PART I

ITEM 1. Business

Mylan Inc. along with its subsidiaries (collectively, the Company, Mylan, our or we) is a fully integrated global pharmaceutical company that develops, licenses, manufactures, markets and distributes generic, branded generic and specialty pharmaceuticals. Mylan ranks among the leading generic and specialty pharmaceutical companies in the world and provides products to customers in approximately 150 countries and territories. We maintain one of the industry's broadest and highest quality product portfolios, supported by a robust product pipeline and one of the world's largest vertically integrated active pharmaceutical ingredient (API) operations. Additionally, we operate a specialty business which is focused on respiratory, allergy and psychiatric therapies. Mylan was incorporated in Pennsylvania in 1970.

Overview

Throughout its history, Mylan has been recognized as a leader in the United States (U.S.) generic pharmaceutical market. Since 2007, Mylan has transformed itself into an established worldwide pharmaceutical leader and is currently the third largest generic and specialty pharmaceuticals company in the world, in terms of revenue. This transformation has taken place through organic growth and external expansion. Our leadership position in the U.S. generic pharmaceutical industry is the result of our ability to obtain Abbreviated New Drug Application (ANDA) approvals, as well as our reliable and high quality supply chain. Through the acquisitions of Mylan Laboratories Limited (formerly known as Matrix Laboratories Limited), Merck KGaA's generics and specialty pharmaceutical business (the former Merck Generics business), Bioniche Pharma Holdings Limited (Bioniche Pharma) and, most recently, the respiratory delivery platform as described below, we have created a horizontally and vertically integrated platform with global scale, augmented our diversified product portfolio and further expanded our range of capabilities, all of which we believe position us well for the future.

In September 2010, Mylan completed the acquisition of 100% of the outstanding equity in Bioniche Pharma, a privately held, global injectable pharmaceutical company. Bioniche Pharma manufactures and sells a diverse portfolio of injectable products across several therapeutic areas for the hospital setting. The addition of Bioniche Pharma has strengthened our position in the institutional marketplace, as it augments the portfolio of products we have historically offered to this sector through certain of our North American subsidiaries.

On December 23, 2011, Mylan completed the acquisition of the exclusive worldwide rights to develop, manufacture and commercialize a generic equivalent to GlaxoSmithKline's Advair Diskus and Seretide® Diskus incorporating Pfizer Inc.'s, (Pfizer's) proprietary dry powder inhaler delivery platform (the Respiratory Delivery Platform). The acquisition of the Respiratory Delivery Platform fills an important strategic gap in the Company's product portfolio and will expand the Company's focus on difficult-to-produce, limited competition products, and it will serve as a base for Mylan's respiratory franchise. The Respiratory Delivery Platform and scientific expertise will also be used to develop additional branded specialty products, building upon the capabilities and assets that the Company has in place within the Specialty segment. As part of the agreement, Mylan will fund the remaining development and capital requirements to bring the products to market.

Through Mylan Laboratories Limited, an Indian subsidiary, we manufacture and supply low cost, high quality API for our own products and pipeline, as well as for third parties. Mylan Laboratories Limited is one of the world's largest API manufacturers as measured by the number of drug master files (DMFs) filed with regulatory agencies. Mylan Laboratories Limited is also a leader in supplying API for the manufacturing of antiretroviral (ARV) drugs, which are utilized in the treatment of HIV/AIDS. Additionally, Mylan Laboratories Limited offers a line of finished dosage form (FDF) products in the ARV market and manufactures non-ARV FDF products that are marketed by Mylan. Mylan holds approximately 98% ownership and control in Mylan Laboratories Limited.

Table of Contents

Mylan has a robust worldwide commercial presence in the generic pharmaceutical market, including leadership positions in France and Australia and several other key European and Asia Pacific markets, as well as a leading branded specialty pharmaceutical business focusing on respiratory, allergy and psychiatric products.

Currently, Mylan markets a global portfolio of approximately 1,100 different products covering a vast array of therapeutic categories. We offer an extensive range of dosage forms and delivery systems, including oral solids, topicals, liquids and semi-solids. In addition, we focus on those that are difficult to formulate and manufacture and typically have longer product life cycles than traditional generic pharmaceuticals, including transdermal patches, high potency formulations, injectables, controlled release and respiratory delivery products.

Mylan also has one of the deepest pipelines and largest number of products pending regulatory approval in our history. Increased sales volumes and continued leverage of our vertically integrated platform provides substantial operational efficiencies and economies of scale.

We believe that the breadth and depth of our business provides certain competitive advantages over many of our competitors in major markets in which we operate, including less dependency on any single market or product, and, as a result, we are better able to successfully compete on a global basis.

Our Operations

Mylan has two segments, Generics and Specialty. Our revenues are primarily derived from the sale of generic and branded generic pharmaceuticals, specialty pharmaceuticals and API. Our generic pharmaceutical business is conducted primarily in the U.S. and Canada (collectively, North America); Europe, the Middle East, and Africa (collectively, EMEA); and India, Australia, Japan and New Zealand (collectively, Asia Pacific). Our API business is conducted through Mylan Laboratories Limited, which is included within the Asia Pacific region in our Generics Segment. Our specialty pharmaceutical business is conducted by Dey Pharma, L.P. (Dey). Refer to Note 12 to Consolidated Financial Statements included in Item 8 in this Form 10-K for additional information related to our segments.

Generics Segment

North America

The U.S. generics market is the largest in the world, with generic prescription market revenues of \$47.5 billion for the twelve months ended November 2011. Mylan holds the number two ranking in the U.S. generics prescription market in terms of both revenue and prescriptions dispensed. One in every 11 prescriptions dispensed in the U.S. is a Mylan product. Our sales in the U.S. are derived principally through our wholly-owned subsidiary Mylan Pharmaceuticals Inc. (MPI), our primary U.S. pharmaceutical research, development, manufacturing, marketing and distribution subsidiary, as well as through Mylan Institutional (MI). MI, a business platform created in 2010, that combined the product lines of Mylan Institutional LLC (formerly Bioniche Pharma USA, LLC) and Mylan Institutional Inc. (formerly UDL Laboratories, Inc.), Mylan's unit dose business, both of which are wholly-owned subsidiaries.

MPI's net revenues are derived primarily from the sale of solid oral dosage and transdermal patch products. MI's net revenues are derived from the sale of its unit dose and injectable product offerings. In the U.S., we have one of the largest product portfolios among all generic pharmaceutical companies, consisting of approximately 340 products, of which approximately 305 are in capsule or tablet form in an aggregate of approximately 740 dosage strengths. Included in these totals are approximately 40 extended release products in a total of approximately 105 dosage strengths.

Also included in our U.S. product portfolio are four transdermal patch products in a total of 18 dosage strengths that are developed and manufactured by Mylan Technologies, Inc. (MTI), our wholly-owned

Table of Contents

transdermal technology subsidiary, and marketed and distributed by MPI. MTI's fentanyl transdermal system (fentanyl) was the first AB-rated generic alternative to Duragesic® on the market and was also the first generic class II narcotic transdermal product ever approved. MTI's fentanyl product currently remains the only AB-rated generic alternative approved in all strengths.

MI focuses on providing a differentiated product offering tailored to institutional customers throughout North America, including group purchasing organizations, wholesalers, hospitals, surgical services, home infusion service providers, long-term care facilities, correctional facilities, specialty pharmacies, veterinary clinics and retail outlets. MI re-packages and markets products, either obtained from MPI or purchased from third parties, in unit dose form, and manufactures and sells a diverse portfolio of injectable products across several therapeutic areas, with most of the Company's sales made to customers in the U.S. MI also provides a platform for the commercialization of future biogeneric product offerings. MI has, among other product offerings, a diverse portfolio of approximately 30 injectable products (branded and generic) in a total of approximately 55 dosage strengths, across several therapeutic areas for the hospital setting, including analgesics/anesthetics, anti-infections, cardiology and oncology. In addition to the products we manufacture in the U.S., we also market approximately 50 generic products in a total of approximately 80 dosage strengths under supply and distribution agreements with other pharmaceutical companies.

We believe that the breadth and quality of our product offerings help us to successfully meet our customers' needs and to better compete in the generic industry over the long term. We also believe that the future growth of our U.S. generics business is partially dependent upon continued acceptance of generic products as low cost alternatives to branded pharmaceuticals, a trend which is largely outside of our control. However, we believe that we can maximize the profitability of our generic product opportunities by continuing our proven track record of bringing to market high quality products that are difficult to formulate or manufacture, or for which the API is difficult to obtain. Over the last several years, in addition to fentanyl, we have successfully introduced many generic products with high barriers to entry, which continues to be meaningful contributors to our business several years after their initial launch. Additionally, we expect to achieve growth in our U.S. business by launching new products for which we may attain U.S. Food and Drug Administration (FDA) first-to-file status with Paragraph IV certification. As described further in the Product Development and Government Regulation discussion below, this Paragraph IV certification makes the product approval holder eligible for a period of generic marketing and distribution exclusivity.

Our North America revenues also include those generated by our wholly-owned subsidiary Mylan Pharmaceuticals ULC (MPC), which markets generic pharmaceuticals in Canada, the world's fifth largest generic retail prescription market by value and the fourth largest generic retail prescription market by volume with revenues of \$5.1 billion for the twelve months ended November 2011. MPC offers a portfolio of approximately 115 products in an aggregate of approximately 250 dosage strengths, and currently ranks fifth in terms of market share in the generic retail prescription market in Canada, based on value. As in the U.S., we believe that growth in Canada will be dependent upon acceptance of generic products as low cost alternatives to branded pharmaceuticals. Further, we plan to leverage the strength and reliability of the Mylan brand in the U.S. to foster growth throughout North America.

EMEA

Our generic pharmaceutical sales in EMEA are generated primarily by our wholly owned subsidiaries in Europe, through which we have operations in 21 countries. The types of markets within Europe vary from country to country; however, when combined, the European market is the second largest generic pharmaceutical market in the world. Within Europe, the generic retail prescription market in Germany is the largest, followed by France, the United Kingdom (U.K.), Spain and Italy, respectively. Of the top ten generic retail prescription markets in Europe, we hold leadership positions in several company-branded markets, including the number one market share position in France, the number two market share position in Italy and a top three market share position in Belgium, Portugal and the Netherlands. We also hold a top three market share position in the generic prescription market in the U.K.

Table of Contents

The European generic retail prescription market varies significantly by country in terms of the extent of generic penetration, the key decision maker in terms of drug choice, and other important aspects. Some countries, including the Netherlands, Germany, the U.K. and Poland, are characterized by relatively high generic penetration, ranging between 50% and 72% of total retail prescription market sales in the twelve months ended November 2011, based on volume. Conversely, other major European markets, including France, Italy and Spain, are characterized by much lower generic penetration, ranging between 16% and 32% of total retail prescription sales in the twelve months ended November 2011, based on volume. However, recent actions taken by governments, in particular in these latter countries, to reduce healthcare costs could encourage further use of generic pharmaceutical products. In each of these underpenetrated markets, in addition to growth from new product launches, we expect our future growth to be driven by increased generic utilization.

The manner in which products are marketed also varies by country. In addition to selling pharmaceuticals under their International Nonproprietary Name (INN) (i.e., active ingredient), in certain European countries, there is a market for both branded generic products and company-branded generic products. Branded generic pharmaceutical products are given a unique brand name, as these markets tend to be more responsive to the promotion efforts generally used to promote brand products. Company-branded products generally consist of the name of the active ingredient with a prefix or suffix of the company's name, either in whole or in part.

Some countries, such as France and Italy, permit substitution by pharmacists. In other countries, such as the U.K., most prescriptions are written using the INN, which allows the pharmacist to dispense their preferred generic. However, if the prescription is written for the brand, then the brand must be dispensed.

France

In France, through our subsidiary Mylan S.A.S., we market a retail portfolio of approximately 215 products in an aggregate of approximately 455 dosage strengths. In France, we have the highest market share, based on value, in the company-branded generic retail prescription market, with a share of approximately 28%. Our future growth in the French market is expected to come primarily from new product launches and increased generic penetration.

Italy

In Italy, we market through our subsidiary Mylan S.p.A. a portfolio of approximately 150 products in an aggregate of approximately 285 dosage strengths. In Italy, we have the second highest market share, based on value and volume, in the company-branded generic retail prescription market. We believe that the Italian generic market is underpenetrated, with company-branded retail generics representing approximately 8% of the value of the Italian pharmaceutical retail market. The Italian government has put forth only limited measures aimed at encouraging generic use, and as a result, generic substitution is still in its early stages. Our growth in the Italian generics market will be fueled by increasing generics penetration and new product launches.

Spain

In Spain, we market through our subsidiary Mylan Pharmaceuticals S.L. a portfolio of approximately 100 products in an aggregate of approximately 220 dosage strengths. In Spain, we have the seventh highest market share, based on value, in the company-branded generic retail prescription market. The company-branded generic market made up approximately 12% of the total Spanish retail pharmaceutical market by value for the twelve months ended November 2011. We view further generic penetration of the Spanish market to be a key driver of our growth in that country.

Germany

In Germany, we market through our subsidiary Mylan dura a portfolio of approximately 150 products in an aggregate of approximately 330 dosage strengths. In Germany, we have the sixth highest market share, based on

Table of Contents

value, in the company-branded generic retail prescription market. A tender system has been implemented in Germany, and as a result, health insurers play a major role in this market. Under a tender system, health insurers invite manufacturers to submit bids that establish prices for generic pharmaceuticals. Pricing pressures result from an effort to win the tender. As a result of these tenders, our business in Germany has declined, and future growth in the German marketplace will depend upon our ability to compete based primarily on price.

U.K.

In the U.K., we offer a broad product portfolio of approximately 175 products in an aggregate of approximately 315 dosage strengths. Mylan is ranked third in the U.K. generic prescription market, in terms of value, with an estimated market share of approximately 8%. Mylan is well positioned in the U.K. as a preferred supplier to wholesalers and is also focused on areas such as multiple retail pharmacies and hospitals. The U.K. generic prescription market is highly competitive, and any growth in the market will stem from new product launches, although we expect that the value will continue to be affected by price erosion.

Other EMEA Locations

We also have a notable presence in several other European company-branded generic retail prescription markets, including Portugal, the Netherlands, and Belgium, where we hold the third highest market share in terms of value, and Sweden where we have the fourth highest market share in terms of value. We also operate in several markets in Central and Eastern Europe, including Poland, Hungary, Slovakia, Slovenia and the Czech Republic. Additionally, we have an export business which is focused on Africa and the Middle East.

Our balanced geographical position, our leadership standing in many established and growing markets and our vertically integrated platform will all be keys to our future growth and success in EMEA.

