Large accelerated filer o Accelerated filer x Non-accelerated filer o Smaller reporting company o

Indicate by check mark if the registrant is a shell company, in Rule 12b(2) of the Exchange Act.

Yes o No x

As of October 31, 2008 there were 5,144,822 shares of common stock outstanding.

BANK OF MARIN BANCORP

Explanatory Note

Bank of Marin Bancorp is the successor registrant to Bank of Marin pursuant to an 8-K filed with the SEC on June 29, 2007.

On July 1, 2007 (the "Effective Date"), a bank holding company reorganization was completed whereby Bank of Marin Bancorp became the parent holding company for Bank of Marin. On the Effective Date, each outstanding share of Bank of Marin common stock was converted into one share of Bank of Marin Bancorp common stock and Bank of Marin became a wholly-owned subsidiary of the holding company. Bancorp assumed the ticker symbol BMRC, which was formerly used by Bank of Marin. Prior to the Effective Date, Bank of Marin filed reports and proxy statements with the Federal Deposit Insurance Corporation ("FDIC") pursuant to Sections 12 of the Securities Exchange Act of 1934 (the "34 Act").

The financial statements and discussion thereof contained in this report for periods subsequent to the reorganization relate to consolidated Bank of Marin Bancorp. Periods prior to the reorganization relate to Bank of Marin only. The information is comparable as the sole subsidiary of Bank of Marin Bancorp is the Bank of Marin.

This report refers to previous filings made by Bank of Marin with the FDIC pursuant to the '34 Act. Copies of these filings are available by requesting them in writing or by phone from:

Corporate Secretary Bank of Marin 504 Redwood Blvd., Suite 100 Novato, CA 94947 415-763-4523

Copies of such filings are also available on Bancorp's website at www.bankofmarin.com. This website address is for information only and is not intended to be an active link, or to incorporate any website information into this document.

The accompanying notes are an integral part of these consolidated financial statements.

BANK OF MARIN BANCORP

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Introductory Explanation

On July 1, 2007 (the "Effective Date"), a bank holding company reorganization was completed whereby Bank of Marin Bancorp (Bancorp) became the parent holding company for Bank of Marin (the "Bank"), its sole and wholly-owned subsidiary. On the Effective Date, in a tax-free exchange, each outstanding share of the Bank was converted into one share of Bancorp and the Bank became a wholly-owned subsidiary of the holding company. The information contained in the financial statements and accompanying footnotes for periods subsequent to the reorganization relate to consolidated Bank of Marin Bancorp. Periods prior to the reorganization relate to Bank of Marin only. The information is comparable for all periods as the sole subsidiary of Bancorp is the Bank.

Note 1: Basis of Presentation

The consolidated financial statements include the accounts of Bancorp and its wholly-owned bank subsidiary. All material intercompany transactions have been eliminated. In the opinion of Management, the unaudited interim consolidated financial statements contain all adjustments necessary to present fairly the financial position, results of operations, changes in stockholders' equity and cash flows. All adjustments are of a normal, recurring nature.

Certain information and footnote disclosures presented in the annual financial statements are not included in the interim consolidated financial statements. Accordingly, the accompanying unaudited interim consolidated financial statements should be read in conjunction with Bancorp's 2007 Annual Report, which is incorporated by reference in Bancorp's 2007 Annual Report on Form 10-K. The results of operations for the nine months ended September 30, 2008 are not necessarily indicative of the operating results for the full year.

The following table shows weighted average basic shares, common stock equivalents related to stock options and nonvested restricted stock, and weighted average diluted shares used in calculating earnings per share. Basic earnings per share are based upon the weighted average number of common shares outstanding (including vested restricted stock) during each period. Diluted earnings per share incorporates the dilutive effect of common stock equivalents outstanding, including stock options and nonvested restricted stock, on an average basis during each period.

Note 2: Recently Issued Accounting Standards

On October 10, 2008, the Financial Accounting Standards Board (FASB) issued FASB Staff Position (FSP) FAS 157-3, "Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active." The FSP clarifies the application of Statement of Financial Accounting Standards (SFAS) No. 157, "Fair Value Measurements", in a market that is not active and provides an example to illustrate key considerations in determining the fair value of a financial asset when the market for that financial asset is not active. The FSP is effective upon issuance, including prior periods for which financial statements have not been issued. Revisions resulting from a change in the valuation technique or its application should be accounted for as a change in accounting estimate following the guidance in SFAS No. 154, "Accounting Changes and Error Corrections." However, the disclosure provisions in SFAS No. 154 for a change in accounting estimate are not required for revisions resulting from a change in valuation technique or its application. Adoption of FSP FAS 157-3 did not have a significant impact on Bancorp's financial condition or results of operations.

BANK OF MARIN BANCORP

On June 16, 2008, the FASB issued FSP on Emerging Issues Task Force (EITF) 03-6-1, "Determining Whether Instruments Granted in Share-Based Payment Transactions are Participating Securities" which states that when calculating basic earnings per share pursuant to the two-class method, all awards that contain rights to nonforfeitable dividends should be considered participating securities. The two-class method is an earnings allocation formula that determines earnings per share for each class of common stock and participating security according to dividends declared (or accumulated) and participation rights in undistributed earnings. Dividends or dividend equivalents actually paid on share-based payment awards not expected to vest should be excluded from the earnings allocation to avoid counting the dividends as both compensation cost and distributed earnings. Undistributed earnings should be allocated to all outstanding share-based payment awards, including those that are not expected to vest. FSP EITF 03-6-1 will be effective for Bancorp beginning January 1, 2009. All prior-period earnings per share data presented will be adjusted retrospectively to conform to the provisions of FSP EITF 03-6-1. Early adoption is not permitted. Bancorp's presentation, but not the amount, of earnings per share will be affected upon adoption of FSP EITF 03-6-1 due to Bancorp's issuance of nonvested restricted common shares on May 1, 2008. See Note 8 below for further discussion.

In May 2008, the FASB issued SFAS No. 162, "The Hierarchy of Generally Accepted Accounting Principles." SFAS No. 162 identifies the sources of accounting principles and the framework for selecting the principles used in the preparation of financial statements that are presented in conformity with generally accepted accounting principles in the United States. SFAS No. 162 is effective 60 days following the SEC's approval of the Public Company Accounting Oversight Board (PCAOB) amendments to AU Section 411, The Meaning of "Present Fairly in Conformity With Generally Accepted Accounting Principles." Bancorp expects that SFAS No. 162 will have no impact on its financial condition or results of operations.

