions, including our original funds transfer system patent. Dr. Belamant has more than 30 years of experience in the fields of operations research, security, biometrics, artificial intelligence and online and offline transaction processing systems. Dr. Belamant holds a PhD in Information Technology and Management.

Mr. Kotzé has been our Chief Financial Officer, Secretary and Treasurer since June 2004. From January 2000 until June 2004, he served on the board of Aplitec as Group Financial Director. Mr. Kotzé joined Aplitec in November 1998 as a strategic financial analyst. Prior to joining Aplitec, Mr. Kotzé was a business analyst at the Industrial Development Corporation of South Africa. Mr. Kotzé qualified as a member of the South African Institute of Chartered Accountants at KPMG.

Mr. Oh has served as Chief Executive Officer and President of KSNET since 2007. He is the Chairman of the VAN Association in Korea. Prior to that, he was the Managing Partner at Dasan Accounting Firm and was the Head of the Investment Banking Division at Daewoo Securities. Mr. Oh is responsible for the day to day operations of KSNET and as its Chief Executive Officer and President is instrumental in setting and implementing its strategy and objectives.

Mr. Soma has served as our Senior Vice President of Information Technology since June 2004. Mr. Soma joined Aplitec in 1997. He specializes in transaction switching and interbank settlements. Mr. Soma represented Nedcor Bank in assisting with the technical specifications for the South African Interbank Standards. He is also responsible for the ATM settlement process to balance ATMs with the host as well as balance the host with different card users. Mr. Soma designed the stratus back-end system for Aplitec, and is responsible for the Nedbank Settlement System for the Point of Sales Devices. Mr. Soma has over 15 years of experience in the development and design of smart card payment systems.

*Significant employees***Business Functions:**

Philip Belamant (28): Managing Director of Net1 Mobile Solutions Mr. Belamant joined us in May 2007, and is responsible for overseeing our newly established Net1 Mobile Solutions Division which encompasses banking, mobile virtual card, biometric verification, mobile network operator solutions, 3rd party payments, prepaid vending, cryptography, CHIP and SIM cards and customized software development.

Thato Chiloane (31): General Manager: FIHRST Mr. Chiloane joined us in July 2012 and is responsible for the marketing and business development of our FIHRST offering.

Dhruv Chopra (39): Managing Director and Country Head India and Head of Investor Relations Mr. Chopra joined us in May 2009 and is responsible for growing our businesses in India and is also responsible for overseeing our investor relations activities globally.

Dr. Gerhard Claassen (54): General Manager Cryptographic Solutions Dr. Claassen joined us in August 2000 and is responsible for the marketing and business development of our cryptographic solutions consisting of the internally developed Incognito range of security solutions, as well as ToDos authenticators and the Cybertrust PKI products.

Wimpie du Plessis (61): Managing Director: MediKredit Mrs. du Plessis joined us in January 1999 and is responsible for the marketing and business development of our MediKredit and XeoHealth offerings worldwide.

K. H. Kang (47): Division Director - Marketing Division 2 Mr. Kang joined us in December 1994 and is responsible for KSNET's market division that focuses primarily on banking VAN, PG and market development.

M. B. Lee (48): Division Director - Marketing Division 1 Mr. Lee joined us in August 1994 and is responsible for KSNET's market division that focuses primarily on card VAN.

Anja Lewington (43): General Manager: Net1 South Africa Mrs. Lewington joined us in February 2000 and assists Mr. Pillay with our South African operations, consisting primarily of CPS and EasyPay.

Igor Medan (40): Joint Managing Director: Net1 UTA Mr. Medan has been the Joint Managing Director of Net1 UTA since 2011. Net1 UTA is responsible for the marketing and business development of our payment solutions in Russia, the CIS, Oman, India, Asia and Latin America.

Tamsanqa Ngalo (36): Chief Technology Officer Net1 Mobile Solutions Mr. Ngalo joined us in March 2009 and oversees all Net1 Mobile Solutions information technology systems' design, development and implementation.

Nanda Pillay (42): Vice President: Net1 South Africa Mr. Pillay joined us in May 2000 and is responsible for our South African operations, consisting primarily of CPS and EasyPay.

Armando Piedra (40): Joint Managing Director: Net1 UTA Mr. Piedra has been the Joint Managing Director of Net1 UTA since 2011. Net1 UTA is responsible for the marketing and business development of our payment solutions in Russia, the CIS, Oman, India, Asia and Latin America.

James Sneedon (44): Business Unit Leader: VTU Mr. Sneedon joined us January 2001 and is responsible for the marketing and business development of our VTU products.

Brenda Stewart (55): Managing director: Net1 Universal Electronic Technological Solutions Mrs. Stewart joined us in 1997 and is responsible for the marketing and business development of our UEPS solutions in Africa (excluding South Africa) and Iraq.

Trevor Smit (55): Chief Commercial Officer Net1 Mobile Solutions: Mr. Smit joined us in May 2007 and is responsible for the overseeing all commercial aspects of our Net1 Mobile Solutions offerings.

Support functions:

Chris Britz (52): Vice President - Group production, repairs & maintenance Mr. Britz joined us in April 2001 and is responsible for the group's production facilities, as well as all internal and external repairs and maintenance of terminals and other hardware.

Lawrie Chalmers (52): Vice President - Group Human Resources Mr. Chalmers joined us in April 1998 and is responsible for the group's South African human resources activities, including recruitment, payroll, training and industrial relations.

Y. H. Cho (47): Head of research director Mr. Cho joined us in July 1999 and is responsible for KSNET's information technology department.

S. S. Lee (43): Director of Management Support Division Mr. Lee joined us in January 2002 and is responsible for KSNET's financial function, including financial accounting, taxation and statutory reporting.

Brian Ellis (39): Vice President of Information Technology Mr. Ellis joined us in April 1998 and is responsible for Net1 South Africa's information technology department, including all payment systems such as our UEPS/ EMV and EasyPay offerings.

Paul Encarnacao (37): Vice President Finance Mr. Encarnacao joined us in June 2004 and is responsible for the preparation of the group's generally accepted accounting principles in the United States of America, or US GAAP, consolidated accounts and statutory reports.

Alan Keschner (53): Vice President: Joint Ventures and Investments Mr. Keschner joined us in January 2012 and provides governance support to our joint ventures as our representative on the various boards of directors.

Warren Segall (48): Vice President: Compliance Mr. Segall joined us in July 2006 and is our compliance officer.

Cara van Straaten (52): Group Financial Controller – Ms. van Straaten joined us in July 2004 and is responsible for the group's South African financial function, including financial accounting, taxation and statutory reporting. Since August 1, 2013, Ms. van Straaten has been responsible for the company secretarial function for most of our South African subsidiaries.

ITEM 1A. RISK FACTORS

OUR OPERATIONS AND FINANCIAL RESULTS ARE SUBJECT TO VARIOUS RISKS AND UNCERTAINTIES, INCLUDING THOSE DESCRIBED BELOW, THAT COULD ADVERSELY AFFECT OUR BUSINESS, FINANCIAL CONDITION, RESULTS OF OPERATIONS, CASH FLOWS, AND THE TRADING PRICE OF OUR COMMON STOCK.

Risks Relating to Our Business

We derive a substantial part of our revenues from our contract with SASSA to provide pension and welfare distribution services throughout South Africa. We are substantially dependent on the continuation of this contract. If we were to lose our SASSA contract, our business would suffer significantly. Further, our business strategy relies on our ability to leverage the social welfare recipient cardholder base to provide them with additional financial and other services. If we cannot successfully do this, we may not be able to grow our business and our financial performance could suffer.

We currently derive a substantial part of our revenues from one customer. Under our contract with SASSA we provide SASSA with a pension and welfare grants distribution service in all of South Africa's nine provinces under a five-year contract that expires in March 2017. During the fiscal year ended June 30, 2013, our pension and welfare business accounted for approximately 42% of our revenues. If we were to discontinue providing these services to SASSA, our business would suffer significantly.

We were awarded our SASSA contract after the completion of a competitive tender process. One of the losing bidders, AllPay Consolidated Investment Holdings (Pty) Ltd, instituted litigation in the South African courts challenging the award and has sought to have our contract set aside. Although the award to us was upheld by the South African Supreme Court of Appeal, AllPay has appealed the Supreme Court's ruling to the South African Constitutional Court, the highest court in the country. AllPay's appeal is scheduled to be heard on September 10, 2013. We cannot predict when or how the Constitutional Court will rule on the matter. If our contract is set aside, SASSA may be required to conduct a new tender process, which would consume a substantial portion of management's time and attention as well as create uncertainty regarding the timing and ultimate outcome. We could be required to continue providing our payment service to SASSA during such a tender period. In addition, we have made major capital investments to implement this contract. If our contract were to be set aside, it is likely that we would suffer a significant loss on these investments.

We are a longstanding contractor to SASSA. Although our current contract has expanded our services to the entire country from the five provinces we previously served, the benefits of higher volumes have been offset by lower per-recipient cardholder pricing. As a result of this lower pricing, our ability to maintain and improve our operating margin in our South African business will depend on our ability to provide the pension and welfare recipient cardholders whom we serve with higher-margin financial and other services. If we cannot successfully capitalize on these opportunities and grow this business, it is likely that our future financial performance would suffer.

The DOJ and the SEC are investigating whether we have violated the Foreign Corrupt Practices Act, or FCPA, and other federal criminal laws, which has adversely impacted our business and reputation.

On November 30, 2012, we received a letter from the U.S. Department of Justice, Criminal Division, informing us that the DOJ and the Federal Bureau of Investigation have begun an investigation into whether we and our subsidiaries, including our officers, directors, employees, and agents and other persons and entities possibly affiliated with us violated provisions of the FCPA and other U.S. federal criminal laws by engaging in a scheme to make corrupt payments to officials of the Government of South Africa in connection with securing our SASSA contract and also engaged in violations of the federal securities laws in connection with statements made by us in our SEC filings regarding this contract. On the same date, we received a letter from the Division of Enforcement of the

SEC advising us that it is also conducting an investigation concerning our company. The SEC letter states that the investigation is a non-public, fact-finding inquiry and that the SEC investigation does not mean that the SEC has concluded that we or anyone else has broken the law or that the SEC has a negative opinion of any person, entity or security. We are continuing to cooperate with the DOJ and the SEC regarding these investigations.

We have been, and will continue to be, exposed to a variety of negative consequences as a result of these investigations. There could be one or more enforcement actions in respect of the matters that are the subject of one or both of the investigations, and such actions, if brought, may result in judgments, settlements, fines, penalties, injunctions, cease and desist orders or other relief, criminal convictions and/or penalties. We cannot predict accurately at this time the outcome or impact of the investigations.

In addition, we have incurred and will continue to incur significant legal and other costs in responding to requests for information seeking documents, testimony and other information in connection with the investigations and cannot predict at this time the ultimate amount of all such costs. These matters have required the involvement of certain members of our senior management that has materially and adversely affected their ability to devote their time to other matters relating to our business. The investigations have negatively impacted our ability to maintain our existing business relationships and to obtain new business, as our business reputation has already suffered significant damage due to the perceptions created by an investigation of this nature. We believe that this damage to our reputation has, and will continue, to have a significant impact on our ability to execute certain aspects of our business strategy effectively. For example, the FSB has suspended Smart Life's license and prohibited it from writing any new long-term insurance policies in South Africa. We believe that the suspension was triggered by the adverse publicity we have received as a result of the DOJ and SEC investigations. Although we are appealing this decision, we cannot predict whether our appeal will be successful. While Smart Life's operations are not currently material, providing a variety of financial products, such as insurance, to our cardholder base is an important part of our future business strategy. We have also been unable to conclude our BEE transaction, as described below. In addition, in order to continue to fund the costs of the investigations, we have had to upstream a portion of our ZAR cash reserves to the U.S., which has resulted in unfavorable currency conversion rates and the incurrence of dividend withholding taxes that we would not otherwise have had to pay.

We have disclosed competitively sensitive information as a result of the AllPay litigation, which could adversely affect our competitive position in the future.

In connection with the AllPay litigation discussed above challenging the award of the SASSA tender to us, we have included our entire SASSA tender submission in the court record, which court record is in the public domain. Our tender submission contains competitively sensitive business information. As a result of this disclosure, our existing and future competitors have access to this information which could adversely affect our competitive position in any future similar tender submissions to the extent that such information continues to remain competitively sensitive.

In order to meet our obligations under our SASSA contract, we are required to deposit government funds with financial institutions in South Africa before commencing the payment cycle and are exposed to counterparty risk.

In order to meet our obligations under our SASSA contract, we are required to deposit government funds, which will ultimately be used to pay social welfare grants, with financial institutions in South Africa before commencing the payment cycle. If these financial institutions are unable to meet their commitments to us, in a timely manner or at all, we would be unable to discharge our obligations under our SASSA contract and could be subject to financial losses, penalties, loss of reputation and potentially, the cancellation of our contract. As we are unable to influence these financial institutions' operations, including their internal information technology structures, capital structures, risk management, business continuity and disaster recovery programs, or their regulatory compliance systems, we are exposed to counterparty risk.

We may undertake acquisitions that could increase our costs or liabilities or be disruptive to our business.

Acquisitions are a significant part of our long-term growth strategy as we seek to grow our business internationally and to deploy our technologies in new markets both inside and outside South Africa. However, we may not be able to locate suitable acquisition candidates at prices that we consider appropriate. If we do identify an appropriate acquisition candidate, we may not be able to successfully negotiate the terms of an acquisition, finance the acquisition or, if the acquisition occurs, integrate the acquired business into our existing business. These transactions may require debt financing or additional equity financing, resulting in additional leverage or dilution of ownership.

Acquisitions of businesses or other material operations and the integration of these acquisitions will require significant attention from our senior management which may divert their attention from our day to day business. The difficulties of integration may be increased by the necessity of coordinating geographically dispersed organizations, integrating personnel with disparate business backgrounds and combining different corporate cultures. We also may not be able to maintain key employees or customers of an acquired business or realize cost efficiencies or synergies or other benefits that we anticipated when selecting our acquisition candidates.

In addition, we may need to record write-downs from future impairments of goodwill or other intangible assets, which could reduce our future reported earnings. Finally, acquisition candidates may have liabilities or adverse operating issues that we fail to discover through due diligence prior to the acquisition.

We have a significant amount of indebtedness that requires us to comply with restrictive and financial covenants. If we are unable to comply with these covenants, we could default on this debt, which would have a material adverse effect on our business and financial condition.

As of June 30, 2013, we had approximately \$81 million of outstanding indebtedness, which we incurred to finance our acquisition of KSNET in October 2010. These loans are secured by substantially all of KSNET's assets, a pledge by Net1 Korea of its entire equity interest in KSNET and a pledge by the immediate parent of Net1 Korea (also one of our subsidiaries) of its entire equity interest in Net1 Korea. The terms of the loan facility require Net1 Korea and its consolidated subsidiaries to maintain certain specified financial ratios (including a leverage ratio and a debt service coverage ratio) and restrict their ability to make certain distributions with respect to their capital stock, prepay other debt, encumber their assets, incur additional indebtedness, make capital expenditures above specified levels, engage in certain business combinations and engage in other corporate activities. Although these covenants only apply to our Korean subsidiaries, these security arrangements and covenants may reduce our operating flexibility or our ability to engage in other transactions that may be beneficial to us. If we are unable to comply with these covenants, we could be in default and the indebtedness could be accelerated. If this were to occur, we might not be able to obtain waivers of default or to refinance the debt with another lender and as a result, our business and financial condition would suffer.

We face competition from the incumbent retail banks in South Africa and SAPO in the unbanked market segment, which could limit growth in our transaction-based activities segment.

The incumbent South African retail banks have created a common banking product, generally referred to as a "Mzansi" account, for unbanked South Africans, which offers limited transactional capabilities at reduced charges, when compared to the accounts traditionally offered by these banks. Certain South African banks have also developed their own low-cost banking products targeted at the unbanked and under-banked market segment. According to the FinScope survey, which is an annual survey conducted by the FinMark Trust, a non-profit independent trust, approximately 4.4 million and 3.5 million people in South Africa claimed to use a Mzansi account in 2009 and 2008, respectively. As the competition to bank the unbanked in South Africa intensifies with the Mzansi account and other similar product offerings, we may not be successful in marketing our low-cost banking product to our target population. Moreover, as our product offerings increase, gain market acceptance and pose a competitive threat in South Africa, especially our UEPS/EMV product with biometric verification, the banks and SAPO may seek governmental or other regulatory intervention if they view us as disrupting their transactional or other businesses.

We may face competition from other companies that offer smart card technology, other innovative payment technologies and payment processing, which could result in loss of our existing business and adversely impact our ability to successfully market additional products and services.

Our primary competitors in the payment processing market include other independent processors, as well as financial institutions, independent sales organizations, and, potentially card networks. Many of our competitors are companies who are larger than we are and have greater financial and operational resources than we have. These factors may allow them to offer better pricing terms or incentives to customers, which could result in a loss of our potential or current customers or could force us to lower our prices as well. Either of these actions could have a significant effect on our revenues and earnings.

In addition to competition that our UEPS system faces from the use of cash, checks, credit and debit cards, existing payment systems and the providers of financial services and low cost bank accounts, there are a number of other products that use smart card technology in connection with a funds transfer system. During the past several years, smart card technology has become increasingly prevalent. We believe that the most competitive product in this marketplace is EMV, a system that is promoted by most of the major card companies such as Visa, MasterCard, JCB and American Express. Also, governments and financial institutions are, to an increasing extent, implementing general-purpose reloadable prepaid cards as a low-cost alternative to provide financial services to the unbanked

population. Moreover, while we see the acceptance over time of using a mobile phone to facilitate financial services as an opportunity, there is a risk that other companies will be able to introduce such services to the marketplace successfully and that customers may prefer those services to ours, based on technology, price or other factors.