Asia Pacific

We market generic pharmaceuticals in Asia Pacific through subsidiaries in Australia, New Zealand, India, Japan and Taiwan. Additionally, we market API to third parties, as well as supply to other Mylan subsidiaries, through our Indian subsidiary, Mylan Laboratories Limited. We have the highest market share in both the Australia and New Zealand generic pharmaceuticals markets.

Australia

The generic pharmaceutical market in Australia had sales of approximately \$1.8 billion during the twelve months ended August 2011. Through our wholly owned subsidiary Alphapharm, we have the highest market share with an estimated 47% market share by volume in Australia, and we offer a portfolio of approximately 170 products in an aggregate of approximately 440 dosage strengths. The Australian generics market is still underdeveloped, and as a result, the government is increasingly focused on encouraging the use of generics in an effort to reduce costs. Maintaining our position of market leadership as the market undergoes further generic penetration and continued pricing pressure will be the key to our future success in Australia.

New Zealand

In New Zealand, our business operates under the name Mylan New Zealand and is the largest generics company in the country. New Zealand is a government tender market where companies submit offers and if accepted can gain exclusivity of up to three years.

Japan

Mylan Seiyaku, our wholly owned Japanese subsidiary, offers a broad portfolio of more than 380 products in an aggregate of approximately 500 dosage strengths. We also have a manufacturing and packaging facility

Table of Contents

located in Japan, which is key to serving the Japanese market. Japan is the second largest pharmaceutical market in the world, behind the U.S., and the sixth largest generic retail prescription market worldwide, with sales of approximately \$5.2 billion during the twelve months ended November 2011. Currently, the market is largely composed of hospitals and clinics, but pharmacies are expected to play a greater role as generic substitution, aided by recent pro-generics government action, becomes more prevalent. The Japanese government has stated that it intends to grow generic utilization to 30% by the end of March 2013 from approximately 23% currently.

Mylan Laboratories Limited

At Mylan Laboratories Limited, our finished dosage business primarily produces ARV products, which are sold mostly outside of India, and other FDF products, which are sold to third parties by other Mylan operations around the world. Additionally, Mylan Laboratories Limited offers a line of FDF products in the ARV market and manufactures non-ARV FDF products that are marketed by Mylan. Expansion of this portfolio and an increase in product sales within India are both key drivers of future growth.

In addition to the sale of FDF products, Asia Pacific revenues are augmented by API sales. We currently have more than 250 APIs in the market or under development, and we focus our marketing efforts on regulated markets such as the U.S. and the European Union (the EU). We produce API for use in the manufacture of our own pharmaceutical products, as well as for use by third parties, in a wide range of categories, including anti-bacterials, central nervous system agents, anti-histamine/anti-asthmatics, cardiovasculars, anti-virals, anti-diabetics, anti-fungals, proton pump inhibitors and pain management drugs. Mylan Laboratories Limited is also a leading supplier of generic ARV APIs used in the treatment of HIV/AIDS.

Mylan Laboratories Limited has eight API and intermediate manufacturing facilities and two FDF facilities. One of the API and intermediate manufacturing facilities is located in China, with the remainder in India. Seven of the facilities, including one FDF facility, are FDA approved, which makes Mylan Laboratories Limited one of the largest companies in India in terms of FDA-approved API manufacturing capacity.

From an API standpoint, growth is dependent upon us continuing to leverage our research and development capabilities to produce high quality, low cost API, while capitalizing on the greater API volumes afforded through our vertically integrated platform.

Specialty Segment

Our specialty pharmaceutical business is conducted through Dey, which competes primarily in the respiratory, severe allergy and psychiatry markets. Dey's portfolio consists of primarily branded specialty injectable, nebulized and transdermal products for life-threatening conditions. A significant portion of Dey's revenues are derived through the sale of the EpiPen[®] Auto-Injector. In February 2012, the Company announced that it plans to change the name of Dey to Mylan Specialty.

The EpiPen Auto-Injector, which is used in the treatment of severe allergic reactions, is an epinephrine auto-injector that has been sold in the U.S. and internationally since the mid-1980s. Dey has worldwide rights to the epinephrine auto-injector, which is supplied to Dey by a wholly owned subsidiary of Pfizer. Anaphylaxis is a severe allergic reaction that is rapid in onset and may cause death, either through swelling that shuts off airways or through significant drop in blood pressure. In December 2010, the National Institute of Allergy and Infectious Diseases, a division of the National Institutes of Health, introduced the Guidelines for the Diagnosis and Management of Food Allergy in the United States. These guidelines state that epinephrine is the first line treatment for anaphylaxis. The EpiPen Auto-Injector is the number one prescribed epinephrine auto-injector with more than 95% market share in the U.S. and more than 90% market share worldwide in the defined auto-injector market during 2011. The strength of the EpiPen brand name, quality and ease of use of the product and the promotional strength of the Dey U.S. sales force have enabled us to maintain our market share.

Table of Contents

Perforomist® Inhalation Solution, Dey's formoterol fumarate inhalation solution, was launched in October 2007. Perforomist Inhalation Solution is a long-acting beta₂-adrenergic agonist indicated for long-term, twice-daily administration in the maintenance treatment of bronchoconstriction in chronic obstructive pulmonary disorder (COPD) patients, including those with chronic bronchitis and emphysema. Dey has been issued several U.S. and international patents protecting Perforomist Inhalation Solution.

We believe that we can continue to drive the long-term growth of our Specialty Segment by successfully managing our existing product portfolio and bringing to market other product opportunities.

Product Development and Government Regulation

Generics Segment

North America

Prescription pharmaceutical products in the U.S. are generally marketed as either brand or generic drugs. Brand products are marketed under brand names through marketing programs that are designed to generate physician and consumer loyalty. Brand products generally are patent protected, which provides a period of market exclusivity during which time they are sold with little or no competition for the compound, although there typically are other participants in the therapeutic area. Additionally, brand products may benefit from other periods of non-patent market exclusivity. Exclusivity normally provides brand products with the ability to maintain their profitability for relatively long periods of time, and brand products typically continue to play a significant role in the market after the end of patent protection or other market exclusivities due to physician and consumer loyalties.

Generic pharmaceutical products are the chemical and therapeutic equivalents of reference brand drugs. A reference brand drug is an approved drug product listed in the FDA publication entitled *Approved Drug Products with Therapeutic Equivalence Evaluations*, popularly known as the Orange Book . The Drug Price Competition and Patent Term Restoration Act of 1984 (the Hatch-Waxman Act) provides that generic drugs may enter the market after the approval of an ANDA, which requires that bioequivalence to a reference brand product be demonstrated, and the expiration, invalidation or circumvention of any patents on the corresponding reference brand drug, or the end of any other relevant market exclusivity periods related to the reference brand drug. Generic drugs are bioequivalent to their reference brand name counterparts. Accordingly, generic products provide a safe, effective and cost-efficient alternative to users of these reference brand products. Branded generic pharmaceutical products are generic products that are more responsive to the promotion efforts generally used to promote brand products. Growth in the generic pharmaceutical industry has been and will continue to be driven by the increased market acceptance of generic drugs, as well as the number of brand drugs for which patent terms and/or other market exclusivities have expired.

We obtain new generic products primarily through internal product development. Additionally, we license or co-develop products through arrangements with other companies. All applications for FDA approval must contain information relating to product formulation, raw material suppliers, stability, manufacturing processes, packaging, labeling and quality control. Information to support the bioequivalence of generic drug products or the safety and effectiveness of new drug products for their intended use is also required to be submitted. There are generally two types of applications used for obtaining FDA approval of new products:

New Drug Application (NDA) An NDA is filed when approval is sought to market a newly developed branded product and, in certain instances, for a new dosage form, a new delivery system, or a new indication for a previously approved drug.

ANDA An ANDA is filed when approval is sought to market a generic equivalent of a drug product previously approved under an NDA and listed in the FDA's Orange Book or for a new dosage strength or a new delivery system for a drug previously approved under an ANDA.

Table of Contents

The ANDA development process is generally less time-consuming and complex than the NDA development process. It typically does not require new preclinical and clinical studies, because it relies on the studies establishing safety and efficacy conducted for the referenced drug previously approved through the NDA process. The ANDA process, however, does typically require one or more bioequivalence studies to show that the ANDA drug is bioequivalent to the previously approved referenced brand drug. Bioequivalence compares the bioavailability of one drug product with that of the referenced drug product containing the same active ingredient. When established, bioequivalence confirms the absence of a significant difference in the rate and extent to which the active ingredient or active moiety in pharmaceutical equivalents or pharmaceutical alternatives becomes available at the site of drug action when administered at the same molar dose under similar conditions in an appropriately designed study. Bioavailability indicates the rate and extent to which the active ingredient or active moiety is absorbed from a drug product and becomes available at the site of action.

Generic products are generally introduced to the marketplace at the expiration of patent protection for the brand product or at the end of a period of non-patent market exclusivity. However, if an ANDA applicant files an ANDA containing a certification of invalidity, non-infringement or unenforceability related to a patent listed in the Orange Book with respect to a reference drug product, that generic equivalent may be able to be marketed prior to the expiration of patent protection for the brand product. Such patent certification is commonly referred to as a Paragraph IV certification. If the holder of the NDA sues, claiming infringement or invalidation, within 45 days of notification by the applicant, the FDA may not approve the ANDA application until the earlier of the rendering of a court decision favorable to the ANDA applicant or the expiration of 30 months. An ANDA applicant that is first to file a Paragraph IV certification is eligible for a period of generic marketing exclusivity. This exclusivity, which under certain circumstances may be required to be shared with other applicable ANDA sponsors with Paragraph IV certifications, lasts for 180 days, during which the FDA cannot grant final approval to other ANDA sponsors holding applications for a generic equivalent to the same reference drug.

In addition to patent exclusivity, the holder of the NDA for the listed drug may be entitled to a period of non-patent market exclusivity, during which the FDA cannot approve an application for a generic version product. If the reference drug is a new chemical entity, the FDA may not accept an ANDA for a generic product for up to five years following approval of the NDA for the new chemical entity. If it is not a new chemical entity, but the holder of the NDA conducted clinical trials essential to approval of the NDA or a supplement thereto, the FDA may not approve an ANDA for reference NDA product before the expiration of three years. Certain other periods of exclusivity may be available if the referenced drug is indicated for treatment of a rare disease or is studied for pediatric indications.

Supplemental ANDAs are required for approval of various types of changes to an approved application, and these supplements may be under review for six months or more. In addition, certain types of changes may only be approved once new bioequivalence studies are conducted or other requirements are satisfied.

A large number of high-value branded pharmaceutical patent expirations are expected over the next several years. These patent expirations should provide additional generic product opportunities. We intend to concentrate our generic product development activities on branded products with significant sales in specialized or growing markets or in areas that offer significant opportunities and other competitive advantages. In addition, we intend to continue to focus our development efforts on technically difficult-to-formulate products or products that require advanced manufacturing technology.

The Biologic License Application (BLA) regulatory pathway was created to review and approve new applications for drugs that are typically produced in living cells. In 2010, in the context of the adoption of the Patient Protection and Affordable Care Act H.R. 3590 and the Healthcare and Education Reconciliation Act of 2010 H.R. 4872, an abbreviated pathway for the approval of generic versions of BLA approved products in the United States was created. This happened after legislation or regulatory guidance for abbreviated pathways for generic biologics were adopted in the past years in the EU, Japan and Canada.

Table of Contents

In 2010, the FDA held a public hearing for all stakeholders to provide input concerning scientific and technical aspects of the agency's implementation of the statute followed by discussions with industry stakeholders on the introduction of user fees. Mylan is a very active participant in this process.

One requirement for FDA approval of NDAs and ANDAs is that our manufacturing procedures and operations conform to FDA requirements and guidelines, generally referred to as current Good Manufacturing Practices (cGMP). The requirements for FDA approval encompass all aspects of the production process, including validation and recordkeeping, the standards around which are continuously changing and evolving.

Facilities, procedures, operations and/or testing of products are subject to periodic inspection by the FDA, the Drug Enforcement Administration (DEA) and other authorities. In addition, the FDA conducts pre-approval and post-approval reviews and plant inspections to determine whether our systems and processes are in compliance with cGMP and other FDA regulations. Our suppliers are subject to similar regulations and periodic inspections.

In Canada, the registration process for approval of all generic pharmaceuticals has two tracks which proceed in parallel. The first track of the process involves an examination of the proposed generic product by Health Canada to ensure that the quality, safety and efficacy of the proposed generic product meet Canadian standards and bioequivalence, and the second track concerns patent rights of the brand drug owner. Companies may submit an application called an abbreviated new drug submission (ANDS) to Health Canada for sale of the drug in Canada by comparing the drug to another drug marketed in Canada under a Notice of Compliance (NOC) issued to a first person. When Health Canada is satisfied that the generic pharmaceutical product described in the ANDS satisfies the statutory requirements, it issues an NOC for that product for the uses specified in the ANDS, subject to any court order that may be made in the second track of the approval process.

The second track of the approval process is governed by the Patented Medicines NOC Regulations (Regulations). The owner or exclusive licensee of patents relating to the brand drug for which it has an NOC may have established a list of patents administered by Health Canada enumerating all the patents claiming the medicinal ingredient, formulation, dosage form or the use of the medicinal ingredient. It is possible that even though the patent for the API may have expired, the originator may have other patents on the list which relate to new forms of the API, a formulation or additional uses. Most brand name drugs have an associated patent list containing one or more unexpired patents claiming the medicinal ingredient itself or a use of the medicinal ingredient (a claim for the use of the medicinal ingredient for the diagnosis, treatment, mitigation or prevention of a disease, disorder or abnormal physical state or its symptoms). In its ANDS, a generic applicant must make at least one of the statutory allegations with respect to each patent on the patent list, for example, alleging that the patent is invalid or would not be infringed and explaining the basis for that allegation. In conjunction with filing its ANDS, the generic applicant is required to serve on the originator a Notice of Allegation (NOA), which gives a detailed statement of the factual and legal basis for its allegations in the ANDS. The originator may commence a court application within 45 days after it has been served with the NOA, if it takes the position that the allegations are not justified. When the application is filed in court and served on Health Canada, Health Canada may not issue an NOC until the earlier of the determination of the application by the court after a hearing or the expiration of 24 months from the commencement of the application. The period may be shortened or lengthened by the court in certain circumstances. An NOC can be obtained for a generic product only if the generic respondent is successful in dismissing the application under the Regulations in court. The legal costs incurred in connection with the application could be substantial.

