UNITED STATES  
SECURITIES AND EXCHANGE COMMISSION  
Washington, D.C. 20549

FORM 10-Q  
(Mark One)

- QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT  
OF 1934

For the quarterly period ended June 30, 2011

OR

- TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT  
OF 1934

For the transition period from \_\_\_\_\_ to \_\_\_\_\_

Commission File Number 001-33572

Bank of Marin Bancorp  
(Exact name of Registrant as specified in its charter)

California 20-8859754  
(State or other jurisdiction of incorporation) (IRS Employer Identification No.)

504 Redwood Blvd., Suite 100, Novato, CA 94947  
(Address of principal executive office) (Zip Code)

Registrant's telephone number, including area code: (415) 763-4520

Indicate by check mark whether the registrant (1) has filed all reports to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months, and (2) has been subject to such filing requirements for the past 90 days.

Yes  No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes  No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b(2) of the Exchange Act.

Edgar Filing: Bank of Marin Bancorp - Form 10-Q

Large accelerated filer  Accelerated filer  Non-accelerated filer  Smaller reporting company

Indicate by check mark if the registrant is a shell company, as defined in Rule 12b(2) of the Exchange Act.

Yes  No

As of July 29, 2011 there were 5,326,686 shares of common stock outstanding.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

## Introductory Explanation

References in this report to “Bancorp” mean the Bank of Marin Bancorp as the parent holding company for Bank of Marin, the wholly-owned subsidiary (the “Bank”). References to “we,” “our,” “us” mean the holding company and the Bank that are consolidated for financial reporting purposes.

## Note 1: Basis of Presentation

The consolidated financial statements include the accounts of Bancorp and its only wholly-owned bank subsidiary, the Bank. All material intercompany transactions have been eliminated. In the opinion of Management, the unaudited interim consolidated financial statements contain all adjustments necessary to present fairly our financial position, results of operations, changes in stockholders' equity and cash flows. All adjustments are of a normal, recurring nature. Management has evaluated subsequent events through the date of filing, and has determined that there are no subsequent events that require recognition or disclosure.

Certain information and footnote disclosures presented in the annual consolidated financial statements are not included in the interim consolidated financial statements. Accordingly, the accompanying unaudited interim consolidated financial statements should be read in conjunction with our 2010 Annual Report on Form 10-K. The results of operations for the three months and six months ended June 30, 2011 are not necessarily indicative of the operating results for the full year.

The following table shows: 1) weighted average basic shares, 2) potential common shares related to stock options, non-vested restricted stock and stock warrant, and 3) weighted average diluted shares. Basic earnings per share (“EPS”) are calculated by dividing net income available to common stockholders by the weighted average number of common shares outstanding during each period. Diluted EPS are calculated using the weighted average diluted shares. The number of potential common shares included in quarterly diluted EPS is computed using the average market prices during the three months included in the reporting period. Our calculation of weighted average shares includes two forms of our outstanding common stock: common stock and unvested restricted stock awards. Holders of restricted stock awards receive non-forfeitable dividends at the same rate as common stockholders and they both share equally in undistributed earnings.

(in thousands, except per share data; unaudited)	Three months ended			Six months ended	
	June 30, 2011	March 31, 2011	June 30, 2010	June 30, 2011	June 30, 2010

Note 2: Recently Issued Accounting Standards

In June 2011, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update (“ASU”) No. 2011-05 Comprehensive Income (Topic 220) Presentation of Comprehensive Income. The ASU improves the comparability, consistency, and transparency of financial reporting and increases the prominence of items reported in other comprehensive income. The amendments to Topic 220, Comprehensive Income, require entities to present the total of comprehensive income, the components of net income, and the components of other comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. Entities are no longer permitted to present components of other comprehensive income as part of the statement of changes in stockholders’ equity. Any adjustments for items that are reclassified from other comprehensive income to net income are to be presented on the face of the entities’ financial statement regardless of the method of presentation for comprehensive income. The amendments do not change items to be reported in comprehensive income or when an item of other comprehensive income must be reclassified to net income, nor do the amendments change the option to present the components of other comprehensive income either net of related tax effects or before related tax effects. ASU 2011-05 is effective for fiscal years, and interim periods beginning on or after December 15, 2011. We do not expect this ASU to have an impact on our financial condition or result of operations as it affects presentation only.

In May 2011, the FASB issued ASU No. 2011-04 Fair Value Measurement (Topic 820) Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs. The ASU improves the comparability of fair value measurements presented and disclosed in accordance with U.S. generally accepted accounting principles (GAAP) and International Financial Reporting Standards (IFRSs) by changing the wording used to describe many of the requirements in U.S GAAP for measuring fair value and disclosure of information. The amendments to this ASU provide explanations on how to measure fair value but do not require any additional fair value measurements and do not establish valuation standards or affect valuation practices outside of financial reporting. The amendments clarify existing fair value measurements and disclosure requirements to include application of the highest and best use and valuation premises concepts; measuring fair value of an instrument classified in a reporting entity’s shareholders’ equity; and disclosures requirements regarding quantitative information about unobservable inputs categorized within Level 3 of the fair value hierarchy. In addition, clarification is provided for measuring the fair value of financial instruments that are managed in a portfolio and the application of premiums and discounts in a fair value measurement. For public entities, ASU 2011-04 is effective during interim and annual periods beginning after December 15, 2011. We do not expect this ASU to have a significant impact on our financial condition or result of operations.

In April 2011, the FASB issued ASU No. 2011-02, Receivables (Topic 310): A Creditor’s Determination of Whether a Restructuring Is a Troubled Debt Restructuring. The ASU clarifies which loan modifications constitute troubled debt restructurings. It is intended to assist creditors in determining whether a modification of the terms of a receivable meets the criteria to be considered a troubled debt restructuring (“TDR”), both for purposes of recording an impairment loss and for disclosure of a TDR. In evaluating whether a restructuring constitutes a TDR, a creditor must separately conclude that both of the following exist: (a) the restructuring constitutes a concession; and (b) the debtor is experiencing financial difficulties. The amendments to ASU Topic 310, Receivables, clarify the guidance on a creditor’s evaluation of whether it has granted a concession and whether a debtor is experiencing financial difficulties. ASU No. 2011-02 is effective for interim and annual periods beginning on or after June 15, 2011, and applies retrospectively to restructurings occurring on or after the beginning of the fiscal year of adoption. We do not expect this ASU to have a significant impact on our financial condition or result of operations.

In December 2010, the FASB issued ASU No. 2010-29, Business Combinations (Topic 805): Disclosure of Supplementary Pro Forma Information for Business Combinations to address diversity in practice about the interpretation of the pro forma revenue and earnings disclosure requirements for business combinations. This ASU is effective prospectively for business combinations for which the acquisition date is on or after the beginning of the first

annual reporting period beginning January 1, 2011. It requires a public entity to disclose pro forma revenue and earnings of the combined entity for the current reporting period as though the acquisition date for all business combinations that occurred during the year had been as of the beginning of the annual reporting period. If comparative financial statements are presented, the pro forma revenue and earnings of the combined entity for the comparable prior reporting period should be reported as though the acquisition date for all business combinations that occurred during the current year had been as of the beginning of the comparable prior annual reporting period. The amendments also expand the supplemental pro forma disclosures to include a description of the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combination included in the reported pro forma revenue and earnings. We have provided the applicable disclosure in Note 3 herein.

Table of Contents

In December 2010, the FASB also issued ASU No. 2010-28, Intangibles—Goodwill and Other (Topic 350), When to Perform Step 2 of the Goodwill Impairment Test for Reporting Units with Zero or Negative Carrying Amounts. The amendments in this ASU affect all entities that have recognized goodwill and have one or more reporting units whose carrying amount for purposes of performing Step 1 of the goodwill impairment test is zero or negative. The amendments in this ASU modify Step 1 so that for those reporting units, an entity is required to perform Step 2 of the goodwill impairment test if it is more likely than not that a goodwill impairment exists. In determining whether it is more likely than not that a goodwill impairment exists, an entity should consider whether there are any adverse qualitative factors indicating that an impairment may exist. The qualitative factors are consistent with existing guidance, which requires that goodwill of a reporting unit be tested for impairment between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying amount. The above two ASUs did not have a significant impact on our financial condition or results of operations.

In July 2010, the FASB issued ASU No. 2010-20, Receivables (Topic 310): Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses. The ASU amends FASB Accounting Standards Codification™ (the “Codification” or “ASC”) Topic 310, Receivables, to improve the disclosures about the credit quality of an entity’s financing receivables and the related allowance for credit losses. As a result of these amendments, an entity is required to disaggregate, by portfolio segment or class of financing receivable, certain existing disclosures and provide certain new disclosures about its financing receivables and related allowance for credit losses.

Existing disclosures are amended to require an entity to provide the following disclosures about its financing receivables on a disaggregated basis:

- (1) A rollforward schedule of the allowance for credit losses from the beginning of the reporting period to the end of the reporting period on a portfolio segment basis, with the ending balance further disaggregated on the basis of the impairment method;
- (2) For each disaggregated ending balance in item (1) above, the related recorded investment in financing receivables;
- (3) The nonaccrual status of financing receivables by class of financing receivables;
- (4) Impaired financing receivables by class of financing receivables.

The amendments in the ASU also require an entity to provide the following additional disclosures about its financing receivables:

- (1) Credit quality indicators of financing receivables at the end of the reporting period by class of financing receivables;
- (2) The aging of past due financing receivables at the end of the reporting period by class of financing receivables;
- (3) A description of the entity’s accounting policies and methodology used to estimate the allowance for credit losses by portfolio segments;
- (4) The nature and extent of TDR that occurred during the period by class of financing receivables and their effect on the allowance for credit losses, as well as the nature and extent of financing receivables modified as TDR within the previous twelve months that defaulted during the reporting period by class of financing receivables and their effect on the allowance for credit losses; and

(5) Significant purchases and sales of financing receivables during the reporting period disaggregated by portfolio segments.

Table of Contents

The disclosures were effective for interim and annual reporting periods ended December 31, 2010. The disclosures about activity that occurs during a reporting period are effective for interim and annual reporting periods that began January 1, 2011. We have provided for the relevant disclosures in Note 6. As this ASU is disclosure-related only, it did not have an impact on our financial condition or results of operations.

## Note 3: Acquisition

On February 18, 2011, we entered into a modified whole-bank purchase and assumption agreement without loss share (the "P&A Agreement") with the Federal Deposit Insurance Corporation (the "FDIC"), the receiver of Charter Oak Bank of Napa, California, to purchase certain assets and assume certain liabilities of the former Charter Oak Bank to enhance our market presence (the "Acquisition"). The purchase price reflected an asset discount of \$19.8 million and no deposit premium.

The P&A Agreement only covers designated assets and liabilities of Charter Oak Bank. Common stock of Charter Oak Bank, certain assets and certain liabilities, such as claims against any officer, director, employee, accountant, attorney, or any other person employed by the former Charter Oak Bank, were not purchased or assumed by us. In addition, loans of the former Charter Oak Bank at their book values totaling approximately \$24.4 million as of the acquisition date were retained by the FDIC. The excluded loans mainly represent loans delinquent more than sixty days or more as of the bid valuation date (October 18, 2010) and certain types of land and construction loans.

The assets acquired and liabilities assumed, both tangible and intangible, were recorded at their fair values as of acquisition date in accordance with ASC 805, Business Combinations. These fair value estimates are subject to change for up to one year after the acquisition date as additional information relative to acquisition date fair values becomes available. In addition, the tax treatment of FDIC-assisted acquisitions is complex and subject to interpretations that may result in future adjustments of deferred taxes as of the acquisition date.

In FDIC-assisted transactions, only certain assets and liabilities are transferred to the acquirer and, depending on the nature and amount of the acquirer's bid, the FDIC may be required to make a cash payment to the acquirer or the acquirer may be required to make payment to the FDIC. We received cash totaling \$32.6 million from the FDIC upon initial settlement of the transaction and recorded a receivable from the FDIC of \$196 thousand (included in other assets on the consolidated statements of condition), for consideration of the net liabilities assumed (i.e., the net difference between the liabilities assumed and the assets acquired). This amount is receivable within one year of the acquisition date and is outstanding at June 30, 2011.

The following table presents the net liabilities assumed from Charter Oak and the estimated fair value adjustments, which resulted in a bargain purchase gain as of the acquisition date as the loans were purchased at a discount:

	Acquisition Date (February 18, 2011)
(Dollars in thousands, unaudited)	
Book value of net liabilities assumed from Charter Oak Bank	\$ (15,750 )
Cash received from the FDIC upon initial settlement	32,588
Receivable from the FDIC	196
<b>Fair value adjustments:</b>	
Loans	(17,406 )
Core deposit intangible asset	725
Vehicles and equipment	16

Edgar Filing: Bank of Marin Bancorp - Form 10-Q

Deferred tax liabilities	(62 )
Deposits	(220 )
Advances from the Federal Home Loan Bank	(2 )
Total purchase accounting adjustments	(16,949 )
Bargain purchase gain, net of tax	\$ 85

Table of Contents

The bargain purchase gain represents the excess of the estimated fair value of the assets acquired over the estimated fair value of the liabilities assumed. We did not immediately acquire the banking facilities, including outstanding lease agreements, furniture, fixtures and equipment, as part of the P&A Agreement as of the acquisition date. We have since acquired all data processing equipment and the Napa branch fixed assets of \$206 thousand and renegotiated a new lease with the landlord. The smaller St. Helena branch acquired from Charter Oak Bank was closed effective April 29, 2011.

The following table reflects the estimated fair values of the assets acquired and liabilities assumed related to the Acquisition, including cash received and receivable from the FDIC on the acquisition date:

(Dollars in thousands, unaudited)	Acquisition Date (February 18, 2011)
<b>Assets:</b>	
Cash and due from banks	\$ 34,144
Interest bearing deposits in banks	5,663
Federal funds sold	4,235
Total cash and cash equivalents	44,042
Loans	61,765
Core deposit intangible	725
Other assets (including the receivable from the FDIC)	1,231
Total assets acquired	107,763
<b>Liabilities:</b>	
<b>Deposits:</b>	
Noninterest bearing	27,874
Interest bearing	65,987
Total deposits	93,861
Advances from the Federal Home Loan Bank	13,502
Deferred tax liabilities	62
Other liabilities	253
Total liabilities assumed	107,678
<b>Bargain purchase gain, net of tax (included in other non-interest income)</b>	<b>\$ 85</b>

The following is a description of the methods used to determine the acquisition date fair values of significant assets and liabilities presented above.

## Loans

The fair values for acquired loans were developed based upon the present values of the expected cash flows utilizing market-derived discount rates. Expected cash flows for each acquired loan were projected based on contractual cash flows adjusted for expected prepayment, expected default (i.e. probability of default and loss severity), and principal recovery.