A prolonged economic slowdown or lengthy or severe recession in South Africa or elsewhere could harm our operations.

A prolonged economic downturn or recession could materially impact our results from operations. A recessionary economic environment could have a negative impact on mobile phone operators, our cardholders and retailers and could reduce the level of transactions we process and the take-up of financial services we offer, which would, in turn, negatively impact our financial results. If financial institutions and retailers experience decreased demand for their products and services our hardware, software and related technology sales will reduce, resulting in lower revenue.

The loss of the services of Dr. Belamant or any of our other executive officers would adversely affect our business.

Our future financial and operational performance depends, in large part, on the continued contributions of our senior management, in particular, Dr. Serge Belamant, our Chief Executive Officer and Chairman and Herman Kotzé, our Chief Financial Officer. Many of our key responsibilities are performed by these two individuals, and the loss of the services of either of them could disrupt our development efforts or business relationships and our ability to continue to innovate and to meet customers' needs, which could have a material adverse effect on our business and financial performance. We do not have employment agreements with these executive officers and they may terminate their employment at any time.

In addition, the success of our KSNET business depends heavily on the continued services of its president, Phil-Hyun Oh and the other senior members of the KSNET management team. We do not maintain any key person life insurance policies.

We face a highly competitive employment market and may not be successful in attracting and retaining a sufficient number of skilled employees, particularly in the technical and sales areas and senior management.

Our future success depends on our ability to continue to develop new products and to market these products to our target users. In order to succeed in our product development and marketing efforts, we need to identify, attract, motivate and retain sufficient numbers of qualified technical and sales personnel. An inability to hire and retain such technical personnel would adversely affect our ability to enhance our existing intellectual property, to introduce new generations of technology and to keep abreast of current developments in technology. Demand for personnel with the range of capabilities and experience we require is high and there is no assurance that we will be successful in attracting and retaining these employees. The risk exists that our technical skills and sales base may be depleted over time because of natural attrition. Furthermore, social and economic factors in South Africa have led, and continue to lead, numerous qualified individuals to leave the country, thus depleting the availability of qualified personnel in South Africa. In addition, our multi-country strategy will also require us to hire and retain highly qualified managerial personnel in each of these markets. If we cannot recruit and retain people with the appropriate capabilities and experience and effectively integrate these people into our business, it could negatively affect our product development and marketing activities.

System failures, including breaches in the security of our system, could harm our business.

We may experience system failures from time to time, and any lengthy interruption in the availability of our back-end system computer could harm our revenues and profits, and could subject us to the scrutiny of our customers.

Frequent or persistent interruptions in our services could cause current or potential customers and users to believe that our systems are unreliable, leading them to avoid our technology altogether, and could permanently harm our reputation and brands. These interruptions would increase the burden on our engineering staff, which, in turn, could delay our introduction of new applications and services. Finally, because our customers may use our products for critical transactions, any system failures could result in damage to our customers' businesses. These customers could seek significant compensation from us for their losses. Even if unsuccessful, this type of claim could be time consuming and costly for us to address.

Although our systems have been designed to reduce downtime in the event of outages or catastrophic occurrences, they remain vulnerable to damage or interruption from earthquakes, floods, fires, power loss, telecommunication failures, terrorist attacks, computer viruses, computer denial-of-service attacks and similar events. Some of our systems are not fully redundant, and our disaster recovery planning may not be sufficient for all eventualities.

Protection against fraud is of key importance to the purchasers and end users of our solutions. We incorporate security features, including encryption software, biometric identification and secure hardware, into our solutions to protect against fraud in electronic transactions and to provide for the privacy and integrity of card holder data. Our solutions may be vulnerable to breaches in security due to defects in the security mechanisms, the operating system and applications or the hardware platform. Security vulnerabilities could jeopardize the security of information transmitted using our solutions. If the security of our solutions is compromised, our reputation and marketplace acceptance of our solutions will be adversely affected, which would cause our business to suffer, and we may become subject to damage claims. We have not yet experienced any security breaches affecting our business.

Despite any precautions we may take, the occurrence of a natural disaster or other unanticipated problems with our system could result in lengthy interruptions in our services. Our current business interruption insurance may not be sufficient to compensate us for losses that may result from interruptions in our service as a result of system failures.

The period between our initial contact with a potential customer and the sale of our UEPS products or services to that customer tends to be long and may be subject to delays which may have an impact on our revenues.

The period between our initial contact with a potential customer and the purchase of our UEPS products and services is often long and subject to delays associated with the budgeting, approval and competitive evaluation processes that frequently accompany significant capital expenditures. A lengthy sales cycle may have an impact on the timing of our revenues, which may cause our quarterly operating results to fall below investor expectations. A customer's decision to purchase our products and services is often discretionary, involves a significant commitment of resources, and is influenced by customer budgetary cycles. To sell our products and services successfully we generally must educate our potential customers regarding the uses and benefits of our products and services, which can require the expenditure of significant time and resources; however, there can be no assurance that this significant expenditure of time and resources will result in actual sales of our products and services.

Our proprietary rights may not adequately protect our technologies.

Our success depends in part on our obtaining and maintaining patent, trade secret, copyright and trademark protection of our technologies in the United States and other jurisdictions as well as successfully enforcing this intellectual property and defending this intellectual property against third-party challenges. We will only be able to protect our technologies from unauthorized use by third parties to the extent that valid and enforceable intellectual property protections, such as patents or trade secrets, cover them. In particular, we place considerable emphasis on obtaining patent and trade secret protection for significant new technologies, products and processes. Furthermore, the degree of future protection of our proprietary rights is uncertain because legal means afford only limited protection and may not adequately protect our rights or permit us to gain or keep our competitive advantage.

We cannot predict the breadth of claims that may be allowed or enforced in our patents. For example, we might not have been the first to make the inventions covered by each of our patents and patent applications or to file patent applications and it is possible that none of our pending patent applications will result in issued patents. It is possible that others may independently develop similar or alternative technologies. Also, our issued patents may not provide a basis for commercially viable products, or may not provide us with any competitive advantages or may be challenged, invalidated or circumvented by third parties.

We also rely on trade secrets to protect our technology, especially where we believe patent protection is not appropriate or obtainable. However, trade secrets are difficult to protect. We have confidentiality agreements with employees, and consultants to protect our trade secrets and proprietary know-how. These agreements may be breached and or may not have adequate remedies for such breach. While we use reasonable efforts to protect our trade secrets, our employees, consultants or others may unintentionally or willfully disclose our information to competitors. If we were to enforce a claim that a third party had illegally obtained and was using our trade secrets, our enforcement efforts would be expensive and time consuming, and the outcome would be unpredictable. Moreover, if our competitors independently develop equivalent knowledge, methods and know-how, it will be more difficult for us to enforce our rights and our business could be harmed. If we are not able to defend the patent or trade secret protection position of our technologies, then we will not be able to exclude competitors from developing or marketing competing technologies.

We also rely on trademarks to establish a market identity for some of our products. To maintain the value of our trademarks, we might have to file lawsuits against third parties to prevent them from using trademarks confusingly similar to or dilutive of our registered or unregistered trademarks. Also, we might not obtain registrations for our pending trademark applications, and might have to defend our registered trademark and pending trademark applications from challenge by third parties.

Defending our intellectual property rights or defending ourselves in infringement suits that may be brought against us is expensive and time-consuming and may not be successful.

Litigation to enforce our patents, trademarks or other intellectual property rights or to protect our trade secrets could result in substantial costs and may not be successful. Any loss of, or inability to protect, intellectual property in our technology could diminish our competitive advantage and also seriously harm our business. In addition, the laws of certain foreign countries may not protect our intellectual property rights to the same extent as do the laws in countries where we currently have patent protection. Our means of protecting our intellectual property rights in countries where we currently have patent or trademark protection, or any other country in which we operate, may not be adequate to fully protect our intellectual property rights. Similarly, if third parties claim that we infringe their intellectual property rights, we may be required to incur significant costs and devote substantial resources to the defense of such claims. We may be required to discontinue using and selling any infringing technology and services, to expend resources to develop non-infringing technology or to purchase licenses or pay royalties for other technology. In addition, if we are unsuccessful in defending any such third-party claims, we could suffer costly judgments and injunctions that could materially adversely affect our business, results of operations or financial condition.

Our strategy of partnering with companies outside South Africa may not be successful.

In order for us to expand our operations into foreign markets, it may be necessary for us to establish partnering arrangements with companies outside South Africa, such as the ones we have co-established in Namibia and India. The success of these endeavors is, however, subject to a number of factors over which we have little or no control, such as finding suitable partners with the appropriate financial, business and technical backing and continued governmental support for planned implementations. In some countries, finding suitable partners and obtaining the appropriate support from the government involved may take a number of years before we can commence implementation. Some of these partnering arrangements may take the form of joint ventures in which we receive a minority interest. Minority ownership carries with it numerous risks, including dependence on partners to provide knowledge of local market conditions and to facilitate the acquisition of any necessary licenses and permits, as well as the inability to control the joint venture vehicle and to direct its policies and strategies. Such a lack of control could result in the loss of all or part of our investment in such entities. In addition, our foreign partners may have different business methods and customs which may be unfamiliar to us and with which we disagree. Our joint venture partners may not be able to implement our business model in new areas as efficiently and quickly as we have been able to do in South Africa. Furthermore, limitations imposed on our South African subsidiaries by South African exchange control regulations, as well as limitations imposed on us by the Investment Company Act of 1940, may limit our ability to establish partnerships or entities in which we do not obtain a controlling interest.

We may have difficulty managing our growth.

We continue to experience growth, both in the scope of our operations and size of our organization. This growth is placing significant demands on our management, especially in connection with the implementation of our SASSA contract throughout all of South Africa during the past 15 months. Continued growth would increase the challenges involved in implementing appropriate operational and financial systems, expanding our technical and sales and marketing infrastructure and capabilities, providing adequate training and supervision to maintain high quality standards, and preserving our culture and values. International growth, in particular, means that we must become familiar and comply with complex laws and regulations in other countries, especially laws relating to taxation.

Additionally, continued growth will place significant additional demands on our management and our financial and operational resources, and will require that we continue to develop and improve our operational, financial and other internal controls. If we cannot scale and manage our business appropriately, we will not experience our projected growth and our financial results may suffer.

We pre-fund the payment of social welfare grants through our merchant acquiring system in South Africa and pre-fund the settlement of certain customers in Korea and a significant level of payment defaults by these merchants or customers would adversely affect us.

We pre-fund social welfare grants through the merchants who participate in our merchant acquiring system in the South African provinces where we operate as well as pre-fund the settlement of funds to certain customers in Korea. These pre-funding obligations expose us to the risk of default by these merchants and customers. Although we have not experienced any material defaults by merchants or customers in the return of pre-funded amounts to us, we cannot guarantee that material defaults will not occur in the future. A material level of merchant or customer defaults could have a material adverse effect on us, our financial position and results of operations.

We may incur material losses in connection with our distribution of cash to recipient cardholders of social welfare grants.

Many social welfare recipient cardholders use our services to access cash using their smart cards. We use armored vehicles to deliver large amounts of cash to rural areas across South Africa to enable these welfare recipient cardholders to receive this cash. In some cases, we also store the cash that will be delivered by the armored vehicles in

depots overnight or over the weekend to facilitate delivery to these rural areas. We cannot insure against certain risks of loss or theft of cash from our delivery vehicles and we will therefore bear the full cost of certain uninsured losses or theft in connection with the delivery process, and such losses could materially and adversely affect our financial condition, cash flows and results of operations. We have not incurred any material losses resulting from cash distribution in recent years, but there is no assurance that we will not incur material losses in the future.

We depend upon third-party suppliers, making us vulnerable to supply shortages and price fluctuations, which could harm our business.

We obtain our smart cards, POS devices and the other hardware we use in our business from a limited number of suppliers, and do not manufacture this equipment ourselves. We generally do not have long-term agreements with our manufacturers or component suppliers.

If our suppliers become unwilling or unable to provide us with adequate supplies of parts or products when we need them, or if they increase their prices, we may not be able to find alternative sources in a timely manner and could be faced with a critical shortage. This could harm our ability to implement new systems and cause our revenues to decline. Even if we are able to secure alternative sources in a timely manner, our costs could increase. A supply interruption or an increase in demand beyond current suppliers' capabilities could harm our ability to distribute our equipment and thus, to acquire a new source of customers who use our UEPS technology. Any interruption in the supply of the hardware necessary to operate our technology, or our inability to obtain substitute equipment at acceptable prices in a timely manner, could impair our ability to meet the demand of our customers, which would have an adverse effect on our business.

Shipments of our electronic payment systems may be delayed by factors outside of our control, which can harm our reputation and our relationships with our customers.

The shipment of payment systems requires us or our manufacturers, distributors or other agents to obtain customs or other government certifications and approvals and, on occasion, to submit to physical inspection of our systems in transit. Failure to satisfy these requirements, and the very process of trying to satisfy them, can lead to lengthy delays in the delivery of our solutions to our direct or indirect customers. Delays and unreliable delivery by us may harm our reputation and our relationships with our customers.

Our Smart Life business exposes us to risks typically experienced by life assurance companies.

Smart Life is a life insurance company and exposes us to risks typically experienced by life assurance companies. Some of these risks include the extent to which we are able to continue to reinsure our risks at acceptable costs, reinsurer counterparty risk, our ability to price our insurance products appropriately, the risk that actual claims experience may exceed our estimates and the competitiveness of the South African insurance market. If we are unable to maintain our desired level of reinsurance at prices that we consider acceptable, we would have to either accept an increase in our exposure risk or reduce our insurance writings. If our reinsurers are unable to meet their commitments to us in a timely manner, or at all, we may be unable to discharge our obligations under our insurance contracts. As such, we are exposed to counterparty, including credit, risk of these reinsurers. Our product pricing includes long-term assumptions regarding investment returns, mortality, morbidity, persistency and operating costs and expenses of the business. Using the wrong assumptions to price our insurance products could materially and adversely affect our financial position, results of operations and cash flows. Further, even though we currently reinsure the majority of our insurance contract liabilities, if our actual claims experience is higher than our estimates, our financial position, results of operations and cash flows could be adversely affected. Finally, the South African insurance industry is highly competitive. Many of our competitors are well-established, represented nationally and market similar products. Because of the competitive nature of the insurance industry, we may not be able to effectively penetrate the South African insurance market.

Risks Relating to Operating in South Africa and Other Foreign Markets

If we do not achieve applicable black economic empowerment objectives in our South African businesses, we risk losing our government and private contracts. In addition, it is possible that we may be required to achieve black shareholding of our company in a manner that could dilute your ownership.

The South African government, through the Broad-Based Black Economic Empowerment Act, 2003, established a legislative framework for the promotion of BEE. The law recognizes two distinct mechanisms for the achievement of BEE objectives – compliance with sector-specific codes of good practice and compliance with industry-specific transformation charters. On 6 June 2012 the South African government promulgated an Information and Communications Technology, or ICT, sector-specific code, to which we are subject. Achievement of BEE objectives is measured by the ICT sector scorecard which establishes a weighting to various components of BEE. We have taken a number of actions as a company to increase empowerment of black South Africans. However, it is

possible that these actions may not be sufficient to enable us to achieve applicable BEE objectives. In that event, in order to avoid risking the loss of our government and private contracts, we may have to seek to comply through other means, including by selling or placing additional shares of Net1 or of our South African subsidiaries to black South Africans. Such sales of shares could have a dilutive impact of your ownership interest, which could cause the market price of our stock to decline.

We entered into a BEE transaction in 2012 pursuant to which, among other things, we granted a BEE consortium a one-year option to purchase 8,955,000 shares of our common stock at an exercise price of \$8.96 per share. We entered into the BEE transaction to facilitate sustainable economic growth and social development in South Africa by adhering to the principles of broad-based BEE, to strengthen the development of our business plan and to comply with South African regulation and business practice. When we entered into the BEE transaction, we expected that the exercise of the option by the BEE consortium would also substantially improve our BEE rating, which we anticipated would significantly enhance our ability to execute our longer-term strategy in South Africa and elsewhere in Africa and strengthen our business credentials that we believe are essential to maintain and accelerate the growth of our business.

However, our stock price decreased materially when we announced the existence of the DOJ and SEC investigations and the option expired unexercised on April 19, 2013, as our stock price continued to remain substantially below the exercise price of the option through the expiration date of the option. We have therefore not succeeded in achieving the envisaged objectives of the BEE transaction. Although we and the BEE consortium are evaluating various alternatives to ensure that our BEE objectives will be met, we cannot assure you that these efforts will be successful. If we enter into another BEE transaction that involves the issuance of equity, we cannot predict what the dilutive effect of such a transaction would be on your ownership or how it would affect the market price of our stock.

In addition, under US generally accepted accounting principles, or GAAP, we recorded a non-cash charge of approximately \$14.2 million during fiscal 2012 in respect of the grant of the option pursuant to our BEE transaction in January 2012. The \$14.2 million charge was determined under GAAP as the fair value of the option on the date of grant and was expensed in full during fiscal 2012. Even though the option expired unexercised, GAAP does not permit the reversal of the prior charge. If we were to grant a new option to the BEE consortium, we would have to record another non-cash charge which would adversely affect our reported results of operations in the period during which we would be required to record such charge.

Fluctuations in the value of the South African rand have had, and will continue to have, a significant impact on our reported results of operations, which may make it difficult to evaluate our business performance between reporting periods and may also adversely affect our stock price.

The South African rand, or ZAR, is the primary operating currency for our business operations while our financial results are reported in US dollars. This means that as long as the ZAR remains our primary operating currency, depreciation in the ZAR against the US dollar, and to a lesser extent, the Korean won, would negatively impact our reported revenue and net income, while a strengthening of the ZAR would have the opposite effect. Depreciation in the ZAR may negatively impact the prices at which our stock trades. The US dollar/ZAR exchange rate has historically been volatile and we expect this volatility to continue. During fiscal 2013, the ZAR was significantly weaker against the US dollar than during most of the preceding several years, which adversely affected our 2013 revenue and net income. We provide detailed information about historical exchange rates in Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations Currency Exchange Rate Information.