Section C.08.004.1 of the Food and Drug Regulations is the so-called data protection provision, and the current version of this section applies in respect of all drugs for which an NOC was issued on or after June 17, 2006. A subsequent applicant for approval to market a drug for which an NOC has already been issued does not need to perform duplicate clinical trials similar to those conducted by the first NOC holder, but is permitted to demonstrate safety and efficacy by submitting data demonstrating that its formulation is bioequivalent to the formulation that was issued for the first NOC. The first party to obtain an NOC for a drug will have an eight-year

Table of Contents

period of exclusivity starting from the date it received its NOC based on those clinical data. A subsequent applicant for approval who seeks to establish safety and efficacy by comparing its product to the product that received the first NOC will not be able to file its own application until six years following the issuance of the first NOC have expired. The Minister of Health will not be permitted to issue an NOC to that applicant until eight years following the issuance of the first NOC have expired this additional two-year period will correspond in most cases to the 24-month automatic stay under the Regulations. If the first person provides the Minister with the description and results of clinical trials relating to the use of the drug in pediatric populations, it will be entitled to an extra six months of data protection. A drug is only entitled to data protection so long as it is being marketed in Canada.

Facilities, procedures, operations and/or testing of products are subject to periodic inspection by Health Canada and the Health Products and Food Branch Inspectorate. In addition, Health Canada conducts pre-approval and post-approval reviews and plant inspections to determine whether our systems are in compliance with the good manufacturing practices in Canada, Drug Establishment Licensing (EL) requirements and other provisions of the Regulations. Competitors are subject to similar regulations and inspections.

The provinces and territories in Canada operate drug benefit programs through which eligible recipients receive drugs through public funding; these drugs are listed on provincial or territorial Drug Benefit Formularies (Formularies). Eligible recipients include seniors, persons on social assistance, low-income earners, and those with certain specified conditions or diseases. Formulary listings are also used by private payors to reimburse generic products. To be listed in a Formulary, drug products must have been issued an NOC and must comply with each jurisdiction's individual review process to be approved through a national common drug review process. The listing recommendation is made by the Canadian Expert Drug Advisory Committee and must be approved by the applicable provincial/territorial health ministry.

The primary regulatory approval for pharmaceutical manufacturers, distributors and importers selling pharmaceuticals to be marketed in Canada is the issuance of an EL. An EL is issued once Health Canada has approved the facility in which the pharmaceuticals are manufactured, distributed or imported. A key requirement for approval of a facility is compliance with the good manufacturing practices in Canada. For pharmaceuticals that are imported, the license for the importing facility must list all foreign sites at which imported pharmaceuticals are manufactured. To be listed, a foreign site must demonstrate compliance with the good manufacturing practices in Canada.

EMEA

The EU presents complex challenges from a regulatory perspective. There is over-arching legislation which is then implemented at a local level by the 27 individual member states, Iceland, Liechtenstein and Norway. Between 1995 and 1998, the legislation was revised in an attempt to simplify and harmonize product registration. This revised legislation introduced the mutual recognition (MR) procedure, whereby after submission and approval by the authorities of the so-called reference member state (RMS), further applications can be submitted into the other chosen member states (known as concerned member states (CMS)). Theoretically, the authorization of the RMS should be mutually recognized by the CMS. More typically, however, a degree of re-evaluation is carried out by the CMS. In November 2005, this legislation was further optimized. In addition to the MR procedure, the decentralized procedure (DCP) was introduced. The DCP is also led by the RMS, but applications are simultaneously submitted to all selected countries. From 2005, the centralized procedure operated by the European Medicines Agency (EMA) became available for generic versions of innovator products approved through the centralized authorization procedure. The centralized procedure results in a single marketing authorization, which, once granted, can be used by the marketing-authorisation holder to file for individual country reimbursement and make the medicine available in all EU countries listed on the application.

Table of Contents

In the EU, as well as many other locations around the world, the manufacture and sale of pharmaceutical products is regulated in a manner substantially similar to that of the U.S. requirements, which generally prohibit the handling, manufacture, marketing and importation of any pharmaceutical product unless it is properly registered in accordance with applicable law. The registration file relating to any particular product must contain medical data related to product efficacy and safety, including results of clinical testing and references to medical publications, as well as detailed information regarding production methods and quality control. Health ministries are authorized to cancel the registration of a product if it is found to be harmful or ineffective or if it is manufactured or marketed other than in accordance with registration conditions.

Pursuant to the MR procedure, a marketing authorization is first sought in one member state from the national regulatory agency (the RMS). The RMS makes its assessment report on the quality, efficacy and safety of the medicinal product available to the other CMSs where marketing authorizations are also sought under the MR procedure.

The DCP is based on the same fundamental idea as the MR procedure. In contrast to the MR procedure, however, the DCP does not require a national marketing authorization to have been granted for the medicinal product. The pharmaceutical company applies for marketing authorization simultaneously in all the member states of the EU in which it wants to market the product. After consultation with the pharmaceutical company, one of the member states concerned in the DCP will become the RMS. The competent agency of the RMS undertakes the scientific evaluation of the medicinal product on behalf of the other CMSs and coordinates the procedure. If all the member states involved (RMS and CMS) agree to grant marketing authorizations, this decision forms the basis for the granting of the national marketing authorizations in the respective member states.

Neither the MR nor DCPs result in automatic approval in all member states. If any member state has objections, particularly in relation to potential serious risk to public health, which cannot be resolved within the procedure scope and timelines, they will be referred to the coordination group for MR and DCPs and reviewed in a 60-day procedure. If this 60-day procedure does not result in a consensus by all member states, the product can be marketed in the countries whose health authorities agree that the product can be licensed. The issue raised will then enter a second referral procedure.

As with the MR procedure, the advantage of the DCP is that the pharmaceutical company receives identical marketing authorizations for its medicinal product in all the member states of the EU in which it wants to market the product. This leads to considerable streamlining of all regulatory activities in regard to the product. Variations, line extensions, renewals, etc. are also handled in a coordinated manner with the RMS leading the activity.

Once a DCP has been completed, the pharmaceutical company can subsequently apply for marketing authorizations for the medicinal product in additional EU member states by means of the MR procedure.

All products, whether centrally authorized or authorized by the MR or DCP, may only be sold in other member states if the product information is in the official language of the state in which the product will be sold, which effectively requires specific packaging and labeling of the product.

Under the national procedure, a company applies for a marketing authorization in one member state. The national procedure can now only be used if the pharmaceutical company does not seek authorization in more than one member state. If it does seek wider marketing authorizations, it must use the MR or DCP.

Before a generic pharmaceutical product can be marketed in the EU, a marketing authorization must be obtained. If a generic pharmaceutical product is shown to be essentially the same as, or bioequivalent to, one that is already on the market and which has been authorized in the EU for a specified number of years, as explained in the section on data exclusivity below, no further preclinical or clinical trials are required for that new generic pharmaceutical product to be authorized. The generic applicant can file an abridged application for marketing authorization, but in order to take advantage of the abridged procedure, the generic manufacturer must demonstrate specific similarities, including bioequivalence, to the already authorized product. Access to clinical

Table of Contents

data of the reference drug is governed by the European laws relating to data exclusivity, which are outlined below. Other products, such as new dosages of established products, must be subjected to further testing, and bridging data in respect of these further tests must be submitted along with the abridged application.

In addition to obtaining approval for each product, in most EU countries the pharmaceutical product manufacturer's facilities must obtain approval from the national supervisory authority. The EU has a code of good manufacturing practice, with which the marketing authorization holder must comply. Regulatory authorities in the EU may conduct inspections of the manufacturing facilities to review procedures, operating systems and personnel qualifications.

In order to control expenditures on pharmaceuticals, most member states in the EU regulate the pricing of products and in some cases limit the range of different forms of drugs available for prescription by national health services. These controls can result in considerable price differences between member states. In addition, in past years, as part of overall programs to reduce healthcare costs, certain European governments have prohibited price increases and have introduced various systems designed to lower prices. Some European governments have also set minimum targets for generics prescribing.

Certain markets in which Mylan does business have recently undergone, some for the first time, or will soon undergo, government-imposed price reductions or similar pricing pressures on pharmaceutical products. In addition, a number of markets in which we operate have implemented or may implement tender systems for generic pharmaceuticals in an effort to lower prices. Such measures are likely to have a negative impact on sales and gross profit in these markets. However, some pro-generic government initiatives in certain markets could help to offset some of this unfavorable effect by potentially increasing generic utilization.

An applicant for a generic marketing authorization currently cannot avail itself of the abridged procedure in the EU by relying on the originator pharmaceutical company's data until expiry of the relevant period of exclusivity given to that data. For products first authorized prior to October 30, 2005, this period is six or ten years (depending on the member state in question) after the grant of the first marketing authorization sought for the relevant product, due to data exclusivity provisions which have been in place. From October 30, 2005, the implementation of a new EU directive (2004/27/EC) harmonized the data exclusivity period for originator pharmaceutical products throughout the EU member states, which were legally obliged to have implemented the directive by October 30, 2005. The new regime for data exclusivity provides for an eight-year data exclusivity period commencing from the grant of first marketing authorization. After the eight-year period has expired, a generic applicant can refer to the data of the originator pharmaceutical company in order to file an abridged application for approval of its generic equivalent product. Yet, conducting the necessary studies and trials for an abridged application, within the data exclusivity period, is not regarded as contrary to patent rights or to supplementary protection certificates for medicinal products. However, the applicant will not be able to launch its product for an additional two years. This ten-year total period may be extended to 11 years if the original marketing authorization holder obtains, within those initial eight years, a further authorization for a new therapeutic use of the product which is shown to be of significant clinical benefit. Further, specific data exclusivity for one year may be obtained for a new indication for a well-established substance, provided that significant pre-clinical or clinical studies were carried out in relation to the new indication. This new regime for data exclusivity applies to products first authorized after October 30, 2005.

Asia Pacific

Australia

The pharmaceutical industry is one of the most highly regulated industries in Australia. The Australian government is heavily involved in the operation of the industry, as it subsidizes purchases of most pharmaceutical products through the Pharmaceutical Benefits Scheme (PBS) that has been in place since 1948. The Australian government agency, the Therapeutic Goods Administration (the TGA), regulates the quality, safety and efficacy of therapeutic goods and is responsible for granting authorization to market pharmaceutical products in Australia.

Table of Contents

The government exerts a significant degree of control over the pharmaceuticals market through the PBS, which is a governmental program for subsidizing the cost of pharmaceuticals to Australian consumers. More than 80% of all prescription medicines sold in Australia are reimbursed by the PBS. The PBS is operated under the Commonwealth of Australia's (Cth) National Health Act 1953. This statute governs matters such as who may sell pharmaceutical products, the prices at which pharmaceutical products may be sold and governmental subsidies. Commencing in 2008, Australia has undergone government-imposed reforms designed to significantly reduce the price the government pays for off patent medicines. In 2010, the government passed an act of parliament to further expand and accelerate the price reductions in the off patent market. This reform imposed further price reductions on off patent medicines impacted by the 2008 reform, an increased price reduction on the launch of the first new product brand and mandated a minimum average price cut on April 1, 2012 for many other off patent medicines not previously covered by the 2008 reform. The ongoing price disclosure system will impose further price reductions based on the weighted average price discount to pharmacists on a rolling basis each year. This has had, and could continue to have, a negative impact on sales and gross profit in this market.

For the first listing of a pharmaceutical product on the PBS, the price is determined through a full health economic analysis submitted to the Pharmaceutical Benefits Advisor Committee (a governmental advisory committee) which then makes a recommendation to the government to consider listing the product on the PBS and then negotiations commence between the Pharmaceutical Benefits Pricing Authority (a governmental agency) and pharmaceutical suppliers to determine the price and any risk sharing arrangements. The Australian government's purchasing power is used to obtain lower prices as a means of controlling the cost of the program. The PBS also stipulates the wholesaler margin for drugs listed on the PBS. Wholesalers therefore have little pricing power over the majority of their product range and as a result are unable to increase profitability by increasing prices.

Australia has a five-year data exclusivity period, whereby any data relating to a pharmaceutical product cannot be referred to in or used in the examination by the TGA of another company's dossier until five years after the original product was approved.

Manufacturers and suppliers of pharmaceutical products are also regulated by the TGA, which administers the Therapeutic Goods Act 1989 (Cth) (the Act). The Act regulates the registration, listing, quality, safety, efficacy, promotion and sale of therapeutic goods, including pharmaceuticals, supplied in Australia. The TGA carries out a range of assessment and monitoring activities to ensure that therapeutic goods available in Australia are of an acceptable standard, with a goal of ensuring that the Australian community has access, within a reasonable time, to therapeutic advances. Australian manufacturers of all medicines must be licensed under Part 3-3 of the Act, and their manufacturing processes must comply with the principles of the good manufacturing practices in Australia. Similar standards and audits apply for both domestic and foreign manufactured products.

All therapeutic goods manufactured for supply in Australia must be listed or registered in the Australian Register of Therapeutic Goods (the ARTG), before they can be promoted or supplied for use and/or sale in Australia. The ARTG is a database kept for the purpose of compiling information in relation to and providing for evaluation of, therapeutic goods for use in humans and lists therapeutic goods which are approved for supply in, or export from, Australia. Whether a product is listed or registered in the ARTG depends largely on the ingredients, the dosage form of the product and the promotional or therapeutic claims made for the product.

Medicines assessed as having a higher level of risk must be registered, while those with a lower level of risk can be listed. The majority of listed medicines are self-selected by consumers and used for self-treatment. In assessing the level of risk, factors such as the strength of a product, side effects, potential harm through prolonged use, toxicity and the seriousness of the medical condition for which the product is intended to be used are taken into account.

Labeling, packaging and advertising of pharmaceutical products are also regulated by the Act and other relevant statutes including fair trading laws and pharmaceutical industry codes.

Table of Contents

Japan

In Japan, we are governed by various laws and regulations, including the Pharmaceutical Affairs Law (Law No. 145, 1960), as amended, and the Products Liability Law (Law No. 85, 1994).

Under the Pharmaceutical Affairs Law, the retailing or supply of a pharmaceutical that a person has manufactured (including manufacturing under license) or imported is defined as marketing, and in order to market pharmaceuticals, one has to obtain a license, which we refer to herein as a Marketing License, from the Minister of Health, Labour and Welfare (the MHLW). The authority to grant the Marketing License is delegated to prefectural governors; therefore, the relevant application must be filed with the relevant prefectural governor. A Marketing License will not be granted if the quality control system for the pharmaceutical for which the Marketing License has been applied or the post-marketing safety management system for the relevant pharmaceutical does not comply with the standards specified by the relevant Ministerial Ordinance made under the Pharmaceutical Affairs Law.

In addition to the Marketing License, a person intending to market a pharmaceutical must, for each product, obtain marketing approval from the MHLW with respect to such marketing, which we refer to herein as Marketing Approval. Marketing Approval is granted subject to examination of the name, ingredients, quantities, structure, administration and dosage, method of use, indications and effects, performance and adverse reactions, and the quality, efficacy and safety of the pharmaceutical. A person intending to obtain Marketing Approval must attach materials, such as data related to the results of clinical trials (including a bioequivalence study, in the case of generic pharmaceuticals) or conditions of usage in foreign countries. Japan provides for market exclusivity through a re-examination system, which prevents the entry of generic pharmaceuticals until the end of the re-examination period, which can be up to eight years, and ten years in the case of drugs used to treat rare diseases (orphan drugs).