For purchased non-credit-impaired loans, prepayment rates were applied to the principal outstanding based on the following assumptions depending on type of loan:

-

## Edgar Filing: Bank of Marin Bancorp - Form 10-Q

For commercial and agriculture loans, a ten percent constant prepayment rate (“CPR”) was assumed based on current research associated with these loan types;

- A one percent CPR was assumed for commercial real estate, construction and land loans as research data indicate limited prepayment activity over the life of these loans;
- For single family residential loans, a twenty percent CPR was used, based on current research associated with these loan types;
- For home equity lines of credit, a CPR of fifteen percent was assumed based on the refinance likelihood and other research; and,
  - For other consumer loans, a CPR of one and a half percent was used based on current capital markets research data for consumer unsecured credit.

Table of Contents

Prepayment assumptions were not factored into the calculation of expected cash flows on purchased credit-impaired loans. For purchased non-credit impaired loans, the total gross contractual amounts receivable were \$69.7 million as of the acquisition date.

Loans with similar characteristics were grouped together and were treated in the aggregate when applying the discount rate on the expected cash flows. Aggregation factors considered include the type of loan and related collateral, risk classification, fixed or variable interest rate, term of loan and whether or not the loan was amortizing. The discount rates used for the similar groups of loans are based on current market rates for new originations of comparable loans, where available, and include adjustments for credit and liquidity factors. To the extent comparable market rates are not readily available, a discount rate was derived based on the assumptions of a market participant's cost of funds, servicing costs, and return requirements for comparable risk assets.

Deposits

The fair values used for the transaction, savings and money market deposits are equal to the amount payable on demand at the reporting date. The fair values for time deposits are estimated using a discounted cash flow calculation that applies interest rates offered by market participants as of the acquisition date on time deposits with similar maturity terms as the discount rates. The core deposit intangible assets recognized as a result of the acquisition of core deposits are deductible for income tax purposes over fifteen years.

Advances from the Federal Home Loan Bank

The advances from the Federal Home Loan Bank San Francisco ("FHLB") were recorded at their estimated fair value, which was based on quoted prices supplied by the FHLB. Subsequent to the acquisition dates, all of these advances were repaid in full.

Pro Forma Results of Operations

The contribution of the acquired operations of the former Charter Oak Bank to our results of operations for the period February 18 to June 30, 2011 is as follows: revenue of \$5.4 million, expenses of \$3.0 million (including a provision for loan losses of \$994 thousand) and income after income taxes of \$1.5 million. These amounts include the bargain purchase gain, acquisition-related costs, accretion of the discount on the acquired loans, and amortization of the fair value mark on time deposits and the core deposit intangible amortization. Charter Oak Bank's results of operations prior to the acquisition date are not included in our operating results for 2011.

We acquired only certain assets and assumed certain liabilities from the former Charter Oak Bank. A significant portion of the former Charter Oak Bank's operations, including certain delinquent loans, its St. Helena facilities and its central operations and administrative functions were not retained by us. Therefore, disclosure of supplemental pro forma financial information, especially prior period comparison is deemed neither practical nor meaningful given the troubled nature of Charter Oak Bank prior to the date of Acquisition.

Acquisition-related expenses are recognized as incurred and continue until all systems have been converted and operational functions become fully integrated. We incurred third-party acquisition-related expenses in the following line items in the consolidated statements of income for the three month and six month periods ended June 30, 2011 as follows:

Acquisition-related Expenses (in thousands)	Three months ended June 30, 2011	Six months ended June 30, 2011

## Note 4: Fair Value of Assets and Liabilities

## Fair Value Hierarchy and Fair Value Measurement

We group our assets and liabilities that are recorded at fair value in three levels, based on the markets in which the assets and liabilities are traded and the reliability of the assumptions used to determine fair value. These levels are:

Level 1: Valuations are based on quoted prices in active markets for identical assets or liabilities. Since valuations are based on quoted prices that are readily and regularly available in an active market, valuation of these products does not involve a significant degree of judgment.

Level 2: Valuations are based on quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active and model-based valuations for which all significant assumptions are observable or can be corroborated by observable market data.

Level 3: Valuations are based on unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Values are determined using pricing models and discounted cash flow models and includes management judgment and estimation which may be significant.

The following table summarizes our assets and liabilities that were required to be recorded at fair value on a recurring basis.

(in thousands)	Carrying Value	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Description of Financial Instruments				
Balance at June 30, 2011 (unaudited):				
Securities available for sale:				
Mortgage-backed securities and collateralized mortgage obligations issued by U.S. government agencies	\$ 119,507	\$---	\$ 119,507	\$ ---
Debentures of government sponsored agencies	\$29,893	\$---	\$ 29,893	\$ ---
Corporate collateralized mortgage obligations	\$18,006	\$---	\$ 18,006	\$ ---
Derivative financial liabilities (interest rate contracts)	\$2,691	\$---	\$ 2,691	\$ ---
Balance at December 31, 2010:				
Securities available for sale:				
Mortgage-backed securities and collateralized mortgage obligations issued by U.S. government agencies	\$95,258	\$---	\$ 95,258	\$ ---
Corporate collateralized mortgage obligations	\$15,870	\$---	\$ 15,870	\$ ---
Equity securities	\$608	\$608	\$ -	\$ ---
Derivative financial liabilities (interest rate contracts)	\$2,470	\$---	\$ 2,470	\$ ---

## Edgar Filing: Bank of Marin Bancorp - Form 10-Q

Securities available for sale are recorded at fair value on a recurring basis. When available, quoted market prices (Level 1) are used to determine the fair value of securities available for sale. If quoted market prices are not available, we obtain pricing information from a reputable third-party service provider, who may utilize valuation techniques that use current market-based or independently sourced parameters, such as bid/ask prices, dealer-quoted prices, interest rates, benchmark yield curves, prepayment speeds, and credit spreads (Level 2). Level 1 securities include those traded on active markets, including U.S. Treasury securities and equity securities. Level 2 securities include U.S. agencies' debt securities, mortgage-backed securities, and corporate collateralized mortgage obligations.

Table of Contents

On a recurring basis, derivative financial instruments are recorded at fair value, which is based on the income approach using observable Level 2 market inputs, reflecting market expectations of future interest rates as of the measurement date. Standard valuation techniques are used to calculate the present value of the future expected cash flows assuming an orderly transaction. Valuation adjustments may be made to reflect both our own credit risk and the counterparties' credit quality in determining the fair value of the derivatives. Level 2 inputs for the valuations are limited to observable market prices for London Interbank Offered Rate ("LIBOR") cash rates (for the very short term), quoted prices for LIBOR futures contracts, observable market prices for LIBOR swap rates, and one-month and three-month LIBOR basis spreads at commonly quoted intervals. Mid-market pricing of the inputs is used as a practical expedient in the fair value measurements. Key inputs for interest rate valuations are used to project spot rates at resets specified by each swap, as well as to discount those future cash flows to present value at the measurement date. When the value of any collateral placed with counterparties is less than the interest rate derivative liability, the interest rate liability position is further discounted to reflect our potential credit risk to counterparties. We have used the spread between the Standard & Poors BBB rated U.S. Bank Composite rate and LIBOR with maturity term corresponding to the duration of the swaps to calculate this credit-risk-related discount of future cash flows.

Certain financial assets may be measured at fair value on a non-recurring basis. These assets are subject to fair value adjustments that result from the application of the lower of cost or fair value accounting or write-downs of individual assets. For example, when a loan is identified as impaired, it is reported at the lower of cost or fair value, measured based on the loan's observable market price (Level 1), the present value of expected future cash flows discounted at a market-based interest rate for similar loans (Level 2), or the current appraised value of the underlying collateral securing the loan if the loan is collateral dependent (Level 3). Securities held to maturity may be written down to fair value (determined using the same techniques discussed above for securities available for sale) as a result of an other-than-temporary impairment, if any.

The following table presents the carrying value of financial instruments by level within the fair value hierarchy as of June 30, 2011 and December 31, 2010, for which a non-recurring change in fair value has been recorded.

(in thousands) Description of Financial Instruments	Carrying Value	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3) (a)	Losses for the three months ended June 30, 2011 (b)	Losses for the six months ended June 30, 2011 (b)	Losses for the three months ended June 30, 2010 (b)	Losses for the six months ended June 30, 2010 (b)
		At June 30, 2011 (unaudited):						
Impaired loans carried at fair value (c)	\$3,585	\$ ---	\$ ---	\$ 3,585	\$2,870	\$4,083	\$557	\$2,200

At December 31, 2010:

Impaired loans carried at fair value (c)	\$8,635	\$ ---	\$ ---	\$ 8,635				
--	---------	--------	--------	----------	--	--	--	--

(a) Represents collateral-dependent loan principal balances that had been generally written down to the appraised value or estimated market value of the underlying collateral, net of specific valuation allowance of \$1.2 million and \$936 thousand at June 30, 2011 and December 31, 2010, respectively. The carrying value of loans fully

charged-off, which includes unsecured lines of credit, overdrafts and all other loans, is zero.

- (b) Represents net charge-offs during the period presented and the specific valuation allowance established on loans during the period.
- (c) Represents the portion of impaired loans that have been written down to their estimated fair value.

#### Disclosures about Fair Value of Financial Instruments

The table below is a summary of fair value estimates for financial instruments as of June 30, 2011 and December 31, 2010, excluding financial instruments recorded at fair value on a recurring basis (summarized in a separate table). The carrying amounts in the following table are recorded in the statements of condition under the indicated captions. We have excluded non-financial assets and non-financial liabilities defined by the Codification (ASC 820-10-15-1A), such as Bank premises and equipment, deferred taxes and other liabilities. In addition, we have not disclosed the fair value of financial instruments specifically excluded from disclosure requirements of the Financial Instruments Topic of the Codification (ASC 825-10-50-8), such as Bank-owned life insurance policies.

Table of Contents

(in thousands; 2011 amounts unaudited)	June 30, 2011		December 31, 2010	
	Carrying Amounts	Fair Value	Carrying Amounts	Fair Value
<b>Financial assets</b>				
Cash and cash equivalents	\$110,159	\$110,159	\$85,232	\$85,232
Investment securities held to maturity	35,514	36,914	34,917	35,090
Loans, net	972,714	989,175	929,008	952,763
Interest receivable	4,403	4,403	4,207	4,207
<b>Financial liabilities</b>				
Deposits	1,138,906	1,139,716	1,015,739	1,016,401
Federal Home Loan Bank borrowings	55,000	57,088	55,000	57,090
Subordinated debenture	5,000	5,123	5,000	4,994
Interest payable	439	439	414	414

Following is a description of methods and assumptions used to estimate the fair value of each class of financial instrument not recorded at fair value but required for disclosure purposes:

**Cash and Cash Equivalents** – The carrying amounts of cash and cash equivalents approximate their fair value because of the short-term nature of these instruments.

**Held-to-maturity Securities** - Held-to-maturity securities, which generally consist of obligations of state & political subdivisions, are recorded at their amortized cost. Their fair value for disclosure purposes is determined using methodologies similar to those described above for available-for-sale securities using Level 2 inputs. If Level 2 inputs are not available, we may utilize pricing models that incorporate unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities (Level 3). As of June 30, 2011, we did not hold any securities whose fair value was measured using significant unobservable inputs.

**Loans** - The fair value of loans with variable interest rates approximates their current carrying value, because their rates are regularly adjusted to current market rates. The fair value of fixed rate loans or variable loans at negotiated interest rate floors or ceilings with remaining maturities in excess of one year is estimated by discounting the future cash flows using current market rates at which similar loans would be made to borrowers with similar credit worthiness and similar remaining maturities. The allowance for loan losses (“ALLL”) is considered to be a reasonable estimate of loan discount due to credit risks.

**Interest Receivable and Payable** - The interest receivable and payable balances approximate their fair value due to the short-term nature of their settlement dates.

**Deposits** - The fair value of non-interest bearing deposits, interest bearing transaction accounts, savings accounts and money market accounts is the amount payable on demand at the reporting date. The fair value of time deposits is estimated by discounting the future cash flows using current rates offered for deposits of similar remaining maturities.

**Federal Home Loan Bank Borrowings** - The fair value is estimated by discounting the future cash flows using current rates offered by the FHLB for similar credit advances corresponding to the remaining duration of our fixed-rate credit advances.

**Subordinated Debenture** - The fair value of the subordinated debenture is estimated by discounting the future cash flows (interest payment at a rate of three-month LIBOR plus 2.48%) using current market rates at which similar bonds would be issued with similar credit ratings as ours and similar remaining maturities. We have used the spread of the ten-year BBB rated U.S. Bank Composite over LIBOR to calculate this credit-risk-related discount of future cash

flows.

Commitments - Loan commitments and standby letters of credit generate ongoing fees, which are recognized over the term of the commitment period. In situations where the borrower's credit quality has declined, we record a reserve for these off-balance sheet commitments. Given the uncertainty in the likelihood and timing of a commitment being drawn upon, a reasonable estimate of the fair value of these commitments is the carrying value of the related unamortized loan fees plus the reserve, which is not material.

Page -16

## Note 5: Investment Securities

Our investment securities portfolio consists primarily of U.S. government agency securities, including mortgage-backed securities (“MBS”) and collateralized mortgage obligations (“CMOs”) issued or guaranteed by FNMA, FHLMC, or GNMA. Our portfolio also includes obligations of state and political subdivisions, debentures issued by government-sponsored agencies such as FHLB, as well as corporate CMOs and equity securities, as reflected in the table below.

(in thousands; June 30, 2011 unaudited)	June 30, 2011				December 31, 2010			
	Amortized Cost	Fair Value	Gross Unrealized		Amortized Cost	Fair Value	Gross Unrealized

Total available for sale	164,731	167,406	2,979	(304)	109,070	111,736	3,014	(348)
Total investment securities	\$200,245	\$204,320	\$4,505	\$(430)	\$143,987	\$146,826	\$3,680	\$(841)

As a member bank of Visa U.S.A., we hold 16,939 shares of Visa Inc. Class B common stock at a zero cost basis. These shares are restricted from resale until their conversion into Class A (voting) shares upon the termination of Visa Inc.’s covered litigation escrow account. The conversion rate will be determined upon the final resolution of the Visa Inc. covered litigation described in Note 13 to the Consolidated Financial Statements in our 2010 Form 10-K. The stock was re-classified from available-for-sale securities to cost-basis accounting in March 2011 as the stock is still currently restricted from resale based on new information received from Visa Inc. Hence, the unrealized gain on the stock, net of tax, at December 31, 2010 was reversed from other comprehensive income. The fair value of the Class B common stock we own was \$697 thousand and \$608 thousand at June 30, 2011 and December 31, 2010, respectively, based on the Class A as-converted rate of 0.4881 and 0.5102, respectively.