Due to the significant fluctuation in the value of the ZAR and its impact on our reported results, you may find it difficult to compare our results of operations between financial reporting periods even though we provide supplemental information about our results of operations determined on a ZAR basis. This difficulty may increase as we expand our business internationally and record additional revenue and expenses in the euro and other currencies. It may also have a negative impact on our stock price.

We generally do not engage in any currency hedging transactions intended to reduce the effect of fluctuations in foreign currency exchange rates on our results of operations, other than economic hedging relating to our inventory purchases which are settled in US dollars or euros. We have used forward contracts in order to hedge our economic exposure to the ZAR/US dollar and ZAR/euro exchange rate fluctuations from these foreign currency transactions. We cannot guarantee that we will enter into hedging transactions in the future or, if we do, that these transactions will successfully protect us against currency fluctuations.

South Africa's high levels of poverty, unemployment and crime may increase our costs and impair our ability to maintain a qualified workforce.

While South Africa has a highly developed financial and legal infrastructure, it also has high levels of crime and unemployment and there are significant differences in the level of economic and social development among its people, with large parts of the population, particularly in the rural areas, having limited access to adequate education,

healthcare, housing and other basic services, including water and electricity. In addition, South Africa has a high prevalence of HIV/AIDS and tuberculosis. Government policies aimed at alleviating and redressing the disadvantages suffered by the majority of citizens under previous governments may increase our costs and reduce our profitability, all of which could negatively affect our business. These problems may prompt emigration of skilled workers, hinder investment into South Africa and impede economic growth. As a result, we may have difficulties attracting and retaining qualified employees.

The economy of South Africa is exposed to high inflation and interest rates which could increase our operating costs and thereby reduce our profitability.

The economy of South Africa in the past has been, and in the future may continue to be, characterized by rates of inflation and interest rates that are substantially higher than those prevailing in the United States and other highly developed economies. High rates of inflation could increase our South African-based costs and decrease our operating margins. Although higher interest rates would increase the amount of income we earn on our cash balances, they would also adversely affect our ability to obtain cost-effective debt financing in South Africa.

South African exchange control regulations could hinder our ability to make foreign investments and obtain foreign-denominated financing.

South Africa's exchange control regulations restrict the export of capital from South Africa, the Republic of Namibia and the Kingdoms of Lesotho and Swaziland, known collectively as the Common Monetary Area without the prior approval of SARB. While the South African government has relaxed exchange controls in recent years, it is difficult to predict whether or how it will further relax or abolish exchange control measures in the foreseeable future.

Although Net1 is a US corporation and is not itself subject to South African exchange control regulations, these regulations do restrict the ability of our South African subsidiaries to raise and deploy capital outside the Common Monetary Area, to borrow money in currencies other than the South African rand and to hold foreign currency. Exchange control restrictions may also affect the ability of these subsidiaries to pay dividends to Net1 unless the affected subsidiary can show that any payment of such dividend will not place it in an over-borrowed position. As of June 30, 2013, approximately 30% of our cash and cash equivalents were held by our South African subsidiaries. Exchange control regulations could make it difficult for our South African subsidiaries to: (i) export capital from South Africa; (ii) hold foreign currency or incur indebtedness denominated in foreign currencies without the approval of SARB; (iii) acquire an interest in a foreign venture without the approval of SARB and first having complied with the investment criteria of SARB; (iv) repatriate to South Africa profits of foreign operations; and (v) limit our business to utilize profits of one foreign business to finance operations of a different foreign business.

Under current exchange control regulations, SARB approval would be required for any acquisition of our company which would involve payment to our South African shareholders of any consideration other than South African rand. This restriction could limit our management in its ability to consider strategic options and thus, our shareholders may not be able to realize the premium over the current trading price of our shares.

Most of South Africa's major industries are unionized, and the majority of employees belong to trade unions. We face the risk of disruption from labor disputes and new South African labor laws.

Trade unions have had a significant impact on the collective bargaining process as well as on social and political reform in South Africa in general. Although only approximately 2% percent of our South African workforce is unionized and we have not experienced any labor disruptions in recent years, such labor disruptions may occur in the future. In addition, developments in South African labor laws may increase our costs or alter our relationship with our employees and trade unions, which may have an adverse effect on us, our financial condition and our operations.

Operating in South Africa and other emerging markets subjects us to greater risks than those we would face if we operated in more developed markets.

Emerging markets such as South Africa, as well as some of the other markets into which we have recently begun to expand, including African countries outside South Africa, South America, Southeast Asia and Central and Eastern Europe, are subject to greater risks than more developed markets. While we focus our business primarily on emerging markets because that is where we perceive there to be the greatest opportunities to market our products and services successfully, the political, economic and market conditions in many of these markets present risks that could make it more difficult to operate our business successfully.

Some of these risks include:

- political and economic instability, including higher rates of inflation and currency fluctuations;
- high levels of corruption, including bribery of public officials;
- loss due to civil strife, acts of war or terrorism, guerrilla activities and insurrection;
- a lack of well-developed legal systems which could make it difficult for us to enforce our intellectual property and contractual rights;

- logistical and communications challenges;
- potential adverse changes in laws and regulatory practices, including import and export license requirements and restrictions, tariffs, legal structures and tax laws;
- difficulties in staffing and managing operations and ensuring the safety of our employees;
- restrictions on the right to convert or repatriate currency or export assets;
- greater risk of uncollectible accounts and longer collection cycles;
- indigenization and empowerment programs; and
- exposure to liability under US securities and foreign trade laws, including the FCPA, and regulations established by the US Department of Treasury s Office of Foreign Assets Control, or OFAC.

Many of these countries and regions are in various stages of developing institutions and political, legal and regulatory systems that are characteristic of democracies. However, institutions in these countries and regions may not yet be as firmly established as they are in democracies in the developed world. Many of these countries and regions are also in the process of transitioning to a market economy and, as a result, are experiencing changes in their economies and their government policies that can affect our investments in these countries and regions. Moreover, the procedural safeguards of the new legal and regulatory regimes in these countries and regions are still being developed and, therefore, existing laws and regulations may be applied inconsistently. In some circumstances, it may not be possible to obtain the legal remedies provided under those laws and regulations in a timely manner.

As the political, economic and legal environments remain subject to continuous development, investors in these countries and regions face uncertainty as to the security of their investments. Any unexpected changes in the political or economic conditions in these or neighboring countries or others in the region may have a material adverse effect on the international investments that we have made or may make in the future, which may in turn have a material adverse effect on our business, operating results, cash flows and financial condition.

Our KSNET operations may be adversely affected by tension in the Korean peninsula.

Our KSNET operations contributed approximately 29% and 22%, respectively, of our revenue and operating income for our 2013 fiscal year. During the early part of calendar 2013, there was increased tension on the Korean peninsula and a concern about potential acts of military aggression or cyber-attacks. This tension may have adversely impacted the Korean economy as is evidenced by the weakening of the KRW against the USD during calendar 2013. Because KSNET is a transaction processor, its operations are dependent on continuing high levels of consumer activity and the availability of data communication infrastructure. Acts of military aggression in the Korean peninsula, other hostile acts or economic weakness that reduces spending by South Korean consumers is likely to materially and adversely impact our KSNET operations. If this were to occur, we might be unable to comply with the debt covenants contained in our Korean debt facility, which could result in default and acceleration of our indebtedness. If this were to occur, we might not be able to obtain waivers of default or to refinance the debt with another lender and as a result, our business and financial condition would suffer.

Risks Relating to Government Regulation

We are required to comply with certain US laws and regulations, including the Foreign Corrupt Practices Act as well as economic and trade sanctions, which could adversely impact our future growth.

We must comply with the FCPA, which prohibits US companies or their agents and employees from providing anything of value to a foreign official for the purposes of influencing any act or decision of these individuals in their official capacity to help obtain or retain business, direct business to any person or corporate entity or obtain any unfair advantage. In addition, OFAC administers and enforces economic and trade sanctions against targeted foreign countries, entities and individuals based on US foreign policy and national security goals.

Any failure by us to adopt appropriate compliance procedures and ensure that our employees, agents and business partners comply with the FCPA could subject us to substantial penalties. In addition, the requirement that we comply with the FCPA could put us at a competitive disadvantage with companies that are not required to comply with the FCPA or could otherwise harm our business. For example, in many emerging markets, there may be significant levels of official corruption, and thus, bribery of public officials may be a commonly accepted cost of doing business. Our refusal to engage in illegal behavior, such as paying bribes, may result in us not being able to obtain business that we might otherwise have been able to secure or possibly even result in unlawful, selective or arbitrary action being taken against us by foreign officials. Furthermore, the trade sanctions administered and enforced by OFAC target countries which are typically less developed countries. Since less developed countries present some of the best opportunities for us to expand our business internationally, restrictions against entering into transactions with those foreign countries, as well as with certain entities and individuals in those countries, can adversely affect our

ability to grow our business.

Changes in current South African government regulations relating to social welfare grants could adversely affect our revenues and cash flows.

We derive a substantial portion of our current business from the distribution of social welfare grants in South Africa. Because social welfare eligibility and grant amounts are regulated by the South African government, any changes to or reinterpretations of the government regulations relating to social welfare may result in the non-renewal or reduction of grants for certain individuals, or a determination that currently eligible social welfare grant recipient cardholders are no longer eligible. If any of these changes were to occur, the number of grants we distribute could decrease which could result in a reduction of our revenue and cash flows.

The implementation of our SASSA contract required the re-registration of all social welfare grant recipient cardholder and beneficiaries in South Africa. To date, an estimated 372,870 recipient cardholders have not presented themselves for reregistration and SASSA has indicated that these grants will be cancelled if the beneficiaries do not present themselves for reregistration by the end of September 2013. Furthermore, part of our solution offered to SASSA involves the comparison of all re-registered beneficiaries' fingerprints with the objective of eliminating any duplicate grants. When we have completed the fingerprint matching, a substantial number of duplicate grant beneficiaries may be removed from the payment file. If any of these events were to occur, the number of grants we distribute could decrease which could result in a reduction of our revenue, operating income and cash flows

We do not have a South African banking license and therefore we provide our social welfare grant distribution and wage payment solution through an arrangement with a third-party bank, which limits our control over this business and the economic benefit we derive from it. If this arrangement were to terminate, we would not be able to operate our social welfare grant distribution and wage payment business without alternate means of access to a banking license.

The South African retail banking market is highly regulated. Under current law and regulations, our South African social welfare grant distribution and wage payment business activities in the unbanked market requires us to be registered as a bank in South Africa or to have access to an existing banking license. We are not currently so registered, but we have entered into an agreement with Grindrod Bank Limited, or Grindrod, that enables us to implement our social welfare grant distribution and wage payment solution in compliance with the relevant laws and regulations. If the agreement were to be terminated, we would not be able to operate these services unless we were able to obtain access to a banking license through alternate means. We are also dependent on Grindrod to defend us against attacks from the other South African banks who may regard the rapid market acceptance of our UEPS/EMV product with biometric verification as disruptive to their funds transfer or other businesses and may seek governmental or other regulatory intervention.

In addition, the South African Financial Advisory and Intermediary Services Act, 2002, requires persons who give advice regarding the purchase of financial products or who act as intermediaries between financial product suppliers and consumers in South Africa to register as financial service providers. We are in the process of applying for a license under this Act in order to continue to provide advice and intermediary services in respect of the financial products on which we advise and the payment processing services we provide in South Africa on behalf of insurers and other financial product suppliers. If we fail to obtain this license, we may be stopped from continuing this part of our business in South Africa.

Our payment processing businesses are subject to substantial governmental regulation and may be adversely affected by liability under, or any future inability to comply with, existing or future regulations or requirements.

Our payment processing activities are subject to extensive regulation. Compliance with the requirements under these various regulatory regimes may cause us to incur significant additional costs and failure to comply with such requirements could result in the shutdown of the non-complying facility, the imposition of liens, fines and/or civil or criminal liability.

We may be subject to regulations regarding privacy, data use and/or security which could adversely affect our business.

We are subject to regulations in a number of the countries in which we operate relating to the collection, use, retention, security and transfer of personally identifiable information about the people who use our products and services, in particular, personal financial and health information. New laws in this area have been passed by several jurisdictions, and other jurisdictions are considering imposing additional restrictions. The interpretation and application of user data protection laws are in a state of flux. These laws may be interpreted and applied inconsistently

from country to country and our current data protection policies and practices may not be consistent with those interpretations and applications. Complying with these varying requirements could cause us to incur substantial costs or require us to change our business practices in a manner adverse to our business.

Any failure, or perceived failure, by us to comply with any regulatory requirements or international privacy or consumer protection-related laws and regulations could result in proceedings or actions against us by governmental entities or others, subject us to significant penalties and negative publicity and adversely affect us. In addition, as noted above, we are subject to the possibility of security breaches, which themselves may result in a violation of these laws.

Risks Relating to our Common Stock

Our stock price has been and may continue to be volatile.

Our stock price has experienced recent significant volatility. During the 2013 fiscal year, our stock price ranged from a low of \$3.01 to a high of \$10.51. We expect that the trading price of our common stock may continue to be volatile as a result of a number of factors, including, but not limited to the following:

- government or regulatory investigations, including developments in the current US government investigations;
- developments in the South African courts related to the AllPay challenge to our SASSA tender award;
- fluctuations in currency exchange rates, particularly the US dollar/ZAR exchange rate;
- announcement of a BEE transaction, especially one involving the issuance or potential issuance of equity securities;
- quarterly variations in our operating results, especially if our operating results fall below the expectations of securities analysts and investors;
- announcements of acquisitions, disposals or impairments of intangible assets;
- the timing of or delays in the commencement, implementation or completion of major projects;
- large purchases or sales of our common stock;
- general conditions in the markets in which we operate; and
- economic and financial conditions.

A majority of our common stock is beneficially owned by a small number of shareholders. The interests of these shareholders may conflict with those of our other shareholders.

There is a concentration of ownership of our outstanding common stock because approximately 54% of our outstanding common stock is owned by three shareholders. Based on their most recent SEC filings disclosing ownership of our shares, International Value Advisers, LLC, or IVA, investment entities affiliated with General Atlantic LLC and Allan Gray Proprietary Limited beneficially owned approximately 27%, 14% and 13% of our outstanding common stock, respectively. General Atlantic also has the right to representation on our board of directors although it is not currently exercising that right.

The interests of IVA, General Atlantic and Allan Gray may be different from or conflict with the interests of our other shareholders. As a result of the ownership by IVA, General Atlantic and Allan Gray, as well as the General Atlantic's right to board representation, they will be able, if they act together, to influence our management and affairs and all matters requiring shareholder approval, including the election of directors and approval of significant corporate transactions. This concentration of ownership may have the effect of delaying or preventing a change of control of our company, thus depriving shareholders of a premium for their shares, or facilitating a change of control that other shareholders may oppose.

We may seek to raise additional financing by issuing new securities with terms or rights superior to those of our shares of common stock, which could adversely affect the market price of our shares of common stock.

We may require additional financing to fund future operations, including expansion in current and new markets, programming development and acquisition, capital costs and the costs of any necessary implementation of technological innovations or alternative technologies, or to fund acquisitions. Because of the exposure to market risks associated with economies in emerging markets, we may not be able to obtain financing on favorable terms or at all.

If we raise additional funds by issuing equity securities, the percentage ownership of our current shareholders will be reduced, and the holders of the new equity securities may have rights superior to those of the holders of shares of common stock, which could adversely affect the market price and voting power of shares of common stock. If we raise additional funds by issuing debt securities, the holders of these debt securities would similarly have some rights

senior to those of the holders of shares of common stock, and the terms of these debt securities could impose restrictions on operations and create a significant interest expense for us.

We may have difficulty raising necessary capital to fund operations or acquisitions as a result of market price volatility for our shares of common stock.

In recent years, the securities markets in the United States have experienced a high level of price and volume volatility, and the market price of securities of many companies have experienced wide fluctuations that have not necessarily been related to the operations, performance, underlying asset values or prospects of such companies. For these reasons, our shares of common stock can also be expected to be subject to volatility resulting from purely market forces over which we will have no control. If our business development plans are successful, we may require additional financing to continue to develop and exploit existing and new technologies, to expand into new markets and to make acquisitions, all of which may be dependent upon our ability to obtain financing through debt and equity or other means.

Issuances of significant amounts of stock in the future could potentially dilute your equity ownership and adversely affect the price of our common stock.

We believe that it is necessary to maintain a sufficient number of available authorized shares of our common stock in order to provide us with the flexibility to issue shares for business purposes that may arise from time to time. For example, we could sell additional shares to raise capital to fund our operations or to acquire other businesses, issue shares in a BEE transaction, issue additional shares under our stock incentive plan or declare a stock dividend. Our board may authorize the issuance of additional shares of common stock without notice to, or further action by, our shareholders, unless shareholder approval is required by law or the rules of the NASDAQ Stock Market. The issuance of additional shares could dilute the equity ownership of our current shareholders. In addition, additional shares that we issue would likely be freely tradable which could adversely affect the trading price of our common stock.

Failure to maintain effective internal control over financial reporting in accordance with Section 404 of the Sarbanes-Oxley Act, especially over companies that we may acquire, could have a material adverse effect on our business and stock price.

Under Section 404 of the Sarbanes-Oxley Act of 2002, or Sarbanes, we are required to furnish a management certification and auditor attestation regarding the effectiveness of our internal control over financial reporting. We are required to report, among other things, control deficiencies that constitute a material weakness or changes in internal control that materially affect, or are reasonably likely to materially affect, internal control over financial reporting. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of annual or interim financial statements will not be prevented or detected on a timely basis.