The authority to grant Marketing Approval in relation to pharmaceuticals for certain specified purposes (e.g., cold medicines and decongestants) is delegated to the prefectural governors by the MHLW, and applications in relation to such pharmaceuticals must be filed with the governor of the relevant prefecture where the relevant company's head office is located. Applications for pharmaceuticals for which the authority to grant the Marketing Approval remains with the MHLW must be filed with the Pharmaceuticals and Medical Devices Agency. When an application is submitted for a pharmaceutical whose active ingredients, quantities, administration and dosage, method of use, indications and effects are distinctly different from those of pharmaceuticals which have already been approved, the MHLW must seek the opinion of the Pharmaceutical Affairs and Food Sanitation Council.

The Pharmaceutical Affairs Law provides that when (a) the pharmaceutical that is the subject of an application is shown not to result in the indicated effects or performance indicated in the application, (b) the pharmaceutical is found to have no value as a pharmaceutical because it has harmful effects outweighing its indicated effects or performance, or (c) in addition to (a) and (b) above, when the pharmaceutical falls within the category designated by the relevant Ministerial Ordinance as not being appropriate as a pharmaceutical, Marketing Approval shall not be granted.

The MHLW must cancel a Marketing Approval, after hearing the opinion of the Pharmaceutical Affairs and Food Sanitation Council, when the MHLW finds that the relevant pharmaceutical falls under any of (a) through (c) above. In addition, the MHLW can order the amendment of a Marketing Approval when it is necessary to do so from the viewpoint of public health and hygiene. Moreover, the MHLW can order the cancellation or amendment of a Marketing Approval when (1) the necessary materials for re-examination or re-evaluation, which the MHLW has ordered considering the character of pharmaceuticals, have not been submitted, false materials have been submitted or the materials submitted do not comply with the criteria specified by the MHLW, (2) the relevant company's Marketing License has expired or has been canceled (a Marketing License needs to be renewed every five years), (3) the regulations regarding investigations of facilities in relation to

Table of Contents

manufacturing management standards or quality control have been violated, (4) the conditions set in relation to the Marketing Approval have been violated, or (5) the relevant pharmaceutical has not been marketed for three consecutive years without a due reason.

Doctors and pharmacists providing medical services pursuant to state medical insurance are prohibited from using pharmaceuticals other than those specified by the MHLW. The MHLW also specifies the standards of pharmaceutical prices, which we refer to herein as Drug Price Standards. The Drug Price Standards are used as the basis of the calculation of the price paid by medical insurance for pharmaceuticals. The governmental policy relating to medical services and the health insurance system, as well as the Drug Price Standards, is revised every two years.

API

The primary regulatory approval required for API manufacturers selling API for use in FDFs to be marketed in the U.S. is approval of the manufacturing facility in which the API are produced, as well as the manufacturing processes and standards employed in that facility. The regulatory process by which API manufacturers generally register their products for commercial sale in the U.S. and other similarly regulated countries is via the filing of a DMF. DMFs are confidential documents containing information on the manufacturing facility and processes used in the manufacture, characterization, quality control, packaging and storage of an API. The DMF is reviewed for completeness by the FDA, or other similar regulatory agencies in other countries, in conjunction with applications filed by FDF manufacturers, requesting approval to use the given API in the production of their drug products.

Specialty Segment

The process required by the FDA before a pharmaceutical product with active ingredients that have not been previously approved may be marketed in the U.S. generally involves the following:

laboratory and preclinical tests;

submission of an Investigational New Drug (IND) application, which must become effective before clinical studies may begin;

adequate and well-controlled human clinical studies to establish the safety and efficacy of the proposed product for its intended use;

submission of an NDA containing the results of the preclinical tests and clinical studies establishing the safety and efficacy of the proposed product for its intended use, as well as extensive data addressing matters such as manufacturing and quality assurance;

scale-up to commercial manufacturing; and

FDA approval of an NDA.

Preclinical tests include laboratory evaluation of the product and its chemistry, formulation and stability, as well as toxicology and pharmacology studies to help define the pharmacological profile of the drug and assess the potential safety and efficacy of the product. The results of these studies are submitted to the FDA as part of the IND. They must demonstrate that the product delivers sufficient quantities of the drug to the bloodstream or intended site of action to produce the desired therapeutic results, before human clinical trials may begin. These studies must also provide the appropriate supportive safety information necessary for the FDA to determine whether the clinical studies proposed to be conducted under the IND can safely proceed. The IND automatically becomes effective 30 days after receipt by the FDA unless the FDA, during that 30-day period, raises concerns or questions about the conduct of the proposed trials, as outlined in the IND. In such cases, the IND sponsor and the FDA must resolve any outstanding concerns before clinical trials may begin. In addition, an independent institutional review board must review and approve any clinical study prior to initiation.

Table of Contents

Human clinical studies are typically conducted in three sequential phases, which may overlap:

Phase I: The drug is initially introduced into a relatively small number of healthy human subjects or patients and is tested for safety, dosage tolerance, mechanism of action, absorption, metabolism, distribution and excretion.

Phase II: Studies are performed with a limited patient population to identify possible adverse effects and safety risks, to assess the efficacy of the product for specific targeted diseases or conditions, and to determine dosage tolerance and optimal dosage.

Phase III: When Phase II evaluations demonstrate that a dosage range of the product is effective and has an acceptable safety profile, Phase III trials are undertaken to evaluate further dosage and clinical efficacy and to test further for safety in an expanded patient population at geographically dispersed clinical study sites.

The results of the product development, preclinical studies and clinical studies are then submitted to the FDA as part of the NDA. The NDA drug development and approval process could take from three to more than ten years.

Research and Development

Research and development efforts are conducted on a global basis, primarily to enable us to develop, manufacture and market approved pharmaceutical products in accordance with applicable government regulations. We have significantly bolstered our global research and development capabilities over the past several years, including through the 2010 acquisition of Bioniche Pharma, which significantly enhanced our injectables platform and our late 2011 acquisition of the Respiratory Delivery Platform. In the U.S., our largest market, the FDA is the principal regulatory body with respect to pharmaceutical products. Each of our other markets has separate pharmaceutical regulatory bodies, including, but not limited to, the Agency Francaise de Securite Sanitaire des Produits de Sante in France, Health Canada, the Medicines and Healthcare products Regulatory Agency in the U.K., the EMA (a decentralized body of the EU), the Bundesinstitut für Arzneimittel und Medizinprodukte in Germany, the Irish Medicines Board in Ireland, the Agenzia Italiana del Farmaco in Italy, the Agencia Española de Medicamentos y Productos Sanitarios in Spain, the TGA in Australia, the MHLW in Japan, Drug Controller General of India, and the World Health Organization (WHO), the regulatory body of the United Nations.

Our global research and development strategy emphasizes the following areas:

development of both branded and generic finished dose products for the global marketplace, including ARV programs;

development of pharmaceutical products that are technically difficult to formulate or manufacture because of either unusual factors that affect their stability or bioequivalence or unusually stringent regulatory requirements;

development of novel controlled-release technologies and the application of these technologies to reference products;

development of injectable products;

development of unit dose oral inhalation products for nebulization;

development of a dry powder inhaler for the treatment of asthma and COPD;

development of API;

development of drugs that target smaller, specialized or underserved markets;

development of generic drugs that represent first-to-file opportunities in the U.S. market;

Table of Contents

expansion of the existing solid oral dosage product portfolio, including with respect to additional dosage strengths;

completion of additional preclinical and clinical studies for approved NDA products required by the FDA, known as post-approval (Phase IV) commitments; and

conducting life-cycle management studies intended to further define the profile of products subject to pending or approved NDAs.

The success of generic biologics in the marketplace and our ability to be successful in this emerging market will depend on the implementation of balanced scientific standards for approval, while not imposing excessive clinical testing demands for well-established products. Furthermore, an efficient patent resolution mechanism and a well-defined mechanism to grant interchangeability after the establishment of bio-similarity with the reference biological product will be key elements determining our future success in this area.

We have a robust generic pipeline. As of December 31, 2011, we had approximately 1,140 country level product approvals pending. During 2011, we completed more than 740 global country level product submissions, which included 94 in North America, 389 in EMEA and 263 in Asia Pacific. These submissions included those for existing products in new markets as well as products new to the Mylan portfolio.

During the year ended December 31, 2011, we received 819 product approvals globally, including individual country level approvals. Of that total, there were 66 approvals in North America, including 49 in the U.S., 58 in Asia Pacific, 593 country level approvals in EMEA, and 102 country level approvals for ARV products. The 49 approvals in the U.S. consisted of 35 final ANDA approvals and 14 tentative ANDA approvals. The 102 country level ARV approvals consisted of 25 different products in 25 countries, of which 97 were based upon U.S. President's Emergency Plan for AIDS Relief (PEPFAR) and five were received from the WHO.

As of December 31, 2011, we had 172 ANDAs pending FDA approval, representing \$98.4 billion in annual sales for the brand name equivalents of these products for the twelve months ended June 30, 2011. Of those pending product applications, 42 were first-to-file Paragraph IV ANDA patent challenges, representing \$26.8 billion in annual brand sales for the twelve months ended June 30, 2011.

Patents, Trademarks and Licenses

We own or license a number of patents in the U.S. and other countries covering certain products and have also developed brand names and trademarks for other products. Generally, the brand pharmaceutical business relies upon patent protection to ensure market exclusivity for the life of the patent. We consider the overall protection of our patents, trademarks and license rights to be of material value and act to protect these rights from infringement. However, our business is not dependent upon any single patent, trademark or license.

In the branded pharmaceutical industry, the majority of an innovative product's commercial value is usually realized during the period in which the product has market exclusivity. In the U.S. and some other countries, when market exclusivity expires and generic versions of a product are approved and marketed, there can often be very substantial and rapid declines in the branded product's sales. The rate of this decline varies by country and by therapeutic category; however, following patent expiration, branded products often continue to have market viability based upon the goodwill of the product name, which typically benefits from trademark protection.

An innovator product's market exclusivity is generally determined by two forms of intellectual property: patent rights held by the innovator company and any regulatory forms of exclusivity to which the innovator is entitled.

Patents are a key determinant of market exclusivity for most branded pharmaceuticals. Patents provide the innovator with the right to exclude others from practicing an invention related to the medicine. Patents may cover, among other things, the active ingredient(s), various uses of a drug product, pharmaceutical formulations, drug delivery mechanisms and processes for (or intermediates useful in) the manufacture of products. Protection

Table of Contents

for individual products extends for varying periods in accordance with the expiration dates of patents in the various countries. The protection afforded, which may also vary from country to country, depends upon the type of patent, its scope of coverage and the availability of meaningful legal remedies in the country.

Market exclusivity is also sometimes influenced by regulatory intellectual property rights. Many developed countries provide certain non-patent incentives for the development of medicines. For example, the U.S., the EU and Japan each provide for a minimum period of time after the approval of a new drug during which the regulatory agency may not rely upon the innovator's data to approve a competitor's generic copy. Regulatory intellectual property rights are also available in certain markets as incentives for research on new indications, on orphan drugs and on medicines useful in treating pediatric patients. Regulatory intellectual property rights are independent of any patent rights and can be particularly important when a drug lacks broad patent protection. However, most regulatory forms of exclusivity do not prevent a competitor from gaining regulatory approval prior to the expiration of regulatory data exclusivity on the basis of the competitor's own safety and efficacy data on its drug, even when that drug is identical to that marketed by the innovator.

We estimate the likely market exclusivity period for each of our branded products on a case-by-case basis. It is not possible to predict the length of market exclusivity for any of our branded products with certainty because of the complex interaction between patent and regulatory forms of exclusivity, and inherent uncertainties concerning patent litigation. There can be no assurance that a particular product will enjoy market exclusivity for the full period of time that we currently estimate or that the exclusivity will be limited to the estimate.

In addition to patents and regulatory forms of exclusivity, we also market products with trademarks. Trademarks have no effect on market exclusivity for a product, but are considered to have marketing value. Trademark protection continues in some countries as long as used; in other countries, as long as registered. Registration is for fixed terms and may be renewed indefinitely.

Customers and Marketing

Generics Segment

In North America, we market products directly to wholesalers, distributors, retail pharmacy chains, long-term care pharmacies, mail order pharmacies and group purchasing organizations. We also market our generic products indirectly to independent pharmacies, managed care organizations, hospitals, nursing homes, pharmacy benefit management companies and government entities. These customers, called indirect customers, purchase our products primarily through our wholesale customers.

In EMEA and Asia Pacific, generic pharmaceuticals are sold to wholesalers, independent pharmacies and, in certain countries, directly to hospitals. Through a broad network of sales representatives, we adapt our marketing strategy to the different markets as dictated by their respective regulatory and competitive landscapes. Our API are sold primarily to generic FDF manufacturers throughout the world, as well as to other Mylan subsidiaries.

Specialty Segment

Dey markets its products to a number of different customer audiences in the U.S., including health care practitioners, wholesalers, pharmacists and pharmacy chains, hospitals, payers, PBMs, HMOs, home health care, long-term care and patients. We reach these customers through our field-based sales force and National Accounts team of approximately 280 employees, to increase our customers' understanding of the unique clinical characteristics and benefits of our branded products. Additionally, Dey supports educational programs to consumers and patients.

Table of Contents

Major Customers

During 2011, sales to Cardinal Health, Inc. and McKesson Corporation represented 13% and 11% of consolidated net revenues, respectively. During 2010, sales to Cardinal Health, Inc. and McKesson Corporation represented 11% each of consolidated net revenues. Sales to Cardinal Health, Inc. and McKesson Corporation represented 10% each of consolidated net revenues during 2009.

Consistent with industry practice, we have a return policy that allows our customers to return product within a specified period prior to and subsequent to the expiration date. See the Application of Critical Accounting Policies section of our Management's Discussion and Analysis of Results of Operations and Financial Condition for a discussion of several of our revenue recognition provisions.

Competition

Our primary competitors include other generic companies (both major multinational generic drug companies and various local generic drug companies) and branded drug companies that continue to sell or license branded pharmaceutical products after patent expirations and other statutory expirations. In the branded space, key competitors are generally other branded products that compete based on their clinical characteristics and benefits.

Competitive factors in the major markets in which we participate can be summarized as follows:

United States. The U.S. pharmaceutical industry is very competitive. Our competitors vary depending upon therapeutic areas and product categories. Primary competitors include the major manufacturers of brand name and generic pharmaceuticals.