Edgar Filing: Bank of Marin Bancorp - Form 10-Q

The amortized cost and fair value of investment securities by contractual maturity at June 30, 2011 are shown below. Expected maturities will differ from contractual maturities because the issuers of the securities may have the right to call or prepay obligations with or without call or prepayment penalties.

(in thousands; unaudited)	June 30, 2011			
	Held to Maturity		Available for Sale	
	Amortized Cost	Fair Value	Amortized Cost	Fair Value
Within one year	\$1,471	\$1,480	\$---	\$---
After one but within five years	7,494	7,747	23,293	23,376
After five years through ten years	19,596	20,541	22,992	23,304
After ten years	6,953	7,146	118,446	120,726
Total	\$35,514	\$36,914	\$164,731	\$167,406

At June 30, 2011, investment securities carried at \$50.1 million were pledged with the State of California: \$49.3 million to secure public deposits in compliance with the Local Agency Security Program and \$662 thousand to provide collateral for trust deposits. In addition, at June 30, 2011, investment securities carried at \$1.4 million were pledged to collateralize an internal Wealth Management Services checking account and \$3.4 million were pledged to collateralize interest rate swaps as discussed in Note 11.

Table of Contents

## Other-Than-Temporarily Impaired Debt Securities

For each security in an unrealized loss position, we assess whether we intend to sell the security, or it is more likely than not that we will be required to sell the security before recovery of its amortized cost basis less any current-period credit losses. For debt securities that are considered other-than-temporarily impaired and that we do not intend to sell and will not be required to sell prior to recovery of our amortized cost basis, we separate the amount of the impairment into the amount that is credit related (credit loss component) and the amount due to all other factors. The credit loss component is recognized in earnings and is calculated as the difference between the security's amortized cost basis and the present value of its expected future cash flows. The remaining difference between the security's fair value and the present value of future expected cash flows is deemed to be due to factors that are not credit related and is recognized in other comprehensive income.

We do not have the intent to sell the securities that are temporarily impaired, and it is more likely than not that we will not have to sell those securities before recovery of the cost basis. Additionally, we have evaluated the credit ratings of our investment securities and their issuers and/or insurers, if applicable. Based on our evaluation, Management has determined that no investment security in our investment portfolio is other-than-temporarily impaired.

Sixteen and twenty-nine investment securities were in unrealized loss positions at June 30, 2011 and December 31, 2010, respectively. They are summarized and classified according to the duration of the loss period as follows:

June 30, 2011 (In thousands; unaudited)	< 12 continuous months		> 12 continuous months		Total Securities in a loss position	
	Fair value	Unrealized loss	Fair value	Unrealized loss	Fair value	Unrealized loss
Held-to-maturity						
Obligations of state & political subdivisions	\$346	\$(1 )	\$1,804	\$(125 )	\$2,150	\$(126 )
Available-for-sale						
Securities of U.S. government agencies	13,588	(65 )	---	---	13,588	(65 )
Corporate CMOs	11,827	(239 )	---	---	11,827	(239 )
Total available for sale	25,415	(304 )	---	---	25,415	(304 )
Total temporarily impaired securities	\$25,761	\$(305 )	\$1,804	\$(125 )	\$27,565	\$(430 )
December 31, 2010 (In thousands)	< 12 continuous months		> 12 continuous months		Total Securities in a loss position	
	Fair value	Unrealized loss	Fair value	Unrealized loss	Fair value	Unrealized loss
Held-to-maturity						
Obligations of state & political subdivisions	\$11,622	\$(250 )	\$1,687	\$(243 )	\$13,309	\$(493 )
Available-for-sale						
Securities of U.S. government agencies	12,888	(184 )	---	---	12,888	(184 )
Corporate CMOs	7,070	(164 )	---	---	7,070	(164 )
Total available for sale	19,958	(348 )	---	---	19,958	(348 )

Total temporarily impaired securities	\$31,580	\$(598)	) \$1,687	\$(243)	) \$33,267	\$(841)	)
---------------------------------------	----------	---------	-----------	---------	------------	---------	---

The unrealized losses associated with debt securities of U.S. government agencies are primarily driven by changes in interest rates and not due to the credit quality of the securities. Further, securities backed by GNMA, FNMA, or FHLMC have the guarantee of the full faith and credit of the U.S. Federal Government. Obligations of U.S. states and political subdivisions in our portfolio are all investment grade without delinquency history. The security in a loss position for more than twelve continuous months relates to one debenture issued by a local subdivision with payments collected through property tax assessments in an affluent community. This security will continue to be monitored as part of our ongoing impairment analysis, but is expected to perform. As a result, we concluded that this security was not other-than-temporarily impaired at June 30, 2011.

The unrealized losses associated with corporate CMO's are primarily related to securities backed by residential mortgages. Most of these securities were AAA rated by at least one major rating agency. We estimate loss projections for each security by assessing loans collateralizing the security and determining expected default rates and loss severities. Based upon our assessment of expected credit losses of each security given the performance of the underlying collateral and credit enhancements where applicable, we concluded that these securities were not other-than-temporarily impaired at June 30, 2011.

#### Securities Carried at Cost

As a member of the FHLB, we are required to maintain a minimum investment in the FHLB capital stock determined by the Board of Directors of the FHLB. The minimum investment requirements can also increase in the event we need to increase our borrowing capacity with the FHLB. Shares cannot be purchased or sold except between the FHLB and its members at its \$100 per share par value. We held \$5.4 million and \$5.0 million of FHLB stock recorded at cost in other assets at June 30, 2011 and December 31, 2010, respectively. On April 28, 2011, FHLB declared a cash dividend for the first quarter of 2011 at an annualized dividend rate of 0.31%. Management expects to be able to redeem this stock at cost, and therefore does not believe the FHLB stock to be other-than-temporarily impaired.

## Note 6: Loans and Allowance for Loan Losses

## Credit Quality of Loans

Outstanding loans by class and payment aging, excluding credit-impaired loans purchased in the Acquisition accounted for under ASC 310-30 ("PCI" loans) of \$7.2 million that have not experienced credit deterioration post acquisition as of June 30, 2011, are as follows:

Loan Aging Analysis by Class As of June 30, 2011 and December 31, 2010

1 Our residential loan portfolio includes no sub-prime loans, nor is it our normal practice to underwrite loans commonly referred to as "Alt-A mortgages", the characteristics of which are loans lacking full documentation, borrowers having low FICO scores or higher loan-to-value ratios.

2 June 30, 2011 amounts include \$701 thousand PCI loans that have experienced credit deterioration post-acquisition and exclude accreting PCI loans of \$7.2 million, as their accretable yield interest recognition is independent from the underlying contractual loan delinquency status. There were no accruing loans past due more than 90 days at December 31, 2010.

3 Amounts were net of deferred loan fees of \$1.9 million and \$2.8 million at June 30, 2011 and December 31, 2010, respectively.

4 Defined as loans whose contractual terms have been restructured in a manner which grants a concession to a borrower experiencing financial difficulties. These balances are included in the impaired loan totals in the table below.

## Table of Contents

Our commercial loans are generally made to established small to mid-sized businesses to provide financing for their working capital needs or acquisition of fixed assets. Management examines historical, current and projected cash flows to determine the ability of the borrower to repay their obligations as agreed. Commercial loans are primarily made based on the identified cash flows of the borrower and secondarily on the underlying collateral provided by the borrower. The cash flows of borrowers, however, may not be as expected and the collateral securing these loans may fluctuate in value. Most commercial and industrial loans are secured by the assets being financed or other business assets such as accounts receivable or inventory and incorporate a personal guarantee; however, some short-term loans may be made on an unsecured basis. In the case of loans secured by accounts receivable, the availability of funds for the repayment of these loans may be substantially dependent on the ability of the borrower to collect amounts due from its customers. We target stable local businesses with strong guarantors that have proven to be more resilient in periods of economic stress. Typically, the strong guarantors provide an additional source of repayment for our credit extensions.

Commercial real estate loans are subject to underwriting standards and processes similar to commercial loans discussed above, in addition to those of real estate loans. We underwrite these loans primarily as cash flow loans and secondarily as loans secured by real estate. Repayment of commercial real estate loans is largely dependent on the successful operation of the property securing the loan, or the business conducted on the property securing the loan. Underwriting standards for these loans typically meet a minimum debt coverage ratio of 1.20:1.00, and a loan-to-value of 65% or less. Furthermore, substantially all of our loans are guaranteed by the owners of the properties. Commercial real estate loans may be more adversely affected by conditions in the real estate markets or in the general economy. In the event of a vacancy, strong guarantors have historically carried the loans until a replacement tenant can be found. The owner's substantial equity investment provides a strong economic incentive to continue to support the commercial real estate projects. As such, we experience nominal delinquencies in this portfolio.

Construction loans are generally made to developers and builders to finance land acquisition as well as the subsequent construction. These loans are underwritten after evaluating of the borrower's financial strength, reputation, prior track record and obtaining independent appraisal reviews. The construction industry can be severely impacted by several major factors, including: 1) the inherent volatility of real estate markets; 2) vulnerability to weather delays, labor, or material shortages and price hikes; and, 3) generally thin margins and tight cash flow. Estimates of construction costs and value associated with the complete project may be inaccurate. Construction loans often involve the disbursement of substantial funds with repayment substantially dependent on the success of the ultimate project.

Consumer loans primarily consist of home equity lines of credit and loans, other residential (tenancy-in-common, or "TIC") loans and other personal loans. We originate consumer loans utilizing credit score information, debt-to-income ratio and loan-to-value ratio analysis. To monitor and manage consumer loan risk, policies and procedures are developed and modified, as needed. This activity, coupled with relatively small loan amounts that are spread across many individual borrowers, minimizes risk. Additionally, trend and outlook reports are reviewed by Management on a regular basis. Underwriting standards for home equity loans include, but are not limited to, a maximum loan-to-value percentage of 75% of loans that are \$1,250,000 or less (and even more conservatively for homes with values in excess of this amount), collection remedies, the number of such loans a borrower can have at one time and documentation requirements. Our underwriting of the other residential loans, mostly secured by TIC units in San Francisco, has been cautious compared to traditional residential mortgages due to the unique ownership structure and the interest-only feature of these loans. However, these borrowers tend to have more equity in their properties, which mitigates risk. Personal loans are nearly evenly split between mobile home loans and floating home loans along with a small number of direct auto loans and installment loans. Personal unsecured loans are offered to consumers with additional underwriting procedures in place, including net worth, and borrowers' verified liquid assets analysis. In general, personal loans usually have a higher degree of risk than other types of loans.

We use a risk rating system as a tool used to evaluate asset quality, and to identify and monitor credit risk in individual loans, and ultimately in the portfolio. Definitions of risk grades of “Special Mention” or worse loans are consistent with those used by the banking regulators. Our internally assigned grades are as follows:

Pass – Loans to borrowers of acceptable or better credit quality. Borrowers in this category demonstrate fundamentally sound financial positions, repayment capacity, credit history and management expertise. Loans in this category must have an identifiable and stable source of repayment and meet the Bank’s policy regarding debt service coverage ratios. These borrowers are capable of sustaining normal economic, market or operational setbacks without significant financial impacts. Financial ratios and trends are acceptable. Negative external industry factors are generally not present. The loan may be secured, unsecured or supported by non-real estate collateral for which the value is more difficult to determine and/or marketability is more uncertain. This category also includes “Watch” loans, where the primary source of repayment has been delayed. “Watch” is intended to be a transitional grade, with either an upgrade or downgrade within a reasonable period.

Table of Contents

Special Mention - Potential weaknesses that deserve close attention. If left uncorrected, those potential weaknesses may result in deterioration of the payment prospects for the asset. Special Mention assets do not present sufficient risk to warrant adverse classification.

Substandard - Inadequately protected by either the current sound worth and paying capacity of the obligor or the collateral pledged, if any. A Substandard asset has a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. Substandard assets are characterized by the distinct possibility that we will sustain some loss if such weaknesses or deficiencies are not corrected. Loss potential, while inherent in the aggregate substandard amount, does not necessarily exist in the individual assets classified Substandard. Well-defined weaknesses include adverse trends or developments of the borrower's financial condition, managerial weaknesses and/or significant collateral deficiencies.

Doubtful - Critical weaknesses that make collection or liquidation in full improbable. There may be specific pending events that work to strengthen the asset, however, the amount or timing of the loss may not be determinable. Pending events generally occur within one year of the asset being classified as Doubtful. Examples include: merger, acquisition, or liquidation; capital injection; guarantee; perfecting liens on additional collateral; and refinancing. Such loans are placed on non-accrual status and usually are collateral-dependant.

We regularly review our credits for accuracy of risk grades whenever new financial information is received. Borrowers are required to submit financial information at regular intervals:

- Generally, commercial borrowers with lines of credit are required to submit financial information with reporting intervals ranging from monthly to annually depending on credit size, risk and complexity.
- Investor commercial real estate borrowers with loans greater than \$2.5 million are required to submit rent rolls or property income statements at least annually. It has been our practice to obtain rent rolls or property income statements for loans \$750 thousand or greater for the last two years.
  - Construction loans are monitored monthly, and assessed on an ongoing basis.
  - Home equity and other consumer loans are assessed based on delinquency.
- Loans graded "Watch" or more severe, regardless of loan type, are assessed no less than quarterly.

The following table represents our analysis of loans by internally assigned grades as of June 30, 2011, including the PCI loans, and December 31, 2010:

Credit Quality Indicators As of June 30, 2011 and December 31, 2010

Table of Contents

## Impaired loan balances and their related allowance by major classes of loans

The table below summarizes information on impaired loans and their related ALLL. The information below excludes \$7.2 million PCI loans purchased in the Acquisition that have not experienced credit deterioration. Based on current information and events, it is probable that we will be able to collect all cash flows expected.

(Dollars in thousands; June 30, 2011 unaudited) June 30, 2011	Commercial	Commercial real estate, owner-occupied	Commercial real estate, investor	Construction	Home equity	Other residential	Installment and other consumer	Total

Interest income recognized on impaired loans during the year ended December 31, 2011

85 22 --- 336 8 5 66 522

The gross interest income that would have been recorded had non-accrual loans been current totaled \$177 thousand, \$220 thousand and \$243 thousand in the quarters ended June 30, 2011, March 31, 2011 and June 30, 2010 respectively and totaled \$397 thousand and \$479 thousand for the first half of 2011 and 2010, respectively. PCI loans are excluded from the data above as their accretable yield interest recognition is independent from the underlying

contractual loan delinquency status. See page 24, "PCI Loans" for further discussion.