The requirement to evaluate and report on our internal controls also applies to companies that we acquire. Some of these companies may not be required to comply with Sarbanes prior to the time we acquire them. The integration of these acquired companies into our internal control over financial reporting could require significant time and resources from our management and other personnel and may increase our compliance costs. If we fail to successfully integrate the operations of these acquired companies into our internal control over financial reporting, our internal control over financial reporting may not be effective.

While we continue to dedicate resources and management time to ensuring that we have effective controls over financial reporting, failure to achieve and maintain an effective internal control environment could have a material adverse effect on the market's perception of our business and our stock price.

You may experience difficulties in effecting service of legal process, enforcing foreign judgments or bringing original actions based upon U.S. laws, including the federal securities laws or other foreign laws, against us or our directors and officers and experts.

While Net1 is incorporated in the state of Florida, United States, the company is headquartered in Johannesburg, South Africa and substantially all of the company's assets are located outside the United States. In addition, all of Net1's directors and officers reside outside of the United States and our experts, including our independent registered public accountants, are based in South Africa.

As a result, even though you could effect service of legal process upon Net1, as a Florida corporation, in the United States, you may not be able to collect any judgment obtained against Net1 in the United States, including any judgment based on the civil liability provisions of the U.S. federal securities laws, because substantially all of our assets are located outside the United States. Moreover, it may not be possible for you to effect service of legal process upon the majority of our directors and officers or upon our experts within the United States or elsewhere outside South Africa and any judgment obtained against any of our foreign directors, officers and experts in the United States, including one based on the civil liability provisions of the U.S. federal securities laws, may not be collectible in the

United States and may not be enforced by a South African court.

A foreign judgment is not directly enforceable in South Africa, but constitutes a cause of action which will be enforced by South African courts provided that:

the court or arbitral body which pronounced the judgment had international jurisdiction and competence to entertain the case according to the principles recognized by South African law with reference to the jurisdiction of foreign courts;
the judgment is final and conclusive (that is, it cannot be altered by the court which pronounced it);
the judgment has not lapsed;

the recognition and enforcement of the judgment by South African courts would not be contrary to public policy in South Africa, including observance of the rules of natural justice which require that no award is enforceable unless the defendant was duly served with documents initiating proceedings, that he was given a fair opportunity to be heard and that he enjoyed the right to be legally represented in a free and fair trial before an impartial tribunal;

the judgment was not obtained by improper or fraudulent means;

the judgment does not involve the enforcement of a penal or foreign revenue law or any award of multiple or punitive damages; and

the enforcement of the judgment is not otherwise precluded by the provisions of the Protection of Business Act 99 of 1978 (as amended), of the Republic of South Africa.

It has been the policy of South African courts to award compensation for the loss or damage actually sustained by the person to whom the compensation is awarded. South African courts have awarded compensation to shareholders who have suffered damages as a result of a diminution in the value of their shares based on various actions by the corporation and its management. Although the award of punitive damages is generally unknown to the South African legal system, that does not mean that such awards are necessarily contrary to public policy. Whether a judgment was contrary to public policy depends on the facts of each case. Exorbitant, unconscionable, or excessive awards will generally be contrary to public policy. South African courts cannot enter into the merits of a foreign judgment and cannot act as a court of appeal or review over the foreign court. Further, if a foreign judgment is enforced by a South African court, it will be payable in South African currency. Also, under South Africa's exchange control laws, the approval of SARB is required before a defendant resident in South Africa may pay money to a non-resident plaintiff in satisfaction of a foreign judgment enforced by a court in South Africa.

It is doubtful whether an original action based on United States federal securities laws may be brought before South African courts. A plaintiff who is not resident in South Africa may be required to provide security for costs in the event of proceedings being initiated in South Africa. Furthermore, the Rules of the High Court of South Africa require that documents executed outside South Africa must be authenticated for the purpose of use in South African courts.

In reaching the foregoing conclusions, we consulted with our South African legal counsel, Cliffe Dekker Hofmeyr Inc.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

We lease our corporate headquarters facility which consists of approximately 83,000 square feet in Johannesburg, South Africa. We also lease properties throughout South Africa, including a 12,088 square foot manufacturing facility in Lazer Park, a 14,230 square foot manufacturing facility in Brakpan and 98 depot facilities. We also lease additional office space in Johannesburg, Pretoria, Cape Town and Durban, South Africa; Vienna, Austria; Seoul, Republic of Korea; Moscow, Russia; New York, New York and Frederick, Maryland. These leases expire at various dates through 2018.

We own land and buildings in Ahnsung, Kyung-gi, Republic of Korea, which facility is used for the storage of business documents. We believe we have adequate facilities for our current business operations.

ITEM 3. LEGAL PROCEEDINGS

AllPay challenge to tender award

On March 27, 2013, a full bench of the South African Supreme Court of Appeal dismissed AllPay's appeal against the earlier ruling by the North Gauteng High Court that SASSA's award of the tender to us would not be set aside. Accordingly, our SASSA contract to distribute social welfare grants to ten million South Africans every month, for a period of five years, remains in full force and effect. On April 18, 2013, AllPay applied for leave to appeal to the South African Constitutional Court, the highest court in the country, against the judgment of the Supreme Court. We and SASSA have opposed AllPay's application. The hearing has been scheduled for September 10, 2013. Both the application for leave to appeal and appeal itself will be argued on September 10, 2013. We cannot predict when or how the Constitutional Court will rule on the matter.

The background of this lawsuit is that on February 8, 2012, AllPay filed an application in the High Court seeking to set aside the award of the SASSA tender to us. AllPay was one of the unsuccessful bidders during the SASSA tender process and was a former contractor to SASSA. We and SASSA were included among the respondents in this proceeding. We and SASSA both opposed AllPay's application. When SASSA publicly announced the award of the tender to us in January 2012, it stated that it had conducted the tender in accordance with all relevant legislation. The High Court heard the matter in May 2012. We applied to the High Court to strike the allegations of corruption contained in AllPay's court papers, as well as the newspaper articles relied upon by AllPay, from the court record. At the outset of the hearing, the High Court ordered that all these allegations and newspaper articles be struck from the court record, with a cost order against AllPay. The High Court issued its ruling, in relation to the application to set aside the award, on August 28, 2012. The result of the ruling was that our contract with SASSA remained valid and was not set aside. Specifically, the High Court ruled that the tender process conducted by SASSA was illegal and invalid but that the award of the tender to us was not set aside. The court also ordered the CEO of SASSA, SASSA and us to pay costs. SASSA and we appealed the ruling that the tender process was illegal and invalid as well as the cost order. AllPay appealed the ruling that the award of the tender by SASSA to us should not be set aside.

The appeal was heard on February 15, 2013, before the Supreme Court. On March 27, 2013, a full bench of the Supreme Court dismissed AllPay's appeal against the earlier ruling by the North Gauteng High Court that SASSA's award of the tender to us would not be set aside. The Supreme Court also upheld our and SASSA's appeal against the High Court's orders that the process conducted in awarding the contract was illegal and invalid and that we and SASSA pay AllPay's costs occasioned by the court proceedings. The Supreme Court also ordered AllPay to pay our and SASSA's costs occasioned by the court proceedings, including the cost of three counsel. The judges presiding at the Supreme Court hearing unanimously ruled that there were no unlawful irregularities in the tender process followed by SASSA.

After the High Court ruling, AllPay approached the Constitutional Court for leave to appeal the High Court ruling directly to the Constitutional Court. We and SASSA opposed AllPay's application. On November 1, 2012, the Constitutional Court concluded that the AllPay application should be dismissed as it was not in the interest of justice to hear the matter at that stage. The leave to appeal filed by AllPay on April 18, 2013 is thus AllPay's second approach to the Constitutional Court in this matter.

Suit against AllPay

On December 11, 2012, we commenced a lawsuit in the South Gauteng High Court in South Africa against AllPay. In our lawsuit, we have alleged that AllPay, wrongfully and unlawfully and with the intention of injuring our reputation, infringing our goodwill and reducing our share price, competed unlawfully with us, by

directly or indirectly making false reports and providing false information to members of the South African media which AllPay orchestrated thereby creating the basis for false media reports which alleged

or implied that the SASSA tender process was tainted by corruption through bribes by or on behalf of our subsidiary, Cash Paymaster Services;
introducing the media reports and allegations of corruption by or on behalf of us in connection with the SASSA tender process into the court proceedings in South Africa instituted by AllPay which sought to set aside the award of the tender to us;
causing an unfounded report to be made to the JSE Limited, or JSE, regarding disclosure that we made in relation to the SASSA contract;
making a report to the DOJ, bringing to the attention of the DOJ the corruption allegations and the South African media reports and repeating the allegations made in the report to the JSE; and
falsely seeking to create the impression in media reports and radio interviews that it had been found in the South African court proceedings described above that the tender process was tainted by corruption.

In the lawsuit, we are seeking damages in the aggregate amount of ZAR 478 million (approximately US\$55 million based on the ZAR/US dollar exchange rate on December 11, 2012) plus interest and costs. The damages claimed may increase as we quantify the continued impact of AllPay's actions. A trial date will be applied for after the exchange of the required pleadings and finalization of any interlocutory issues which may arise. We cannot predict when this matter will go to trial.

Our application to prompt the Hawks to conduct an investigation into corruption allegations that appeared in the South African media

On February 14, 2013, we filed an application pursuant to Section 34 of the South African Prevention of Corrupt Activities Act in South Africa with the South African Police Service. Section 34 deals with the reporting of suspected fraud, theft, extortion and forgery. Matters reported under Section 34 are usually referred for investigation to the South African Directorate for Priority Crime Investigation, known as the Hawks. We filed the Section 34 application to prompt the Hawks to conduct an investigation into who may have made corruption allegations that appeared in the South African media after we were awarded the SASSA tender in January 2012. The Hawks have confirmed to us that our Section 34 application has been accepted for investigation. We have provided certain electronic information to the Hawks at their request and we will cooperate with the Hawks in their investigation.

There are no other material pending legal proceedings, other than ordinary routine litigation incidental to our business, to which we are a party or of which any of our property is the subject.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II**ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES***Market information*

Our common stock is listed on The Nasdaq Global Select Market, or Nasdaq, in the United States under the symbol **UEPS** and on the JSE in South Africa under the symbol **NT1**. The Nasdaq is our principal market for the trading of our common stock.

The following table sets forth, for the periods indicated, the high and low sales prices of our common stock as reported by Nasdaq.

Period	High	Low
Quarter ended September 30, 2011	\$9.00	\$5.77
Quarter ended December 31, 2011	\$8.59	\$5.80
Quarter ended March 31, 2012	\$11.21	\$6.71
Quarter ended June 30, 2012	\$10.33	\$7.79
Quarter ended September 30, 2012	\$10.51	\$7.84
Quarter ended December 31, 2012	\$9.39	\$3.01
Quarter ended March 31, 2013	\$7.95	\$5.01
Quarter ended June 30, 2013	\$8.00	\$6.60

Our transfer agent in the United States is Computershare Shareowner Services LLC, 480 Washington Blvd, Jersey City, New Jersey, 07310. According to the records of our transfer agent, as of August 14, 2013, there were 18 shareholders of record of our common stock. A substantially greater number of holders of our common stock are street name or beneficial holders, whose shares are held of record by banks, brokers, and other financial institutions. Our transfer agent in South Africa is Link Market Services South Africa (Pty) Ltd, 13th Floor, Rennie House, 19 Ameshoff Street, Braamfontein, 2001, South Africa.

Dividends

We have not paid any dividends on our shares of common stock during our last two fiscal years and presently intend to retain future earnings to finance the expansion of the business. We do not anticipate paying any cash dividends in the foreseeable future. The future dividend policy will depend on our earnings, capital requirements, expansion plans, financial condition and other relevant factors.

Issuer purchases of equity securities

We did not purchase any shares of our common stock during the fourth quarter of fiscal 2013. On August 21, 2013, our Board of Directors authorized the repurchase of up to \$100 million of our common stock from time to time. The authorization has no expiration date. This authorization replaces our prior one.

Share performance graph

The chart below compares the five-year cumulative return, assuming the reinvestment of dividends, where applicable, on our common stock with that of the S&P 500 Index and the NASDAQ Industrial Index. This graph assumes \$100 was invested on June 30, 2008, in each of our common stock, the S&P 500 companies, and the companies in the NASDAQ Industrial Index.

ITEM 6. SELECTED FINANCIAL DATA

The following selected historical consolidated financial data should be read together with Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations and Item 8 Financial Statements and Supplementary Data. The following selected historical financial data as of June 30, 2013 and 2012, and for the three years ended June 30, 2013 have been derived from our consolidated financial statements included elsewhere in this Annual Report on Form 10-K. The selected historical consolidated financial data presented below as of June 30, 2011, 2010 and 2009 and for the years ended June 30, 2010 and 2009, have been derived from our consolidated financial statements, which are not included herein. The selected historical financial data as of each date and for each period presented have been prepared in accordance with US GAAP. These historical results are not necessarily indicative of results to be expected in any future period.

Consolidated Statements of Operations Data

(in thousands, except per share data)

	Year Ended June 30				
	2013⁽¹⁾	2012⁽¹⁾	2011⁽²⁾	2010	2009
Revenue	\$ 452,147	\$ 390,264	\$ 343,420	\$ 280,364	\$ 246,822

Diluted	\$ 0.28	\$ 0.99	\$ 0.06	\$ 0.84	\$ 1.53

(1) The economics of our five year SASSA contract that was effective April 1, 2012, is included in fiscal 2013 and for three months in fiscal 2012 and contributed to the increase in revenue, especially in fiscal 2013. We incurred substantial implementation and smart card expenses totaling approximately \$66.5 million and \$16.3 million during fiscal 2013 and 2012, respectively, which resulted in an increase in cost of goods sold, IT processing, servicing and support an selling, general and administrative expense. The majority of these expenses were deductible for tax purposes. We also incurred significant capital expenditures related to the SASSA contract implementation which resulted in an increase in depreciation expense in fiscal 2013.

(2) KSNET was acquired effective November 1, 2010, and our reported results for fiscal 2011 include KSNET revenues of \$68.4 million and a net loss of \$4.1 million, after acquisition-related intangible assets amortization, deferred taxes related to acquisition-related intangible asset amortization and interest related to financing obtained to partially fund the acquisition.

(3) Selling, general and administrative expense includes a charge of \$3.9 million (2013), \$2.8 million (2012), \$1.7 million (2011), \$5.5 million (2010) and \$4.9 million (2009), respectively, in respect of stock-based compensation.

(4) On April 19, 2012, we issued an option to purchase 8,955,000 shares of our common stock to a BEE consortium pursuant to a BEE transaction that we entered into on January 25, 2012. The fair value of the option was determined as approximately \$14.2 million and has been expensed in full in fiscal 2012. The option expired unexercised in fiscal 2013.

(5) Customer relationships acquired in the acquisition of Net1 UTA were impaired in fiscal 2011. Goodwill related to the hardware, software and related technology sales segment was impaired during fiscal 2010, and goodwill related to the financial services segment was impaired during fiscal 2009.

(6) The foreign exchange gain related to a short-term investment in the form of an asset swap arrangement which matured during fiscal 2009.

(7) The fully-distributed tax rate for fiscal 2013 and 2012 was 28% and for fiscal 2011, 2010 and 2009 it was 34.55% . Our income tax expense for fiscal 2012 includes the effects of the change in South African tax law to impose a 15% dividends withholding tax (a tax levied and withheld by a company on distributions to its shareholders) to replace the 10% Secondary Taxation on Companies (a tax levied directly on a company on dividend distributions) (STC). Our income tax expense for fiscal 2012 also includes a valuation allowance of \$8.2 million related to foreign tax credits we believe we may not recover. Our income tax expense for fiscal 2011 includes valuation allowances related to our Net1 UTA business of \$8.9 million and a reversal of \$10.4 million related to the customer impairment loss. Our income tax expense for fiscal 2009 includes the impact of the change in the fully-distributed rate during that year of approximately \$3.5 million.

Total assets	1,276,322	955,893	781,645	472,090	499,487
Total current liabilities before settlement obligations	76,859	73,377	102,406	57,927	77,809
Total long-term debt	66,632	79,760	111,776	4,343	4,185
Total equity	\$ 339,969	\$ 346,811	\$ 328,010	\$ 287,301	\$ 375,756

(1) During fiscal 2013, we identified an immaterial balance sheet misclassification related to prior periods that involved an overstatement of other payables and an understatement of additional paid-in capital of \$2.0 million, respectively. We corrected these amounts in the current period, effective July 1, 2010. This reclassification has no impact on our previously reported consolidated income, comprehensive income or cash flows.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis should be read in conjunction with Item 6 Selected Financial Data and Item 8 Financial Statements and Supplementary Data. In addition to historical consolidated financial information, the following discussion and analysis contains forward-looking statements that involve risks, uncertainties and assumptions. See Item 1A Risk Factors and Forward Looking Statements.

Overview

We are a leading provider of payment solutions and transaction processing services across multiple industries and in a number of emerging economies.

We have developed and market a comprehensive transaction processing solution that encompasses our smart card-based alternative payment system for the unbanked and under-banked populations of developing economies and for mobile transaction channels. Our market-leading system can enable the billions of people globally who generally have limited or no access to a bank account to enter affordably into electronic transactions with each other, government agencies, employers, merchants and other financial service providers. Our universal electronic payment system, or UEPS, uses biometrically secure smart cards that operate in real-time but offline, unlike traditional payment systems offered by major banking institutions that require immediate access through a communications network to a centralized computer. This offline capability means that users of our system can conduct transactions at any time with other card holders in even the most remote areas so long as a smart card reader, which is often portable and battery powered, is available. Our off-line systems also offer the highest level of availability and affordability by removing any elements that are costly and are prone to outages. Our latest version of the UEPS technology has now been certified by EMV, which facilitates our traditionally proprietary UEPS system to interoperate with the global EMV standard and allows card holders to transact at any EMV-enabled point of sale terminal or ATM. The new UEPS/EMV technology has been deployed on an extensive scale in South Africa through the issuance of MasterCard-branded UEPS/EMV cards to our social welfare grant customers. In addition to effecting purchases, cash-backs and any form of payment, our system can be used for banking, health care management, international money transfers, voting and identification.