The primary means of competition are innovation and development, timely FDA approval, manufacturing capabilities, product quality, marketing, portfolio offering size, customer service, reputation and price. The environment of the U.S. pharmaceutical marketplace is highly sensitive to price. To compete effectively, we rely on cost-effective manufacturing processes to meet the rapidly changing needs of our customers around a reliable, high quality supply of generic pharmaceutical products. With regard to our Specialty Segment business, significant sales and marketing effort is required to be directed to each targeted customer segment in order to compete effectively.

Our competitors include other generic manufacturers, as well as brand companies that license their products to generic manufacturers prior to patent expiration or as relevant patents expire. Further regulatory approval is not required for a brand manufacturer to sell its pharmaceutical products directly or through a third-party to the generic market, nor do such manufacturers face any other significant barriers to entry into such market. Related to our Specialty Segment business, our competitors include branded manufacturers who offer products for the treatment of COPD, severe allergies and major depressive disorder, as well as brand companies that license their products to generic manufacturers prior to patent expiration.

The U.S. pharmaceutical market is undergoing, and is expected to continue to undergo, rapid and significant technological changes, and we expect competition to intensify as technological advances are made. We intend to compete in this marketplace by (1) developing therapeutic equivalents to branded products that offer unique marketing opportunities, are difficult to formulate and/or have significant market size, (2) developing or licensing brand pharmaceutical products that are either patented or proprietary and (3) developing or licensing pharmaceutical products that are primarily for indications having relatively large patient populations or that have limited or inadequate treatments available.

Our sales can be impacted by new studies that indicate that a competitor's product has greater efficacy for treating a disease or particular form of a disease than one of our products. Our sales also can be impacted by additional labeling requirements relating to safety or convenience that may be imposed on our products by the

Table of Contents

FDA or by similar regulatory agencies. If competitors introduce new products and processes with therapeutic or cost advantages, our products can be subject to progressive price reductions and/or decreased volume of sales.

Medicaid, a U.S. federal health care program, requires all pharmaceutical manufacturers to pay rebates to state Medicaid agencies. The rebates are based on the volume of drugs that are reimbursed by the states for Medicaid beneficiaries. The Patient Protection and Affordable Care Act (the PPACA) and the Health Care and Education and Reconciliation Act of 2010, which amends the PPACA, raised the rebate percentages for both generic and brand pharmaceuticals effective January 1, 2010. The required rebate is currently 13% of the average manufacturer's price for sales of Medicaid-reimbursed products marketed under ANDAs, up from 11% for periods prior to 2010. Sales of Medicaid-reimbursed products marketed under NDAs require manufacturers to rebate the greater of approximately 23% (up from 15%) of the average manufacturer's price or the difference between the average manufacturer's price and the best price during a specific period. We believe that federal or state governments may continue to enact measures aimed at reducing the cost of drugs to the public.

Under Part D of the Medicare Modernization Act, Medicare beneficiaries are eligible to obtain discounted prescription drug coverage from private sector providers. As a result, usage of pharmaceuticals has increased, which is a trend that we believe will continue to benefit the generic pharmaceutical industry. However, such potential sales increases may be offset by increased pricing pressures, due to the enhanced purchasing power of the private sector providers that are negotiating on behalf of Medicare beneficiaries.

France. Generic penetration in France is relatively low compared to other large pharmaceutical markets, with low prices resulting from government initiatives. As pharmacists are the primary customers in this market, established relationships, driven by breadth of portfolio and effective supply chain management, are key competitive advantages.

Italy. The Italian generic market is relatively small due to few incentives for market stakeholders, and in part to low prices on available brand name drugs. Also to be considered is the fact that the generic market in Italy suffered a certain delay compared to other European countries due to extended patent protection. The Italian government has put forth only limited measures aimed at increasing generic usage, and as such generic substitution is still in its early stages. Pharmacists will play a key role in future market expansion, due to higher margins provided by generic versus branded products.

Spain. Spain is a rapidly growing, highly fragmented generic market with many participants. As a result of recent legislative changes, all regions within Spain will move to INN prescribing and substitution, thus making the pharmacists the key driver of generic usage. Companies compete in Spain based on being first to market, offering a wide portfolio, building strong relationships with customers and providing a consistent supply of quality products.

Germany. The German market has become highly competitive as a result of a large number of generic players, one of the highest generic penetration rates in Europe, and most recently a move toward a tender system. Under a tender system, health insurers are entitled to issue invitations to tender products. Pricing pressures resulting from an effort to win the tender should drive near-term competition.

United Kingdom. The U.K. is one of the most competitive markets, with low barriers to entry and a high degree of fragmentation. Competition among manufacturers, along with indirect control of pricing by the government, has led to strong downward pricing pressure. Companies in the U.K. will continue to compete on price, with consistent supply chain and breadth of product portfolio also coming into play.

Australia. The Australian generic market is small by international standards, in terms of prescriptions, value and the number of active participants. Patent extensions that delayed patent expiration are somewhat responsible for under-penetration of generic products.

Table of Contents

Japan. Historically, government initiatives have kept all drug prices low, resulting in little incentive for generic usage. More recent pro-generic actions by the government should lead to growth in the generics market, in which doctors, pharmacists and hospital purchasers will all play a key role.

India. Intense competition by other API suppliers in the Indian pharmaceuticals market has, in recent years, led to increased pressure on prices. We expect that the exports of API and generic FDF products from India to developed markets will continue to increase. The success of Indian pharmaceutical companies is attributable to established development expertise in chemical synthesis and process engineering, development of FDF, availability of highly skilled labor and the low cost manufacturing base.

Product Liability

Global product liability litigation represents an inherent risk to firms in the pharmaceutical industry. We utilize a combination of self-insurance (including through our wholly owned captive insurance subsidiary) and traditional third-party insurance policies with regard to our product liability claims. Such insurance coverage at any given time reflects market conditions, including cost and availability, existing at the time the policy is written, and the decision to obtain commercial insurance coverage or to self-insure varies accordingly.

Raw Materials

Mylan utilizes a global approach to managing relationships with its suppliers. Mylan Laboratories Limited provides Mylan with significant vertical integration opportunities as a part of our global pharmaceutical platform. The APIs and other materials and supplies used in our pharmaceutical manufacturing operations are generally available and purchased from many different U.S. and non-U.S. suppliers, including Mylan Laboratories Limited. However, in some cases, the raw materials used to manufacture pharmaceutical products are available only from a single supplier. Even when more than one supplier exists, we may choose, and in some cases have chosen, only to list one supplier in our applications submitted to the FDA. Any change in a supplier not previously approved must then be submitted through a formal approval process with the FDA.

Seasonality

Certain parts of our business are affected by seasonality, primarily the Specialty Segment and the Asia Pacific region within our Generics Segment. The seasonal impact of these particular businesses may affect a quarterly comparison within any fiscal year; however, this impact is generally not significant to our annual consolidated results.

Environment

We believe that our operations comply in all material respects with applicable laws and regulations concerning the environment. While it is impossible to predict accurately the future costs associated with environmental compliance and potential remediation activities, compliance with environmental laws is not expected to require significant capital expenditures and has not had, and is not expected to have, a material adverse effect on our operations or competitive position.

Employees

Mylan's global workforce includes more than 18,000 employees and external contractors. Certain production and maintenance employees at our manufacturing facility in Morgantown, West Virginia, are represented by the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union and its Local Union 8-957 AFL-CIO under a contract that expires on April 16, 2012. In addition, there are non-U.S. Mylan locations, that have employees who are unionized or part of works councils or trade unions.

Table of Contents

Securities Exchange Act Reports

Mylan maintains an Internet website at the following address: www.mylan.com. We make available on or through our Internet website certain reports and amendments to those reports that we file with the Securities and Exchange Commission (the "SEC") in accordance with the Securities Exchange Act of 1934. These include our annual reports on Form 10-K, our quarterly reports on Form 10-Q and our current reports on Form 8-K. We make this information available on our website free of charge, as soon as reasonably practicable after we electronically file the information with, or furnish it to, the SEC. The contents of our website are not incorporated by reference in this Report on Form 10-K and shall not be deemed "filed" under the Securities Exchange Act of 1934.

The public may also read and copy any materials that we file with the SEC at the SEC's Public Reference Room at 100 F Street NE, Washington, D.C. 20549. You may obtain information about the Public Reference Room by contacting the SEC at 1-800-SEC-0330. Reports filed with the SEC are also made available on the SEC website (www.sec.gov).

ITEM 1A. Risk Factors

The following risk factors could have a material adverse effect on our business, financial position or results of operations and could cause the market value of our common stock to decline. These risk factors may not include all of the important factors that could affect our business or our industry or that could cause our future financial results to differ materially from historic or expected results or cause the market price of our common stock to fluctuate or decline.

CURRENT ECONOMIC CONDITIONS MAY ADVERSELY AFFECT OUR INDUSTRY, BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Over the past few years, the global economy has undergone a period of significant volatility, and the economic environment may continue to be less favorable than that of past years. In particular the risk of a debt default by certain European countries and related European financial structuring efforts or deficit reduction programs instituted by the U.S. government could negatively impact the global economy. This has led, and/or could lead, to reduced consumer and customer spending and/or reduced or eliminated third party payor coverage or reimbursement in the foreseeable future, and this may include spending on healthcare. While generic drugs present an ideal alternative to higher-priced branded products, our sales could be negatively impacted if patients forego obtaining healthcare, customers reduce spending or purchases, and/or if third-party payors reduce or eliminate coverage or reimbursement amounts. In addition, reduced consumer and customer spending and/or reduced third party payor coverage or reimbursement, may drive us and our competitors to decrease prices and may reduce the ability of customers to pay due balances. These conditions may have a material adverse effect on our industry, business, financial position and results of operations and may cause the market value of our common stock to decline.

OUR INTEGRATION OF ACQUIRED BUSINESSES INVOLVES A NUMBER OF RISKS. THESE RISKS COULD CAUSE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

There are a number of operational risks associated with the integration of acquired businesses. These risks include, but are not limited to, difficulties in achieving identified financial and operating synergies, cost savings, revenue synergies and growth opportunities; difficulties in consolidating information technology platforms, business applications and corporate infrastructure; our substantial indebtedness and assumed liabilities; challenges in operating in other markets outside of the U.S. that are new to us; and the unanticipated effects of export controls, exchange rate fluctuations, domestic and foreign political conditions or domestic and foreign economic conditions.

Table of Contents

These factors could impair our growth and ability to compete, require us to focus additional resources on integration of operations rather than other profitable areas, or otherwise cause a material adverse effect on our business, financial position and results of operations and could cause a decline in the market value of our common stock.

WE HAVE GROWN AT A VERY RAPID PACE. OUR INABILITY TO PROPERLY MANAGE OR SUPPORT THIS GROWTH MAY HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We have grown very rapidly over the past few years, through our acquisitions of the former Merck Generics business, the former Matrix Laboratories Limited, and the acquisition of Bioniche Pharma. This growth has put significant demands on our processes, systems and people. We expect to make further investments in additional personnel, systems and internal control processes to help manage our growth. Attracting, retaining and motivating key employees in various departments and locations to support our growth are critical to our business, and competition for these people can be intense. If we are unable to hire and retain qualified employees and if we do not continue to invest in systems and processes to manage and support our rapid growth, there may be a material adverse effect on our business, financial position and results of operations, and the market value of our common stock could decline.

OUR GLOBAL FOOTPRINT EXPOSES US TO ADDITIONAL RISKS WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our operations extend to numerous countries outside the U.S., and operating globally exposes us to certain additional risks including, but not limited to:

compliance with a variety of national and local laws of countries in which we do business, including restrictions on the import and export of certain intermediates, drugs and technologies;

changes in laws, regulations, and practices affecting the pharmaceutical industry and the healthcare system, including but not limited to imports, exports, manufacturing, cost, pricing, reimbursement, approval, inspection, and delivery of healthcare;

fluctuations in exchange rates for transactions conducted in currencies other than the functional currency;

adverse changes in the economies in which we operate as a result of a slowdown in overall growth, a change in government or economic liberalization policies, or financial, political or social instability in such countries that affects the markets in which we operate, particularly emerging markets;

wage increases or rising inflation in the countries in which we operate;

supply disruptions, and increases in energy and transportation costs;

natural disasters, including droughts, floods and earthquakes in the countries in which we operate;

communal disturbances, terrorist attacks, riots or regional hostilities in the countries in which we operate; and

Edgar Filing: MYLAN INC. - Form 10-K

government uncertainty, including as a result of new or changed laws and regulations.

We also face the risk that some of our competitors have more experience with operations in such countries or with international operations generally. Furthermore, whether due to language, cultural or other differences, statements we make may be misinterpreted, misconstrued or taken out of context. Any of the above factors could have a material adverse effect on our business, financial position and results of operations and could cause a decline in the market value of our common stock.

Table of Contents

A SIGNIFICANT PART OF OUR BUSINESS IS LOCATED IN INDIA AND IS SUBJECT TO REGULATORY, ECONOMIC, SOCIAL AND POLITICAL UNCERTAINTIES IN INDIA. THESE UNCERTAINTIES CREATE RISKS WHICH COULD CAUSE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

In recent years, Mylan's Indian subsidiary, Mylan Laboratories Limited, has benefited from many policies of the Government of India and the Indian state governments in the states in which it operates, which are designed to promote foreign investment generally, including significant tax incentives, liberalized import and export duties and preferential rules on foreign investment and repatriation. There is no assurance that such policies will continue. Various factors, such as changes in the current federal government, could trigger significant changes in India's economic liberalization and deregulation policies and disrupt business and economic conditions in India generally and our business in particular.

In addition, our financial performance may be adversely affected by general economic conditions and economic and fiscal policy in India, including changes in exchange rates and controls, interest rates and taxation policies, as well as social stability and political, economic or diplomatic developments affecting India in the future. In particular, India has experienced significant economic growth over the last several years, but faces major challenges in sustaining that growth in the years ahead. These challenges include the need for substantial infrastructure development and improving access to healthcare and education. Our ability to recruit, train and retain qualified employees and develop and operate our manufacturing facilities in India could be adversely affected if India does not successfully meet these challenges.