On March 19, 2008, the FASB issued SFAS. No. 161, "Disclosures about Derivative Instruments and Hedging Activities-an Amendment of FASB Statement 133." SFAS No. 161 enhances required disclosures regarding derivatives and hedging activities, including improved disclosures regarding how: (a) an entity uses derivative instruments, (b) derivative instruments and related hedged items are accounted for under SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (SFAS No.133), and (c) derivative instruments and related hedged items affect an entity's financial position, financial performance, and cash flows. SFAS No. 161 is effective for fiscal years and interim periods beginning after November 15, 2008, with early application permitted. As SFAS No. 161 is disclosure-related only, it is expected that SFAS No. 161 will have no impact on Bancorp's financial condition or results of operations.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), "Business Combinations." SFAS No. 141R establishes principles and requirements for how the acquirer of a business recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, and any non-controlling interest in the acquiree. The statement also provides guidance for recognizing and measuring the goodwill acquired in the business combination and determines what information to disclose to enable users of the financial statement to evaluate the nature and financial effects of the business combination. SFAS No. 141R is effective for financial statements issued for fiscal years beginning after December 15, 2008. Accordingly, any business combinations Bancorp engages in will be recorded and disclosed following existing generally accepted accounting principles until January 1, 2009. Bancorp expects SFAS No. 141R would have an impact on its consolidated financial statements when effective if it acquires another company, but the nature and magnitude of the specific effects will depend upon the nature, terms and size of the acquisitions Bancorp consummates after the effective date.

In December 2007, the FASB issued SFAS No. 160, "Noncontrolling Interests in Consolidated Financial Statements," which provides guidance for accounting and reporting of noncontrolling (minority) interests in consolidated financial

statements. The statement is effective for fiscal years and interim periods within fiscal years beginning on or after December 15, 2008. Bancorp does not hold minority interests in subsidiaries, therefore it is expected that SFAS No. 160 will have no impact on its financial condition or results of operations.

In June 2007, the FASB EITF reached a consensus on EITF Issue No. 06-11, "Accounting for Income Tax Benefits of Dividends on Share-Based Payment Awards." The EITF requires that the tax benefit related to dividends paid on restricted stock, which are expected to vest, be recorded as an increase to additional paid-in-capital. The EITF was effective for all tax benefits on dividends declared by Bancorp after January 1, 2008. At adoption, there was no impact on Bancorp's financial position or results of operations.

BANK OF MARIN BANCORP

Note 3: Fair Value Measurement

The Bank performs fair market valuations on certain assets and liabilities as a result of the application of accounting guidelines that were in effect prior to the adoption of SFAS No. 157, "Fair Value Measurements." The following table summarizes the Bank's financial instruments that were measured at fair value on a recurring basis at September 30, 2008.

(Dollars in thousands) Description of Financial Instruments	Septem	ber 30, 2008	P N Id	Quoted rices in Active Markets for dentical Assets Level 1)	Ol	ignificant Other bservable Inputs (Level 2)	Significant observable Inputs (Level 3)
Securities available for sale	\$	73,348	\$		\$	73,348	\$
Derivative financial assets		48				48	
Total Assets	\$	73,396	\$		\$	73,396	\$
Derivative financial liabilities	\$	902	\$		\$	902	\$

When available, quoted market prices (Level 1) are used to determine the fair value of securities available for sale. If quoted market prices are not available, management obtains pricing information from a reputable third-party service provider, who may utilize valuation techniques that use current market-based or independently sourced parameters, such as bid prices, dealer-quoted prices, interest rates, benchmark yield curves, prepayment speeds, and credit spreads (Level 2). Level 1 securities include those traded on active markets, including U.S. Treasury securities. Level 2 securities include U.S. agencies' securities, mortgage-backed securities and corporate collateralized mortgage obligations. Changes in fair market value are recorded in other comprehensive income.

The fair value of derivative financial instruments is based on the income approach using observable Level 2 market inputs, reflecting market expectations of future interest rates as of the measurement date. Standard valuation techniques are used to calculate the present value of the future expected cash flows assuming an orderly transaction. Valuation adjustments may be made to reflect both the Bank's own credit risk and the counterparties' credit quality in determining the fair value of the derivatives. Level 2 inputs for the valuations are limited to observable market prices for London Interbank Offered Rate (LIBOR) cash rates (for the very short term), quoted prices for LIBOR futures contracts (two years and less), observable market prices for LIBOR swap rates (at commonly quoted intervals from two years to beyond the derivative's maturity), and 1-month and 3-month LIBOR basis spreads at commonly quoted intervals. Mid-market pricing of the inputs is used as a practical expedient in the fair value measurements. Key inputs for interest rate valuations are used to project spot rates at resets specified by each swap, as well as to discount those future cash flows to present value at measurement date. When the value of any collateral placed with counterparties is less than the interest rate derivative liability, the interest rate liability position is further discounted to reflect the potential credit risk to counterparties. The Bank has used the spread over LIBOR on the Federal Home Loan Bank San Francisco (FHLB) fixed-rate credit advance with the duration corresponding to the swaps' to calculate this credit-risk related discount of future cash flows.

The interest rate swaps are carried on the balance sheet at their fair value in other assets (when the fair value is positive) or in other liabilities (when the fair value is negative) and offset in other non-interest income.

Certain financial assets may be measured at fair value on a nonrecurring basis. For example, when a loan is identified as impaired, it is reported at the lower of cost or fair value, measured based on the loan's observable market price (Level 1), the present value of expected future cash flows discounted at the loan's original effective interest rate (Level 2), or the fair value of the underlying collateral securing the loan if the loan is collateral dependent (Level 3). The value of impaired loans, which totaled \$823 thousand at September 30, 2008, were primarily based on the appraised value of the collateral (Level 3).

BANK OF MARIN BANCORP

Note 4: Investment Securities

The Bank's investment securities portfolio at September 30, 2008 consists primarily of U.S. government agency securities, including mortgage-backed securities (MBS) and collateralized mortgage obligations (CMOs) issued or guaranteed by Federal National Mortgage Association (FNMA), Federal Home Loan Mortgage Corporation (FHLMC), or Government National Mortgage Association (GNMA). The Bank's portfolio also includes obligations of state and political subdivisions, debentures issued by government-sponsored agencies including FHLB, Federal Farm Credit Bank and FNMA, as well as corporate CMOs, as reflected in the table below.

		Septen	nber	30, 2008	December 31, 200

Total available for sale		73,405		73,348		87,450		86,989

The Bank generally invests in mortgage-backed securities with borrowers having strong credit scores and/or collateral compositions reflecting low loan-to-value ratios. Investment securities carried at \$25.8 million and \$20.7 million were pledged at September 30, 2008 and December 31, 2007, respectively.

Note 5: Allowance for Loan Losses and Non-accrual Loans

The allowance for loan losses is maintained at levels considered adequate by management to provide for probable loan losses inherent in the portfolio. The allowance is based on management's assessment of various factors affecting the loan portfolio, including problem loans, economic conditions and loan loss experience, and an overall evaluation of the quality of the underlying collateral.

Activity in the allowance for loan losses follows:

			Three	e months e	nded		Nine months ended

Non-accrual loans at period end	\$ 823	\$	236	\$ 150	\$ 823	\$ 150

At September 30, 2008, the Bank had six non-accrual loans totaling \$823 thousand. At December 31, 2007 the Bank had one non-accrual loan totaling \$144 thousand. At September 30, 2007, the Bank had two non-accrual loans amounting to \$150 thousand. Impaired loan balances at each period-end approximated the balance of nonaccrual loans, with an allocated allowance of \$47 thousand, \$49 thousand, and zero at September 30, 2008, June 30, 2008, and September 30, 2007, respectively. At September 30, 2008, there were no commitments to extend credit on impaired loans.