We also provide secure transaction technology solutions and services, by offering transaction processing, financial and clinical risk management solutions to various industries. We have extensive expertise in secure online transaction processing, cryptography, mobile telephony and integrated circuit card (chip/smart card) technologies.

Our technology is widely used in South Africa today, where we distribute pension and welfare payments, using our UEPS/EMV technology, to over nine million recipient cardholders across the entire country, process debit and credit card payment transactions on behalf of a wide range of retailers through our EasyPay system, process value-added services such as bill payments and prepaid airtime and electricity for the major bill issuers and local councils in South Africa, and provide mobile telephone top-up transactions for all of the South African mobile carriers. We are the largest provider of third-party and associated payroll payments in South Africa through our FIHRST service that processes monthly payments for approximately 1,300 employer groups representing over 900,000 employees. Our MediKredit service provides the majority of funders and providers of healthcare in South Africa with an on-line real-time management system for healthcare transactions. We perform a similar service in the US through our XeoHealth subsidiary.

Internationally, through KSNET, the second largest transaction processor by volume in Korea, we offer card processing, payment gateway and banking value-added services in that country.

Our Net1 Mobile Solutions business unit is responsible for the worldwide technical development and commercialization of our array of web and mobile applications and payment technologies, such as MVC, Chip and

GSM licensing and VTU and has deployed solutions in many countries, including South Africa, Namibia, Nigeria, Cameroon, the Philippines and Colombia.

Sources of Revenue

We generate our revenues by charging transaction fees to government agencies, merchants, financial service providers, utility providers, bill issuers, employers and healthcare providers; by providing loans and insurance products and by selling hardware, licensing software and providing related technology services.

We have structured our business and our business development efforts around four related but separate approaches to deploying our technology. In our most basic approach, we act as a supplier, selling our equipment, software, and related technology to a customer. As an example, in Ghana, we sold a complete UEPS to the Central Bank, which owns and operates the resulting transaction settlement system. The revenue and costs associated with this approach are reflected in our hardware, software and related technology sales segment.

We have found that we have greater revenue and profit opportunities, however, by acting as a service provider instead of a supplier. In this approach we own and operate the UEPS ourselves, charging one-time and on-going fees for the use of the system either on a fixed or ad valorem basis. This is the case in South Africa, where we distribute welfare grants on behalf of the South African government and wages on behalf of employers on a fixed fee basis, but charge a fee on an ad valorem basis for goods and services purchased using our smart card. The revenue and costs associated with this approach are reflected in our smart card accounts, South African transaction-based activities and financial services segments.

Because our smart cards are designed to enable the delivery of more advanced services and products, we are also willing to supply those services and products directly where the business case is compelling. For instance, we provide short-term UEPS-based loans to our smart card holders. This is an example of the third approach that we have taken. Here we can act as the principal in operating a business that can be better delivered through our UEPS. We can also act as an agent, for instance, in the provision of insurance policies. In both cases, the revenue and costs associated with this approach are reflected in our financial services segment.

Through KSNET, we earn most of our revenue from payment processing services we provide to approximately 220,000 merchants and to card issuers in Korea through our value-added-network. In the US, we earn transaction fees from our customers utilizing our XeoRules on-line real-time management system for healthcare transactions. We also generate fees from our customers who utilize our VCPay technology to generate a unique, one-time use prepaid virtual card number to securely purchase goods and services or perform bill payments in any card-not-present environment. The revenue and costs at KSNET, XeoHealth and VCPay as well as those from our expired Iraqi contracts to February 2013, are reflected in our international transaction-based activities segment.

In South Africa, we also generate fees from debit and credit card transaction processing, the provision of value-added services such as bill payments, mobile top-up and pre-paid utility sales, transaction processing for both funders and providers of healthcare and from providing a payroll transaction management service. The revenue and costs associated with these services are reflected in our South African transaction-based activities segment.

Finally, we have entered into business partnerships or joint ventures to introduce our UEPS and VTU solutions to new markets such as Namibia and Colombia. In these situations, we take an equity position in the business while also acting as a supplier of technology. In evaluating these types of opportunities, we seek to maintain a highly disciplined approach, carefully selecting partners, participating closely in the development of the business plan and remaining actively engaged in the management of the new business. In most instances, the joint venture or partnership has a license to use the UEPS in the specific territory, including the back-end system. We account for our equity investments using the equity method. When we equity-account these investments, we are required under US GAAP to eliminate our share of the net income generated from sales of hardware and software to the investee. We recognize this net income from these equity-accounted investments during the period in which the hardware and software is utilized in the investee's operations, or has been sold to third-party customers, as the case may be.

We believe that this flexible approach enables us to drive adoption of our solution while capturing the value created by the implementation of our technology.

Business Developments during Fiscal 2013

South Africa

SASSA

We commenced the second phase of the enrollment process in early July 2012 and completed the bulk enrollment by April 30, 2013, in accordance with the implementation plan agreed with SASSA. Under our agreement with SASSA, we have to enroll both the grant recipient cardholders (those individuals who receive the actual payment

and are issued with our UEPS/EMV smart card), as well as the grant beneficiaries (those individuals who have qualified for the social grant, but are not necessarily the recipient cardholder of the grant). By way of example, a parent who has three children and receives a grant for all three children is the grant recipient cardholder, while the three children are each classified individually as grant beneficiaries. In this case, we capture the personal and biometric information of the parent and three children, but only the parent is issued with an UEPS/EMV smart card. Our monthly service fee is calculated on the number of grant recipient cardholders.

While the number of grant recipient cardholders on a national basis has consistently been quantified by SASSA at approximately 9.4 million individuals, the number of beneficiaries was revised higher by SASSA from an initial estimate of approximately 15.5 million, to the revised estimate of approximately 21.6 million. In order to complete the second phase of the implementation on time, and given the significantly higher number of beneficiaries, we increased the number of temporary employees that we hired in the second quarter of fiscal 2013 from 2,500 to approximately 5,500 and retained the higher employee base through all of the third quarter of fiscal 2013. Having substantially concluded bulk enrollment in fiscal 2013, our temporary employee headcount has since declined to 1,392 at June 30, 2013.

As of June 30, 2013, we had enrolled a total of 21.7 million people which comprises approximately 9.5 million grant recipient cardholders and 12.2 million beneficiaries associated with these recipient cardholders in accordance with our second phase enrollment schedule, and issued them our UEPS/EMV smart card.

During March 2013, the Minister of Social Development and SASSA announced that the deadline for the enrollment of grant recipient cardholders would be extended to April 30, 2013. We therefore continued with the enrollment process for the month of April 2013. SASSA sent termination notices to all cardholder recipients and beneficiaries who had not presented themselves for enrollment during May, June and July 2013 in terms of the Promotion of Administrative Justice Act. As of July 30, 2013, there were an estimated 372,870 former grant recipient cardholders who had not presented themselves for enrollment. The grants applicable to these grant recipient cardholders will be suspended with effect from September 2013 and these beneficiaries will have to re-apply for their grants. Our revenue for fiscal 2014 will decline to the extent that these beneficiaries do not re-apply for their grants, but such decline may be offset by the amount of new grant recipient cardholders approved by SASSA.

The graph below presents our enrollment progress from inception to June 30, 2013:

The enrollment statistics included in the graph above reflect the cumulative number of cardholder recipient and beneficiary enrollments since the inception of the new contract. The statistics therefore do not reflect any cardholder recipients and beneficiaries that may have been removed from the payment file subsequent to enrollment due to the suspension or disqualification of a social welfare grant or death. There is a time lag between when a current grant recipient cardholder is issued a UEPS/EMV card and when the recipient cardholder receives grants onto the UEPS/EMV smart card. For instance, recipient cardholders enrolled in March 2013 and issued a UEPS/EMV smart card were only paid onto that card in the April 2013 pay cycle. When a new grant recipient cardholder is approved by SASSA, the recipient cardholder is enrolled, issued a UEPS/EMV smart card and immediately paid on this card. We are paid monthly by SASSA for each recipient cardholder paid by us, regardless of the number of grants received by the recipient cardholder, the channel utilized and therefore for the month of June 2013, we earned revenue from SASSA based on the distribution of grants to 9,591,950 recipient cardholders.

During fiscal 2013, we incurred direct implementation expenses of approximately \$56.2 million (ZAR 488.3 million), including staff, travel, temporary infrastructure hire, fixed premises hire for enrollment and stationery costs. We are unable to quantify the value of time spent by our executives and pension and welfare operations managers and staff that service the five provinces in which we operated under the previous contract and that have assisted in the implementation of the national contract. During fiscal 2012, we incurred direct implementation expenses of approximately \$10.9 million (ZAR 83.9 million).

We also expensed \$10.3 million (ZAR 90.2 million) related to the cost of the UEPS/EMV smart cards issued during fiscal 2013, which is not included in the \$56.2 million (ZAR 488.3 million) of direct implementation expenses described above. We did not expense any smart cards in fiscal 2012.

We also incurred approximately \$6.9 million in capital expenditures related to the implementation during fiscal 2013. Since inception of the implementation we have incurred cumulative capital expenditures of \$28.1 million. We have substantially completed the bulk enrollment of recipient cardholders and beneficiaries and do not expect any further significant capital expenditures related to this process.

Our total cash outlay through June 30, 2013 has been \$105.5 million for direct implementation expenses, smart card costs and capital expenditures. We would have been in-line with the mid-point of our initial total cash outlay range assuming the volume of enrollments had not changed. Our revised estimate including the registration of the incremental beneficiaries was between \$100 and \$105 million and included expanding our temporary staff for longer.

See Part I, Item 1A Risk Factors and Item 3 Legal Proceedings for more information and the risks associated with our SASSA contract and for an update on litigation associated with our SASSA contract.

Smart Life long-term insurance license

During January 2013, the FSB suspended Smart Life's long-term insurance license and prohibited it from writing any new long-term insurance policies in South Africa. We have prepared a submission to the FSB to uplift the suspension and the FSB is currently conducting an investigation into the affairs of Smart Life, but we cannot predict what the outcome will be.

South African transaction processors, excluding pension and welfare

FIHRST continues to grow its market share in the employer and employee payment processing space via the offering of our expanded services and the acquisition of new employer and employee groups. MediKredit signed agreements with new providers, including public hospitals, private hospitals and specialist doctors, and has commenced adjudication and processing activities for these providers.

Outside South Africa

KSNET

Our strategic marketing initiatives over the past two years, focusing on the small and medium merchant segment has had a positive impact on our transaction processing volumes and operating profit in Korea. Our processing volume and value growth rate continues to outpace the Korean economic growth rate. The KSNET management team remains focused on the retention and expansion of our current market share and to grow into adjacent markets. The competitive value added network environment in Korea has resulted in a nominal anticipated loss of operation margin, which we expect to stabilize during fiscal 2014. Our payment gateway and banking VAN businesses continue to grow exponentially, albeit off a small base.

XeoHealth

The commencement of the recovery audit contractor, or RAC, services and desk review recovery referrals identified through our XeoRules™ engine for Cognosante in North Dakota has been delivered and Cognosante has commenced issuing recovery letters to providers. Under our contract, we are compensated based on a percentage of the final recoveries identified by our XeoRules claim re-adjudicating service for the audit period of five years, as well as the desk review recovery referrals identified through our XeoRules engine. XeoHealth has recently realized the first recoveries in but we are currently unable to quantify the value of RAC service revenues to be recognized during any particular future quarter.

XeoHealth has also been subcontracted by Cognosante to provide both the automated audit as well the analysis services as required by the RAC for the State of Missouri Medicaid. We have recently completed the business rules

and audit findings and received approval from the State of Missouri Medicaid which enabled us to commence performing the required services in the third quarter of fiscal 2013. The results have been delivered to Cognosante for cycle 1 and recovery letters are being issued to providers. Similar to North Dakota, XeoHealth will be compensated based on a percentage of the final recoveries identified by our XeoRules claims re-adjudicating service for the audit period of three years, as well as the desk review recovery referrals identified through our XeoRules engine.

XeoHealth has recently concluded a contract to expand the current services offered to Philadelphia-based Community Behavioral Health, or CBH, to individual practices contracted for delivery of services to the Office of Mental Health. The State of Pennsylvania conducted an audit on XeoRules used by CBH for claims adjudication and no findings were reported. We have been informed that the auditors highlighted the ICD10 readiness of XeoRules. ICD10 is scheduled for implementation on October 1, 2014. We expect the final audit report to be published on the State's web site in November 2013. The expansion into adjacent markets and expected audit report findings supports our strategy to establish XeoHealth as the provider of disruptive innovation focused on patient centricity in the United States.

Net1 Mobile Solutions

Following our acquisition of Pbel in fiscal 2013, we decided to consolidate our array of web and mobile applications and payment technologies, such as MVC, Chip and GSM licensing and VTU in a new business division, Net1 Mobile Solutions. This division is responsible for the worldwide technical development and commercialization of these technologies. During fiscal 2013, this new division assumed control of our existing MVC, Chip and VTU projects and customers, in addition to the projects and customers acquired as part of the Pbel acquisition and commenced a business re-engineering program to optimize costs and realize synergies across the various products, projects and geographies. We have developed several new applications, including mobile applications to provide our social welfare cardholders with certain value added services, which will be deployed during the first quarter of fiscal 2014.

The African Continent and Iraq

During fiscal 2013, NUETS was informed in writing by International Smart Card LLC, or ISC, its customer in Iraq, that it would not renew its contracts with NUETS upon their expiration. As a result, NUETS stopped processing transactions for its Iraqi customer at the end of February 2013, but has some minor remaining contractual commitments over the next several months. In addition, ISC has not paid several outstanding invoices and we have provided an amount of \$2.3 million as doubtful debts during the third quarter of fiscal 2013. We have instituted debt recovery procedures to recover the outstanding amounts but we cannot predict the outcome, or timing, of these procedures. NUETS continued to service its current customers on the African continent and continued its business development efforts, including responding to a number of tenders, in multiple countries on the African continent during the year.

Our partnership with MasterCard may also bring us additional business development opportunities for current or future MasterCard member banks who seek the offline and additional functionality incorporated in our new UEPS/EMV payment technology. We participated in several such business development opportunities with MasterCard during fiscal 2013, but cannot predict the timing or outcome of these initiatives.

Critical Accounting Policies

Our consolidated financial statements have been prepared in accordance with US GAAP, which requires management to make estimates and assumptions about future events that affect the reported amount of assets and liabilities and disclosure of contingent assets and liabilities. As future events and their effects cannot be determined with absolute certainty, the determination of estimates requires management's judgment based on a variety of assumptions and other determinants such as historical experience, current and expected market conditions and certain scientific evaluation techniques. Management believes that the following accounting policies are critical due to the degree of estimation required and the impact of these policies on the understanding of the results of our operations and financial condition.

Business Combinations and the Recoverability of Goodwill

A component of our growth strategy has been to acquire and integrate businesses that complement our existing operations. The purchase price of an acquired business is allocated to the tangible and intangible assets acquired and liabilities assumed based upon their estimated fair value at the date of purchase. The difference between the purchase price and the fair value of the net assets acquired is recorded as goodwill. In determining the fair value of assets acquired and liabilities assumed in a business combination, we use various recognized valuation methods, including present value modeling. Further, we make assumptions using certain valuation techniques, including discount rates and timing of future cash flows.

We review the carrying value of goodwill annually or more frequently if circumstances indicate impairment may have occurred. In performing this review, we are required to estimate the fair value of goodwill that is implied from a valuation of the reporting unit to which the goodwill has been allocated after deducting the fair values of all the identifiable assets and liabilities that form part of the reporting unit.

The determination of the fair value of a reporting unit requires us to make significant judgments and estimates. In determining the fair value of reporting units, we consider the earnings before interest, taxation, depreciation and amortization, or EBITDA, and the EBITDA multiples applicable to peer and industry comparables of the reporting units. We base our estimates on assumptions we believe to be reasonable but that are unpredictable and inherently uncertain. In addition, we make judgments and assumptions in allocating assets and liabilities to each of our reporting units. The results of our impairment tests during fiscal 2013 indicated that the fair value of our reporting units exceeded their carrying values and therefore our reporting units were not at risk of potential impairment.

Intangible Assets Acquired Through Acquisitions

The fair values of the identifiable intangible assets acquired through acquisitions were determined by management using the purchase method of accounting. We completed acquisitions during fiscal 2013, 2012 and 2011, where we identified and recognized intangible assets. We have used the relief from royalty method, the multi-period excess earnings method, the income approach and the cost approach to value acquisition-related intangible assets. In so doing, we made assumptions regarding expected future revenues and expenses to develop the underlying forecasts, applied contributory asset charges, discount rates, exchange rates, cash tax charges and useful lives.

The valuations were based on information available at the time of the acquisition and the expectations and assumptions that have been deemed reasonable by us. No assurance can be given, however, that the underlying assumptions or events associated with such assets will occur as projected. For these reasons, among others, the actual cash flows may vary from forecasts of future cash flows. To the extent actual cash flows vary, revisions to the useful life or impairment of intangible assets may be necessary. For instance, during fiscal 2011, we recognized an impairment loss of approximately \$41.8 million related to the entire carrying value of customer relationships acquired in the Net1 UTA acquisition in August 2008.