Management monitors delinquent loans continuously and identifies problem loans, generally loans graded substandard or worse, to be evaluated individually for impairment testing. Generally, we charge off our estimated losses related to specifically-identified impaired loans when it is deemed uncollectible. The charged-off portion of impaired loans outstanding at June 30, 2011 totaled approximately \$3.6 million. At June 30, 2011, there were no significant commitments to extend credit on impaired loans, including loans to borrowers whose terms have been modified in troubled debt restructurings.

Table of Contents

The following table discloses loans by major portfolio category and the related ALLL disaggregated by impairment evaluation method as of June 30, 2011 and December 31, 2010, as well as activity in the ALLL for the three months and six months ended June 30, 2011:

Allowance for loan losses to non-accrual loans		109.28 %
Non-accrual loans to total loans		1.15 %

## Purchased Credit-Impaired Loans

During the first six months of 2011, we evaluated loans purchased in the Acquisition in accordance with accounting guidance in ASC 310-30 related to loans acquired with deteriorated credit quality. Acquired loans are considered credit-impaired if there is evidence of deterioration of credit quality since origination and it is probable, at the acquisition date, that we will be unable to collect all contractually required payments receivable. Management has determined certain loans purchased in the Acquisition to be PCI loans based on credit indicators such as nonaccrual status, past due status, loan risk grade, loan-to-value ratio, etc. Revolving credit agreements (e.g. home equity lines of credit and revolving commercial loans), if at the acquisition date the borrower had revolving privileges, are not considered PCI loans as cash flows cannot be reasonably estimated.

For acquired loans not considered credit-impaired, the difference between the contractual amounts due (principal amount) and the fair value is accounted for subsequently through accretion. We elect to recognize discount accretion based on the acquired loan's contractual cash flows using an effective interest rate method. The accretion is recognized through the net interest margin as described in the guidance for accounting for loan origination fees and costs that is included in FASB ASC 310-20 (formerly FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases).

The following table presents the fair value of loans pursuant to accounting standards for purchased credit-impaired loans and other purchased loans as of the acquisition date:

(Dollars in thousands; unaudited)	February 18, 2011		Total
	Purchased credit-impaired loans	Other purchased loans	

Edgar Filing: Bank of Marin Bancorp - Form 10-Q

Contractually required payments including interest	\$24,316	\$69,702	\$94,018
Less: nonaccretable difference	(13,044 )	---	(13,044 )
Cash flows expected to be collected (undiscounted)	11,272	69,702	80,974
Accretable yield	(1,902 )	(17,307 ) <sup>1</sup>	(19,209 )
Fair value of purchased loans	\$9,370	\$52,395	\$61,765

<sup>1</sup> \$5.8 million of the \$17.3 million represents the difference between the contractual principal amounts due and the fair value. This discount is to be accreted to interest income over the remaining lives of the loans. The remaining \$11.5 million is the contractual interest to be earned over the life of the loans.

For the PCI loans, the accretable yield initially represents the excess of the cash flows expected to be collected at acquisition over the fair value of the loans at the acquisition date, and is accreted into interest income over the estimated remaining life of the purchased credit-impaired loans using the effective yield method, provided that the timing and amount of future cash flows is reasonably estimable. The accretable yield is affected by:

Table of Contents

(1) Changes in interest rate indices for variable rate loans – Expected future cash flows are based on the variable rates in effect at the time of the regular evaluations of cash flows expected to be collected;

(2) Changes in prepayment assumptions – Prepayments affect the estimated life of the loans which may change the amount of interest income, and possibly principal, expected to be collected;

(3) Changes in the expected principal and interest payments over the estimated life – Updates to expected cash flows are driven by the credit outlook and actions taken with borrowers. Changes in expected future cash flows from loan modifications are included in the regular evaluations of cash flows expected to be collected.

When the timing and/or amounts of expected cash flows on such loans are not reasonably estimable, no interest is accreted and the loan is reported as a nonperforming loan; otherwise, if the timing and amounts of expected cash flows for purchased credit-impaired loans are reasonably estimable, then interest is accreted and the loans are reported as performing loans. The initial estimated cash flows expected to be collected are updated each quarter based on current assumptions regarding default rates, loss severities, and other factors that are reflective of current market conditions. Probable decreases in expected cash flows after acquisition result in the recognition of impairment, which would be recorded as a charge to the provision for loan losses. Probable and significant increases in expected cash flows would first reverse any related allowance for loan losses and any remaining increases would be recognized prospectively as interest income over the estimated remaining lives of the loans. The impact of changes in variable interest rates is recognized prospectively as adjustments to interest income.

The nonaccretable difference represents the difference between the undiscounted contractual cash flows and the undiscounted expected cash flows, and also reflects the estimated credit losses in the acquired loan portfolio at the acquisition date and can fluctuate due to changes in expected cash flows during the life of the PCI loans.

The following table reflects the outstanding balance and related carrying value of PCI loans as of the acquisition date (February 18, 2011) and June 30, 2011:

	February 18, 2011		June 30, 2011	
	Unpaid principal balance	Carrying value	Unpaid principal balance	Carrying value
PCI Loans (Dollars in thousands; unaudited)				
Commercial	\$10,860	\$3,706	\$5,818	\$2,189
Commercial real estate	10,139	5,664	10,575	5,706
Total purchased credit-impaired loans	\$20,999	\$9,370	\$16,393	\$7,895

The activities in the accretable yield, or income expected to be earned, for PCI loans were as follows:

	Three months ended June 30, 2011	Three months ended March 31, 2011	Six months ended June 30, 2011
Accretable Yield (Dollars in thousands, unaudited)			
Balance at beginning of period	\$1,787	\$---	\$---
Additions	---	1,902	1,902
Removals 1	(6 )	(39 )	(45 )
Accretion	(291 )	(76 )	(367 )
Reclassifications (to)/from nonaccretable difference 2	1,877	---	1,877
Balance at end of period	\$3,367	\$1,787	\$3,367

1 Represents the accretable difference that is relieved when a loan exits the PCI population due to payoff, full charge-off, or transfer to repossessed assets, etc.

2 Primarily relates to improvements in expected credit performance and changes in expected timing of cash flows.

Table of Contents

## Pledged Loans

Our FHLB line of credit is secured under terms of a blanket collateral agreement by a pledge of certain qualifying loans equal to the amount of our line of credit, which totaled \$243.5 million and \$241.1 million at June 30, 2011 and December 31, 2010, respectively. In addition, we pledge a certain residential loan portfolio, which totaled \$43.7 million and \$40.0 million at June 30, 2011 and December 31, 2010, respectively, to secure our borrowing capacity with the FRB. Also see Note 8 below.

## Note 7: Intangible Assets

The table below reflects our identifiable intangible asset arising from the Acquisition and accumulated amortization at June 30, 2011.

(in thousands; unaudited)	June 30, 2011		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Core deposit intangible	\$ 725	\$ (18 )	\$ 707

The core deposit intangible is being amortized on a straight-line basis over fifteen years and the estimated amortization expense is \$42 thousand for the year ending December 31, 2011, \$48 thousand each year ending December 31, 2012 through 2015 and \$491 thousand thereafter.

## Note 8: Borrowings

Federal Funds Purchased— We have unsecured lines of credit totaling \$77.0 million with correspondent banks for overnight borrowings. In general, interest rates on these lines approximate the Federal funds target rate. At June 30, 2011 and December 31, 2010, we had no overnight borrowings outstanding under these credit facilities.

Federal Home Loan Bank Borrowings – As of June 30, 2011 and December 31, 2010, we had lines of credit with the FHLB totaling \$243.5 million and \$219.2 million, respectively, based on eligible collateral of certain loans. At June 30, 2011 and December 31, 2010, we had no FHLB overnight borrowings.

On February 5, 2008, we entered into a ten-year borrowing agreement under the same FHLB line of credit for \$15.0 million at a fixed rate of 2.07%. Interest-only payments are required every three months until maturity. Although the entire principal is due on February 5, 2018, the FHLB has the unconditional right to accelerate the due date on August 5, 2011 and every three months thereafter (the “put dates”). If the FHLB exercises its right to accelerate the due date, the FHLB will offer replacement funding at the current market rate, subject to certain conditions. We must comply with the put date, but are not required to accept replacement funding.

On December 16, 2008, we entered into a five-year borrowing agreement under the FHLB line of credit for \$20.0 million at a fixed rate of 2.54%. Interest-only payments are required every month until maturity.

On January 23, 2009, we entered into a three-year borrowing agreement under the FHLB line of credit for \$20.0 million at a fixed rate of 2.29%. Interest-only payments are required every month until maturity.

At June 30, 2011, \$188.5 million was remaining as available for borrowing from the FHLB. The FHLB overnight borrowing and the FHLB line of credit are secured by a certain loan portfolio under a blanket lien.

Federal Reserve Line of Credit – We also have a line of credit with the FRB secured by a certain residential loan portfolio. At June 30, 2011 and December 31, 2010, we had borrowing capacity under this line totaling \$43.7 and \$40.2 million, respectively, and had no outstanding borrowings with the FRB.

Subordinated Debt – On September 17, 2004 we issued a 15-year, \$5.0 million subordinated debenture through a pooled trust preferred program, which matures on June 17, 2019. We have the right to redeem the debenture, in whole or in part, at the redemption price at principal amounts in multiples of \$1.0 million on any interest payment date on or after June 17, 2009. The interest rate on the debenture changes quarterly and is paid quarterly at the three-month LIBOR plus 2.48%. The rate at June 30, 2011 was 2.73%. The debenture is subordinated to the claims of depositors and our other creditors.

Table of Contents

## Note 9: Stockholders' Equity

## Preferred Stock

Pursuant to the U.S. Treasury Capital Purchase Program (the "TCPP"), on December 5, 2008 Bancorp issued to the U.S. Treasury 28,000 shares of senior preferred stock with a zero par value and a \$1,000 per share liquidation preference, along with a warrant to purchase 154,242 shares of common stock at a per share exercise price of \$27.23, in exchange for aggregate consideration of \$28.0 million. The proceeds of \$28 million were allocated between the preferred stock and the warrant with \$27.0 million allocated to preferred stock and \$961 thousand allocated to the warrant, based on their relative fair value at the time of issuance. The warrant was immediately exercisable and expires 10 years after the issuance date.

Under the American Recovery and Reinvestment Act of 2009, which allows participants in the TCPP to withdraw from the program, we repurchased all 28,000 shares of outstanding preferred stock from the U.S. Treasury at \$28 million plus accrued but unpaid dividends of \$179 thousand on March 31, 2009. The warrant remains outstanding, and was subsequently adjusted for cash dividend increases to represent a right to purchase 154,693 shares of common stock at \$27.15 per share in accordance with Section 13(c) of the Form of Warrant to Purchase Common Stock.

## Dividends

Presented below is a summary of cash dividends paid to common stockholders, recorded as a reduction of retained earnings.

(in thousands except per share data, unaudited)	Three months ended		Six months ended		June 30, 2010
	June 30, 2011	March 31, 2011	June 30, 2010	June 30, 2011	
Cash dividends to common stockholders	\$ 851	\$ 847	\$ 787	\$ 1,698	\$ 1,572
Cash dividends per common share	\$ 0.16	\$ 0.16	\$ 0.15	\$ 0.32	\$ 0.30

## Share-Based Payments

The fair value of stock options on the grant date is recorded as a stock-based compensation expense in the statement of income over the requisite service period with a corresponding increase in common stock. Stock-based compensation also includes compensation expense related to the issuance of non-vested restricted common shares pursuant to the 2007 Equity Plan. The grant-date fair value of the restricted common shares, which equals its intrinsic value on that date, is being recorded as compensation expense over the requisite service period with a corresponding increase in common stock as the shares vest. In addition, we record excess tax benefits on the exercise of non-qualified stock options, the disqualifying disposition of incentive stock options and vesting of restricted stock as an addition to common stock with a corresponding decrease in current taxes payable.

The holders of the non-vested restricted common shares are entitled to dividends on the same per-share ratio as the holders of common stock. Dividends paid on the portion of share-based awards not expected to vest are also included in stock-based compensation expense. Tax benefits on dividends paid on the portion of share-based awards expected to vest are recorded as increase to common stock with a corresponding decrease in current taxes payable.

## Note 10: Commitments and Contingencies

Financial Instruments with Off-Balance Sheet Risk

We make commitments to extend credit in the normal course of business to meet the financing needs of our customers. These financial instruments include commitments to extend credit in the form of loans or through standby letters of credit. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since many of the commitments are expected to expire without being fully drawn upon, the total commitment amount does not necessarily represent future cash requirements.

## Table of Contents

We are exposed to credit loss equal to the contract amount of the commitment in the event of nonperformance by the borrower. We use the same credit policies in making commitments as we do for on-balance-sheet instruments and we evaluate each customer's credit worthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary by us, is based on Management's credit evaluation of the borrower. Collateral held varies, but may include accounts receivable, inventory, property, plant and equipment, and real property.

The contractual amount of loan commitments and standby letters of credit not reflected on the consolidated statement of condition was \$268.4 million at June 30, 2011 at rates ranging from 1.91% to 18.00%. This amount included \$146.9 million under commercial lines of credit (these commitments are contingent upon customers maintaining specific credit standards), \$78.4 million under revolving home equity lines, \$17.9 million under undisbursed construction loans, \$16.0 million under standby letters of credit, and a remaining \$9.2 million under personal and other lines of credit. We have set aside an allowance for losses in the amount of \$537 thousand for these commitments as of June 30, 2011, which is recorded in interest payable and other liabilities.

## Operating Leases

We rent certain premises and equipment under long-term non-cancelable operating leases expiring at various dates through the year 2024. Commitments under these leases approximate \$1.3 million, \$2.7 million, \$2.7 million, \$2.5 million and \$2.6 million for 2011 (July through December), 2012, 2013, 2014, and 2015 respectively, and \$16.8 million for all years thereafter.

## Litigation and Regulatory Matters

We may be party to legal actions which arise from time to time as part of the normal course of our business. We believe, after consultation with legal counsel, that we have meritorious defenses in these actions, and that litigation contingency liability, if any, will not have a material adverse effect on our financial position, results of operations, or cash flows. We are responsible for our proportionate share of certain litigation indemnifications provided to Visa U.S.A. by its member banks in connection with lawsuits related to anti-trust charges and interchange fees. Also refer to Note 13 to the Consolidated Financial Statements of the Bancorp's 2010 Annual Report on Form 10-K.

## Note 11: Derivative Financial Instruments and Hedging Activities

We have entered into interest rate swap agreements, primarily as an asset/liability management strategy, in order to mitigate the changes in the fair value of specified long-term fixed-rate loans (or firm commitments to enter into long-term fixed-rate loans) caused by changes in interest rates. These hedges allow us to offer long-term fixed rate loans to customers without assuming the interest rate risk of a long-term asset. Converting our fixed-rate interest stream to a floating-rate interest stream, generally benchmarked to the one-month U.S. dollar LIBOR index, protects us against changes in the fair value of our loans otherwise associated with fluctuating interest rates.