Page - 12

BANK OF MARIN BANCORP

The gross interest income that would have been recorded had non-accrual loans been current totaled \$37 thousand, \$6 thousand, and \$3 thousand in the quarters ended September 30, 2008, June 30, 2008 and September 30, 2007, respectively. The amount of foregone interest income on nonaccrual loans was \$49 thousand and \$8 thousand for the nine-month periods ended September 30, 2008 and 2007, respectively. The Bank recognized interest income of \$12 thousand and \$5 thousand for cash payments received during the nine-month periods ended September 30, 2008 and 2007, respectively.

Effective January 1, 2007, the Bank elected the early-adoption provisions of SFAS No. 159, which permits entities to choose to measure eligible financial instruments at fair value at specified election dates. Upon adoption, the Bank selected the fair value option for the indirect auto loan portfolio, which was subsequently sold on June 5, 2007. In conjunction with the adoption of SFAS No. 159, the allowance for loan losses was reduced by \$1.0 million in the first quarter of 2007, which is reflected in the table above.

Note 6: CDARS® Reciprocal Deposits

Late in the first quarter of 2008, the Bank began to offer the CDARS® deposit product, short for Certificate of Deposit Account Registry Service. Through CDARS®, the Bank may accept deposits in excess of the FDIC insured maximum from a depositor and place the deposits through a network to other member banks in increments of less than the FDIC insured maximum to provide the depositor full FDIC insurance coverage. Where the Bank receives an equal dollar amount of deposits from other member banks in exchange for the deposits the Bank places into the network, the Bank records these as CDARS® reciprocal deposits. At September 30, 2008, CDARS® reciprocal deposits totaled \$16.8 million.

Note 7: Borrowings

As of September 30, 2008 and December 31, 2007, the Bank had lines of credit with the FHLB totaling \$170.7 million and \$184.8 million, respectively. At September 30, 2008 overnight borrowings totaled \$13.6 million with the FHLB under the line of credit. At December 31, 2007, the Bank had no outstanding borrowings with FHLB, correspondent banks, or the Federal Reserve. The interest rate for overnight borrowings is determined daily.

On February 5, 2008, the Bank entered into a ten-year borrowing agreement under the same FHLB line of credit for \$15.0 million at a fixed rate of 2.07%. Interest-only payments are required every three months until maturity. Although the entire principal is due on February 5, 2018, the FHLB has the unconditional right to accelerate the due date on February 5, 2009 and every three months thereafter (the "put" dates). If the FHLB exercises its right to accelerate the due date, the FHLB will offer replacement funding at the current market rate, subject to certain conditions. The Bank must comply with the put date, but is not required to accept replacement funding.

At September 30, 2008, \$142.1 million was remaining as available for borrowing from the FHLB under a formula based on eligible collateral. The FHLB overnight borrowing and the FHLB line of credit are secured by certain assets, including a portfolio of loans, investment securities, cash and cash equivalents under a blanket lien. On September 30, 2008, the pledged loans totaled \$341.4 million.

Additional borrowing capacity includes lines of credit with correspondent banks totaling \$65.0 million and a line of credit with the Federal Reserve Bank totaling \$3.0 million to borrow overnight. There were no borrowings under these credit facilities on September 30, 2008.

Note 8: Stockholders' Equity

Effective January 1, 2007, the Bank elected early adoption of SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities." Upon adoption, the Bank selected the fair value option for its indirect auto loan portfolio, which was subsequently sold on June 5, 2007. Upon the adoption of SFAS No. 159 for its indirect auto loan portfolio, the Bank recorded a cumulative-effect adjustment as a charge to retained earnings totaling \$1.5 million effective January 1, 2007.

On July 1, 2007 (the "Effective Date"), the bank holding company reorganization was completed and the Bank repurchased a total of 24,399 common shares of the Bank for \$876 thousand from six stockholders who dissented to the exchange of these shares for Bancorp common stock. Also, on the Effective Date, after the repurchase, each remaining outstanding share of the Bank was converted into one share of Bank of Marin Bancorp and the Bank became a wholly-owned subsidiary of the holding company.

BANK OF MARIN BANCORP

The California Department of Financial Institutions (DFI) and the FDIC approved a \$15 million, twelve-month share repurchase program in October 2006. Under this program, the Bank repurchased 115,625 shares in the fourth quarter of 2006 at an average price of \$34.26 per share, plus commissions, for a total cost of \$4.0 million and 289,692 shares in the first quarter of 2007 at an average price of \$38.10 per share, plus commissions, for a total cost of \$11.0 million, at which time the program was completed.

In November 2007, Bancorp's Board of Directors approved an additional plan to repurchase up to \$5 million of common shares of Bancorp. No regulatory approval was required for this repurchase plan as Bancorp was exempted under the provisions of Regulation Y of the Federal Reserve Board. In the fourth quarter of 2007, Bancorp repurchased a total of 51,732 shares at an average price of \$29.96 per share, plus commissions, for a total cost of \$1.5 million. During the first nine months of 2008, Bancorp repurchased 88,316 shares at an average price of \$28.55, plus commissions, for a total cost of \$2.5 million. In September 2008, the repurchases under the plan were discontinued to preserve capital during a time of extreme economic turbulence.

The Bank executed the repurchase transactions pursuant to the Securities and Exchange Commission's Rule 10b-18. All shares repurchased under both programs were made in open market transactions and were part of publicly announced repurchase programs.

A summary of cash dividends paid to stockholders, which are recorded as a reduction of retained earnings, is presented below.

			Thr	ee months ended		Nine months ended

Cash dividends per share	\$	0.14	\$	0.14 \$	0.13	\$	0.42	\$	0.38

Under SFAS No. 123R, "Share-Based Payment," which was implemented in January 2006, the fair value of stock options on the grant date is recorded as a stock-based compensation expense in the income statement over the requisite service period with a corresponding increase in common stock. In addition, the Bank records excess tax benefits on the exercise of non-qualified stock options, disqualifying disposition of incentive stock options or vesting of restricted stock as an addition to common stock with a corresponding decrease in current taxes payable.

Stock-based compensation also includes compensation expense related to the issuance of nonvested restricted common shares pursuant to the 2007 Equity Plan. On May 1, 2008 employees were granted 6,700 restricted common shares of Bancorp, which vest twenty percent on each anniversary of the grant for five years. The grant-date fair value of the restricted common shares, which is equal to its intrinsic value, is recorded as compensation expense over the requisite service period with a corresponding increase in common stock. Any excess tax benefit on the vesting of these shares will be also recorded as increase in common stock and a corresponding decrease in current taxes payable. The holders of the nonvested restricted common shares are entitled to dividends on the same per-share ratio as the holders of common stock. Dividends paid on the portion of share-based awards not expected to vest are also included in stock-based compensation expense. Tax benefits on dividends paid on the portion of share-based awards expected to vest are recorded as increase to common stock with a corresponding decrease in current taxes payable.

Stock-based compensation and excess tax benefits on exercised options are shown below.