Deferred Taxation

We estimate our tax liability through the calculations done for the determination of our current tax liability, together with assessing temporary differences resulting from the different treatment of items for tax and accounting purposes. These differences result in deferred tax assets and liabilities which are disclosed on our balance sheet. Management then has to assess the likelihood that deferred tax assets are more likely than not to be realized in future periods. In the event it is determined that the deferred tax assets to be realized in the future would be in excess of the net recorded amount, an adjustment to the deferred tax asset valuation allowance would be recorded. This adjustment would increase income in the period such determination was made. Likewise, should it be determined that all or part of the net deferred tax asset would not be realized in the future, an adjustment to increase the deferred tax asset valuation allowance would be charged to income in the period such determination is made. In assessing the need for a valuation allowance, historical levels of income, expectations and risks associated with estimates of future taxable income and ongoing prudent and practicable tax planning strategies are considered. During fiscal 2013, 2012, and 2011, we recorded increases to our valuation allowance of \$2.6 million, \$12.0 million and \$19.5 million, respectively.

Stock-based Compensation and Equity Instrument issued pursuant to BEE transaction

Stock-based compensation

Management is required to make estimates and assumptions related to our valuation and recording of stock-based compensation charges under current accounting standards. These standards require all share-based compensation to employees to be recognized in the statement of operations based on their respective grant date fair values over the requisite service periods and also requires an estimation of forfeitures when calculating compensation expense.

We utilize the Cox Ross Rubinstein binomial model to measure the fair value of stock options granted to employees and directors and recognize compensation cost on a straight line basis. Option-pricing models require estimates of a number of key valuation inputs including expected volatility, expected dividend yield, expected term and risk-free interest rate. Our management has estimated forfeitures based on historic employee behavior under similar compensation plans. The fair value of stock options is affected by the assumptions selected. Net stock-based compensation expense from continuing operations was \$3.9 million, \$2.8 million and \$1.7 million for fiscal 2013, 2012 and 2011, respectively. Net stock-based compensation expense for fiscal 2011, includes a reversal of \$3.5 million related to a portion of the restricted stock granted in August 2007 that did not vest as the performance condition prescribed in the terms of the awards was not met.

Equity instrument

We recorded \$14.2 million of expense associated with the issuance of equity instruments as part of the BEE transaction during fiscal 2012 as such awards were fully vested during the period. The option expired unexercised in fiscal 2013, however, the expense recorded during fiscal 2012 was not reversed during fiscal 2013 because the option had vested in full on the grant date in 2012.

Accounts Receivable and Allowance for Doubtful Accounts Receivable

We maintain an allowance for doubtful accounts receivable related to our hardware, software and related technology sales and international transaction-based activities segments as a result of sales or rental of hardware, support and maintenance services provided; or sale of licenses to customers; or the provision of transaction processing services to our customers.

Our policy is to regularly review the aging of outstanding amounts due from customers and adjust the provision based on management's estimate of the recoverability of the amounts outstanding.

Management considers factors including period outstanding, creditworthiness of the customers, past payment history and the results of discussions by our credit department with the customer. We consider this policy to be appropriate taking into account factors such as historical bad debts, current economic trends and changes in our customer payment patterns. Additional provisions may be required should the ability of our customers to make payments when due deteriorate in the future. A significant amount of judgment is required to assess the ultimate recoverability of these receivables, including on-going evaluation of the creditworthiness of each customer.

Research and Development

Accounting standards require product development costs to be charged to expenses as incurred until technological feasibility is attained. Technological feasibility is attained when our software has completed system testing and has been determined viable for its intended use. The time between the attainment of technological feasibility and completion of software development has been short. Accordingly, we did not capitalize any development costs during the years ended June 30, 2013, 2012 or 2011, particularly because the main part of our development is the enhancement and upgrading of existing products.

Costs to develop software for our internal use is expensed as incurred, except to the extent that these costs are incurred during the application development stage. All other costs including those incurred in the project development and post-implementation stages are expensed as incurred.

A significant amount of judgment is required to separate research costs, new development costs and ongoing development costs based as the transition between these stages. A multitude of factors need to be considered by management, including an assessment of the state of readiness of the software and the existence of markets for the software. The possibility of capitalizing development costs in the future may have a material impact on the group's profitability in the period when the costs are capitalized, and in subsequent periods when the capitalized costs are amortized.

Recent Accounting Pronouncements

Recent accounting pronouncements adopted

Refer to Note 2 of our consolidated financial statements for a full description of recent accounting pronouncements, including the expected dates of adoption and effects on financial condition, results of operations and cash flows.

Recent accounting pronouncements not yet adopted as of June 30, 2013

Refer to Note 2 of our consolidated financial statements for a full description of recent accounting pronouncements not yet adopted as of June 30, 2013, including the expected dates of adoption and effects on financial condition, results of operations and cash flows.

Currency Exchange Rate Information

Actual exchange rates

The actual exchange rates for and at the end of the periods presented were as follows:

Table 1

Year ended June 30,

	2013	2012	2011 (1)
ZAR : \$ average exchange rate	8.8462	7.7920	7.0286
Highest ZAR : \$ rate during period	10.3587	8.6987	7.7809
Lowest ZAR : \$ rate during period	8.0444	6.6096	6.4925
Rate at end of period	9.8925	8.2881	6.8449
KRW :			
\$ average exchange rate	1,112	1,130	1,113
Highest KRW : \$ rate during period	1,162	1,202	1,169
Lowest KRW : \$ rate during period	1,019	1,029	1,059
Rate at end of period	1,144	1,159	1,079

(1) KRW : \$ average, highest and lowest exchange rates are from November 1, 2010 (KSNET acquisition date) to June 30, 2011.

Translation Exchange Rates

We are required to translate our results of operations from ZAR to US dollars on a monthly basis. Thus, the average rates used to translate this data for the years ended June 30, 2013, 2012 and 2011, vary slightly from the averages shown in the table above. The translation rates we use in presenting our results of operations are the rates shown in the following table:

Table 2	Year ended		
	2013	2012	2011
Income and expense items: \$1 = ZAR	8.7105	7.7186	6.9962
Income and expense items: \$1 = KRW	1,072	1,104	1,121
Balance sheet items: \$1 = ZAR	9.8925	8.2881	6.8449
Balance sheet items: \$1 = KRW	1,144	1,159	1,079

Results of Operations

The discussion of our consolidated overall results of operations is based on amounts as reflected in our audited consolidated financial statements which are prepared in accordance with US GAAP. We analyze our results of operations both in US dollars, as presented in the consolidated financial statements, and supplementally in ZAR, because ZAR is the functional currency of the entities which contribute the majority of our profits and is the currency in which the majority of our transactions are initially incurred and measured. Due to the significant impact of currency fluctuations between the US dollar and ZAR on our reported results and because we use the US dollar as our reporting currency, we believe that the supplemental presentation of our results of operations in ZAR is useful to investors to understand the changes in the underlying trends of our business.

Fiscal 2013 results include SmartSwitch Botswana from December 1, 2012 and Pbel from September 1, 2012. Fiscal 2012 results include Smart Life from July 1, 2011 and Eason from October 1, 2011. Fiscal 2011 results include KSNET from November 1, 2010. Refer also to Note 3 to the consolidated financial statements.

The discussion below gives effect to the reallocation of certain activities among our various operating segments as discussed above.

Fiscal 2013 Compared to Fiscal 2012

The following factors had an influence on our results of operations during fiscal 2013 as compared with the same period in the prior year:

Unfavorable impact from the strengthening of the US dollar: The US dollar appreciated by 14% against the ZAR during fiscal 2013 which negatively impacted our reported results;

SASSA implementation costs: : We completed the bulk enrollment of recipient cardholders and beneficiaries under our SASSA contract during fiscal 2013 and incurred implementation and staff costs of \$66.5 million, including the cost of UEPS/EMV smart cards issued, compared with \$10.9 million in fiscal 2012;

DOJ and SEC investigation-related expenses: We incurred DOJ and SEC investigation-related expenses of \$5.9 million in fiscal 2013;

Allowance for doubtful accounts receivable relating to expired Iraqi contracts: We have provided \$2.3 million related to expired NUETS Iraqi customer contracts;

Fair value charge resulting from issue of equity instrument pursuant to BEE transaction: The fair value charge of \$14.2 million related to our BEE transaction negatively impacted our reported results

during fiscal 2012;

Fiscal 2012 impacted by change in South African tax law: As a result of the change in South African tax law that replaced STC with a dividends withholding tax, fiscal 2012 tax expense included a net taxation benefit of \$10.1 million, as we recorded a \$18.3 million deferred tax benefit which was offset by an \$8.2 million foreign tax credit valuation allowance; and

Profit on liquidation of SmartSwitch Nigeria: In fiscal 2012, we recorded a non-cash profit of \$4.0 million on the liquidation of SmartSwitch Nigeria.

Consolidated overall results of operations

This discussion is based on the amounts which were prepared in accordance with US GAAP.

The following tables show the changes in the items comprising our statements of operations, both in US dollars and in ZAR:

Table 3	In United States Dollars		
	(US GAAP)		
	Year ended June 30,		%
2013	2012	change	
	\$ 000		\$ 000

Income tax expense	127,661	123,004	4%
Net income before income from equity-accounted investments	109,952	343,053	(68%)
Income from equity-accounted investments	3,057	1,698	80%
Net income	113,009	344,751	(67%)
(Add) Less net (loss) income attributable to non-controlling interest	(26)	108	nm
Net income attributable to Net1	113,035	344,643	(67%)

The increase in revenue was primarily due to incremental revenue resulting from our new SASSA contract and a higher contribution from KSNET.

The increase in cost of goods sold, IT processing, servicing and support was primarily due to higher expenses related to the implementation of our new SASSA contract which includes the UEPS/EMV smart cards issued during fiscal 2013.

Our selling, general and administration expense increased primarily due to the SASSA contract implementation costs described above, legal fees of approximately \$5.9 million (ZAR 51.7 million) in connection with the government investigations and the allowance for doubtful accounts receivable for expired NUETS contracts. Our selling, general and administration expense for fiscal 2012 included SASSA contract implementation costs of \$10.9 million (ZAR 83.9 million) and cash bonuses of \$5.4 million (ZAR 41.8 million) related to our SASSA tender award and a non-cash profit related to the liquidation of SmartSwitch Nigeria of \$4.0 million.

The grant date fair value of the equity instrument issued pursuant to our January 2013 BEE transaction was \$14.2 million (ZAR 112.1 million) and was expensed in full in fiscal 2012. The option expired unexercised in fiscal 2013.

Our operating income margin for fiscal 2013 and 2012 was 5% and 16%, respectively. We discuss the components of the operating income margin under Results of operations by operating segment. The decrease is primarily attributable to higher implementation costs related to the SASSA contract, DOJ and SEC investigation costs and the NUETS allowance for doubtful accounts receivable in fiscal 2013.

Depreciation and amortization increased primarily as a result of an increase in depreciation related to assets used to service our obligations under our SASSA contract. The intangible asset amortization related to our various acquisitions has been allocated to our operating segments as presented in the tables below:

Table 5	Year ended June 30,	
	2013	2012
	\$ 000	\$ 000
Amortization included in depreciation and amortization expense:	18,222	19,557
South African transaction-based activities	4,491	6,171
International transaction-based activities	13,402	13,015
Hardware, software and related technology sales	329	371

Table 6	Year ended June 30,	
	2013	2012
	ZAR 000	ZAR 000
Amortization included in depreciation and amortization expense:	158,721	150,952
South African transaction-based activities	39,114	47,625
International transaction-based activities	116,738	100,458
Hardware, software and related technology sales	2,869	2,869

Interest on surplus cash increased to \$12.1 million (ZAR 105.2 million) from \$8.6 million (ZAR 66.2 million). The increase resulted primarily from higher average daily ZAR cash balances offset by lower deposit rates resulting from the decrease in the South African prime interest rate from an average of approximately 9.0% to 8.5% per annum.

Interest expense decreased to \$8.0 million (ZAR 69.4 million) from \$9.3 million (ZAR 72.1 million) due to a lower average long-term debt balance.

Total fiscal 2013 tax expense was \$14.7 million (ZAR 127.7 million) compared to \$16.0 million (ZAR 123.0 million) in fiscal 2012. Our fiscal 2012 tax expense includes \$18.3 million related to a change in South African tax law and the creation of a valuation allowance of \$8.2 million related to foreign tax credits. Our effective tax rate for fiscal 2013, was 53.7% and was higher than the South African statutory rate primarily as a result of non-deductible expenses (including interest expense related to our long-term Korean borrowings and stock-based compensation charges) and South African dividend withholding taxes. Our effective tax rate for fiscal 2012, was 26.4% and was lower than the South African statutory rate as a result of a change in South African tax law which resulted in a net deferred taxation benefit and a non-taxable profit on liquidation of SmartSwitch Nigeria, which was partially offset by an equity instrument issued pursuant to our BEE transaction and non-deductible expenses (including interest expense related to our long-term Korean borrowings and stock-based compensation charges) and the creation of a valuation allowance.

Results of operations by operating segment

The composition of revenue and the contributions of our business activities to operating income are illustrated below

Table 7*In United States Dollars (US GAAP)*

South African transaction-based activities

In ZAR, the increases in segment revenue were primarily due to higher revenues earned for a full year under our new SASSA contract, increased transaction fees from our expanded merchant acquiring system and the inclusion of Pbel for ten months.

Our operating income margin for fiscal 2013 and 2012 was 5% and 25%, respectively, and has declined primarily due to the higher SASSA implementation costs. Excluding amortization of intangibles, our operating margin for fiscal 2013 and 2012 was 7% and 28%, respectively.

South African transaction processors:

The table below presents the total volume and value processed during fiscal 2013 and 2012 by our transaction processors:

Table 9

Transaction processor	Total volume ('000s)		Total value \$ ('000)		Total value ZAR ('000)	
	2013	2012	2013	2012	2013	2012
CPS	114,521	55,973	12,057,511	6,768,469	105,026,946	52,243,105
EasyPay(1)	419,723	443,227	11,140,908	12,171,663	97,042,882	93,948,192

Discontinued	-	24,396	-	787,929	-	6,081,705
MediKredit	10,611	10,677	763,142	620,439	6,647,349	4,788,923
FIHRST	24,003	24,266	9,507,059	10,069,927	82,811,238	77,725,741

- (1) fiscal 2012 data includes Eason prepaid airtime and electricity volume and value from October 1, 2011 and reclassified to reflect the consolidation of value-added services through EasyPay and to reflect the remaining core processing activities.

Our SASSA contract discussed under Business Developments during Fiscal 2013 South Africa SASSA had a positive impact on revenue but the substantial implementation costs incurred during fiscal 2013 significantly decreased our operating margin. Our pension and welfare operations continue to generate the majority of our revenues and operating income, before implementation costs, in this operating segment and overall.

During fiscal 2012, one of EasyPay's large customers decided to perform its EFT/switching activities in-house, which had an adverse impact on our volumes during that year. EasyPay has retained its value-added services relationship with this customer and therefore the overall impact to revenue and profitability has been modest. EasyPay fiscal 2012 volumes and values were impacted by its focus on higher-margin value-added services and termination of certain inefficient activities such as the hosting of processing servers for financial institutions. EasyPay has signed contracts with two large retailers and commenced processing transaction for one of them, with a modest impact on transaction volumes and values.

MediKredit's total volumes processed decreased moderately due to the on-going consolidation in the medical scheme industry in South Africa which has resulted in MediKredit losing adjudication and processing business as its providers are obligated to outsource these services to their parent's processor. This moderate decrease in volumes has been offset by commencing adjudication and processing activities for new providers, including public hospitals, private hospitals and specialist doctors. MediKredit's total value processed has increased due to the significant increase in the underlying cost of medical services and products in the South African medical scheme industry and an increase in private hospital claims processing.

FIHRST volumes modestly decreased due to labor strikes in the South African mining industry. As a result of the strikes, some of FIHRST's mining industry customers temporarily suspended wage payments which resulted in a

lower number of transactions processed during fiscal 2013. However, as and when the strikes were settled, FIHRST's customers requested FIHRST to process one transaction which included a catch up payment of all missed wages and any other benefits. While volumes modestly decreased due to the strikes, total transaction values have increased due to a higher number of customers and inflation-related increases to the underlying transaction values.

Our results for fiscal 2013 include intangible asset amortization related to our Pbel acquisition from September 2012 and Eason for the full year. MediKredit's intangible assets were amortized in full at the ended of December 2012 and are included for six months. The majority of FIHRST's intangible assets were amortized in full at the end of March 2013 and are included for nine months. Our results for fiscal 2012 include intangible asset amortization related to our Eason acquisition from October 2011 and MediKredit and FIHRST for the full year.

International transaction-based activities

KSNET continues to contribute the majority of our revenues and operating income in this operating segment. Revenue increased primarily due to KSNET's revenue growth during fiscal 2013 and was offset by the expiration and non-renewal of NUETS' contract with its Iraqi customer. Operating income was negatively impacted by this expiration and non-renewal and the related allowance for doubtful accounts receivable, ongoing start-up expenditures related to our XeoHealth launch in the United States, ongoing losses at Net1 Virtual Card and Net1 UTA as well as ongoing competition in the Korean marketplace, but was partially offset by increased revenue contributions from KSNET. Operating margin for the segment is lower than most of our South African transaction-based businesses. Operating income margin for fiscal 2013 and 2012 was 0% and 1%, respectively. Excluding amortization of intangibles, our operating margin for fiscal 2013 and 2012 was 10% and 12%, respectively.

Our results for fiscal 2013 and 2012 include the intangible asset amortization related to our KSNET acquisition for the full year.

Smart card accounts

In ZAR, our revenue from this operating segment was higher because the number of smart card-based accounts has increased as a result of the new SASSA contract, however, our revenue per account has decreased in fiscal 2013. We reduced our pricing for smart card accounts after taking into consideration the lower price and higher volumes under the new contract.

The new pricing, effective from April 1, 2012, reduced the average monthly revenue per smart card from ZAR5.50 to ZAR4.00 and the operating income margin from 45.45% to 28.50%. Operating income margin from providing smart card accounts for fiscal 2013 and 2012 was 29% and 41%, respectively.