Southern Asia has, from time to time, experienced instances of civil unrest and hostilities among neighboring countries, including India and Pakistan, and within the countries themselves. Rioting, military activity or terrorist attacks in the future could influence the Indian economy by disrupting communications and making travel and the conduct of our business more difficult. Resulting political tensions could create a greater perception that investments in companies with Indian operations involve a high degree of risk, and that there is a risk of disruption of services provided by companies with Indian operations, which could have a material adverse effect on the market for Mylan Laboratories Limited's products. Furthermore, if India were to become engaged in armed hostilities, particularly hostilities that were protracted or involved the threat or use of nuclear weapons, Mylan Laboratories Limited might not be able to continue its operations. We generally do not have insurance for losses and interruptions caused by terrorist attacks, military conflicts and wars. These risks could cause a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

MOVEMENTS IN FOREIGN CURRENCY EXCHANGE RATES COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

A significant portion of our revenues, indebtedness and other liabilities and our costs are denominated in foreign currencies, including the Euro, the Australian Dollar, the British Pound, the Canadian Dollar, the Indian Rupee and the Japanese Yen. We report our financial results in U.S. Dollars. Our results of operations and, in some cases, cash flows, could be adversely affected by certain movements in exchange rates. In particular, the risk of a debt default by certain European countries and related European financial restructuring efforts may cause volatility in the value of the Euro. From time to time, we may implement currency hedges intended to reduce our exposure to changes in foreign currency exchange rates. However, our hedging strategies may not be successful, and any of our unhedged foreign exchange exposures will continue to be subject to market fluctuations. These risks could cause a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

Table of Contents

WE ARE SUBJECT TO THE U.S. FOREIGN CORRUPT PRACTICES ACT AND SIMILAR WORLDWIDE ANTI-BRIBERY LAWS, WHICH IMPOSE RESTRICTIONS AND MAY CARRY SUBSTANTIAL PENALTIES. ANY VIOLATIONS OF THESE LAWS, OR ALLEGATIONS OF SUCH VIOLATIONS, COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

The U.S. Foreign Corrupt Practices Act and anti-bribery laws in other jurisdictions, including new anti-bribery legislation in the U.K. that took effect on July 1, 2011, generally prohibit companies and their intermediaries from making improper payments for the purpose of obtaining or retaining business or other commercial advantage. Our policies mandate compliance with these anti-bribery laws, which often carry substantial penalties. We operate in jurisdictions that have experienced governmental and private sector corruption to some degree, and, in certain circumstances, strict compliance with anti-bribery laws may conflict with certain local customs and practices. We cannot assure you that our internal control policies and procedures always will protect us from reckless or other inappropriate acts committed by our affiliates, employees or agents. Violations of these laws, or allegations of such violations, could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

OUR FUTURE REVENUE GROWTH AND PROFITABILITY ARE DEPENDENT UPON OUR ABILITY TO DEVELOP AND/OR LICENSE, OR OTHERWISE ACQUIRE, AND INTRODUCE NEW PRODUCTS ON A TIMELY BASIS IN RELATION TO OUR COMPETITORS' PRODUCT INTRODUCTIONS. OUR FAILURE TO DO SO SUCCESSFULLY COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our future revenues and profitability will depend, to an extent, upon our ability to successfully develop and/or license, or otherwise acquire and commercialize, new generic and patent or statutorily protected pharmaceutical products in a timely manner. Product development is inherently risky, especially for new drugs for which safety and efficacy have not been established and the market is not yet proven. Likewise, product licensing involves inherent risks including uncertainties due to matters that may affect the achievement of milestones, as well as the possibility of contractual disagreements with regard to the supply of product meeting specifications and terms such as license scope or termination rights. The development and commercialization process, particularly with regard to new drugs, also requires substantial time, effort and financial resources. We, or a partner, may not be successful in commercializing any of such products on a timely basis, if at all, which could adversely affect our business, financial position and results of operations and could cause the market value of our common stock to decline.

Before any prescription drug product, including generic drug products, can be marketed, marketing authorization approval is required by the relevant regulatory authorities and/or national regulatory agencies (for example the FDA in the U.S. and the EMA in the EU). The process of obtaining regulatory approval to manufacture and market new and generic pharmaceutical products is rigorous, time consuming, costly and largely unpredictable. Outside the U.S., the approval process may be more or less rigorous, and the time required for approval may be longer or shorter than that required in the U.S. Bioequivalence studies conducted in one country may not be accepted in other countries, and the approval of a pharmaceutical product in one country does not necessarily mean that the product will be approved in another country. We, or a partner, may be unable to obtain requisite approvals on a timely basis for new generic or branded products that we may develop, license or otherwise acquire. Moreover, if we obtain regulatory approval for a drug, it may be limited with respect to the indicated uses and delivery methods for which the drug may be marketed, which could in turn restrict our potential market for the drug. Also, for products pending approval, we may obtain raw materials or produce batches of inventory to be used in efficacy and bioequivalence testing, as well as in anticipation of the product's launch. In the event that regulatory approval is denied or delayed, we could be exposed to the risk of this

Table of Contents

inventory becoming obsolete. The timing and cost of obtaining regulatory approvals could adversely affect our product introduction plans, business, financial position and results of operations and could cause the market value of our common stock to decline.

The approval process for generic pharmaceutical products often results in the relevant regulatory agency granting final approval to a number of generic pharmaceutical products at the time a patent claim for a corresponding branded product or other market exclusivity expires. This often forces us to face immediate competition when we introduce a generic product into the market. Additionally, further generic approvals often continue to be granted for a given product subsequent to the initial launch of the generic product. These circumstances generally result in significantly lower prices, as well as reduced margins, for generic products compared to branded products. New generic market entrants generally cause continued price and margin erosion over the generic product life cycle.

In the U.S., the Drug Price Competition and Patent Term Restoration Act of 1984, or the Hatch-Waxman Act, provides for a period of 180 days of generic marketing exclusivity for each abbreviated new drug application (ANDA) applicant that is first-to-file an ANDA containing a certification of invalidity, non-infringement or unenforceability related to a patent listed with respect to a reference drug product, commonly referred to as a Paragraph IV certification. During this exclusivity period, which under certain circumstances may be required to be shared with other applicable ANDA sponsors with Paragraph IV certifications, the FDA cannot grant final approval to other ANDA sponsors holding applications for the same generic equivalent. If an ANDA containing a Paragraph IV certification is successful and the applicant is awarded exclusivity, the applicant generally enjoys higher market share, net revenues and gross margin for that product. However, our ability to obtain 180 days of generic marketing exclusivity may be dependent upon our ability to obtain FDA approval or tentative approval within 30 months of the FDA's acceptance of our ANDA. If we are unable to obtain approval or tentative approval within that time period, we may risk forfeiture of such marketing exclusivity. Even if we obtain FDA approval for our generic drug products, if we are not the first ANDA applicant to challenge a listed patent for such a product, we may lose significant advantages to a competitor that filed its ANDA containing such a challenge. The same would be true in situations where we are required to share our exclusivity period with other ANDA sponsors with Paragraph IV certifications. Such situations could have a material adverse effect on our ability to market that product profitably and on our business, financial position and results of operations, and the market value of our common stock could decline.

In Europe, there is no exclusivity period for the first generic. The EMA or national regulatory agencies may grant marketing authorizations to any number of generics. However, if there are other patents which the brand alleges are relevant, for example, new formulations, the owner of the original brand pharmaceutical may be able to obtain a preliminary injunction in certain European jurisdictions delaying launch of the generic product, depending on local court practices and/or the relevance of the asserted patents.

In addition, in other jurisdictions outside the U.S., we may face similar regulatory hurdles and constraints. If we are unable to navigate our products through all of the regulatory hurdles we face in a timely manner it could adversely affect our product introduction plans, business, financial position and results of operations and could cause the market value of our common stock to decline.

WE EXPEND A SIGNIFICANT AMOUNT OF RESOURCES ON RESEARCH AND DEVELOPMENT EFFORTS THAT MAY NOT LEAD TO SUCCESSFUL PRODUCT INTRODUCTIONS. FAILURE TO SUCCESSFULLY INTRODUCE PRODUCTS INTO THE MARKET COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS, AND THE MARKET VALUE OF OUR COMMON STOCK COULD DECLINE.

Much of our development effort is focused on technically difficult-to-formulate products and/or products that require advanced manufacturing technology, including our generic biologics program and respiratory platform. We conduct research and development primarily to enable us to manufacture and market approved

Table of Contents

pharmaceuticals in accordance with applicable regulations. We also partner with third parties to develop products. Typically, research expenses related to the development of innovative compounds and the filing of marketing authorization applications for innovative compounds (such as NDAs in the U.S.) are significantly greater than those expenses associated with the development of and filing of marketing authorization applications for generic products (such as ANDAs in the U.S. and abridged applications in Europe). As we and our partners continue to develop new products, our research expenses will likely increase. Because of the inherent risk associated with research and development efforts in our industry, particularly with respect to new drugs, our, or a partner's, research and development expenditures may not result in the successful introduction of new pharmaceutical products approved by the relevant regulatory bodies. Also, after we submit a marketing authorization application for a new compound or generic product, the relevant regulatory authority may change standards and/or request that we conduct additional studies and, as a result, we may incur total research and development costs to develop a particular product in excess of what we anticipated. Finally, we cannot be certain that any investment made in developing products will be recovered, even if we are successful in commercialization. To the extent that we expend significant resources on research and development efforts and are not able, ultimately, to introduce successful new products as a result of those efforts, our business, financial position and results of operations may be materially adversely affected, and the market value of our common stock could decline.

OUR APPROVED PRODUCTS MAY NOT ACHIEVE EXPECTED LEVELS OF MARKET ACCEPTANCE, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR PROFITABILITY, BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Even if we are able to obtain regulatory approvals for our new pharmaceutical products, generic or branded, the success of those products is dependent upon market acceptance. Levels of market acceptance for our new products could be impacted by several factors, including but not limited to:

- the availability of alternative products from our competitors;
- the price of our products relative to that of our competitors;
- the timing of our market entry;
- the ability to market our products effectively to the retail level; and
- the acceptance of our products by government and private formularies.

Some of these factors are not within our control. Additionally, continuing studies of the proper utilization, safety and efficacy of pharmaceutical products are being conducted by the industry, government agencies and others. Such studies, which increasingly employ sophisticated methods and techniques, can call into question the utilization, safety and efficacy of previously marketed products. In some cases, studies have resulted, and may in the future result, in the discontinuance of product marketing or other risk management programs such as the need for a patient registry. These situations, should they occur, could have a material adverse effect on our profitability, business, financial position and results of operations, and could cause the market value of our common stock to decline.

OUR BUSINESS IS HIGHLY DEPENDENT UPON MARKET PERCEPTIONS OF US, OUR BRANDS AND THE SAFETY AND QUALITY OF OUR PRODUCTS. OUR BUSINESS OR BRANDS COULD BE SUBJECT TO NEGATIVE PUBLICITY, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Table of Contents

Market perceptions of our business are very important to us, especially market perceptions of our brands and the safety and quality of our products. If we, or our brands, suffer from negative publicity, or if any of our products or similar products which other companies distribute are subject to market withdrawal or recall or are proven to be, or are claimed to be, harmful to consumers, then this could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline. Also, because we are dependent on market perceptions, negative publicity associated with product quality, illness or other adverse effects resulting from, or perceived to be resulting from, our products could have a material adverse impact on our business, financial position and results of operations and could cause the market value of our common stock to decline.

THE ILLEGAL DISTRIBUTION AND SALE BY THIRD PARTIES OF COUNTERFEIT VERSIONS OF OUR PRODUCTS OR OF STOLEN PRODUCTS COULD HAVE A NEGATIVE IMPACT ON OUR REPUTATION AND A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

The drug supply has been increasingly challenged by the vulnerability of distribution channels to illegal counterfeiting and the presence of counterfeit products in a growing number of markets and over the Internet. The World Health Organization (WHO) estimates that more than 10% of medications being sold globally are counterfeit.

Third parties may illegally distribute and sell counterfeit versions of our products, which do not meet the rigorous manufacturing and testing standards that our products undergo. Counterfeit products are frequently unsafe or ineffective, and can be potentially life-threatening. Counterfeit medicines may contain harmful substances, the wrong dose of the API or no API at all. However, to distributors and users, counterfeit products may be visually indistinguishable from the authentic version.

Reports of adverse reactions to counterfeit drugs or increased levels of counterfeiting could materially affect patient confidence in the authentic product. It is possible that adverse events caused by unsafe counterfeit products will mistakenly be attributed to the authentic product. In addition, thefts of inventory at warehouses, plants or while in-transit, which are not properly stored and which are sold through unauthorized channels could adversely impact patient safety, our reputation and our business.

Public loss of confidence in the integrity of pharmaceutical products as a result of counterfeiting or theft could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

IF WE OR ANY PARTNER FAIL TO ADEQUATELY PROTECT OR ENFORCE OUR INTELLECTUAL PROPERTY RIGHTS, THEN WE COULD LOSE REVENUE UNDER OUR LICENSING AGREEMENTS OR LOSE SALES TO GENERIC COPIES OF OUR BRANDED PRODUCTS. THESE RISKS COULD CAUSE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our success, particularly in our specialty business, depends in part on our or any partner's ability to obtain, maintain and enforce patents, and protect trade secrets, know-how and other proprietary information. Our ability to commercialize any branded product successfully will largely depend upon our or any partner's ability to obtain and maintain patents of sufficient scope to prevent third-parties from developing substantially equivalent products. In the absence of patent and trade secret protection, competitors may adversely affect our branded products business by independently developing and marketing substantially equivalent products. It is also possible that we could incur substantial costs if we are required to initiate litigation against others to protect or enforce our intellectual property rights.

Table of Contents

We have filed patent applications covering composition of, methods of making, and/or methods of using, our branded products and branded product candidates. We may not be issued patents based on patent applications already filed or that we file in the future, and if patents are issued, they may be insufficient in scope to cover our branded products. The issuance of a patent in one country does not ensure the issuance of a patent in any other country. Furthermore, the patent position of companies in the pharmaceutical industry generally involves complex legal and factual questions and has been and remains the subject of much litigation. Legal standards relating to scope and validity of patent claims are evolving and may differ in various countries. Any patents we have obtained, or obtain in the future, may be challenged, invalidated or circumvented. Moreover, the U.S. Patent and Trademark Office or any other governmental agency may commence interference proceedings involving our patents or patent applications. Any challenge to, or invalidation or circumvention of, our patents or patent applications would be costly, would require significant time and attention of our management, could cause a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE FACE VIGOROUS COMPETITION FROM OTHER PHARMACEUTICAL MANUFACTURERS THAT THREATENS THE COMMERCIAL ACCEPTANCE AND PRICING OF OUR PRODUCTS. SUCH COMPETITION COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

The generic pharmaceutical industry is highly competitive. We face competition from many U.S. and foreign manufacturers, some of whom are significantly larger than we are. Our competitors may be able to develop products and processes competitive with or superior to our own for many reasons, including but not limited to the possibility that they may have:

proprietary processes or delivery systems;

larger research and development and marketing staffs;

larger production capabilities in a particular therapeutic area;

more experience in preclinical testing and human clinical trials;

more products; or

more experience in developing new drugs and greater financial resources, particularly with regard to manufacturers of branded products.