Table of Contents

BANK OF MARIN BANCORP

Note 9: Financial Instruments with Off-Balance Sheet Risk

The Bank makes commitments to extend credit in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit in the form of loans or through standby letters of credit. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Standby letters of credit issued by the Bank guarantee the performance of a customer to a third party. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since many of the commitments are expected to expire without being drawn upon, the total commitment amount does not necessarily represent future cash requirements.

The Bank is exposed to credit loss in the contract amount of the commitment in the event of nonperformance by the borrower. The Bank uses the same credit policies in making commitments as it does for on-balance-sheet instruments and evaluates each customer's creditworthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary by the Bank, is based on management's credit evaluation of the borrower. Collateral held varies, but may include accounts receivable, inventory, property, plant and equipment, and real estate property.

The contract amount of loan commitments and standby letters of credit not reflected on the statement of condition was \$251.2 million at September 30, 2008 at rates ranging from 3.73% to 10.25%. This amount included \$128.7 million under commercial lines of credit (these commitments are contingent upon customers maintaining specific credit standards), \$74.0 million under revolving home equity lines, \$37.4 million under undisbursed construction loans, \$4.0 million under standby letters of credit, and the remaining \$7.1 million under personal and other lines of credit. The Bank has set aside an allowance for losses in the amount of \$502 thousand for these commitments, which is recorded in "interest payable and other liabilities."

Note 10: Derivative Financial Instruments and Hedging Activities

The Bank has entered into interest-rate swap agreements, primarily as an asset/liability management strategy, in order to mitigate the changes in the fair value of the hedged long-term fixed-rate loans or firm commitments to enter into long-term fixed-rate loans caused by changes in interest rates. Such hedges allow the Bank to offer long-term fixed rate loans to customers without assuming the interest rate risk of a long-term asset by swapping the Bank's fixed-rate interest stream for a floating-rate interest stream, generally benchmarked to the one-month U.S. dollar LIBOR index, thus protecting the Bank against an adverse effect on the net interest margin due to fluctuating interest rates.

The interest rate swap agreements are generally structured at inception to mirror all of the provisions of the hedged loan agreements. These interest rate swaps, designated and qualified as fair value hedges, are carried on the balance sheet at their fair value in other assets (when the fair value is positive) or in other liabilities (when the fair value is negative). One of the Bank's interest rate swap agreements qualifies for short-cut hedge accounting treatment in accordance with SFAS 133. The change in fair value of the swap using the short-cut accounting treatment is recorded in other non-interest income, while the change in fair value of swaps using non-short cut accounting is recorded in interest income. The unrealized gain or loss in market value of the hedged fixed-rate loan is recorded as an adjustment to the hedged loan and offset in other non-interest income (for short-cut accounting treatment) or interest income (for non-short cut accounting treatment).

During the third quarter of 2007, a forward swap was designated to offset the change in fair value of a loan originated during the period. The fair value of the related yield maintenance agreement totaling \$69 thousand at the date of designation, recorded in other assets, is being amortized to interest income using the effective yield method over the life of the loan.

The Bank's credit exposure, if any, on interest rate swaps is limited to the net favorable value (net of any collateral pledged) and interest payments of all swaps by each counterparty. Conversely, when the interest rate swaps are in liability position exceeding certain threshold, the Bank may be required to post collateral to the counterparties. Collateral levels are monitored and adjusted on a regular basis for changes in interest rate swap values. The Bank's securities totaling \$3.0 million were held as collateral by one of the counterparties for derivative liabilities at September 30, 2008.

agreement qualifying as derivatives

BANK OF MARIN BANCORP

As of September 30, 2008, the Bank had three interest rate swap agreements, which are scheduled to mature in September 2018, June 2020 and June 2022. Information on the Bank's derivatives follows:

- 1 Credit risk represents the amount of unrealized gain included in derivative assets which is subject to counterparty credit risk. It reflects the effect of master netting agreements and includes credit risk on virtual derivatives.
- 2 Tax equivalent yield equals 8.43%, 8.44%, and 8.26% for three months ended Spetember 30, 2008, June 30, 2008, and September 30, 2007, respectively; 8.43% and 8.26% for the nine months ended September 30, 2008 and 2007, respectively.

Note 11: Transactions with Visa Inc.

As a member bank of Visa Inc., the Bank holds 16,939 shares of Visa Inc. Class B common stock at a zero cost basis. In connection with Visa Inc.'s initial public offering (IPO) on March 19, 2008, the Bank recognized a \$457 thousand gain on the mandatory redemption of 10,677 shares of Class B common stock representing the difference between the cash proceeds received and the zero carrying basis of the stock redeemed. The remaining shares owned by the Bank cannot be converted into Class A (voting) shares until the later of March 25, 2011 or the final resolution of the covered litigation described below.

The Bank recorded a liability of \$242 thousand in the fourth quarter of 2007 to cover its potential indemnification obligations to Visa, Inc. The obligations arose in connection with the Bank's proportionate share of certain litigation indemnifications provided to Visa U.S.A. by its member banks prior to Visa U.S.A.'s merger into Visa Inc. In March of 2008, the Bank reversed this liability because, subsequent to Visa Inc.'s IPO, Visa, Inc. established an escrow account from which it planned to pay any potential settlements.

On October 27, 2008 Visa Inc. announced a settlement with one of the litigants, Discover Card, for \$1.9 billion, of which \$1.7 billion is the responsibility of member banks. As of the settlement date, the escrow account was underfunded by \$1.1 billion. The Bank's proportionate share of the shortfall is \$75 thousand. Visa Inc. expects to further fund the escrow account in the fourth quarter of 2008 to cover the settlement through a reduction in the conversion factor of Class B shares held by member banks that are available for conversion to Class A as allowed by the "Retrospective Responsibility Plan" outlined in the Form S-1 filed by Visa Inc. on November 9, 2007. The Bank expects that its liability will be fully covered by the additional escrow funding, with no cash payment required by the Bank.

Table of Contents

BANK OF MARIN BANCORP

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

In the following pages, Management discusses its analysis of the financial condition and results of operations for the third quarter of 2008 compared to the third quarter of 2007 and to the prior quarter (second quarter of 2008). This discussion should be read in conjunction with the related financial statements and with the audited financial statements and accompanying notes included in the Bank of Marin Bancorp's 2007 Annual Report. Average balances, including balances used in calculating certain financial ratios, are generally comprised of average daily balances.

Forward-Looking Statements

This discussion of financial results includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, (the "1933 Act") and Section 21E of the Securities Exchange Act of 1934, as amended, (the "1934 Act"). Those sections of the 1933 Act and 1934 Act provide a "safe harbor" for forward-looking statements to encourage companies to provide prospective information about their financial performance so long as they provide meaningful, cautionary statements identifying important factors that could cause actual results to differ significantly from projected results.

Bancorp's forward-looking statements include descriptions of plans or objectives of management for future operations, products or services, and forecasts of its revenues, earnings or other measures of economic performance. Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often include the words "believe," "expect," "intend," "estimate" or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may."