In ZAR, revenue from the provision of smart card-based accounts increased in proportion to the increased number of recipient cardholders serviced through our SASSA contract. Approximately 9.3 million smart card-based accounts were active at June 30, 2013 compared to approximately 5.6 million active accounts at June 30, 2012.

Financial services

UEPS-based lending contributes the majority of the revenue and operating income in this operating segment. Revenue decreased primarily due to a decrease in the number of loans granted. Operating income decreased primarily as a result of ongoing start-up expenditure incurred to establish our Smart Life insurance business, lower UEPS-based lending activity and the allocation of UEPS-based lending corporate administration and overhead expenses to this segment from South African transaction-based activities. Smart Life did not contribute to operating income in fiscal 2013 or 2012.

Operating income margin for the financial services segment decreased to 56% from 57%, primarily as a result of start-up expenditures related to Smart Life and other financial services offerings and the allocation of UEPS-based lending corporate administration and overhead expenses to this segment. Fiscal 2012 results have not been restated to allocate the UEPS-based lending corporate administration and overhead expenses to this segment from South African transaction-based activities. The operating income margin for fiscal 2012 would have been 52% if these expenses had been allocated. The allocation of these expenses from the South African transaction-based activities segment has no meaningful impact on its operating margin for fiscal 2012.

Hardware, software and related technology sales

In ZAR, the increase in revenue resulted primarily from an increase in royalty fees and ad hoc hardware sales, offset by a lower contribution from most other major contributors to hardware and software sales. Operating income

increased due the higher royalty fees and ad hoc hardware sales, offset by the lower contribution from most key contributors to the operating segment. Significant quarter over quarter fluctuations in revenue, operating income and operating margin are expected due to ad hoc orders in this operating segment. Amortization of intangible assets during fiscal 2013 and 2012, respectively, was approximately \$0.3 million (ZAR 2.9 million) and \$0.4 million (ZAR 2.9 million) and reduced our operating income.

As we expand internationally, whether through traditional selling arrangements to provide products and services (such as in Ghana or through joint ventures (such as with SmartSwitch Namibia), we expect to receive revenues from sales of hardware and from software customization and licensing to establish the infrastructure of POS terminals and smart cards necessary to enable utilization of the UEPS technology in a particular country. To the extent that we enter into joint ventures and account for the investment as an equity investment, we are required to eliminate our portion of the sale of hardware, software and licenses to the investees. The sale of hardware, software and licenses under these arrangements occur on an ad hoc basis as new arrangements are established, which can materially affect our revenues and operating income in this segment from period to period.

Corporate/ Eliminations

Our fiscal 2013 corporate expenses include increased legal and other fees we incurred in connection with the US government investigations and higher stock-based compensation charges. Our fiscal 2012 corporate expenses include a charge related to our equity instrument issued pursuant to our BEE transaction and a \$4.0 million profit related to the liquidation of SmartSwitch Nigeria.

Our corporate expenses also include expenditure related to compliance with Sarbanes; non-executive directors fees; employee and executive salaries and bonuses; stock-based compensation; legal and audit fees; directors and officers insurance premiums; telecommunications expenses; property-related expenditures including utilities, rental, security and maintenance; and elimination entries.

Fiscal 2012 Compared to Fiscal 2011

The following factors had an influence on our results of operations during fiscal 2012 as compared with the same period in the prior year:

- ***Impact of new SASSA contract:*** Our new SASSA contract has resulted in higher revenues from SASSA during the fourth quarter of fiscal 2012. We commenced implementing the new contract during the third quarter of fiscal 2012 and incurred additional implementation and staff costs of approximately \$10.9 million, excluding cash bonuses of \$5.4 million which were paid as a result of the tender award to us;
- ***Unfavorable impact from the strengthening of the US dollar:*** The US dollar appreciated by 10% against the ZAR during fiscal 2012 which negatively impacted our reported results;
- ***Replacement of STC with a dividends withholding tax in South Africa:*** As a result of a change in South African tax law that replaces STC with a dividends withholding tax, our tax expense includes the positive impact of a \$18.3 million deferred tax benefit;
- ***Foreign tax credit valuation allowance:*** Our tax expense includes the negative impact of a \$8.2 million foreign tax credit valuation allowance;
- ***Fair value charge resulting from issue of equity instrument pursuant to BEE transaction:*** The fair value charge of \$14.2 million related to our BEE transaction negatively impacted our reported results during fiscal 2012;
- ***Inclusion of revenue contribution from KSNET at lower operating margin (before acquired intangible asset amortization) than our legacy business:*** The inclusion of KSNET contributed to an increase in revenues for fiscal 2012; however, because KSNET has an operating margin (before acquired intangible asset amortization) that is lower than our legacy businesses, it reduced our overall operating margin. KSNET also contributed to the increase in selling, general and administration and depreciation and amortization expenses;
- ***Inclusion of revenue contribution from Eason at lower operating margin than our legacy business:*** The inclusion of the acquired Eason business from the second quarter of fiscal 2012 contributed to an increase in revenues for fiscal 2012; however, because Eason's prepaid airtime sales business has a operating margin (before acquired intangible asset amortization) that is lower than our legacy businesses, it reduced our overall operating margin;
- ***Intangible asset amortization related to acquisitions:*** We recorded additional intangible asset amortization related to the acquisitions of KSNET and Eason which was offset by the full impairment of Net1 UTA's intangibles in 2011;
- ***Profit on liquidation of SmartSwitch Nigeria:*** We recorded a non-cash profit of \$4.0 million on the liquidation of SmartSwitch Nigeria in fiscal 2012; and
- ***Fiscal 2011 intangible asset impairment and transaction-related expenses:*** During 2011, we impaired intangible assets related to the Net1 UTA acquisition of \$41.8 million and incurred transaction-related expenses of \$5.7 million, primarily for the acquisition of KSNET.

Consolidated overall results of operations

This discussion is based on the amounts which were prepared in accordance with US GAAP.

The following tables show the changes in the items comprising our statements of operations, both in US dollars and in ZAR:

Table 10	In United States Dollars		
	(US GAAP)		
	Year ended June 30,		
	2012	2011	%

Analyzed in ZAR, the increase in revenue was primarily due to the inclusion of KSNET, incremental revenue resulting from our new SASSA contract award, higher prepaid airtime sales resulting from the Eason acquisition, increase in the number of UEPS-based loans made, and higher utilization of our UEPS system in Iraq, offset by lower hardware and software sales.

Analyzed in ZAR, cost of goods sold, IT processing, servicing and support was higher primarily due to the inclusion of KSNET and incremental costs resulting from our new SASSA contract award.

The increase in selling, general and administration expense is the result of the KSNET acquisition and SASSA implementation costs of \$10.9 million and cash bonuses of \$5.4 million paid which was offset by lower stock-based compensation charge, primarily because the performance-based restricted stock granted in August 2007 was fully expensed in prior periods and due to the non-cash profit related to the liquidation of SmartSwitch Nigeria of \$4.0 million. During fiscal 2011, selling, general and administration expense included transaction-related costs of \$6.0 million (ZAR 42.3 million), primarily for the KSNET acquisition.

The grant date fair value of the equity instrument issued pursuant to our January 2012 BEE transaction was \$14.2 million (ZAR 112.1 million) and has been expensed in full in fiscal 2012.

Our operating income margin for fiscal 2012 and 2011 was 16% and 11%, respectively. We discuss the components of the operating income margin under Results of operations by operating segment, however the increase is attributable to lower stock-based compensation charges and the non-cash profit related to the liquidation of SmartSwitch Nigeria of \$4.0 million in fiscal 2012 compared with fiscal 2011 and transaction-related costs during fiscal 2011.

In ZAR, depreciation and amortization increased primarily as a result of an increase in depreciation related to assets used to service our obligations under our new SASSA contract and an increase in KSNET depreciation and intangible asset amortization, but was partially offset by the full impairment of Net1 UTA intangibles in 2011. The intangible asset amortization related to our various acquisitions has been allocated to our operating segments as presented in the tables below:

Hardware, software and related technology sales	371	7,388

Table 13

	Year ended June 30,	
	2012	2011
	ZAR 000	ZAR 000
Amortization included in depreciation and amortization expense:	150,952	151,761
South African transaction-based activities	47,625	39,891
International transaction-based activities	100,458	60,181
Hardware, software and related technology sales	2,869	51,689

During fiscal 2011, customer relationships acquired as part of the Net1 UTA acquisition in August 2008 were reviewed for impairment following deteriorating trading conditions and uncertainty surrounding the timing and quantum of future net cash inflows. As a consequence of this review, we recognized an impairment loss of approximately \$41.8 million related to the entire carrying value of customer relationships acquired. In addition, we reversed the deferred tax liability of \$10.4 million associated with this intangible asset.

In ZAR, interest on surplus cash increased to \$8.6 million (ZAR 66.2 million) from \$7.7 million (ZAR 53.4 million). The increase resulted primarily from higher average daily ZAR cash balances offset by lower deposit rates resulting from the decrease in the South African prime interest rate from an average of approximately 9.29% to 9.00% per annum.

Interest expense increased to \$9.3 million (ZAR 72.1 million) from \$8.7 million (ZAR 60.7 million) due to the incurrence of long-term debt to fund a portion of the KSNET purchase price. Interest expense for fiscal 2012 and 2011 includes amortized debt facility fees of \$0.4 million (ZAR 3.0 million) and \$2.0 million (ZAR 13.7 million),

respectively.

Total fiscal 2012 tax expense was \$16.0 million (ZAR 123.0 million) compared to \$33.5 million (ZAR 234.5 million) in fiscal 2012. Our fiscal 2012 tax expense includes \$18.3 million related to a change in South African tax law and the creation of a valuation allowance of \$8.2 million related to foreign tax credits. Our fiscal 2011 tax expense includes the effect of the reversal of \$10.4 million related to deferred tax liabilities related to impaired Net1 UTA customer relationships and a valuation allowances of \$8.9 million related to Net1 UTA deferred tax assets. Our effective tax rate for fiscal 2012, was 26.4% and was lower than the South African statutory rate as a result of a change in South African tax law which resulted in a net deferred taxation benefit and a non-taxable profit on liquidation of SmartSwitch Nigeria, which was partially offset by an equity instrument issued pursuant to our BEE transaction and non-deductible expenses (including interest expense related to our long-term Korean borrowings and stock-based compensation charges) and the creation of a valuation allowance. Our effective tax rate for fiscal 2011, was 92.1% and was higher than the South African statutory rate as a result of the valuation allowance related to Net1 UTA deferred tax assets and non-deductible expenses (including interest expense related to our long-term Korean borrowings and transaction-related expenditure).

Net earnings from equity-accounted investments for fiscal 2012 were \$0.2 million (ZAR 1.7 million) compared with a loss of \$0.3 million (ZAR 2.4 million) during fiscal 2011. We sold VinaPay in fiscal 2011 and in fiscal 2012 we did not account for the equity accounted losses in VTU Colombia as the accumulated losses have exceeded our initial investments. Net earnings from equity-accounted investments for fiscal 2012 was primarily due to an increase in transaction fees generated by SmartSwitch Namibia and SmartSwitch Botswana and due to the exclusion of VinaPay and VTU Colombia loss-making results.

Results of operations by operating segment

The composition of revenue and the contributions of our business activities to operating income are illustrated below

South African transaction-based activities					

In ZAR, the increases in segment revenue were primarily due to higher revenues earned, from April 1, 2012, under our new SASSA contract, higher prepaid airtime sales resulting primarily from the Eason acquisition and increased transaction volumes at MediKredit, offset by a lower contribution from EasyPay. Segment revenues include the transaction fees we earn through our merchant acquiring system and reflect the elimination of inter-company transactions.

Our operating income margin for the fiscal 2012 and 2011 was 25% and 40%, respectively, and has declined primarily due to SASSA implementation costs and cash bonuses paid and higher low-margin prepaid airtime sales and higher intangible asset amortization attributable to the Eason acquisition. Excluding amortization of intangibles, our operating margin for fiscal 2012 and 2011 was 28% and 43%, respectively.

South African transaction processors:

The table below presents the total volume and value processed during fiscal 2012 and 2011 by our transaction processors:

Table 16

Transaction processor	Total volume (000s)		Total value \$ (000)		Total value ZAR (000)	
	2012	2011	2012	2011	2012	2011
CPS	55,973	37,820	6,768,469	4,851,192	52,243,105	33,939,908
EasyPay(1)	443,227	715,945	12,171,663	24,307,247	93,948,192	165,500,752
Remaining core	418,831	493,018	11,383,734	15,662,653	87,866,487	106,642,308
Discontinued	24,396	222,927	787,929	8,644,594	6,081,705	58,858,444
MediKredit	10,677	9,805	620,439	513,503	4,788,923	3,592,572
FIHRST	24,266	21,954	10,069,927	9,792,178	77,725,741	68,508,034

- (1) includes Eason prepaid airtime and electricity volume and value from October 1, 2011 and reclassified to reflect the consolidation of value-added services through EasyPay and to reflect the remaining core processing activities.

Our SASSA contract concluded in February 2012 had a positive impact on revenue but decreased our operating margin. Our pension and welfare operations generated the majority of our revenues and operating income in this operating segment and overall.

We refocused EasyPay's activities on higher-margin value-added services in fiscal 2012 and have terminated certain inefficient activities such as the hosting of processing servers for financial institutions. We reclassified the 2011 transaction volumes and values in the table above to reflect the consolidation of value-added services through EasyPay and to reflect the remaining core processing activities.

Our results for fiscal 2012 include intangible asset amortization related to our Eason acquisition from October 2011 and MediKredit and FIHRST for the full year. Our results for fiscal 2011 include intangible asset amortization related to our MediKredit and FIHRST acquisitions for the full year.

International transaction-based activities

Operating margin for the segment was negatively impacted by start-up expenditures related to our XeoHealth launch in the United States, MVC activities at Net1 UTA and on-going losses at Net1 Virtual Card, but these expenses were partially offset by revenue contributions from KSNET, and to a lesser extent from XeoHealth and NUETS initiative in Iraq. Operating income margin for fiscal 2012 and 2011 was 1% and 0%, respectively. Excluding amortization of intangibles, our operating margin for each of fiscal 2012 and 2011, respectively was 12%.

Our results for fiscal 2012 include the intangible asset amortization related to our KSNET acquisition for the full year and for fiscal 2011 from November 1, 2011.

Smart card accounts

In ZAR, our revenue from this operating segment was higher because the number of smart card-based accounts has increased as a result of the SASSA award, however, our revenue per account has decreased. We have reduced our pricing for smart card accounts after taking into consideration the lower price and higher volumes of the new SASSA contract. The new pricing, effective from April 1, 2012, reduced the average revenue from R5.50 to R4.00 and the operating income margin from 45.45% to 28.50%. Operating income margin from providing smart card accounts for fiscal 2012 and 2011 was 41% and 45%, respectively.

In ZAR, revenue from the provision of smart card-based accounts increased in proportion to the increased number of recipient cardholders serviced through our SASSA contract. A total number of 5,578,518 smart card-based accounts were active at June 30, 2012 compared to 3,561,105 active accounts as at June 30, 2011.

Financial services

Revenue increased primarily due to an increase in the number of loans granted. Our current UEPS-based lending portfolio comprises loans made to qualifying old age grant recipient cardholders in some of the provinces where we distribute social welfare grants. We continue to incur start-up expenditures related to our Smart Life business and other financial services offerings. Smart Life did not contribute significantly to our operating income in fiscal 2012 as it had not commenced operating activities under its new business model.

Operating income margin for the financial services segment decreased to 57% from 68%, primarily as a result of start-up expenditures related to Smart Life and other financial services offerings, which was offset by increased UEPS-based lending activities. Fiscal 2012 and 2011 results have not been restated to allocate the UEPS-based lending corporate administration and overhead expenses to this segment from South African transaction-based activities. The operating income margin for fiscal 2012 and 2011 would have been 52% and 65%, respectively, if these expenses had been allocated. The allocation of these expenses from the South African transaction-based activities segment has no meaningful impact on its operating margin for fiscal 2012 and 2011, respectively.

Hardware, software and related technology sales

In ZAR, the decrease in revenue was due to a lower contribution from all drivers of hardware and software sales. However, the increase in operating margin to 13% from 2% (before the intangible asset impairment) is attributable to the sale of more software and license revenues in 2012, which contribute higher margins compared to hardware sales. UETS was impacted by significantly lower hardware sales, primarily terminals and cards, as these sales are generally made on an ad hoc basis. Amortization of intangible assets during fiscal 2012 and 2011, respectively, was approximately \$0.4 million (ZAR 2.9 million) and \$0.7 million (ZAR 4.6 million) and reduced our operating income.

During fiscal 2011, customer relationships of \$41.8 million acquired as part of the Net1 UTA acquisition were impaired.

Corporate/ Eliminations

The increase in our corporate expenses resulted primarily from the equity instrument issued pursuant to our BEE transaction, offset by lower stock-based compensation charges, primarily because the performance-based restricted stock granted in August 2007 was fully expensed in prior periods and due to the \$4.0 million profit related to the liquidation of SmartSwitch Nigeria. These expense reductions were offset by higher corporate head office-related expenses. In addition, the fiscal 2011 results include transaction related expenditures of \$6.0 million (ZAR 42.3 million), primarily related to the acquisition of KSNET.

Liquidity and Capital Resources

At June 30, 2013, our cash balances were \$53.7 million, which comprised mainly ZAR-denominated balances of ZAR 133.6 million (\$13.5 million), KRW-denominated balances of KRW 32.5 billion (\$28.4 million) and US dollar-denominated balances of \$10.4 million and other currency deposits, primarily euro, of \$1.3 million. The increase in our cash balances from June 30, 2012 was primarily from cash generated from operations, offset by implementation costs and capital expenditures related to our SASSA contract, scheduled repayments of our Korean debt and the acquisitions of Pbel and SmartSwitch Botswana.