The fixed-rate payment features of the interest rate swap agreements are generally structured at inception to mirror substantially all of the provisions of the hedged loan agreements. These interest rate swaps, designated and qualified as fair value hedges, are carried on the balance sheet at their fair value in other assets (when the fair value is positive) or in other liabilities (when the fair value is negative). One of our interest rate swap agreements qualifies for shortcut hedge accounting treatment. The change in fair value of the swap using the shortcut accounting treatment is recorded in other non-interest income, while the change in fair value of swaps using non-shortcut accounting is recorded in interest income. The unrealized gain or loss in fair value of the hedged fixed-rate loan is recorded as an adjustment to the hedged loan and offset in other non-interest income (for shortcut accounting treatment) or interest income (for non-shortcut accounting treatment).

Table of Contents

From time to time, we make firm commitments to enter into long-term fixed-rate loans with borrowers backed by yield maintenance agreements and simultaneously enter into forward interest rate swap agreements with correspondent banks to mitigate the change in fair value of the yield maintenance agreement. Prior to loan funding, yield maintenance agreements with net settlement features that meet the definition of a derivative are considered as non-designated hedges and are carried on the balance sheet at their fair value in other assets (when the fair value is positive) or in other liabilities (when the fair value is negative). The offsetting changes in the fair value of the forward swap and the yield maintenance agreement are recorded in interest income. In June 2007, August 2010 and June 2011, three previously undesignated forward swaps were designated to offset the change in fair value of a fixed-rate loan originated in each of those periods. Subsequent to the point of the swap designations, the related yield maintenance agreements are no longer considered derivatives. Their fair value at the designation date was recorded in other assets and is amortized using the effective yield method over the life of the respective designated loans.

The net effect of the change in fair value of interest rate swaps, the amortization of the yield maintenance agreement and the change in the fair value of the hedged loans results in an insignificant amount of hedge ineffectiveness recognized in interest income.

Our credit exposure, if any, on interest rate swaps is limited to the net favorable value (net of any collateral pledged) and interest payments of all swaps by each counterparty. Conversely, when an interest rate swap is in a liability position exceeding a certain threshold, we are required to post collateral to the counterparty in an amount determined by the agreements (generally when our derivative liability position is greater than \$100 thousand or \$1.3 million, depending upon the counterparty). Collateral levels are monitored and adjusted on a regular basis for changes in interest rate swap values. The aggregate fair value of all derivative instruments that are in a liability position and have collateral requirements on June 30, 2011 is \$2.7 million, for which we have posted collateral in the form of securities available for sale totaling \$3.4 million.

As of June 30, 2011, we had six interest rate swap agreements, which are scheduled to mature in September 2018, April 2019, June 2020, August 2020, June 2022 and June 2031. All of our derivatives are accounted for as fair value hedges. Our interest rate swaps are settled monthly with counterparties. Accrued interest on the swaps totaled \$70 thousand as of June 30, 2011. Information on our derivatives follows:

(in thousands; June 30, 2011 unaudited)	Asset derivatives		Liability derivatives	
	June 30, 2011	December 31, 2010	June 30, 2011	December 31, 2010

Increase (decrease) in value of yield maintenance agreement recognized against interest income	131	(10 )
Net loss on derivatives recognized in interest income (2)	\$ (539 )	\$ (405 )

(1)See Note 4 for valuation methodology.

(2)Ineffectiveness of (\$31) thousand, (\$23) thousand, and \$23 thousand was recorded in interest income during the three months ended June 30, 2011, March 31, 2011 and June 30, 2010, respectively. Ineffectiveness of (\$54) thousand, and \$18 thousand was recorded in interest income during the six months ended June 30, 2011 and June 30, 2010, respectively. The full change in value of swaps was included in the assessment of hedge effectiveness.

Table of Contents

ITEM 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

In the following pages, Management discusses its analysis of the financial condition and results of operations for the second quarter of 2011 compared to the second quarter of 2010 and to the prior quarter (first quarter of 2011), as well as the six-month period ended June 30, 2011 compared to the same period in 2010. This discussion should be read in conjunction with the related consolidated financial statements in this Form 10-Q and with the audited consolidated financial statements and accompanying notes included in our 2010 Annual Report on Form 10-K. Average balances, including balances used in calculating certain financial ratios, are generally comprised of average daily balances.

Forward-Looking Statements

This discussion of financial results includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, (the "1933 Act") and Section 21E of the Securities Exchange Act of 1934, as amended, (the "1934 Act"). Those sections of the 1933 Act and 1934 Act provide a "safe harbor" for forward-looking statements to encourage companies to provide prospective information about their financial performance so long as they provide meaningful, cautionary statements identifying important factors that could cause actual results to differ significantly from projected results.

Our forward-looking statements include descriptions of plans or objectives of Management for future operations, products or services, and forecasts of its revenues, earnings or other measures of economic performance. Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often include the words "believe," "expect," "intend," "estimate" or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may."

Forward-looking statements are based on Management's current expectations regarding economic, legislative, and regulatory issues that may impact our earnings in future periods. A number of factors—many of which are beyond Management's control—could cause future results to vary materially from current Management expectations. Such factors include, but are not limited to, estimated fair values related to the assets acquired and liabilities assumed of the former Charter Oak Bank; general economic conditions; the current financial downturn in the U.S. and abroad; changes in interest rates, deposit flows, real estate values and competition; changes in accounting principles, policies or guidelines; changes in legislation or regulation; and other economic, competitive, governmental, regulatory and technological factors affecting our operations, pricing, products and services. These and other important factors are detailed in the Risk Factors section of this report and our 2010 Form 10-K as filed with the SEC, copies of which are available from us at no charge. Forward-looking statements speak only as of the date they are made. We do not undertake to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements are made or to reflect the occurrence of unanticipated events.

Executive Summary

Our second quarter 2011 earnings of \$3.4 million were up 3% from \$3.3 million in the second quarter of 2010 and down 24% from \$4.5 million in the first quarter of 2011. Diluted earnings per share were \$0.64, down \$0.20 from the first quarter of 2011 and up \$0.01 from the same quarter a year ago.

2011 results include the impact of the FDIC-assisted acquisition of certain assets and the assumption of certain liabilities of the former Charter Oak Bank on February 18, 2011 (the "Acquisition"). As discussed in Note 3, we acquired \$61.8 million of loans at fair value without loss share and assumed \$93.9 million of deposits at fair value. As part of the Acquisition, we also acquired \$44.0 million cash and equivalents, including cash received from the FDIC upon settlement, and recorded an \$85 thousand gain on bargain purchase, net of tax.

The increases in year-to-date earnings over the same period last year primarily reflect the acquisition of loans of the former Charter Oak Bank and related accretion, as well as a reduction in the cost of deposits, partially offset by higher salaries and benefits, data processing costs and professional costs associated with the Acquisition.

Total loans reached \$986.6 million at June 30, 2011, representing an increase of \$45.2 million, or 4.8%, over December 31, 2010. This growth was significantly impacted by loans purchased as part of the Acquisition, partially offset by the successful resolution through payoffs of several high credit risk loans, as well as the prepayment of certain large credits in a low interest rate environment.

Table of Contents

Non-performing loans decreased to \$8.7 million or .88% of our loans at June 30, 2011, from \$12.9 million, or 1.37% at December 31, 2010. PCI loans of \$7.2 million at June 30, 2011 (excluding loans totaling \$701 thousand that have experienced credit deterioration post-Acquisition) are excluded from the non-performing designation as their accretable yield interest recognition is independent from the underlying contractual loan delinquency status.

The provision for loan losses totaled \$3.0 million in the second quarter of 2011, representing an increase of \$1.7 million from the same quarter a year ago, and up \$2.0 million from the first quarter of 2011. The provision for loan losses totaled \$4.1 million and \$2.9 million in the first half of 2011 and 2010, respectively. Net charge-offs in the second quarter of 2011 totaled \$2.1 million compared to \$225 thousand in the same quarter a year ago, and \$372 thousand in the prior quarter. The increase to the provision for loan losses and net charge-offs primarily reflects the write-off of certain loans which were originated prior to the Acquisition, reflecting declines in the value of two unsecured commercial loans, as well as declines in the values of real estate collateral securing one problem commercial loan and one problem construction loan. The allowance for loan losses of \$13.9 million totaled 1.41% of loans at June 30, 2011, compared to 1.25% and 1.34% at June 30, 2010 and March 31, 2011, respectively. The increases in the allowance for loan losses as a percentage of loans from both a year ago and a quarter ago reflect a higher level of specific reserves on impaired loans, including PCI loans.

Total deposits grew \$123.2 million, or 12.1%, over December 31, 2010 to \$1.1 billion. The higher level of deposits reflects growth in most deposit categories, except for CDARS® time deposits, which decreased \$35.6 million. Demand deposits comprised 30.4% of total deposits at June 30, 2011. In addition, Management has strategically allowed the \$9.0 million of internet deposits assumed as part of the Acquisition to run off.

The tax-equivalent net interest margin was 5.51% in the second quarter of 2011, compared to 5.44% in the first quarter of 2011 and 5.01% in the same quarter last year. The tax equivalent net interest margin was 5.48% and 5.00% in the first half of 2011 and 2010, respectively. The acquisition of the former Charter Oak Bank's loans and related accretion contributed 69 basis points to the 2011 year-to-date net interest margin. The acquired non-credit impaired loans were initially measured and recorded at their estimated fair values at Acquisition date and are being accreted back to their unpaid principal balances over the remaining lives of the loans through interest income.

Non-interest income in the second quarter of 2011 totaled \$1.6 million and remained relatively unchanged from the same period last year and from the prior quarter. Non-interest income for the first half of 2011 totaled \$3.2 million, an increase of \$326 thousand, or 11% from the first half of 2010. The increase relates to the pre-tax bargain purchase gain of \$146 thousand from the Acquisition and higher Wealth Management and Trust Services fees.

Non-interest expense totaled \$10.0 million in the second quarter of 2011, an increase of \$1.4 million, or 16.4%, from the same quarter a year ago and an increased of \$868 thousand, or 9.5%, from the prior quarter. Non-interest expense totaled \$19.1 million and \$16.8 million in the first half of 2011 and 2010, respectively, representing a 13.8% increase. The increases primarily reflect higher personnel costs associated with franchise expansion, as well as, higher professional costs and data processing costs associated with the Acquisition. Bancorp incurred one-time Acquisition-related third-party costs of approximately \$642 thousand in the second quarter of 2011 and \$348 thousand in the first quarter of 2011. Bancorp does not expect to incur significant one-time Acquisition-related third-party costs going forward.

## Table of Contents

### Critical Accounting Policies

Critical accounting policies are those that are both most important to the portrayal of our financial condition and results of operations and require Management's most difficult, subjective, or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain.

Management has determined the following five accounting policies to be critical: Allowance for Loan Losses, Acquired Loans, Other-than-temporary Impairment of Investment Securities, Accounting for Income Taxes and Fair Value Measurements.

#### Allowance for Loan Losses

Allowance for loan losses is based upon estimates of loan losses and is maintained at a level considered adequate to provide for probable losses inherent in the outstanding loan portfolio. The allowance is increased by provisions charged to expense and reduced by net charge-offs. In periodic evaluations of the adequacy of the allowance balance, Management considers our past loan loss experience by type of credit, known and inherent risks in the portfolio, adverse situations that may affect the borrower's ability to repay, the estimated value of any underlying collateral, current economic conditions and other factors. We formally assess the adequacy of the allowance for loan losses on a quarterly basis. These assessments include the periodic re-grading of loans based on changes in their individual credit characteristics including delinquency, seasoning, recent financial performance of the borrower, economic factors, changes in the interest rate environment, and other factors as warranted. Loans are initially graded when originated. They are reviewed as they are renewed, when there is a new loan to the same borrower and/or when identified facts demonstrate heightened risk of default. Confirmation of the quality of our grading process is obtained by independent reviews conducted by outside consultants specifically hired for this purpose and by periodic examination by various bank regulatory agencies. Management monitors delinquent loans continuously and identifies problem loans to be evaluated individually for impairment testing. For loans that are determined impaired, formal impairment measurement is performed at least quarterly on a loan-by-loan basis.

Our method for assessing the appropriateness of the allowance includes specific allowances for identified problem loans, an allowance factor for categories of credits, and allowances for changing environmental factors (e.g., portfolio trends, concentration of credit, growth, economic factors). Allowances for identified problem loans are based on specific analysis of individual credits. Loss estimation factors for loan categories are based on analysis of local economic factors applicable to each loan category, including consideration of our historical charge-off history. Allowances for changing environmental factors are Management's best estimate of the probable impact these changes have had on the loan portfolio as a whole.

For our methodology on estimating the allowance for loan losses on acquired loans, refer to the section Acquired Loans below.

#### Acquired Loans

Acquired loans are recorded at their estimated fair values at acquisition date in accordance with ASC 805 Business Combinations, factoring in credit losses expected to be incurred over the life of the loan. Accordingly, an allowance for loan losses is not carried over or recorded for acquired loans as of the acquisition date.

The process of estimating fair values of the acquired loans, including the estimate of losses that are expected to be incurred over the estimated remaining lives of the loans at acquisition date and the ongoing updates to Management's expectation of future cash flows, requires significant and subjective judgments and assumptions, particularly considering the current economic environment. The economic environment and the lack of market liquidity and

transparency are factors that have influenced, and may continue to affect, these assumptions and estimates.

We estimated the fair value of acquired loans at the acquisition date based on a discounted cash flow methodology that considered factors including the type of loan and related collateral, risk classification, fixed or variable interest rate, term of loan and whether or not the loan was amortizing, and current discount rates. Loans were grouped together according to similar characteristics and were treated in the aggregate when applying various valuation techniques. The estimate of expected cash flows incorporates our best estimate of current key assumptions, such as property values, default rates, loss severity and prepayment speeds. The discount rates used for loans were based on current market rates for new originations of comparable loans, where available, and include adjustments for liquidity concerns. To the extent comparable market rates are not readily available, a discount rate was derived based on the assumptions of market participants' cost of funds, servicing costs and return requirements for comparable risk assets. In either case, the discount rate does not include a factor for credit losses as that has been included in the estimated cash flows. The initial estimate of cash flows to be collected was derived from assumptions such as default rates and loss severities.

Table of Contents

In conjunction with the Acquisition, we purchased certain loans with evidence of credit quality deterioration subsequent to their origination and for which it was probable, at acquisition, that we would be unable to collect all contractually required payments. Management has applied significant judgment in determining which loans are PCI loans. Evidence of credit quality deterioration as of the purchase date may include statistics such as past due and nonaccrual status, risk grades and recent loan-to-value percentages. Revolving credit agreements (e.g. home equity lines of credit and revolving commercial loans), if at the acquisition date the borrower had revolving privileges, are not considered PCI loans as cash flows can not be reasonably estimated.