Forward-looking statements are based on management's current expectations regarding economic, legislative, and regulatory issues that may impact Bancorp's earnings in future periods. A number of factors - many of which are beyond management's control - could cause future results to vary materially from current management expectations. Such factors include, but are not limited to, general economic conditions, the current financial turmoil in the United States and abroad, changes in interest rates, deposit flows, real estate values and competition; changes in accounting principles, policies or guidelines; changes in legislation or regulation; and other economic, competitive, governmental, regulatory and technological factors affecting Bancorp's operations, pricing, products and services. These and other important factors are detailed in the Risk Factors section of Bancorp's 2007 Form 10-K as filed with the SEC, copies of which are available from Bancorp at no charge, and in the Risk Factors noted in Part II, Item 1A of this report. Forward-looking statements speak only as of the date they are made. Bancorp does not undertake to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements are made or to reflect the occurrence of unanticipated events.

Executive Summary

In 2007 and 2008, financial markets experienced significant disruptions beginning with dramatic declines in the housing market leading to increased foreclosures, declines in home values and increased unemployment which culminated in significantly reduced liquidity in financial markets. Banks and other financial institutions became reluctant to lend to clients and to other banks. The liquidity crisis has spread worldwide.

Recently, the federal government has announced various programs under the Emergency Economic Stabilization Act of 2008 (the Act) intended to inject liquidity and stabilize the financial industry. The Act includes the Treasury Capital Purchase Program (TCPP), Troubled Assets Relief Program (TARP), FDIC Temporary Liquidity Guarantee Program (TLGP) and the Money Market Investor Funding Facility. Bancorp is assessing the potential impact of its participation

in the TCPP and TLGP but has not yet made a definitive decision as to whether it will participate.

It cannot be determined whether these recent steps taken by the federal government will result in significant improvement in financial and economic conditions affecting the banking industry. Despite the federal government's recent fiscal and monetary measures, if the U.S. economy were to remain in a recessionary condition for an extended period, this would present additional significant challenges for the U.S. banking and financial services industry, and inevitably, businesses of Bancorp.

BANK OF MARIN BANCORP

While the banking industry continued to be impacted by the slowing U.S. economy and volatility in the financial markets, due to the strength of the market in which it operates, Bancorp continued to generate healthy loan growth, maintain stable deposits and increase efficiency. It maintains a strong capital base. It's sources of funding, including lines of credit with the FHLB and correspondent banks remain available.

Bancorp experienced loan growth of \$114 million, an increase of 15.7%, in the first nine months of 2008, and experienced loan growth of \$38.8 million, or 4.9% in the third quarter of 2008, with no significant changes to the mix of loans. During the same period, deposits, exclusive of a \$53 million short-term deposit placed with Bancorp over the 2007 year-end, increased \$67 million, or 8.6%.

Bancorp recorded an increase in net income of \$291 thousand, or 3.2% in the nine-month period ended September 30, 2008 compared to the same period in 2007 and a decrease of \$494 thousand, or 15.5%, in the quarter ended September 30, 2008 compared to the same period last year. The results reflect increases in the provision for loan losses from \$340 thousand in the nine months ended September 30, 2007 to \$2.8 million in the nine months ended September 30, 2008 and from \$200 thousand in the third quarter of 2007 to \$1.7 million in the third quarter of 2008. The increases in the loan loss reserve reflect strong loan growth, an increased allocation for economic uncertainty, and increases to the specific reserve where needed.

Charge-offs in the first nine months of 2008 totaling \$1.1 million and in the third quarter of 2008 totaling \$969 thousand primarily relate to the charge-off of one unsecured commercial line of credit and one commercial term loan collateralized by a residence where the Bank holds the second deed of trust. The allowance for loan losses as a percentage of loans totaled 1.11% at September 30, 2008 compared to 1.05% a year ago. In addition, our allowance for loan losses is 11.3 times our non-performing loans at September 30, 2008.

Bancorp has not participated in subprime lending nor does it hold investment securities backed by subprime loans. Bancorp does not hold common or preferred stock of either the Federal National Mortgage Association (Fannie Mae) or the Federal Home Loan Mortgage Corporation (Freddie Mac).

A combination of lower deposit and borrowing rates and a shift in interest-earning assets from Federal funds sold to higher-yielding loans contributed to expansion of the tax-equivalent net interest margin to 5.43% percent in the nine months ended September 30, 2008 compared to 5.00% in the nine months ended September 30, 2007. Beginning in August 2007 and continuing through April 2008, the Federal Reserve lowered its target interest rate by 325 basis points, resulting in lower deposit rates offered by Bancorp. Loan yields did not fall as dramatically since the yield on fixed-rate loans, which comprise over half of the loan portfolio, remained relatively unchanged. During June 2007, Bancorp received proceeds of \$76.7 million from sale of its indirect auto loan portfolio. Such proceeds were mainly invested in Federal funds sold during the second and third quarters of 2007, and were gradually reinvested in higher-yielding relationship loans.

In the third quarter of 2008, Bancorp experienced a decline in the tax-equivalent net interest margin to 5.35% from 5.52% in the second quarter, reflecting downward repricing on variable rate loans and new loans originated at lower market rates, partially offset by lower deposit rates in a declining rate environment. During the quarter, there were no changes in the Federal funds target rate. The repricing relates to rate re-sets at specified intervals and loans tied to indexes that may not move in tandem with the Federal funds rate. The effect of lower loan yields was partially offset by a decline in the cost of purchased funds during the period due to an injection of liquidity into the market by the Federal Reserve in later part of the third quarter.

The largest factors likely to affect Bancorp's net interest margin in the remainder of 2008 will be the volume of loan demand and deposits, which will in turn influence Bancorp's liquidity level, the Federal funds target rate, which is expected to decline during the remainder of 2008, as well as Bancorp's responsiveness to competitive pricing on loans and deposits in its market.

Higher net interest income combined with modest growth in non-interest expenses have resulted in a marked improvement in efficiency. The efficiency ratio improved 336 basis points in the nine-month period ended September 30, 2008 compared to the same period in 2007 and 86 basis points in the quarter ended September 30, 2008 compared to the same period last year.

In the first nine months of 2008, Bancorp recorded a non-recurring pre-tax gain of \$457 thousand related to the mandatory redemption of shares in Visa, Inc. and the reversal of a \$242 thousand pre-tax charge for the potential obligation to Visa Inc. in connection with certain indemnifications provided to Visa Inc. by Visa member banks. In the first nine months of 2007, Bancorp recorded a non-recurring pre-tax gain of \$710 thousand on the sale of the indirect auto portfolio and a \$387 pre-tax gain on the sale of the Visa card portfolio.

Table of Contents

BANK OF MARIN BANCORP

Bancorp has continued to expand its franchise with the opening of a new branch in downtown Mill Valley in June of 2008 and has secured a site for an additional branch in Greenbrae.

In November 2007, Bancorp initiated a stock repurchase plan to buy back up to \$5 million of its common stock. Bancorp purchased 88,316 shares during the first nine months of 2008 for \$2.5 million, bringing the total amount purchased under this program to \$4.1 million. In September 2008, Bancorp discontinued purchases under the program to preserve capital during a time of extreme economic turbulence. Bancorp has maintained a strong capital position, with total risk-based capital at September 30, 2008 of 11.6%, well over the ten percent regulatory minimum to be considered well-capitalized.