Any of these factors and others could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

THE USE OF LEGAL, REGULATORY AND LEGISLATIVE STRATEGIES BY COMPETITORS, BOTH BRAND AND GENERIC, INCLUDING AUTHORIZED GENERICS AND CITIZEN S PETITIONS, AS WELL AS THE POTENTIAL IMPACT OF PROPOSED LEGISLATION, MAY INCREASE OUR COSTS ASSOCIATED WITH THE INTRODUCTION OR MARKETING OF OUR GENERIC PRODUCTS, COULD DELAY OR PREVENT SUCH INTRODUCTION AND/OR COULD SIGNIFICANTLY REDUCE OUR PROFIT POTENTIAL. THESE FACTORS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our competitors, both branded and generic, often pursue strategies to prevent or delay competition from generic alternatives to branded products. These strategies include, but are not limited to:

Edgar Filing: MYLAN INC. - Form 10-K

entering into agreements whereby other generic companies will begin to market an authorized generic, a generic equivalent of a branded product, at the same time generic competition initially enters the market;

Table of Contents

launching a generic version of their own branded product at the same time generic competition initially enters the market;

filing citizen's petitions with the FDA or other regulatory bodies, including timing the filings so as to thwart generic competition by causing delays of our product approvals;

seeking to establish regulatory and legal obstacles that would make it more difficult to demonstrate bioequivalence;

initiating legislative efforts to limit the substitution of generic versions of brand pharmaceuticals;

filing suits for patent infringement that may delay regulatory approval of many generic products;

introducing next-generation products prior to the expiration of market exclusivity for the reference product, which often materially reduces the demand for the first generic product for which we seek regulatory approval;

obtaining extensions of market exclusivity by conducting clinical trials of brand drugs in pediatric populations or by other potential methods;

persuading regulatory bodies to withdraw the approval of brand name drugs for which the patents are about to expire, thus allowing the brand name company to obtain new patented products serving as substitutes for the products withdrawn; and

seeking to obtain new patents on drugs for which patent protection is about to expire.

In the U.S., some companies have lobbied Congress for amendments to the Hatch-Waxman legislation that would give them additional advantages over generic competitors. For example, although the term of a company's drug patent can be extended to reflect a portion of the time an NDA is under regulatory review, some companies have proposed extending the patent term by a full year for each year spent in clinical trials rather than the one-half year that is currently permitted.

If proposals like these in the U.S., Europe or in other countries where we operate were to become effective, our entry into the market and our ability to generate revenues associated with new products may be delayed, reduced or eliminated, which could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

OUR COMPETITORS, INCLUDING BRANDED PHARMACEUTICAL COMPANIES, OR OTHER THIRD PARTIES, MAY ALLEGE THAT WE ARE INFRINGING THEIR INTELLECTUAL PROPERTY, FORCING US TO EXPEND SUBSTANTIAL RESOURCES IN RESULTING LITIGATION, THE OUTCOME OF WHICH IS UNCERTAIN. ANY UNFAVORABLE OUTCOME OF SUCH LITIGATION, INCLUDING IN AN AT-RISK LAUNCH SITUATION, COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Companies that produce brand pharmaceutical products routinely bring litigation against ANDA or similar applicants that seek regulatory approval to manufacture and market generic forms of their branded products. These companies allege patent infringement or other violations of intellectual property rights as the basis for filing suit against an ANDA or similar applicant. Likewise, patent holders may bring patent infringement suits against companies that are currently marketing and selling their approved generic products. Litigation often involves significant expense and can delay or prevent introduction or sale of our generic products. If patents are held valid and infringed by our products in a particular jurisdiction, we would, unless we could obtain a license from the patent holder, need to cease selling in that jurisdiction and may need to deliver up or destroy existing stock in that jurisdiction.

Table of Contents

There may also be situations where we use our business judgment and decide to market and sell products, notwithstanding the fact that allegations of patent infringement(s) have not been finally resolved by the courts (i.e., an at-risk launch situation). The risk involved in doing so can be substantial because the remedies available to the owner of a patent for infringement may include, among other things, damages measured by the profits lost by the patent owner and not necessarily by the profits earned by the infringer. In the case of a willful infringement, the definition of which is subjective, such damages may be increased up to three times. Moreover, because of the discount pricing typically involved with bioequivalent products, patented branded products generally realize a substantially higher profit margin than bioequivalent products. An adverse decision in a case such as this or in other similar litigation could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

OUR SPECIALTY BUSINESS DEVELOPS, FORMULATES, MANUFACTURES OR IN-LICENSES AND MARKETS BRANDED PRODUCTS THAT ARE SUBJECT TO RISKS. THESE RISKS COULD CAUSE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our branded products developed, formulated, manufactured (or alternatively, in-licensed) and marketed by our specialty business may be subject to the following risks, among others:

limited patent life, or the loss of patent protection;

competition from generic products;

reductions in reimbursement rates by third-party payors;

importation by consumers;

product liability;

drug development risks arising from typically greater research and development investments than generics; and

unpredictability with regard to establishing a market.

In addition, developing and commercializing branded products is generally more costly than generic products. If such business expenditures do not ultimately result in the launch of commercially successful brand products, or if any of the risks above were to occur, there could be a material adverse effect on our business, financial position and results of operations and the market value of our common stock could decline.

A RELATIVELY SMALL GROUP OF PRODUCTS MAY REPRESENT A SIGNIFICANT PORTION OF OUR REVENUES, GROSS PROFIT OR NET EARNINGS FROM TIME TO TIME. IF THE VOLUME OR PRICING OF ANY OF THESE PRODUCTS DECLINES, IT COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Sales of a limited number of our products from time to time represent a significant portion of our revenues, gross profit and net earnings. For the years ended December 31, 2011 and 2010, our top ten products in terms of sales, in the aggregate, represented approximately 23% of our consolidated total revenues. If the volume or pricing of our largest selling products declines in the future, our business, financial position and results of operations could be materially adversely affected, and the market value of our common stock could decline.

A SIGNIFICANT PORTION OF OUR REVENUES ARE DERIVED FROM SALES TO A LIMITED NUMBER OF CUSTOMERS. ANY SIGNIFICANT REDUCTION OF BUSINESS WITH ANY OF

Table of Contents

THESE CUSTOMERS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS, AND THE MARKET VALUE OF OUR COMMON STOCK COULD DECLINE.

A significant portion of our revenues are derived from sales to a limited number of customers. If we were to experience a significant reduction in or loss of business with one such customer, or if one such customer were to experience difficulty in paying us on a timely basis, our business, financial position and results of operations could be materially adversely affected, and the market value of our common stock could decline.

During the years ended December 31, 2011, 2010 and 2009, sales to McKesson Corporation were 11%, 11% and 10%, respectively, and sales to Cardinal Health, Inc. were 13%, 11%, and 10%, respectively, of consolidated net revenues.

WE MAY EXPERIENCE DECLINES IN THE SALES VOLUME AND PRICES OF OUR PRODUCTS AS THE RESULT OF THE CONTINUING TREND TOWARD CONSOLIDATION OF CERTAIN CUSTOMER GROUPS, SUCH AS THE WHOLESALE DRUG DISTRIBUTION AND RETAIL PHARMACY INDUSTRIES, AS WELL AS THE EMERGENCE OF LARGE BUYING GROUPS. THE RESULT OF SUCH DEVELOPMENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

A significant amount of our sales are to a relatively small number of drug wholesalers and retail drug chains. These customers represent an essential part of the distribution chain of generic pharmaceutical products. Drug wholesalers and retail drug chains have undergone, and are continuing to undergo, significant consolidation. This consolidation may result in these groups gaining additional purchasing leverage and consequently increasing the product pricing pressures facing our business. Additionally, the emergence of large buying groups representing independent retail pharmacies and the prevalence and influence of managed care organizations and similar institutions potentially enable those groups to attempt to extract price discounts on our products. The result of these developments may have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE DEPEND TO A LARGE EXTENT ON THIRD-PARTY SUPPLIERS AND DISTRIBUTORS FOR THE RAW MATERIALS, PARTICULARLY THE CHEMICAL COMPOUND(S) COMPRISING THE ACTIVE PHARMACEUTICAL INGREDIENT, THAT WE USE TO MANUFACTURE OUR PRODUCTS AS WELL AS CERTAIN FINISHED GOODS. AN INTERRUPTION IN THE SUPPLY OF SUCH PRODUCTS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We typically purchase the active pharmaceutical ingredient (i.e., the chemical compounds that produce the desired therapeutic effect in our products) and other materials and supplies that we use in our manufacturing operations, as well as certain finished products, from many different foreign and domestic suppliers.

Additionally, we maintain safety stocks in our raw materials inventory and, in certain cases where we have listed only one supplier in our applications with regulatory agencies, have received regulatory agency approval to use alternative suppliers should the need arise. However, there is no guarantee that we will always have timely and sufficient access to a critical raw material or finished product. An interruption in the supply of a single-sourced raw material, including the active ingredient, or finished product could cause our business, financial position and results of operations to be materially adversely affected, and the market value of our common stock could decline. In addition, our manufacturing capabilities could be impacted by quality deficiencies in the products which our suppliers provide, which could have a material adverse effect on our business, financial position and results of operations, and the market value of our common stock could decline.

Table of Contents

We utilize controlled substances in certain of our current products and products in development and therefore must meet the requirements of the Controlled Substances Act of 1970 and the related regulations administered by the DEA in the U.S. as well as similar laws in other countries where we operate. These laws relate to the manufacture, shipment, storage, sale and use of controlled substances. The DEA and other regulatory agencies limit the availability of the active ingredients used in certain of our current products and products in development and, as a result, our procurement quota of these active ingredients may not be sufficient to meet commercial demand or complete clinical trials. We must annually apply to the DEA and other regulatory agencies for procurement quota in order to obtain these substances. Any delay or refusal by the DEA or such regulatory agencies in establishing our procurement quota for controlled substances could delay or stop our clinical trials or product launches, or could cause trade inventory disruptions for those products that have already been launched, which could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE HAVE A LIMITED NUMBER OF MANUFACTURING FACILITIES AND CERTAIN THIRD PARTY SUPPLIERS PRODUCING A SUBSTANTIAL PORTION OF OUR PRODUCTS. PRODUCTION AT ANY ONE OF THESE FACILITIES COULD BE INTERRUPTED, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

A substantial portion of our capacity as well as our current production is attributable to a limited number of manufacturing facilities and certain third party suppliers. A significant disruption at any one of the facilities within our internal or third party supply chain, even on a short-term basis, whether due to a labor strike, failure to reach acceptable agreement with labor and unions, adverse quality or compliance observation, act of God, civil or political unrest, or other events could impair our ability to produce and ship products to the market on a timely basis and could, among other consequences, subject us to exposure to claims from customers. Any of these events could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

Certain production and maintenance employees at our largest manufacturing facility, that is located in Morgantown, West Virginia, are represented by the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union and its Local Union 8-957 AFL-CIO and are employed under a labor contract that expires on April 16, 2012. While we have successfully negotiated contracts in the past without labor disruption or a material increase in labor costs, there can be no assurance in this regard. Although we have taken steps to mitigate this exposure, a significant labor disruption or a material increase in labor costs resulting from such contracts could have a material adverse impact on our business, financial position and result of operations and could cause the market value of our common stock to decline.

BECAUSE THE PHARMACEUTICAL INDUSTRY IS HEAVILY REGULATED, WE FACE SIGNIFICANT COSTS AND UNCERTAINTIES ASSOCIATED WITH OUR EFFORTS TO COMPLY WITH APPLICABLE REGULATIONS. SHOULD WE FAIL TO COMPLY, WE COULD EXPERIENCE MATERIAL ADVERSE EFFECTS ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS, AND THE MARKET VALUE OF OUR COMMON STOCK COULD DECLINE.

The pharmaceutical industry is subject to regulation by various governmental authorities. For instance, we must comply with requirements of the FDA and similar requirements of similar agencies in our other markets with respect to the research, development, manufacture, quality, safety, labeling, sale, distribution, marketing, advertising, promotion and development of pharmaceutical products. Failure to comply with regulations of the FDA and other regulators could result in fines, disgorgement, unanticipated compliance expenditures, rejection or delay in approval of applications, recall or seizure of products, total or partial suspension of production and/or distribution, our inability to sell products, the return by customers of our products, suspension of the applicable

Table of Contents

regulator's review of our submissions, enforcement actions, injunctions and criminal prosecution. Under certain circumstances, the regulators may also have the authority to revoke previously granted drug approvals. Although we have internal regulatory compliance programs and policies and have had a favorable compliance history, there is no guarantee that these programs, as currently designed, will meet regulatory agency standards in the future. Additionally, despite our efforts at compliance, there is no guarantee that we may not be deemed to be deficient in some manner in the future. If we were deemed to be deficient in any significant way, or if any of the noted risks occur, our business, financial position and results of operations could be materially affected and the market value of our common stock could decline.

In Europe we must also comply with regulatory requirements with respect to the manufacture, labeling, sale, distribution, marketing, advertising, promotion and development of pharmaceutical products. Some of these requirements are contained in EU regulations and governed by the EMA. Other requirements are set down in national laws and regulations of the EU Member States. Failure to comply with the regulations can result in a range of fines, penalties, product recalls/suspensions or even criminal liability. Similar laws and regulations exist in most of the markets in which we operate.

In addition to the new drug approval process, government agencies also regulate the facilities and operational procedures that we use to manufacture our products. We must register our facilities with the FDA and other similar regulators. Products manufactured in our facilities must be made in a manner consistent with current good manufacturing practices or similar standards in each territory in which we manufacture. Compliance with such regulations requires substantial expenditures of time, money and effort in such areas as production and quality control to ensure full technical compliance. The FDA and other agencies periodically inspect our manufacturing facilities for compliance. Regulatory approval to manufacture a drug is site-specific. Failure to comply with good manufacturing practices and other regulatory standards at one of our manufacturing facilities could result in an enforcement action brought by the FDA or other regulatory bodies which could include withholding or withdrawing the approval of our submissions or other product applications of that facility, discontinuation of manufacture, recalls, or other adverse actions. If any regulatory body were to withhold or withdraw approval of an application, or require a recall or other adverse product action, or require one of our manufacturing facilities to cease or limit production, our business could be adversely affected. Delay and cost in obtaining FDA or other regulatory approval to manufacture at a different facility also could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

We are subject, as are generally all manufacturers, to various federal, state and local laws regulating working conditions, as well as environmental protection laws and regulations, including those governing the discharge of materials into the environment and those related to climate change. We are also required to comply with data protection and data privacy rules in many countries. Although we have not incurred significant costs associated with complying with such environmental provisions in the past, if changes to such environmental laws and regulations are made in the future that require significant changes in our operations or if we engage in the development and manufacturing of new products requiring new or different environmental or other controls, or if we are found to have violated any applicable rules, we may be required to expend significant funds. Such changes could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

OUR REPORTING AND PAYMENT OBLIGATIONS UNDER THE MEDICARE AND/OR MEDICAID REBATE PROGRAM AND OTHER GOVERNMENTAL PURCHASING AND REBATE PROGRAMS ARE COMPLEX AND MAY INVOLVE SUBJECTIVE DECISIONS THAT COULD CHANGE AS A RESULT OF NEW BUSINESS CIRCUMSTANCES, NEW REGULATORY GUIDANCE, OR ADVICE OF LEGAL COUNSEL. ANY DETERMINATION OF FAILURE TO COMPLY WITH THOSE OBLIGATIONS COULD SUBJECT US TO PENALTIES AND SANCTIONS WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS, AND THE MARKET VALUE OF OUR COMMON STOCK COULD DECLINE.