The accounting guidance for PCI loans provides that the excess of the cash flows initially expected to be collected over the fair value of the loans at the acquisition date (i.e., the accretable yield) should be accreted into interest income at a level rate of return over the remaining term of the loan, provided that the timing and amount of future cash flows is reasonably estimable. The difference between the contractually required payments and the cash flows expected to be collected at acquisition, considering the impact of prepayments, is referred to as the nonaccretable difference and is not recorded.

The initial estimate of cash flows expected to be collected is updated each quarter and requires the continued usage of key assumptions and estimates similar to the initial estimate of fair value. Given the current economic environment, we must apply judgment to develop our estimates of cash flows for PCI loans given the impact of real estate value changes, changing loss severities and prepayment speeds.

For purposes of accounting for the PCI loans purchased in the Acquisition, we elected not to apply the pooling method but to account for these loans individually. If we have probable decreases in cash flows expected to be collected (other than due to decreases in interest rate indices), we charge the provision for credit losses, resulting in an increase to the allowance for loan losses. Disposals of loans, which may include sales of loans to third parties, receipt of payments in full or part by the borrower, and foreclosure of the collateral, result in removal of the loan from the PCI loan portfolio at its carrying amount. The amount of cash flows expected to be collected and, accordingly, the adequacy of the allowance for loan losses are particularly sensitive to changes in loan credit quality.

If we have probable and significant increases in cash flows expected to be collected on PCI loans, we first reverse any previously established allowance for loan loss and then increase interest income as a prospective yield adjustment over the remaining life of the loans. The impact of changes in variable interest rates is recognized prospectively as adjustments to interest income. All PCI loans that were classified as nonperforming loans prior to Acquisition were no longer classified as nonperforming because, at Acquisition, we believed that we would fully collect the new carrying value of these loans. Subsequent to Acquisition, certain PCI loans have experienced credit deterioration and were classified as non-performing loans. Specific reserves for these loans have been reflected as an increase to the allowance for loan losses. It is important to note that judgment is required to classify PCI loans as performing or non-performing, and is dependent on having a reasonable expectation about the timing and amount of cash flows expected to be collected.

For the acquired loans not considered PCI loans, we elect to recognize the entire fair value discount accretion based on the acquired loan's contractual cash flows using an effective interest rate method for term loans, and on a straight line basis to interest income for revolving lines, as the timing and amount of cash flows under revolving lines are not predictable. Subsequent to Acquisition, if the probable and estimable losses for non-PCI loans exceed the amount of the remaining unaccreted discount, the excess is established as an allowance for loan losses.

For further information regarding our acquired loans, see Note 3 and Note 6 to our Consolidated Financial Statements in this Form 10-Q.

## Table of Contents

### Other-than-temporary Impairment of Investment Securities

At each financial statement date, we assess whether declines in the fair value of held-to-maturity and available-for-sale securities below their costs are deemed to be other than temporary. We consider, among other things, (i) the length of time and the extent to which the fair value has been less than cost, (ii) the financial condition and near-term prospects of the issuer, and (iii) our intent and ability to retain the investment for a period of time sufficient to allow for any anticipated recovery in fair value. Evidence evaluated includes, but is not limited to, the remaining payment terms of the instrument and economic factors that are relevant to the collectability of the instrument, such as: current prepayment speeds, the current financial condition of the issuer(s), industry analyst reports, credit ratings, credit default rates, interest rate trends and the value of any underlying collateral. Credit-related other-than-temporary impairment results in a charge to earnings and the corresponding establishment of a new cost basis for the security. Non-credit-related other-than-temporary impairment results in a charge to other comprehensive income, net of applicable taxes, and the corresponding establishment of a new cost basis for the security. The other-than-temporary impairment recognized in other comprehensive income for debt securities classified as held-to-maturity is accreted from other comprehensive income to the amortized cost of the debt security over the remaining life of the debt security in a prospective manner on the basis of the amount and timing of future estimated cash flows.

### Accounting for Income Taxes

Income taxes reported in the financial statements are computed based on an asset and liability approach. We recognize the amount of taxes payable or refundable for the current year, and deferred tax assets and liabilities for the expected future tax consequences that have been recognized in the financial statements. Under this method, deferred tax assets and liabilities are determined based on the differences between the financial statements and tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to reverse. We record net deferred tax assets to the extent it is more likely than not that they will be realized. In evaluating our ability to recover the deferred tax assets, Management considers all available positive and negative evidence, including scheduled reversals of deferred tax liabilities, projected future taxable income, tax planning strategies and recent financial operations. In projecting future taxable income, Management develops assumptions including the amount of future state and federal pretax operating income, the reversal of temporary differences, and the implementation of feasible and prudent tax planning strategies. These assumptions require significant judgment about the forecasts of future taxable income and are consistent with the plans and estimates being used to manage the underlying business. Bancorp files consolidated federal and combined state income tax returns.

We recognize the financial statement effect of a tax position when it is more likely than not, based on the technical merits, that the position will be sustained upon examination. For tax positions that meet the more-likely-than-not threshold, we may recognize only the largest amount of tax benefit that is greater than fifty percent likely of being realized upon ultimate settlement with the taxing authority. Management believes that all of our tax positions taken meet the more-likely-than-not recognition threshold. To the extent tax authorities disagree with these tax positions, our effective tax rates could be materially affected in the period of settlement with the taxing authorities.

### Fair Value Measurements

We use fair value measurements to record fair value adjustments to certain assets and liabilities and to determine fair value disclosures. We base our fair values on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Securities available for sale, derivatives, and loans held for sale, if any, are recorded at fair value on a recurring basis. Additionally, from time to time, we may be required to record certain assets at fair value on a non-recurring basis, such as certain impaired loans held for investment and securities held to maturity that are other-than-temporarily impaired. These non-recurring fair

value adjustments typically involve write-downs of individual assets due to application of lower-of-cost or market accounting.

We have established and documented a process for determining fair value. We maximize the use of observable inputs and minimize the use of unobservable inputs when developing fair value measurements. Whenever there is no readily available market data, Management uses its best estimate and assumptions in determining fair value, but these estimates involve inherent uncertainties and the application of Management's judgment. As a result, if other assumptions had been used, our recorded earnings or disclosures could have been materially different from those reflected in these financial statements. For detailed information on our use of fair value measurements and our related valuation methodologies, see Note 4 to Consolidated Financial Statements in this Form 10-Q.

## Net Interest Income

Net interest income is the difference between the interest earned on loans, investments and other interest-earning assets and the interest expense incurred on deposits and other interest-bearing liabilities. Net interest income is impacted by changes in general market interest rates and by changes in the amounts and composition of interest-earning assets and interest-bearing liabilities. Interest rate changes can create fluctuations in the net interest margin due to an imbalance in the timing of repricing or maturity of assets or liabilities. We manage interest rate risk exposure with the goal of minimizing the impact of interest rate volatility on net interest margin.

Net interest margin is expressed as net interest income divided by average interest-earning assets. Net interest rate spread is the difference between the average rate earned on total interest-earning assets and the average rate incurred on total interest-bearing liabilities. Both of these measures are reported on a taxable-equivalent basis. Net interest margin is the higher of the two because it reflects interest income earned on assets funded with non-interest-bearing sources of funds, which include demand deposits and stockholders' equity.

Table of Contents

The following table, Distribution of Average Statements of Condition and Analysis of Net Interest Income, compares interest income and interest-earning assets with interest expense and interest-bearing liabilities for the periods presented. The table also indicates net interest income, net interest margin and net interest rate spread for each period presented.

(1) Interest income/expense is divided by actual number of days in the period times 360 days to correspond to stated interest rate terms, where applicable.

(2) Yields on available-for-sale securities are calculated based on amortized cost balances rather than fair value, as changes in fair value are reflected as a component of stockholders' equity.

(3) Yields and interest income on tax-exempt securities and loans are presented on a taxable-equivalent basis using the Federal statutory rate of 35

(4) Average balances on loans outstanding include non-performing loans. The amortized portion of net loan origination fees is included in interest income on loans, representing an adjustment to the yield.

Table of Contents

Second Quarter of 2011 Compared to Second Quarter of 2010

The tax-equivalent net interest margin increased to 5.51% in the second quarter of 2011, up fifty basis points from the second quarter of 2010. The increase in the net interest margin primarily reflects the FDIC-assisted acquisition of the former Charter Oak Bank, as well as a reduction in the cost of deposits, partially offset by a higher level of liquidity and a reduction in the yields on investment securities. The net interest spread increased fifty-eight basis points over the same period for the same reasons.

In the second quarter of 2011, three PCI loans paid off early where the payoff amounts exceeded the recorded investment by \$1.2 million, which favorably impacted our net interest margin by thirty-nine basis points. Accretion on the acquired non-PCI loans contributed twenty-eight basis points to the net interest margin in the second quarter of 2011.

Total average interest-earning assets increased \$134.8 million, or 12.2%, in the second quarter of 2011 compared to the second quarter of 2010. The increase primarily relates to an increase of \$58.5 million in average interest-bearing due from banks, \$47.1 million in average loans (mainly due to the Acquisition) and an increase of \$29.3 million of average investment securities.

Market interest rates are, in part, based on the target Federal funds interest rate (the interest rate banks charge each other for short-term borrowings) implemented by the Federal Reserve Open Market Committee. In December of 2008, the target interest rate was brought to a historic low with a range of 0% to 0.25% where it remains as of June 30, 2011.

The average yield on interest-earning assets increased twenty-four basis points in the second quarter of 2011 compared to the second quarter of 2010. The yield on the loan portfolio, which comprised 79.1% and 84.5% of average interest-earning assets in the quarters ended June 30, 2011 and 2010, respectively, increased eighty-one basis points from the second quarter of 2010, primarily reflecting the effect of early payoffs on three PCI loans discussed above (forty-nine basis points), as well as the accretion on the acquired non-PCI loans (thirty-six basis points). The decrease in yields on investment securities is mainly due to lower yields on recently purchased securities in this low interest rate environment and acceleration of the amortization of premiums on U.S. Government agency securities. In addition, we have experienced a shift in the relative composition of interest-earnings assets from higher-yielding loans to lower-yielding liquid assets.

The average balance of interest-bearing liabilities increased \$46.0 million, or 5.8%, in the second quarter of 2011 compared to the same period a year ago, primarily due to \$50.3 million of average interest-bearing deposit accounts related to the Acquisition. The increase in average deposits reflects increases of \$30.8 million in interest-bearing transaction accounts, \$18.4 million in savings accounts and \$8.4 million in money market accounts, partially offset by a decrease of \$11.6 million in time deposits (including CDARS®). The mix of deposits reflects a shift towards demand accounts from money market and time accounts.

The rate on interest-bearing liabilities decreased thirty-four basis points in the second quarter of 2011 compared to the same quarter a year ago, primarily due to lower offered deposit rates. The rates on CDARS® time deposits, other time deposits, money market accounts, and savings accounts decreased sixty-two basis points, forty-two basis points, forty-one basis points and seven basis points, respectively, compared to the same quarter a year ago as offering rates were lowered and time deposits repriced downward.

Second Quarter of 2011 Compared to First Quarter of 2011

The tax equivalent net interest margin increased seven basis points from the prior quarter. The increase in the net interest margin primarily reflects higher yields on loans, partially offset by a higher level of liquidity and a reduction

in the yields on investment securities. The net interest spread increased eight basis points compared to the last quarter for the same reasons.

The early payoffs on three PCI loans (discussed above) favorably impacted our net interest margin by thirty-nine basis points in the second quarter of 2011. Accretion on the acquired non-PCI loans contributed twenty-eight basis points and forty-five basis points to the net interest margin in the second and first quarter of 2011, respectively.

Table of Contents

Total average interest-earning assets increased \$53.0 million, or 4.5%, in the second quarter of 2011 compared to the prior quarter, reflecting increases of \$27.6 million in average interest-bearing due from banks and \$25.5 in average investment securities.

The average yield on interest-earning assets increased three basis points in the second quarter of 2011 compared to the prior quarter. The loan portfolio comprised 79.1% and 82.7% of average interest-earning assets in the quarters ended June 30, 2011 and March 31, 2011, respectively. The yields on loans increased thirty-two basis points from the prior quarter, primarily reflecting the effect of early payoffs on three PCI loans discussed above (forty-nine basis points), partially offset by the impact of a lower level of accretion on the acquired non-PCI loans (thirty-six basis points in the second quarter of 2011 compared to fifty-four basis points in the first quarter of 2011). The decrease in yields on investment securities is mainly due to lower yields on recently purchased securities in this low interest rate environment and acceleration of the amortization of premiums on U.S. Government agency securities. The average yield on interest-earning assets was also negatively impacted by the higher level of liquidity, as discussed above.

The average balance of interest-bearing liabilities increased \$3.5 million, or 0.4%, in the second quarter of 2011 compared to the prior quarter. The increase in interest-bearing liabilities primarily reflects increases of \$12.5 million in interest-bearing transaction accounts, \$12.4 million in money market accounts and \$6.8 million in savings accounts, partially offset by a decrease of \$24.2 million in time deposits (including CDARS®). FHLB borrowings decreased by \$3.9 million due to the maturity of five short-term FHLB fixed-rate advances that we acquired from the former Charter Oak Bank.

The shift in the mix of deposits reflects a slight decrease in the average balance of money market accounts to 35.1% of average deposits, down from 35.8% in the previous quarter. The average balance of demand accounts increased to 30.8% of average deposits, up from 27.8% of average deposits in the previous quarter. The average balance of NOW accounts increased to 11.3% of average deposits, up from 10.8% in the previous quarter.

The overall rate on interest-bearing liabilities decreased five basis points in the second quarter of 2011 compared to the prior quarter, primarily due to lower deposit rates on CDARS® time deposits and other time deposits. This decrease is partially offset by higher rates on FHLB fixed-rate advances as we paid-off five short-term FHLB fixed-rate advances in the first quarter of 2011 that we acquired in the Acquisition at lower interest rates, as well as a slightly higher rate on the subordinated debenture.

Six Months 2011 Compared to Six Months 2010

The tax-equivalent net interest margin increased to 5.48% in the first six months of 2011, up forty-eight basis points from the first six months of 2010. The increase in the net interest margin primarily reflects the FDIC-assisted acquisition of the former Charter Oak Bank, as well as a reduction in the cost of deposits, partially offset by a reduction in the yields on investment securities and a higher level of liquidity.

Accretion on the acquired non-PCI loans contributed thirty-seven basis points to the year-to-date net interest margin. The early payoffs on three PCI loans (discussed above) favorably impacted our net interest margin by twenty basis points in the first half of 2011.