Holding Company

On May 8, 2007, Bank of Marin stockholders approved the formation of a bank holding company. On July 1, 2007, the holding company, Bank of Marin Bancorp, acquired Bank of Marin as its wholly owned subsidiary. The holding company is expected to provide flexibility in meeting the financing needs of the Bank and in responding to evolving changes in the banking and financial services industries.

The financial statements and discussion thereof contained in this report for periods subsequent to the reorganization relate to consolidated Bank of Marin Bancorp. Periods prior to the reorganization relate to Bank of Marin only. The information is comparable as the sole subsidiary of Bank of Marin Bancorp is the Bank of Marin.

Critical Accounting Policies

Critical accounting policies are those that are both most important to the portrayal of Bancorp's financial condition and results of operations and require management's most difficult, subjective, or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain. Management has determined the following four accounting policies to be critical: Allowance for Loan Losses, Share-Based Payment, Accounting for Income Taxes and Fair Value Option for Financial Assets and Liabilities.

Allowance for Loan Losses

Allowance for loan losses is based upon estimates of loan losses and is maintained at a level considered adequate to provide for probable losses inherent in the outstanding loan portfolio. The allowance is increased by provisions charged to expense and reduced by net charge-offs. In periodic evaluations of the adequacy of the allowance balance, management considers the Bank's past loan loss experience by type of credit, known and inherent risks in the portfolio, adverse situations that may affect the borrower's ability to repay, the estimated value of any underlying collateral, current economic conditions and other factors. The Bank formally assesses the adequacy of the allowance for loan losses on a quarterly basis. These assessments include the periodic re-grading of loans based on changes in their individual credit characteristics including delinquency, seasoning, recent financial performance of the borrower, economic factors, changes in the interest rate environment, and other factors as warranted. Loans are initially graded when originated. They are reviewed as they are renewed, when there is a new loan to the same borrower and/or when identified facts demonstrate heightened risk of default. Larger problem loans are monitored continuously and formal impairment analysis for the purpose of SFAS No. 114 occurs at least quarterly.

The Bank's method for assessing the appropriateness of the allowance includes specific allowances for identified problem loans, an allowance factor for categories of credits, and allowances for changing environmental factors (e.g., portfolio trends, concentration of credit, growth, economic factors). Allowances for identified problem loans are based

on specific analysis of individual credits. Loss estimation factors for loan categories are based on analysis of local economic factors applicable to each loan categories. Allowances for changing environmental factors are management's best estimate of the probable impact these changes have had on the loan portfolio as a whole.

Table of Contents

BANK OF MARIN BANCORP

Share-Based Payment

On January 1, 2006, the Bank adopted the provisions of SFAS No.123R, "Share-Based Payment," which requires that all share-based payments, including stock options and nonvested restricted common shares, be recognized as an expense in the income statement based on the grant-date fair value of the award with a corresponding increase to common stock.

The Bank determines the fair value of stock options at grant date using the Black-Scholes pricing model that takes into account the stock price at the grant date, the exercise price, the expected dividend yield, stock price volatility and the risk-free interest rate over the expected life of the option. The Black-Scholes model requires the input of highly subjective assumptions including the expected life of the stock-based award and stock price volatility. The estimates used in the model involve inherent uncertainties and the application of management judgment. As a result, if other assumptions had been used, the Bank's recorded stock-based compensation expense could have been materially different from that reflected in these financial statements. The fair value of nonvested restricted common shares generally equals the stock price at grant date. In addition, the Bank is required to estimate the expected forfeiture rate and only recognize expense for those share-based awards expected to vest. If the Bank's actual forfeiture rate is materially different from the estimate, the share-based compensation expense could be materially different. For additional discussion of SFAS No.123R, see Note 6 of the Notes to Consolidated Financial Statements in this Form 10-Q.

Accounting for Income Taxes

Income taxes reported in the financial statements are computed based on an asset and liability approach in accordance with FASB Statement No. 109, "Accounting for Income Taxes." (FASB No. 109). Bancorp recognizes the amount of taxes payable or refundable for the current year, and deferred tax assets and liabilities for the expected future tax consequences that have been recognized in the financial statements. Under this method, deferred tax assets and liabilities are determined based on the differences between the financial statements and tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to reverse. Bancorp records net deferred tax assets to the extent it is more likely than not that they will be realized. In evaluating Bancorp's ability to recover the deferred tax assets, management considers all available positive and negative evidence, including scheduled reversals of deferred tax liabilities, projected future taxable income, tax planning strategies and recent financial operations. In projecting future taxable income, management develops assumptions including the amount of future state and federal pretax operating income, the reversal of temporary differences, and the implementation of feasible and prudent tax planning strategies. These assumptions require significant judgment about the forecasts of future taxable income and are consistent with the plans and estimates being used to manage the underlying business. Bancorp files consolidated federal and combined state income tax returns.

Effective January 1, 2007, Bancorp adopted the provisions of FASB Interpretation (FIN) No. 48, "Accounting for Uncertainty in Income Taxes – An Interpretation of FASB Statement No. 109," which clarifies the accounting for uncertainty in income taxes recognized in an enterprise's financial statements in accordance with FASB No. 109. FIN 48 establishes a "more-likely-than-not" recognition threshold that must be met before a tax benefit can be recognized in the financial statements. For tax positions that meet the more-likely-than-not threshold, an enterprise may recognize only the largest amount of tax benefit that is greater than fifty percent likely of being realized upon ultimate settlement with the taxing authority. Management believed that there were no tax positions that did not meet the more-likely-than-not recognition threshold; therefore, there were no adjustments to retained earnings as a consequence of adopting FIN No. 48 and no subsequent adjustments to the provision for income taxes related to FIN 48. To the extent tax authorities disagree with these tax positions, the Bank's and Bancorp's effective tax rates could be materially

affected in the period of settlement with the taxing authorities.

Fair Value Option for Financial Assets and Financial Liabilities and Fair Value Measurements

Effective January 1, 2007, the Bank elected early adoption of FASB Statement No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" and FASB Statement No. 157, "Fair Value Measurements" and elected the fair value option for its indirect auto loan portfolio, which was subsequently sold. The changes in fair value of the portfolio after the initial adoption at each balance sheet date were recorded through earnings prior to the sale on June 5, 2007. The Bank determined fair value at January 1, 2007 and March 31, 2007 based on certain criteria including weighted average interest rate, remaining term and FICO credit score. The expected cash flows were discounted using Treasury rates and a spread above the Treasury rate was applied based on recent sales of similar assets. The assumptions represented management's best estimates, but these estimates involved inherent uncertainties and the application of management's judgment. As a result, if other assumptions had been used, the Bank's recorded unrealized gain in the first quarter of 2007 could have been materially different from that reflected in these financial statements.

BANK OF MARIN BANCORP

As a result of the Bank's fair value measurement election for the auto loan portfolio, the Bank recorded a cumulative-effect adjustment of \$1.5 million, net of tax, as a reduction of retained earnings as of January 1, 2007. In addition, \$190 thousand and \$520 thousand of pre-tax net gains were recorded in the Bank's second and first quarter 2007 earnings, respectively (2 cents and 6 cents per diluted share, respectively, on an after-tax basis), representing the change in fair value of such instruments during those periods after giving effect to the cumulative-effect adjustment.