We currently believe that our cash and credit facilities are sufficient to fund our future operations for at least the next four quarters. However, substantially all of our business is conducted through our South African and Korean subsidiaries and most of our cash reserves are in the form of ZAR or KRW held by our South African and Korean subsidiaries. Most of the legal costs relating to the DOJ and SEC investigations are incurred by us in US dollars in the U.S. We have upstreamed cash from our South African operations to fund a portion of these expenses, notwithstanding currency conversion at adverse rates and the incurrence of dividend withholding taxes that we would not have to pay absent such expenses.

We generally invest the surplus cash held by our South African operations in overnight call accounts that we maintain at South African banking institutions, and surplus cash held by our non-South African companies in the US and European money markets. We have invested surplus cash in Korea in short-term investment accounts at Korean banking institutions. In addition, we are required to invest the interest payable under our Korean debt facilities due in the next six months in an interest reserve account in Korea.

Historically, we have financed most of our operations, research and development, working capital, capital expenditures and acquisitions through our internally generated cash. When considering whether to borrow under our financing facilities, we consider the cost of capital, cost of financing, opportunity cost of utilizing surplus cash and availability of tax efficient structures to moderate financing costs.

We have a South African short-term credit facility of approximately ZAR 250 million (\$25.3 million) which remained fully undrawn as of June 30, 2013.

As of June 30, 2013, we had outstanding long-term debt of KRW 92.5 billion (approximately \$80.8 million translated at exchange rates applicable as of June 30, 2013) under credit facilities with a group of Korean banks. The loans bear interest at the Korean CD rate in effect from time to time (2.79% as of June 30, 2013) plus a margin of 4.10%. Semi-annual principal payments of approximately \$7.1 million (translated at exchange rates applicable as of June 30, 2013) were due starting in October 2011, with final maturity scheduled for October 2015.

The loans are secured by substantially all of KSNET's assets, a pledge by our subsidiary, Net1 Korea, of its entire equity interest in KSNET and a pledge by the immediate parent of Net1 Korea (also one of our subsidiaries) of its entire equity interest in Net1 Korea. The Facilities Agreement contains customary covenants that require Net1 Korea and its consolidated subsidiaries to maintain certain specified financial ratios (including a leverage ratio and a debt service coverage ratio) and restrict their ability to make certain distributions with respect to their capital stock,

prepay other debt, encumber their assets, incur additional indebtedness, make capital expenditures above specified levels, engage in certain business combinations and engage in other corporate activities. As of June 30, 2013, we were in compliance with all of the required covenants under the Facilities Agreement. The loans under the Facilities Agreement are without recourse to, and the covenants and other agreements contained therein do not apply to, us or any of our subsidiaries (other than Net1 Korea and its subsidiaries, including KSNET).

We have a unique cash flow cycle due to the funding mechanism under our SASSA contact and our pre-funding of certain merchants. We generally receive the grant funds 48 hours prior to the provision of the service in a trust account and any interest we earn on these amounts is for the benefit of SASSA. We are required to initiate payments before the start of the pay cycle month in order to have cash, merchant and interbank funds available when the payment cycle commences and this process requires that we have access to the grant funds to be paid. These funds are recorded as settlement assets and liabilities. Historically, we opened the pay cycle at certain participating merchants a few days before the payment of grants at pay sites, however, currently we do not commence the payment cycle at participating merchants before the start of the pay cycle month.

We use our funds to pre-fund certain merchants for grants paid through our merchant acquiring system on our behalf a day or two before the pay cycle opens. We typically reimburse merchants that are not pre-funded within 48 hours after they distribute the grants to the social welfare recipient cardholders.

In addition, as a transaction processor, and in certain instances as a claims adjudicator, we receive cash from:

health care plans which we disburse to health care service providers once we have adjudicated claims;

customers on whose behalf we process off payroll payments that we will disburse to customer employees, payroll-related payees and other payees designated by the customer; and

credit card companies (as well as other types of payment services) which have business relationships with merchants selling goods and services via the internet in Korea that are our customers and on whose behalf we process the transactions between various parties and settle the funds from the credit card companies to our merchant customers.

These funds do not represent cash that is available to us and we present these funds, and the associated liability, outside of our current assets and liabilities on our consolidated balance sheet. Movements in these cash balances are presented in investing activities and movements in the obligations are presented in financing activities in our consolidated statement of cash flows.

Cash flows from operating activities

Cash flows from operating activities for fiscal 2013 increased to \$55.9 million (ZAR 513.7 million) from \$20.4 million (ZAR 157.5 million) for fiscal 2012. Excluding the impact of interest paid under our Korean debt facility and taxes presented in the table below, the increase in cash provided by operating activities resulted from a more favorable trading environment, notwithstanding the significant implementation costs paid in fiscal 2013, an increase in accounts payable and a decrease in prefunding to merchants participating in our merchant acquiring system. These increases to operating cash flows were offset by a moderate increase in accounts receivable and inventory and lower other payables and taxes which all decrease operating cash flow. During fiscal 2013, we paid interest of \$7.1 million under our Korean debt facility.

Cash flows from operating activities for fiscal 2012 decreased to \$20.4 million (ZAR 157.5 million) from \$66.2 million (ZAR 463.4 million) for fiscal 2011. Excluding the impact of interest paid under our Korean debt and taxes, the decrease in cash provided by operating activities resulted from the timing of receipts of accounts receivable in our South African transaction-based activities operating segment and an increase in prefunding to merchants participating in our merchant acquiring system. We also incurred implementation costs related to our SASSA contract and, due to the timing of the opening of the July 2012 pay cycle, we did not have any significant amounts due to non-prefunded merchants participating in our merchant acquiring system as of June 30, 2012. During fiscal 2012, we paid interest of \$8.7 million under our Korean debt facility.

During fiscal 2013, we made a first provisional tax payment of \$6.8 million (ZAR 58.7 million), a second provisional tax payment of \$7.2 million (ZAR 72.5 million) related to our 2013 tax year in South Africa and paid dividend withholding taxes of \$1.6 million (ZAR 14.9 million) related to cross-border intercompany dividends paid. We made an additional second provisional tax payments of \$3.1 million (ZAR 25.5 million) related to our 2012 tax year in South Africa. We also paid taxes totaling \$3.3 million in other tax jurisdictions, primarily Korea.

During fiscal 2012, we made a first provisional payment of \$15.0 million (ZAR 123.3 million), a second provisional payment of \$8.5 million (ZAR 71.5 million) related to our 2012 tax year in South Africa and paid STC of \$1.8 million (ZAR 14.6 million) related to cross-border intercompany dividends paid. We made an additional second provisional tax payment of \$3.3 million (ZAR 24.8 million) related to our 2010 tax year in South Africa. We also paid

taxes totaling \$2.4 million in other tax jurisdictions, primarily Korea.

Taxes paid during fiscal 2013, 2012 and 2011 were as follows:

Table 17	Year ended June 30,

<i>Cash flows from investing activities</i>						

During fiscal 2013 we paid, net of cash acquired, \$1.9 million (ZAR 16.8 million) for Pbel and \$0.2 million for SmartSwitch Botswana. During fiscal 2012, we received a net settlement of \$4.9 million from the former shareholders of KSNET. We also paid \$4.5 million (ZAR 34.8 million) for the Eason prepaid electricity and airtime business during fiscal 2012. During fiscal 2011, we paid approximately \$230.2 million (ZAR 1.6 billion), net of cash received, for 98.73% of KSNET.

Cash used in investing activities for fiscal 2013 includes capital expenditure of \$22.7 million (ZAR 198.1 million), primarily for payment vehicles and related equipment for our SASSA contract and acquisition of payment processing terminals in Korea.

Cash used in investing activities for fiscal 2012 includes capital expenditure of \$39.2 million (ZAR 302.2 million), primarily for payment vehicles for our SASSA contract, acquisition of payment processing terminals in Korea and POS devices to service our merchant acquiring system in South Africa.

Cash used in investing activities for fiscal 2011 includes capital expenditure of \$15.1 million (ZAR 105.6 million), primarily for the acquisition of payment processing terminals in Korea, kiosks to service our EasyPay Kiosk pilot project, the acquisition of POS devices to service our merchant acquiring system, the replacement of computer and electronic hardware and the replacement of motor vehicles.

Cash flows from financing activities

During fiscal 2013, we made long-term debt repayments of \$14.5 million and received \$0.2 million from the exercise of stock options.

During fiscal 2012, we made long-term debt repayments of \$19.2 million and acquired 180,656 shares of our common stock for \$1.1 million.

During fiscal 2011 we obtained long-term debt to fund a portion of the KSNET purchase price. We also repaid KSNET's outstanding debt of \$7.1 million. In addition, we paid the facility fee of approximately \$3.1 million in October 2010 and acquired 125,392 shares of our common stock for \$1.0 million.

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements.

Capital Expenditures

Capital expenditures for the years ended June 30, 2013, 2012 and 2011 were as follows:

Operating Segment	Year ended June 30,					
	2013	2012	2011	2013	2012	2011
	\$	\$	\$	ZAR	ZAR	ZAR
	000	000	000	000	000	000
South African transaction-based activities	9,438	23,408	2,423	82,210	180,678	16,952
International transaction-based activities	12,490	14,978	12,113	108,794	115,610	84,745
Smart card accounts	-	-	-	-	-	-
Financial services	718	620	400	6,254	4,786	2,798
Hardware, software and related technology sales .	101	161	117	880	1,243	819
Corporate / Eliminations	-	-	-	-	-	-
Consolidated total	22,747	39,167	15,053	198,138	302,317	105,314

Our capital expenditures for fiscal 2013, 2012 and 2011, are discussed under Liquidity and Capital Resources Cash flows from investing activities.

All of our capital expenditures for the past three fiscal years were funded through internally-generated funds. We had outstanding capital commitments as of June 30, 2013, of \$0.3 million related mainly to computer equipment required to maintain and expand operations. We expect to fund these expenditures through internally-generated funds. In addition to these capital expenditures, we expect that capital spending for fiscal 2014 will also relate to providing a switching service through EasyPay and expanding our operations in Korea.

Contractual Obligations

The following table sets forth our contractual obligations as of June 30, 2013:

	Payments due by Period, as of June 30, 2013 (in \$ 000s)				
	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Long-term debt obligations (A)	90,536	19,933	70,603	-	-
Operating lease obligations	10,129	4,192	4,840	1,097	-
Purchase obligations	3,875	3,875	-	-	-
Capital commitments	341	341	-	-	-
Other long-term obligations (B)	21,659	-	-	-	21,659
Total	126,540	28,341	75,443	1,097	21,659

(A) Includes \$80.8 million of long-term debt discussed under Liquidity and capital resources and includes interest payable at the rate applicable as of June 30, 2013.

(B) Includes policy holder liabilities \$20.7 million related to our insurance business.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We seek to reduce our exposure to currencies other than the South African rand, or ZAR, through a policy of matching, to the extent possible, assets and liabilities denominated in those currencies. In addition, we use financial instruments to economically hedge our exposure to exchange rate and interest rate fluctuations arising from our operations. We are also exposed to equity price and liquidity risks as well as credit risks.

Currency Exchange Risk

We are subject to currency exchange risk because we purchase inventories that we are required to settle in other currencies, primarily the euro and US dollar. We have used forward contracts to limit our exposure in these transactions to fluctuations in exchange rates between the ZAR, on the one hand, and the US dollar and the euro, on the other hand. As of June 30, 2013, and 2012, our outstanding foreign exchange contracts were as follows:

As of June 30, 2013

Notional amount	Strike price	Fair market value price	Maturity
USD 4,000,000	ZAR 9.06	ZAR 10.1397	September 30, 2013

As of June 30, 2012

None.

Translation Risk

Translation risk relates to the risk that our results of operations will vary significantly as the US dollar is our reporting currency, but we earn most of our revenues and incur most of our expenses in ZAR and generate a significant amount of revenue and related and operating expenses in KRW. The US dollar fluctuated significantly over the past three years, including against the ZAR and KRW. As exchange rates are outside our control, there can be no assurance that future fluctuations will not adversely affect our results of operations and financial condition.

Interest Rate Risk

As a result of our normal borrowing and leasing activities, our operating results are exposed to fluctuations in interest rates, which we manage primarily through our regular financing activities. In addition, outstanding indebtedness under our Korean debt facility bears interest at the Korean CD rate plus 4.10%. As interest rates, and specifically the Korean CD rate, are outside our control, there can be no assurance that future increases in interest rates, specifically the Korean CD rate, will not adversely affect our results of operations and financial condition. As of June 30, 2013, the Korean CD rate was 2.79%.

The following table illustrates the effect on our annual expected interest charge, translated at exchange rates applicable as of June 30, 2013, as a result of a change in the Korean CD rate. The effects of a hypothetical 1% increase and a 1% decrease in the Korean CD rate as of June 30, 2013, is shown. The selected 1% hypothetical change does not reflect what could be considered the best or worst case scenarios.

Table 20	As of June 30, 2013	
	Annual	Estimated annual expected interest charge

	expected interest charge (\$ 000)	Hypothetical change in Korean CD rate	after change in Korean CD rate (\$ 000)
Interest on debt facility	6,059	1%	6,939
		(1%)	5,180

We generally maintain limited investment in cash equivalents and have occasionally invested in marketable securities. The interest earned on our bank balances and short term cash investments is dependent on the prevailing interest rates in the jurisdictions where our cash reserves are invested.

Credit Risk

Credit risk relates to the risk of loss that we would incur as a result of non-performance by counterparties. We maintain credit risk policies with regard to our counterparties to minimize overall credit risk. These policies include an evaluation of a potential counterparty's financial condition, credit rating, and other credit criteria and risk mitigation tools as our management deems appropriate.

With respect to credit risk on financial instruments, we maintain a policy of entering into such transactions only with South African and European financial institutions that have a credit rating of BBB or better, as determined by credit rating agencies such as Standard & Poor's, Moody's and Fitch Ratings.

Equity Price and Liquidity Risk

Equity price risk relates to the risk of loss that we would incur as a result of the volatility in the exchange-traded price of equity securities that we hold and the risk that we may not be able to liquidate these securities. We have invested in approximately 26% of the issued share capital of Finbond Group Limited which are exchange-traded equity securities. The fair value of these securities as of June 30, 2013, represented approximately 1% of our total assets, including these securities. We expect to hold these securities for an extended period of time and we are not concerned with short-term equity price volatility with respect to these securities provided that the underlying business, economic and management characteristics of the company remain sound.

The market price of these securities may fluctuate for a variety of reasons, consequently, the amount we may obtain in a subsequent sale of these securities may significantly differ from the reported market value.

Liquidity risk relates to the risk of loss that we would incur as a result of the lack of liquidity on the exchange on which these securities are listed. We may not be able to sell some or all of these securities at one time, or over an extended period of time without influencing the exchange traded price, or at all.

The following table summarizes our exchange-traded equity securities with equity price risk as of June 30, 2013. The effects of a hypothetical 10% increase and a 10% decrease in market prices as of June 30, 2013, is also shown. The selected 10% hypothetical change does not reflect what could be considered the best or worst case scenarios. Indeed, results could be far worse due both to the nature of equity markets and the aforementioned liquidity risk.

As of June 30, 2013

Table 21

	Fair value (\$ 000)	Hypothetical price change	Estimated fair value after hypothetical change in price (\$ 000)	Hypothetical Percentage Increase (Decrease) in Shareholders Equity
Exchange-traded equity securities .	8,303	10%	9,133	0.24%
		(10%)	7,473	(0.24%)

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Our consolidated financial statements, together with the report of our independent registered public accounting firm, appear on pages F-1 through F-51 of this Annual Report on Form 10-K.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of disclosure controls and procedures

Under the supervision and with the participation of our management, including our chief executive officer and our chief financial officer, we conducted an evaluation of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) under the Securities Exchange Act of 1934. Based on this evaluation, the chief executive officer and the chief financial officer concluded that our disclosure controls and procedures were effective as of June 30, 2013.

Internal Control over Financial Reporting

Internal control over financial reporting is a process designed by, or under the supervision, of the company's chief executive officer and chief financial officer, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with US GAAP.

Internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with US GAAP, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the consolidated financial statements.

Inherent Limitations in Internal Control over Financial Reporting

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Management's Report on Internal Control Over Financial Reporting

Management, including our chief executive officer and our chief financial officer, is responsible for establishing and maintaining adequate internal control over our financial reporting. Management conducted an evaluation of the effectiveness of internal control over financial reporting based on the Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission in 1992. Based on this evaluation, management concluded that our internal control over financial reporting was effective as of June 30, 2013. Deloitte & Touche (South Africa), our independent registered public accounting firm, has issued an audit report on our internal control over financial reporting.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during the most recent fiscal quarter ended June 30, 2013, that have materially affected, or are reasonably likely to materially affect, our internal control

over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To The Shareholders of Net 1 UEPS Technologies, Inc.

We have audited the internal control over financial reporting of Net 1 UEPS Technologies, Inc. and subsidiaries (the Company) as of June 30, 2013, based on criteria established in *Internal Control Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers or persons performing similar functions, and effected by the company's board of directors, management and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of June 30, 2013, based on the criteria established in *Internal Control Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended June 30, 2013 of the Company and our report dated August 22, 2013, expressed an unqualified opinion on those financial statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To The Shareholders of Net 1 UEPS Technologies, Inc.

We have audited the accompanying consolidated balance sheets of Net 1 UEPS Technologies, Inc. and subsidiaries (the Company) as of June 30, 2013 and 2012 and the related consolidated statements of operations, comprehensive income, changes in equity and cash flows for each of the three years in the period ended June 30, 2013. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Net 1 UEPS Technologies, Inc. and subsidiaries as of June 30, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended June 30, 2013, in conformity with accounting principles generally accepted in the United States of America.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of June 30, 2013, based on the criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated August 22, 2013, expressed an unqualified opinion on the Company's internal control over financial reporting.