Average interest-earning assets increased \$124.6 million, or 11.5%, in the first half of 2011 compared to the first half of 2010. The increase primarily relates to an increase of \$54.0 million in average loans (mainly due to the Acquisition), \$47.1 million in average interest-bearing due from banks and an increase of \$23.4 million of average investment securities.

## Edgar Filing: Bank of Marin Bancorp - Form 10-Q

The average yield on interest-earning assets increased twenty-two basis points in the first six months of 2011 compared to the same period a year ago, primarily due to a higher yield on loans, partially offset by the higher level of liquidity discussed previously and a reduction in the yields on investment securities.

The yield on the loan portfolio, which comprised 80.9% and 85.1% of average earning assets in the six months ended June 30, 2011 and 2010, respectively, increased sixty-eight basis points in the first half of 2011 compared to the first half of 2010, primarily reflecting the accretion on the acquired non-PCI loans (forty-five basis points), as well as the early payoffs on three PCI loans discussed above (twenty-five basis points).

Table of Contents

The decrease in yields on investment securities is mainly due to lower yields on recently purchased securities in this low interest rate environment and acceleration of the amortization of premiums on U.S. Government agency and Corporate CMO securities. The yield on Corporate CMO's and other securities decreased 112 basis points in the first half of 2011 from the same period a year ago, the yield on U.S. Government agency securities decreased eighty-two basis points, and the yield on obligations of state and political subdivisions decreased forty-six basis points.

The average balance of interest-bearing liabilities increased \$51.4 million, or 6.5%, in the first half of 2011 compared to the first half of 2010. The increase in interest-bearing liabilities primarily reflects increases of \$38.8 million in other time accounts, \$27.6 million in interest-bearing transaction accounts, \$16.2 million in savings accounts, partially offset by decreases of \$25.3 million in CDARS® accounts and \$7.9 million in money market accounts. The mix of deposits reflects a shift towards demand accounts from money market and time accounts.

Average FHLB borrowings increased by \$2.0 million as we acquired five short-term FHLB fixed-rate advances in the Acquisition. These advances matured and were paid off in the first quarter of 2011.

The overall rate on interest-bearing liabilities decreased thirty-four basis points in the six months ended June 30, 2011 compared to the six months ended June 30, 2010, primarily due to lower deposit rates on CDARS® time deposits, other time deposits and money market accounts. This decrease is partially offset by a slightly higher rate on the subordinated debenture.

Provision for Loan Losses

Management assesses the adequacy of the allowance for loan losses on a quarterly basis based on several factors including growth of the loan portfolio, analysis of probable losses in the portfolio, recent loss experience and the current economic climate. Actual losses on loans are charged against the allowance, and the allowance is increased through the provision for loan losses charged to expense. For further discussion, see the section captioned "Critical Accounting Policies."

Our provision for loan losses totaled \$3.0 million in the second quarter of 2011 and compared to \$1.1 million in the first quarter of 2011 and \$1.4 million in the second quarter of 2010, and totaled \$4.1 million and \$2.9 million for the first half of 2011 and 2010, respectively. The increase to the provision for loan losses primarily reflects the write-off of two unsecured commercial loans, as well as declines in the values of real estate collateral securing one problem commercial loan and one problem construction loan. A higher level of specific reserves on impaired loans also contributed to the increase in the provision for loan losses.

The allowance for loan losses as a percentage of loans was 1.41% at June 30, 2011 compared to 1.34% at March 31, 2011 and 1.32% at December 31, 2010. The increases in the allowance for loan losses as a percentage of loans from both a quarter ago and last year-end reflect a higher level of specific reserves on impaired loans, including purchased credit-impaired loans. The ratio of allowance for loan losses to non-accrual loans increased from 95.9% at December 31, 2010 to 160.1% at June 30, 2011, primarily due to a lower level of non-accrual loans, as well as a higher level of specific reserves on impaired loans. Impaired loan balances totaled \$10.2 million, \$10.6 million, and \$14.1 million at June 30, 2011, March 31, 2011 and December 31, 2010, respectively, with a specific valuation allowance of \$2.6 million, \$1.9 million and \$1.1 million, respectively.

Net charge-offs in the second quarter of 2011 totaled \$2.1 million compared to \$373 thousand in the first quarter of 2011, and \$225 thousand in the second quarter of 2010. Net charge-offs totaled \$2.5 million and \$1.7 million in the first six months of 2011 and 2010, respectively. The majority of the increases in the three-month and six-month periods ended June 30, 2011 compared to the prior periods relate to charge-offs of the commercial loans discussed above. The percentage of net charge-offs to average loans was 0.22% in the second quarter of 2011, compared to

0.04% in the first quarter of 2011 and 0.02% in the second quarter of 2010, and totaled 0.26% and 0.19% in the first halves of 2011 and 2010, respectively.

Table of Contents

Non-interest Income

The table below details the components of non-interest income.

(dollars in thousands; unaudited)	Three months ended			June 30, 2011 compared to March 31, 2011			June 30, 2011 compared to June 30, 2010

Other income	220	194	346	26	13.4 %	(126 )	(36.4 %)		
Total other non-interest income	644	722	674	(78 )	(10.8 %)	(30 )	(4.5 %)		
Total non-interest income	\$1,581	\$1,599	\$1,505	\$(18 )	(1.1 %)	\$76	5.0 %		

(dollars in thousands; unaudited)	Six months ended		Amount	Percent
	June 30, 2011	June 30, 2010		
Service charges on deposit accounts	\$ 911	\$ 909	\$ 2	0.2 %
Wealth Management and Trust Services	903	763	140	18.3 %
Other non-interest				

income					
Earnings on Bank-owned life insurance	362	343	19	5.5	%
Customer banking fees and other charges	443	282	161	57.1	%
Pre-tax bargain purchase gain	147	-	NM	NM	
Other income	414	557	(143 )	(25.7	%)
Total other non-interest income	1,366	1,182	184	15.6	%
Total non-interest income	\$ 3,180	\$ 2,854	\$ 326	11.4	%

Non-interest income in the second quarter of 2011 totaled \$1.6 million and remained relatively unchanged from the same period last year and from the prior quarter. Non-interest income for the first half of 2011 totaled \$3.2 million, an increase of \$326 thousand, or 11% from the first half of 2010. The increase relates to the pre-tax bargain purchase gain of \$147 thousand from the Acquisition and higher Wealth Management and Trust Services (“WMTS”) fees.

The increase in service charges on deposit accounts when compared to the prior quarter is due to increase in nonsufficient fund fees related to a higher volume of activity. Service charges remain relatively unchanged when compared to the same quarter a year ago.

The increase in WMTS income, when compared to last quarter, is due to higher estate settlement fees and higher rates charged on corporate trust-related services. When compared to the same quarter a year ago, WMTS income increased due to an increase in assets under management, as well as higher estate settlement and trust-related service fees. As of June 30, 2011, March 31, 2011 and June 30, 2010, assets under management totaled approximately \$264.9 million, \$263.3 million and \$230.2 million, respectively.

The increases in bank-owned life insurance (“BOLI”) income in the three-month and six-month periods ended June 30, 2011 compared to the prior periods are due to additional income earned on \$2.5 million in new policies purchased in late March 2011.

The increases in customer banking fees and other charges in the three-month and six-month periods ended June 30, 2011 compared to the prior periods, are primarily due to higher Visa® debit card fees, attributable to a higher volume of Visa® debit card usage. In June 2011, the Federal Reserve finalized a new regulation to restrict interchange fees charged for debit card transactions by banks with more than \$10 billion in assets. Although we are exempt under the new rule, market pricing of the interchange fees may drive these revenues down. The effect on market pricing, if any, may take time to realize. Therefore, we cannot quantify the ultimate impact of this rule on such interchange fees.

Table of Contents

## Non-interest Expense

The table below details the components of non-interest expense.

(dollars in thousands; unaudited)	Three months ended			June 30, 2011 compared to March 31, 2011			June 30, 2011 compared to June 30 2010		
	June 30, 2011	March 31, 2011	June 30, 2010	Amount	Percent	Amount	Percent	Amount	Percent

Other non-interest expense					
Advertising	186	184	2	1.1	%
Director expense	235	240	(5 )	(2.1)	%
Other expense	2,371	2,158	213	9.9	%
Total other non-interest expense	2,792	2,582	210	8.1	%
Total non-interest expense	\$ 19,128	\$ 16,813	\$ 2,315	13.8	%

The increase in salaries and benefit expenses when compared to the same quarter last year and the previous quarter primarily reflected higher personnel costs associated with franchise expansion. The number of full-time equivalent employees (“FTE”) totaled 236, 229 and 198 at June 30, 2011, March 31, 2011 and June 30, 2010, respectively.

The increases in occupancy and equipment expenses in the three-month and six-month periods ended June 30, 2011 compared to the prior periods are primarily due to higher rent expenses associated with our franchise expansion to Napa and Sonoma counties.

The decrease in depreciation and amortization expenses compared to the same quarter last year is mainly due to accelerated amortization of leasehold improvements in the second quarter of 2010 on our Corte Madera branch, which was relocated in July 2010. Depreciation and amortization expenses remained relatively consistent compared to the prior quarter. The decrease in depreciation and amortization expenses in the first six months of 2011, compared to the first six months of 2010, is attributable to certain assets, including leasehold improvements on our old Corte Madera branch, being fully depreciated as discussed above.

The decreases in FDIC insurance expenses compared to the same quarter a year ago and the prior quarter primarily reflect the revision to the FDIC insurance assessment base. On February 7, 2010, as required by the Dodd-Frank Act, the FDIC approved a rule that changes the FDIC insurance assessment base from adjusted domestic deposits to a bank’s average consolidated total assets minus average tangible equity, defined as Tier 1 capital. While the new rule expands the assessment base, it lowers assessment rates to between 2.5 and 9 basis points on the broader base for banks in the lowest risk category. The change was effective the beginning of the second quarter of 2011 and will be paid at the end of September 2011 upon receipt of the FDIC assessment invoice. Since we have a solid core deposit base and do not rely heavily on borrowings and brokered deposits, the benefit of the lower assessment rate significantly outweighed the effect of a wider assessment base.

Table of Contents

The decrease in FDIC insurance from the same quarter last year also reflects the expiration of the FDIC Transaction Account Guarantee Program on December 31, 2010, which provided unlimited insurance coverage on non-interest-bearing transaction accounts. We paid a 15 basis point surcharge per \$100 covered balances in excess of \$250 thousand from January to December 2010. When comparing the first six months of 2011 to the first six months of 2010, the decrease in FDIC insurance is primarily due to the revision to the FDIC insurance assessment base as mentioned above.

The increase in data processing expenses from the prior quarter primarily reflect one-time system conversion and integration costs related to the Acquisition. Besides the one-time system conversion and integration costs incurred in the second quarter of 2011, the increases in data processing costs from the quarter and six-month period a year ago also reflects a higher volume of data processing associated with franchise expansion.

The increases in professional service expenses in the second quarter and first six-months of 2011 compared to the same periods a year ago are primarily attributable to additional expenses associated with the Acquisition. Additionally, we incurred more legal fees related to loan workouts in the second quarter and the first six months of 2011 than in the comparable periods a year ago.

The fluctuation in advertising expenses from the prior quarter and from the same quarter a year ago is primarily due to the timing of our various bank advertising programs.

Director fees remained relatively unchanged compared to the same quarter last year and the prior quarter.

Other expenses increased from the prior quarter and the same quarter last year as we wrote off certain facility and network fixed assets that we purchased from the FDIC related to the Acquisition settlement in the second quarter of 2011. When comparing the first six months of 2011 to the first six months of 2010, the increase in other expenses is also attributable to higher miscellaneous expenses.

Provision for Income Taxes

We reported a provision for income taxes of \$2.1 million, \$2.8 million, and \$2.0 million for the quarters ended June 30, 2011, March 31, 2011, and June 30, 2010, respectively. The effective tax rates were 38.4%, 38.2% and 37.3%, respectively, for those same periods. The provision for income taxes was \$4.9 million and \$3.7 million for the first six months ended June 30, 2011 and 2010, respectively. These provisions reflect accruals for taxes at the applicable rates for federal income tax and California franchise tax based upon reported pre-tax income, adjusted for the effect of all permanent differences between income for tax and financial reporting purposes (such as earnings on qualified municipal securities, Bank-owned life insurance policies and certain federal tax-exempt loans). Therefore, there are normal fluctuations in the effective rate from period to period based on the relationship of net permanent differences to income before tax. We have not been subject to an alternative minimum tax during these periods.

Bancorp and the Bank have entered into a tax allocation agreement which provides that income taxes shall be allocated between the parties on a separate entity basis. The intent of this agreement is that each member of the consolidated group will incur no greater tax liability than it would have incurred on a stand-alone basis.

Table of Contents

## FINANCIAL CONDITION

## Summary

During the first six months of 2011, total assets increased \$129.2 million, or 11% to \$1.3 billion from December 31, 2010. This increase in assets primarily reflects an increase in investment securities of \$56.3 million, an increase in net loans of \$43.7 million, and an increase in cash and cash equivalents of \$24.9 million. Total loans reached \$986.6 million at June 30, 2011, representing an increase of \$45.2 million, or 4.8%, over December 31, 2010. This growth reflected the loans purchased as part of the Acquisition, partially offset by the successful resolution through payoffs of several high credit risk loans, as well as the prepayment of certain large credits in a low interest rate environment. Further, we have experienced a modest level of loan originations this year, in line with reduced market demand and strong competition for quality loans. The following table presents the composition of our loans outstanding by type:

## Loans Outstanding

(Dollars in thousands; June 30, 2011 unaudited)	June 30, 2011	December 31, 2010
Commercial loans	\$177,255	\$ 153,836
Real estate		
Commercial owner-occupied	164,990	142,590
Commercial investor	390,549	383,553
Construction	66,504	77,619
Home equity	95,212	86,932
Other residential <sup>1</sup>	66,886	69,991
Installment and other consumer loans	25,238	26,879
Total loans	986,634	941,400
Allowance for loan losses	(13,920 )	(12,392 )
Total net loans	\$972,714	\$ 929,008

<sup>1</sup>Our residential loan portfolio includes no sub-prime loans, nor is it our normal practice to underwrite loans commonly referred to as "Alt-A mortgages", the characteristics of which are loans lacking full documentation, borrowers having low FICO scores or collateral compositions reflecting high loan-to-value ratios. However, substantially all of our residential loans are indexed to Treasury Constant Maturity Rates and have provisions to reset five years after their origination dates.