The Bank has established and documented a process for determining fair value. For detailed information on the Bank's use of fair valuation of financial instruments and our related valuation methodologies, see Note 3 of the Consolidated Financial Statements in this Form 10-Q.

Net Interest Income

Net interest income is the difference between the interest earned on loans, investments and other interest-earning assets and the interest expense on deposits and other interest-bearing liabilities. Net interest income is impacted by changes in general market interest rates and by changes in the amounts and composition of interest-earning assets and interest-bearing liabilities. The table below indicates net interest income, net interest margin, and net interest rate spread for each period presented. Net interest margin is expressed as net interest income divided by average interest-earning assets. Net interest rate spread is the difference between the average rate earned on total interest-earning assets and the average rate incurred on total interest-bearing liabilities. Both of these measures are reported on a taxable-equivalent basis. Net interest margin is higher than net interest rate spread because net interest margin reflects interest income earned on assets funded with non-interest-bearing sources of funds, which include

demand deposits and stockholders' equity.

Interest rate changes can create fluctuations in the net interest margin due to an imbalance in the timing of repricing or maturity of assets or liabilities. Interest rate risk exposure is managed with the goal of minimizing the impact of interest rate volatility on the net interest margin.

The following table, Distribution of Average Statements of Condition and Analysis of Net Interest Income, compares interest income and average interest-earning assets with interest expense and average interest-bearing liabilities for the periods presented. The tables also indicate net interest income, net interest margin and net interest rate spread for each period presented.

- (1) Yields and interest income are presented on a taxable-equivalent basis using the Federal statutory rate of 35 percent.
- (2) Average balances on loans outstanding include non-performing loans, if any. The amortized portion of net loan origination fees is included in interest income on loans, representing an adjustment to the yield.

Table of Contents

BANK OF MARIN BANCORP

Third Quarter 2008 Compared to Third Quarter 2007

The tax-equivalent net interest margin increased to 5.35% in the third quarter of 2008, up 41 basis points from the third quarter of 2007. Sharply lower rates on deposits, purchased funds and borrowed funds were only partially offset by lower loan yields. The drop of 100 basis points in the Federal funds target rate in the latter part of 2007 and 225 basis points in the first four months of 2008 resulted in lower offered rates on deposits and lower borrowing rates only partially offset by lower loan yields, favorably impacting the net interest margin. The net interest margin was also enhanced by a shift in the mix of interest-earning assets from Federal funds sold to higher-yielding loans, partially offset by an increase in purchased funds whose cost is higher than the average cost of the Bank's interest-bearing deposits. The impact to the net interest margin of the \$823 thousand non-accrual loan balances as of September 30, 2008 was not significant.

Total average interest-earning assets increased \$53.1 million, or 6.1%, in the third quarter of 2008 compared to the third quarter of 2007. The increase primarily relates to loan growth of \$151.3 million, partially offset by a decline of \$88.7 million in Federal funds sold and a decline in investment securities of \$9.5 million. Federal funds sold declined as the proceeds from the sale of the indirect auto loan portfolio in the second quarter of 2007, initially invested in Federal funds sold, were later reinvested in loans.

The average yield on interest-earning assets decreased 72 basis points in the third quarter of 2008 compared to the third quarter in 2007. The decline in yield on loans was only partially offset by increased yields on investment securities. The yield on the loan portfolio, which comprised 88.9% and 76.9% of average interest-earning assets in the quarters ended September 20, 2008 and 2007, respectively, decreased 117 basis points in the third quarter of 2008 over the comparable period a year ago due to the downward repricing of variable-rate loans and new loans originated at lower market rates, as well as maturities and pay downs of loans with higher yields.

In the quarter ended September 30, 2008, the yield on the portfolio of agency securities was essentially unchanged from the same quarter a year ago. Agency securities comprised 7.8% and 9.8% of average interest-earning assets in the third quarter of 2008 and 2007, respectively. These securities generally have shorter lives than other securities in the portfolio and mature or are called more quickly. The flat yield on agency securities in a declining rate environment is primarily due to increased demand for safe securities in a volatile economic climate. The yield on municipal bond securities, which comprised 2.2% or less of interest-earning assets in each of these two quarters, increased 66 basis points at quarter end September 30, 2008 from the same quarter a year ago. The increase relates to the purchase of municipal bonds at higher market rates than those maturing. In 2008, higher rates on new municipal bonds resulted from reduced market demand due to growing concern over the stability of certain companies that insure municipal bonds and investor concern over the credit risk of certain municipalities. At the same time, investor demand moved toward safer treasury securities because of the current volatile market conditions. These market conditions required some municipalities to offer higher rates to attract investors.

The yield on Federal funds sold decreased 325 basis points in the quarter ended September 30, 2008 compared to the quarter ended September 30, 2007 as a direct result of the decline in the Federal funds target rate.

The average balance of interest-bearing liabilities increased \$39.1 million, or 6.3%, in the third quarter of 2008 compared to the same period a year ago. The increase was comprised of \$26.9 million in interest-bearing deposit accounts and \$12.2 million in funds purchased to support loan growth.

The rate on interest-bearing liabilities decreased 159 basis points in the third quarter of 2008 compared to the same quarter a year ago. The overall cost of liabilities was affected by lower offered deposit rates and the mix between

deposits and other interest-bearing liabilities. The rate on savings and money market accounts, which comprised 70.0% and 71.3% of average interest-bearing liabilities in the quarters ended September 20, 2008 and 2007, respectively, decreased 191 basis points compared to the same quarter a year ago and the rate on time deposits, which comprised 12.6% and 13.9% of interest-bearing liabilities in the two periods, respectively, decreased 136 basis points in the same comparable periods. The decreases reflected sharply declining market rates. The rate on purchased funds decreased 220 basis points in the third quarter of 2008 compared to the same quarter last year, primarily reflecting the decline in the Federal funds target rate. The rate on the subordinated debenture decreased 279 basis points due to a decline in the LIBOR rate, to which the borrowing is indexed.

Table of Contents

BANK OF MARIN BANCORP

In the third quarter of 2008, the mix of deposits was consistent with the composition of deposits in the third quarter of 2007.

Third Quarter of 2008 Compared to Second Quarter of 2008

The tax equivalent net interest margin decreased to 5.35% in the third quarter of 2008, down 17 basis points from the prior quarter. In the third quarter of 2008, there were no changes in the Federal funds target rate. Rates offered on the largest component of interest-bearing liabilities, savings and money market accounts, were unchanged while the yield on loans, the largest component of interest-earning assets, declined slightly due to factors discussed below, negatively impacting the net interest margin. The margin was also impacted by a shift in the mix of deposits from demand deposits, on which no interest is paid, to savings and money market accounts.

Total average interest-earning assets increased \$48.8 million, or 5.6%, in the third quarter of 2008 compared to the prior quarter. The increase primarily relates to \$43.1 million loan growth and \$4.9 million in increased Federal funds sold.