Impaired and non-performing loans exclude purchased credit-impaired loans, unless credit deterioration has occurred post-acquisition. Purchased credit impaired loans total \$7.9 million at June 30, 2011, including loans totaling \$701 thousand that have experienced post-acquisition credit deterioration. As of June 30, 2011, there were fifty impaired loans totaling \$10.2 million, compared to forty impaired loans totaling \$14.1 million at December 31, 2010, which included troubled-debt restructured loans totaling \$1.6 million and \$1.2 million at June 30, 2011 and December 31, 2010, respectively. Impaired loans included thirty-eight non-accrual loans totaling \$8.7 million at June 30, 2011, compared to twenty-eight non-accrual loans totaling \$12.9 million at December 31, 2010. Accruing loans past due 30-89 days increased from \$352 thousand at December 31, 2010 and \$21.9 million at March 31, 2011 to \$763 thousand at June 30, 2011. The decrease in past due loans from last quarter-end relates to \$21.1 million of past due loans that have become current or paid off.

Our investment securities portfolio increased \$56.3 million in the first six months of 2011, primarily due to purchases of \$76.5 million of securities (primarily U.S. agency securities), partially offset by \$20.2 million of pay-downs and maturities of available-for-sale securities. Investment securities in our portfolio that may be backed by mortgages having sub-prime or Alt-A features (certain corporate CMOs) represent 2.9% of our total investment portfolio.

At June 30, 2011, other assets included BOLI of \$21.2 million, compared to \$18.3 million at December 31, 2010. Other assets also include net deferred tax assets of \$5.9 million and \$6.6 million at June 30, 2011 and December 31, 2010, respectively. These deferred tax assets consist primarily of tax benefits expected to be realized in future periods related to temporary differences for the allowance for loan losses, depreciation, leases and deferred compensation. Management believes these assets to be realizable due to our consistent record of earnings and the expectation that earnings will continue at a level adequate to realize such benefits.

During the first six months of 2011, total liabilities increased \$122.1 million to \$1.2 billion. The increase in total liabilities was primarily due to an increase in deposits of \$123.2 million, primarily reflecting the impact of the Acquisition, as well as growth in our core markets. The higher level of deposits reflects growth in most deposit categories, except for CDARS® time deposits, which decreased \$35.6 million. As the FDIC permanently increased the deposit insurance coverage limit and the public concern for safety and soundness of banks eased, it appears that the CDARS® time deposits are a less attractive deposit option demand deposits comprised 30.4% of total deposits at June 30, 2011, compared to 27.8% at December 31, 2010. In addition, Management has strategically allowed the \$9.0 million internet deposits assumed as part of the Acquisition to run off.

Table of Contents

Stockholders' equity increased \$7.1 million to \$129.1 million during the first six months of 2011. The increase in stockholders' equity primarily reflects the net income accumulated during the period, partially offset by cash dividends to shareholders.

Capital Adequacy

Bancorp and the Bank are subject to various regulatory capital requirements administered by the federal banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory and possibly additional discretionary actions by regulators that, if undertaken, could have a material effect on our consolidated financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, Bancorp and the Bank must meet specific capital guidelines that involve quantitative measures of Bancorp's and the Bank's assets, liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. The capital amounts and the Bank's prompt corrective action classification are also subject to qualitative judgments by the regulators about components, risk weightings and other factors. Prompt corrective action provisions are not applicable to bank holding companies such as Bancorp.

Quantitative measures established by regulation to ensure capital adequacy require Bancorp and the Bank to maintain minimum amounts and ratios (set forth in the table below) of total and Tier 1 capital to risk-weighted assets and of Tier 1 capital to quarterly average assets.

Capital ratios are reviewed by Management on a regular basis to ensure that capital exceeds the prescribed regulatory minimums and is adequate to meet our anticipated future needs. For all periods presented, the Bank's ratios exceed the regulatory definition of "well capitalized" under the regulatory framework for prompt corrective action and Bancorp's ratios exceed the required minimum ratios for capital adequacy purposes.

Table of Contents

The Bank's and Bancorp's capital adequacy ratios as of June 30, 2011 and December 31, 2010 are presented in the following table.

## Capital Ratios for Bancorp

(in thousands; June 30, 2011 unaudited)

As of June 30, 2011	Actual Ratio			Ratio for Capital Adequacy Purposes	
	Amount	Ratio		Amount	Ratio
Total Capital (to risk-weighted assets)	\$ 145,816	13.01	%	≥\$ 89,668	≥ 8.00%
Tier 1 Capital (to risk-weighted assets)	\$ 126,800	11.31	%	≥\$44,834	≥ 4.00%
Tier 1 Capital (to average assets)	\$ 126,800	9.58	%	≥\$52,961	≥ 4.00%

As of December 31, 2010

Total Capital (to risk-weighted assets)	\$ 138,545	13.34	%	≥\$83,068	≥ 8.00%

## Liquidity

The goal of liquidity management is to provide adequate funds to meet both loan demand and unexpected deposit withdrawals. We accomplish this goal by maintaining an appropriate level of liquid assets, and formal lines of credit with the FHLB, FRB and correspondent banks that enable us to borrow funds as needed. Our Asset/Liability Management Committee ("ALCO"), which is comprised of certain directors of the Bank, is responsible for establishing and monitoring our liquidity targets and strategies.

Management regularly adjusts our investments in liquid assets based upon our assessment of expected loan demand, expected deposit flows, yields available on interest-earning securities and the objectives of our asset/liability management program. ALCO has also developed a contingency plan should liquidity drop unexpectedly below internal requirements.

We obtain funds from the repayment and maturity of loans as well as deposit inflows, investment security maturities and pay-downs, Federal funds purchases, FHLB advances, and other borrowings. Our primary uses of funds are the origination of loans, the purchase of investment securities, withdrawals of deposits, maturity of certificate of deposits, repayment of borrowings and dividends to common stockholders.

We must retain and attract new deposits, which depends upon the variety and effectiveness of our customer account products, service and convenience, and rates paid to customers, as well as our financial strength. Any long-term decline in retail deposit funding would adversely impact our liquidity. Management does not anticipate significant reliance on Federal funds purchased and FHLB advances in the near future, as our core deposit inflow has provided adequate liquidity to fund our operations. If we were to rely on Federal Funds purchased or FHLB advances in the future, we expect to have the ability to post adequate collateral for such funding requirements.

As presented in the accompanying unaudited consolidated statements of cash flows, the sources of liquidity vary between periods. Our cash and cash equivalents at June 30, 2011 totaled \$110.2 million, an increase of \$25.0 million over December 31, 2010. The primary sources of funds during the first six months of 2011 included \$44.0 million of cash received from the Acquisition, \$29.1 million increase in net deposits, \$20.2 million in pay-downs and maturities of investment securities \$16.2 million in loan principal collections (net of origination), and \$11.1 million net cash provided by operating activities. The primary uses of funds were a \$76.5 million in investment securities purchases, and \$13.5 million in repayment of FHLB borrowings.

Table of Contents

At June 30, 2011, our cash and cash equivalents and unpledged available-for-sale securities with estimated maturities within one year totaled \$116.3 million. The remainder of the unpledged available for sale securities portfolio of \$141.2 million provides additional liquidity. Taken together, these liquid assets equaled 19.3% of our assets at June 30, 2011, compared to 15.1% at December 31, 2010. The increased liquidity at June 30, 2011 was primarily due to cash received from the Acquisition, as well as the overall growth in net deposits.

We anticipate that cash and cash equivalents on hand and other sources of funds will provide adequate liquidity for our operating, investing and financing needs and our regulatory liquidity requirements for the foreseeable future. Management monitors our liquidity position daily, balancing loan funding/payments with changes in deposit activity and overnight investments. Our emphasis on local deposits combined with our 9.6% equity to assets ratio, provides a very stable funding base. In addition to cash and cash equivalents, we have substantial additional borrowing capacity including unsecured lines of credit totaling \$77.0 million with correspondent banks. Further, we have pledged a certain residential loan portfolio that increased our borrowing capacity with the FRB, which totaled \$43.7 million at June 30, 2011. As of June 30, 2011, there is no debt outstanding to correspondent banks or the FRB. We are also a member of the FHLB and have a line of credit (secured under terms of a blanket collateral agreement by a pledge of essentially all of our financial assets) in the amount of \$243.5 million, of which \$188.5 million was available at June 30, 2011. Borrowings under the line are limited to eligible collateral. The interest rates on overnight borrowings with both correspondent banks and the FHLB are determined daily and generally approximate the Federal Funds target rate.

Undisbursed loan commitments, which are not reflected on the consolidated statements of condition, totaled \$268.4 million at June 30, 2011 at rates ranging from 1.91% to 18.00%. This amount included \$146.9 million under commercial lines of credit (these commitments are contingent upon customers maintaining specific credit standards), \$78.4 million under revolving home equity lines, \$17.9 million under undisbursed construction loans, \$16.0 million under standby letters of credit, and a remaining \$9.2 million under personal and other lines of credit. These commitments, to the extent used, are expected to be funded primarily through the repayment of existing loans, deposit growth and existing balance sheet liquidity. Over the next twelve months \$151.4 million of time deposits will mature. We expect these funds to be replaced with new time deposits.

Since Bancorp is a holding company and does not conduct regular banking operations, its primary sources of liquidity are dividends from the Bank. Under the California Financial Code, payment of a dividend from the Bank to Bancorp without advance regulatory approval is restricted to the lesser of the Bank's retained earnings or the amount of the Bank's undistributed net profits from the previous three fiscal years. As the Bank made a \$28 million distribution to Bancorp in March 2009 in connection with Bancorp's repurchase of preferred stock, distributions from the Bank to Bancorp will be subject to advance regulatory approval for three years beginning in 2010. The primary uses of funds for Bancorp are stockholder dividends and ordinary operating expenses. Management anticipates that the current cash level at Bancorp will be sufficient to meet its funding requirements for the next twelve months, after which we will apply for regulatory approval for a dividend from the Bank to Bancorp.

ITEM 3. Quantitative and Qualitative Disclosure about Market Risk

Our most significant form of market risk is interest rate risk. The risk is inherent in our deposit and lending activities. Management, together with ALCO, has sought to manage rate sensitivity and maturities of assets and liabilities to minimize the exposure of our earnings and capital to changes in interest rates. Additionally, interest rate risk exposure is managed with the goal of minimizing the impact of interest rate volatility on our net interest margin. Interest rate changes can create fluctuations in the net interest margin due to an imbalance in the timing of repricing or maturity of assets or liabilities. Interest rate risk exposure is managed with the goal of minimizing the impact of interest rate volatility on the net interest margin.

Activities in asset and liability management include, but are not limited to, lending, borrowing, accepting deposits and investing in securities. Interest rate risk is the primary market risk associated with asset and liability management. Sensitivity of net interest income (“NII”) and capital to interest rate changes results from differences in the maturity or repricing of asset and liability portfolios. To mitigate interest rate risk, the structure of the Consolidated Statement of Condition is managed with the objective of correlating the movements of interest rates on loans and investments with those of deposits and borrowings. The asset and liability policy sets limits on the acceptable amount of change to NII and capital in changing interest rate environments. We use simulation models to forecast NII.

Table of Contents

From time to time, we enter into certain interest rate swap contracts designated as fair value hedges to mitigate the changes in the fair value of specified long-term fixed-rate loans and firm commitments to enter into long-term fixed-rate loans caused by changes in interest rates. See Note 11 to the consolidated financial statements in this Form 10-Q.

Exposure to interest rate risk is reviewed at least quarterly by the ALCO and the Board of Directors. They utilize interest rate sensitivity simulation models as a tool for achieving these objectives and for developing ways in which to improve profitability. A simplified statement of condition is prepared on a quarterly basis as a starting point, using as inputs, actual loans, investments, borrowings and deposits. If potential changes to net equity value and net interest income resulting from hypothetical interest changes are not within the limits established by the Board of Directors, Management may adjust the asset and liability mix to bring interest rate risk within approved limits.

Since 2009, there has been no change to the Federal funds target rate, which has been kept at a historic low level of 0-0.25%. The Bank currently has low interest rate risk and is slightly asset sensitive in a rising rate environment. During the first six months of 2011, the Bank's asset sensitivity increased from the rise in liquidity and variable rate loans. That increase in asset sensitivity was partially offset by the increase in investment securities and interest bearing transaction, savings and money market deposit accounts. Due to loans with interest rates on floors, however, we expect a lag in the upward re-pricing of loans when market rates begin to move up. We have mitigated earnings sensitivity to a certain extent through the procurement of fixed-rate borrowings from the FHLB. Also refer to "Market Risk Management" in our 2010 Annual Report on Form 10-K.

ITEM 4. Controls and Procedures

We maintain a system of disclosure controls and procedures that is designed to provide reasonable assurance that information required to be disclosed is accumulated and communicated to management in an appropriate manner to allow timely decisions regarding required disclosure. Management, including the Chief Executive Officer and Chief Financial Officer, or persons performing similar functions, reviewed this system of disclosure controls and procedures and believes that our disclosure controls and procedures (as that term is defined in Rule 13a-15(e) of the Exchange Act) were effective, as of the end of the period covered by this report, in recording, processing, summarizing and reporting information required to be disclosed in reports that we file or submit under the Securities and Exchange Act of 1934, within the time periods specified in the Securities and Exchange Commission's rules and forms. No significant changes were made in our internal controls over financial reporting during the last fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II OTHER INFORMATION

ITEM 1 Legal Proceedings

We may be party to legal actions which arise from time to time as part of the normal course of our business. We believe, after consultation with legal counsel, that we have meritorious defenses in these actions, and that litigation contingency liability, if any, will not have a material adverse effect on our financial position, results of operations, or cash flows.

We are responsible for our proportionate share of certain litigation indemnifications provided to Visa U.S.A. by its member banks in connection with lawsuits related to anti-trust charges and interchange fees. For further details, see Note 13 to the Consolidated Financial Statements in Item 8 of our 2010 Form 10-K.

ITEM 1A Risk Factors

Purchased Loans from the Acquisition May Lose Value if the Estimated Fair Value is Inaccurate

Our determination regarding the fair value of assets purchased in the Acquisition, including loans, could be inaccurate, which could materially and adversely affect our business, financial condition, results of operations and future prospects. Management makes various assumptions and judgments about the collectability of the acquired loans, including the creditworthiness of borrowers and the value of the real estate and other assets serving as collateral for the repayment of secured loans. The timing and amount of future expected cash flows is hence subject to a great degree of uncertainty. Increases in the amount of future losses in response to different economic conditions or adverse developments in the acquired loan portfolio may result in increased credit loss provisions and could have a negative impact on our operating results.

Other than noted above, there have been no material changes from the risk factors previously disclosed in our 2010 Form 10-K. Refer to "Risk Factors" in our 2010 Form 10-K, pages 12 through 20.

ITEM 2 Unregistered Sales of Equity Securities and Use of Proceeds

We did not have any unregistered sales of our equity securities during the three months ended June 30, 2011.

ITEM 3 Defaults Upon Senior Securities

None.

ITEM 4 [Removed and Reserved]

ITEM 5 Other Information

None.