The average yield on total interest-earning assets decreased 21 basis points in the quarter ended September 30, 2008 compared to the prior quarter. The yield on the loan portfolio, which comprised 88.9% of average interest-earning assets in each of the quarters ended September 30, 2008 and June 30, 2008, decreased 23 basis points due to the downward re-pricing of variable-rate loans and new loans originated at lower market rates. The decline in loan yields was partially offset by increased yields on municipal bonds and other investments due to factors previously discussed.

The average balance of interest-bearing liabilities increased \$46.7 million, or 7.7%, in the third quarter of 2008 compared to the prior quarter. Increases of \$59.0 million in savings and money market accounts, \$6.8 million in CDARSâ reciprocal deposits, \$838 thousand in interest-bearing transaction accounts and \$921 thousand in time deposits were partially offset by a decline of \$20.9 million in purchased funds.

The rate on interest-bearing liabilities decreased 9 basis points in the third quarter of 2008 compared to the prior quarter, primarily due to the repricing of time accounts and lower cost of purchased funds. The rate on savings and money market accounts, which comprised 70.0% and 65.7% of average interest-bearing liabilities in the quarters ended September 20, 2008 and June 30, 2008, respectively, was unchanged from the prior quarter while the rate on time deposits, which comprised 12.6% and 13.5% of interest-bearing liabilities in these two periods, respectively, decreased 49 basis points reflecting maturities of higher-rate deposits. The rate on purchased funds declined 22 basis points reflecting the injection of liquidity into the market by the Federal Reserve late in the third quarter of 2008.

In the third quarter of 2008, the average balance of demand deposits, on which no interest is paid, decreased to 25.4% of average deposits, down from 27.3% in the prior quarter. Savings and money market accounts increased to 54.6% of average deposits in the third quarter of 2008, up from 51.9% in the second quarter of 2008, while the proportion of time deposits, including CDARSâ reciprocal deposits, remained essentially unchanged at approximately 11%, and interest-bearing transaction accounts declined slightly to 9.3% from 10.1%.

Nine Months ended September 30, 2008 Compared to Nine Months ended September 20, 2007

The tax-equivalent net interest margin increased to 5.43% in the first nine months of 2008, up 43 basis points from the first nine months of 2007. Lower rates on deposits, purchased funds and subordinated debt were only partially offset

by lower loan yields.

Average interest-earning assets increased \$41.8 million, or 5.0%, in the first nine months of 2008 compared to the first nine months of 2007. The increase primarily relates to loan growth of \$77.0 million, partially offset by a \$36.7 million decline in Federal funds sold. Federal funds sold declined as the proceeds from the sale of the indirect auto portfolio in the second quarter of 2007, which were initially invested in Federal funds, were later reinvested in loans.

The average yield on interest-earning assets decreased 65 basis points in the nine-month period ended September 30, 2008 compared to the same period a year ago. The decline in yield on loans was only partially offset by increased yields on most categories of investment securities. The yield on the loan portfolio, which comprised 88.3% and 83.6% of average earning assets in the nine-months ended September 30, 2008 and 2007, respectively, decreased 88 basis points in the first nine months of 2008 compared to the first nine months of 2007 due to the downward repricing of variable rate loans and new loans originated at lower market rates, as well as maturities and pay downs of higher yielding loans.

BANK OF MARIN BANCORP

The yield on the portfolio of agency securities, which comprised 8.2% and 8.9% of interest-earning assets the first nine months of 2008 and 2007, respectively, remained fairly consistent between these periods. The yield on municipal bonds, which comprised approximately 2% of interest-earning assets in both of the nine-month periods ended September 30, 2008 and 2007, increased 73 basis points in the nine months ended September 30, 2008 compared to the same period in 2007 due to higher rates on new securities as discussed earlier.

The average balance of interest-bearing liabilities increased \$25.6 million, or 4.3%, in the first nine months of 2008 compared to the first nine months of 2007. Increases in savings and money market accounts of \$15.0 million, purchased funds of \$10.1 million, CDARSâ reciprocal deposits of \$2.8 million and interest-bearing transaction accounts of \$2.3 million were partially offset by a decline of \$4.6 million in time deposits.

The rate on interest-bearing liabilities decreased 149 basis points in the nine months ended September 30, 2008 compared to the nine months ended September 30, 2007, reflecting generally declining market rates. The rate on savings and money market accounts decreased 185 basis points in the nine months ended September 30, 2008 compared to the nine months ended September 30, 2007. The rate on time deposits declined only 86 basis points in the same comparable period since time deposits have longer maturities and the rates on customer accounts change less frequently. The rate on purchased funds declined 257 basis points, primarily due to declines in the target Federal funds rate. The rate on borrowed funds declined 204 basis points due to a decline in LIBOR, to which the borrowing rate is indexed.

The mix of deposits was relatively unchanged in the nine-month period ended September 30, 2008 compared to the same period a year ago.

Provision for Loan Losses

The Bank formally assesses the adequacy of the allowance for loan losses on a quarterly basis. The Bank provides, as an expense, an amount to bring the allowance for loan losses to a level to provide adequate coverage for probable loan losses. The adequacy of the allowance for loan losses is evaluated based on several factors, including growth of the loan portfolio, analysis of probable losses in the portfolio and recent loss experience. Actual losses on loans are charged against the allowance, and the allowance is increased through the provision for loan losses charged to expense. For further discussion, see sections captioned "Critical Accounting Policies."

The Bank's provision for loan losses was \$1.7 million in the third quarter of 2008 compared to \$200 thousand in the third quarter of 2007, and \$510 thousand in the second quarter of 2008. During the first nine months of 2008, the provision for loan losses totaled \$2.8 million compared to \$340 thousand in the first nine months of 2007. The allowance for loan losses as a percentage of loans totaled 1.11% at September 30, 2008, compared to 1.07% at June 30, 2008, and 1.05% at September 30, 2007. The increases to the provision and allowance for loan losses reflect the significant level of loan growth that the Bank experienced in 2007 and 2008, an increased allocation for economic uncertainty, and increases to the specific reserve where needed. The U.S. economies are experiencing significantly reduced business activity as a result of, among other factors, disruptions in the financial system dramatic declines in the housing market and increasing unemployment rate. Over the last quarter, there has been unprecedented volatility and deterioration in the financial markets, witnessing the failure of well-known companies and inducing a national recession. In this environment, loan quality has already shown softness as a result of general economic conditions, and could deteriorate even further. Consequently, the Bank has increased the economic factor from 0.20% at September 30, 2007 to 0.225% at June 30, 2008 and 0.25% at September 30, 2008, resulting in increases in allowance for loan losses related to economic uncertainty of \$648 thousand in the nine months ended September 30, 2008 and \$299 thousand in the third quarter of 2008. The specific reserve increased from zero at September 30, 2007 to \$251

thousand at June 30, 2008 and to \$363 thousand at September 30, 2008.

Net charge-offs in the first nine months of 2008 totaling \$1.1 million and in the third quarter of 2008 totaling \$969 thousand primarily relate to the charge-off of one unsecured commercial line of credit and one commercial term loan collateralized by a residence where the Bank holds the second deed of trust. Net charge-offs in the first nine months of 2007 totaled \$88 thousand and in the third quarter of 2007 totaled \$26 thousand.

BANK OF MARIN BANCORP

Non-interest Income

The table below details the components of non-interest income.