Table of Contents

The regulations regarding reporting and payment obligations with respect to Medicare and/or Medicaid reimbursement and rebates and other governmental programs are complex. Because our processes for these calculations and the judgments involved in making these calculations involve, and will continue to involve, subjective decisions and complex methodologies, these calculations are subject to the risk of errors. In addition, they are subject to review and challenge by the applicable governmental agencies, and it is possible that such reviews could result in material changes. The Patient Protection and Affordable Care Act (PPACA) of 2010 included a provision requiring the Centers for Medicare and Medicaid Services (CMS) to publish a weighted average Average Manufacturer Price (AMP) for all multi-source drugs. The provision was effective October 1, 2010; however, weighted average AMP s have not yet been published by CMS, except in draft form, and have not been implemented for use in the calculation of Federal Upper Limits (FULs). Although the weighted average AMP would not reveal Mylan s individual AMP, publishing a weighted average AMP available to customers and the public at large could negatively affect our leverage in commercial price negotiations.

In addition, as also disclosed herein, a number of state and federal government agencies are conducting investigations of manufacturers reporting practices with respect to Average Wholesale Prices (AWP) in which they have suggested that reporting of inflated AWP has led to excessive payments for prescription drugs. We and numerous other pharmaceutical companies have been named as defendants in various actions relating to pharmaceutical pricing issues and whether allegedly improper actions by pharmaceutical manufacturers led to excessive payments by Medicare and/or Medicaid.

Any governmental agencies that have commenced, or may commence, an investigation of Mylan relating to the sales, marketing, pricing, quality, or manufacturing of pharmaceutical products could seek to impose, based on a claim of violation of fraud and false claims laws or otherwise, civil and/or criminal sanctions, including fines, penalties and possible exclusion from federal health care programs including Medicare and/or Medicaid. Some of the applicable laws may impose liability even in the absence of specific intent to defraud. Furthermore, should there be ambiguity with regard to how to properly calculate and report payments and even in the absence of any such ambiguity a governmental authority may take a position contrary to a position we have taken, and may impose civil and/or criminal sanctions. Any such penalties or sanctions could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE MAY EXPERIENCE REDUCTIONS IN THE LEVELS OF REIMBURSEMENT FOR PHARMACEUTICAL PRODUCTS BY GOVERNMENTAL AUTHORITIES, HMOS OR OTHER THIRD-PARTY PAYORS. IN ADDITION, THE USE OF TENDER SYSTEMS COULD REDUCE PRICES FOR OUR PRODUCTS OR REDUCE OUR MARKET OPPORTUNITIES. ANY SUCH REDUCTIONS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Various governmental authorities (including the U.K. National Health Service and the German statutory health insurance scheme) and private health insurers and other organizations, such as health maintenance organizations (HMOs) in the U.S., provide reimbursements or subsidies to consumers for the cost of certain pharmaceutical products. Demand for our products depends in part on the extent to which such reimbursement is available. In the U.S., third-party payors increasingly challenge the pricing of pharmaceutical products. This trend and other trends toward the growth of HMOs, managed health care and legislative health care reform create significant uncertainties regarding the future levels of reimbursement for pharmaceutical products. Further, any reimbursement may be reduced in the future, perhaps to the point that market demand for our products declines. Such a decline could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

In addition, a number of markets in which we operate have implemented or may implement tender systems for generic pharmaceuticals in an effort to lower prices. Under such tender systems, manufacturers submit bids

Table of Contents

which establish prices for generic pharmaceutical products. Upon winning the tender, the winning company will receive a preferential reimbursement for a period of time. The tender system often results in companies underbidding one another by proposing low pricing in order to win the tender.

Certain other countries may consider the implementation of a tender system. Even if a tender system is ultimately not implemented, the anticipation of such could result in price reductions. Failing to win tenders, or the implementation of similar systems in other markets leading to further price declines, could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

LEGISLATIVE OR REGULATORY PROGRAMS THAT MAY INFLUENCE PRICES OF PHARMACEUTICAL PRODUCTS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Current or future federal, state or foreign laws and regulations may influence the prices of drugs and, therefore, could adversely affect the prices that we receive for our products. For example, programs in existence in certain states in the U.S. seek to set prices of all drugs sold within those states through the regulation and administration of the sale of prescription drugs. Expansion of these programs, in particular state Medicare and/or Medicaid programs, or changes required in the way in which Medicare and/or Medicaid rebates are calculated under such programs, could adversely affect the prices we receive for our products and could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

In order to control expenditure on pharmaceuticals, most member states in the EU regulate the pricing of products and, in some cases, limit the range of different forms of pharmaceuticals available for prescription by national health services. These controls can result in considerable price differences between member states.

Several countries in which we operate have implemented, or plan to implement, government mandated price reductions. When such price cuts occur, pharmaceutical companies have generally experienced significant declines in revenues and profitability and uncertainties continue to exist within the market. Such price reductions could have an adverse effect on our business, and as uncertainties are resolved or if other countries in which we operate enact similar measures, they could have a further material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

HEALTHCARE REFORM LEGISLATION COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

In recent years, there have been numerous initiatives on the federal and state levels for comprehensive reforms affecting the payment for, the availability of and reimbursement for healthcare services in the U.S., and it is likely that federal and state legislatures and health agencies will continue to focus on health care reform in the future. The PPACA and The Health Care and Education and Reconciliation Act of 2010 (H.R. 4872), which amends the PPACA (collectively the Health Reform Laws), were signed into law in March 2010. While the Health Reform Laws may increase the number of patients who have insurance coverage for our products, they also include provisions such as the assessment of a pharmaceutical manufacturer fee and an increase in the amount of rebates that manufacturers pay for coverage of their drugs by Medicaid programs.

We are unable to predict the future course of federal or state healthcare legislation. The Health Reform Laws and further changes in the law or regulatory framework that reduce our revenues or increase our costs could also have a material adverse effect on our business, financial condition and results of operations and cash flows, and could cause the market value of our common stock to decline.

Table of Contents

Additionally, we encounter similar regulatory and legislative issues in most other countries. In the EU and some other international markets, the government provides health care at low cost to consumers and regulates pharmaceutical prices, patient eligibility or reimbursement levels to control costs for the government-sponsored health care system. This international system of price regulations may lead to inconsistent prices. Within the EU and in other countries, the availability of our products in some markets at lower prices undermines our sales in some markets with higher prices. Additionally, certain countries set prices by reference to the prices in other countries where our products are marketed. Thus, our inability to secure adequate prices in a particular country may also impair our ability to obtain acceptable prices in existing and potential new markets, and may create the opportunity for third party cross border trade.

If significant additional reforms are made to the U.S. healthcare system, or to the healthcare systems of other markets in which we operate, those reforms could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE ARE INVOLVED IN VARIOUS LEGAL PROCEEDINGS AND CERTAIN GOVERNMENT INQUIRIES AND MAY EXPERIENCE UNFAVORABLE OUTCOMES OF SUCH PROCEEDINGS OR INQUIRIES, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We are or may be involved in various legal proceedings and certain government inquiries, including, but not limited to, patent infringement, product liability, antitrust matters, breach of contract and claims involving Medicare and/or Medicaid reimbursements, or laws relating to sales and marketing practices, some of which are described in our periodic reports, that involve claims for, or the possibility of fines and penalties involving substantial amounts of money or other relief, including but not limited to civil or criminal fines and penalties and exclusion from participation in various government healthcare-related programs. If any of these legal proceedings or inquiries were to result in an adverse outcome, the impact could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

With respect to product liability, we maintain a combination of self-insurance (including through our wholly-owned captive insurance subsidiary) and commercial insurance to protect against and manage a portion of the risks involved in conducting our business. Although we carry insurance, we believe that no reasonable amount of insurance can fully protect against all such risks because of the potential liability inherent in the business of producing pharmaceuticals for human consumption. To the extent that a loss occurs, depending on the nature of the loss and the level of insurance coverage maintained, it could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

In addition, in limited circumstances, entities we acquired in the acquisition of the former Merck Generics business are party to litigation in matters under which we are entitled to indemnification by Merck KGaA. However, there are risks inherent in such indemnities and, accordingly, there can be no assurance that we will receive the full benefits of such indemnification, which could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

IF THE INTERCOMPANY TERMS OF CROSS BORDER ARRANGEMENTS WE HAVE AMONG OUR SUBSIDIARIES ARE DETERMINED TO BE INAPPROPRIATE, OUR TAX LIABILITY MAY INCREASE, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Table of Contents

We have potential tax exposures resulting from the varying application of statutes, regulations and interpretations which include exposures on intercompany terms of cross border arrangements among our subsidiaries in relation to various aspects of our business, including manufacturing, marketing, sales and delivery functions. Although our cross border arrangements between affiliates are based upon internationally accepted standards, tax authorities in various jurisdictions may disagree with and subsequently challenge the amount of profits taxed in their country, which may result in increased tax liability, including accrued interest and penalties, which would cause our tax expense to increase. This could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

UNANTICIPATED CHANGES IN OUR TAX PROVISIONS OR EXPOSURE TO ADDITIONAL INCOME TAX LIABILITIES COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We are subject to income taxes in the U.S. and many foreign jurisdictions. Significant judgment is required in determining our worldwide provision for income taxes. In the ordinary course of business, there are many transactions and calculations where the ultimate tax determination is uncertain. The final determination of any tax audits or related litigation could be materially different from our historical income tax provisions and accruals.

Additionally, changes in the effective tax rate as a result of a change in the mix of earnings in countries with differing statutory tax rates, changes in our overall profitability, changes in the valuation of deferred tax assets and liabilities, the results of audits and the examination of previously filed tax returns by taxing authorities and continuing assessments of our tax exposures could impact our tax liabilities and affect our income tax expense, which could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

CHANGES IN INCOME TAX LAWS AND TAX RULINGS MAY HAVE A SIGNIFICANTLY ADVERSE IMPACT ON OUR EFFECTIVE TAX RATE AND INCOME TAX EXPENSE, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

On September 19, 2011, President Obama submitted to the Joint Select Committee on Deficit Reduction five international tax reform proposals that the Administration stated would reduce the deficit by approximately \$112 billion over 10 years. Those measures would defer deduction of interest expense related to deferred income; determine the foreign tax credit on a pooling basis; tax currently excess returns associated with transfers of intangibles offshore; clarify the definition of intangible property for purposes of Internal Revenue Code sections 367(d) and 482 to prevent inappropriate shifting of income outside the United States; and limit earnings stripping by expatriated entities. We cannot determine whether these proposals will be modified or enacted, whether other proposals unknown at this time will be made or the extent to which the corporate tax rate might be reduced and ameliorate the adverse impact of these proposals. If enacted, and depending on its precise terms, such legislation could materially increase our overall effective income tax rate and income tax expense. This could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE MAY DECIDE TO SELL ASSETS, WHICH COULD ADVERSELY AFFECT OUR PROSPECTS AND OPPORTUNITIES FOR GROWTH, AND WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Table of Contents

We may from time to time consider selling certain assets if (a) we determine that such assets are not critical to our strategy, or (b) we believe the opportunity to monetize the asset is attractive or for various reasons including we want to reduce indebtedness. We have explored and will continue to explore the sale of certain non-core assets. Although our intention is to engage in asset sales only if they advance our overall strategy, any such sale could reduce the size or scope of our business, our market share in particular markets or our opportunities with respect to certain markets, products or therapeutic categories. As a result, any such sale could have an adverse effect on our business, prospects and opportunities for growth, financial position and results of operations and could cause the market value of our common stock to decline.

WE HAVE SIGNIFICANT INDEBTEDNESS AND WILL BE REQUIRED TO APPLY VARYING PORTIONS OF OUR CASH FLOW FROM OPERATIONS TO SERVICE OUR INDEBTEDNESS. OUR CREDIT FACILITIES, SENIOR UNSECURED NOTES, OTHER OUTSTANDING INDEBTEDNESS AND ANY ADDITIONAL INDEBTEDNESS WE INCUR IN THE FUTURE IMPOSE, OR MAY IMPOSE, SIGNIFICANT OPERATING AND FINANCIAL RESTRICTIONS, WHICH MAY PREVENT US FROM CAPITALIZING ON BUSINESS OPPORTUNITIES. OUR SUBSTANTIAL INDEBTEDNESS COULD LEAD TO ADVERSE CONSEQUENCES THAT MAY HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Our high level of indebtedness could have important consequences, including but not limited to:

increasing our vulnerability to general adverse economic and industry conditions;

requiring us to dedicate a substantial portion of our cash flow from operations and proceeds of any equity issuances to payments on our indebtedness, thereby reducing the availability of cash flow to fund working capital, capital expenditures, acquisitions and investments and other general corporate purposes;

making it difficult for us to optimally capitalize and manage the cash flow for our businesses;

limiting our flexibility in planning for, or reacting to, changes in our businesses and the markets in which we operate;

making it difficult for us to meet the leverage and interest coverage ratios required by our Senior Credit Agreement;

limiting our ability to borrow money or sell stock to fund our working capital, capital expenditures, acquisitions and debt service requirements and other financing needs;

increasing our vulnerability to increases in interest rates in general because a substantial portion of our indebtedness bears interest at floating rates;

requiring us to sell assets in order to pay down debt;

restricting us from exploiting business opportunities;

increasing our cost of borrowings; and

Edgar Filing: MYLAN INC. - Form 10-K

placing us at a competitive disadvantage to our competitors that have less debt.

Our ability to service our indebtedness will depend on our future operating performance and financial results, which will be subject, in part, to factors beyond our control, including interest rates and general economic, financial and business conditions. If we do not have sufficient cash flow to service our indebtedness, we may need to refinance all or part of our existing indebtedness, borrow more money or sell securities, some or all of which may not be available to us at acceptable terms or at all. In addition, we may need to incur additional indebtedness in the future in the ordinary course of business. Although the terms of our Senior Credit Agreement and our bond indentures allow us to incur additional debt, this is subject to certain limitations which may preclude us from incurring the amount of indebtedness we otherwise desire.

Table of Contents

In addition, if we incur additional debt, the risks described above could intensify. If global credit markets return to their recent levels of contraction, future debt financing may not be available to us when required or may not be available on acceptable terms, and as a result we may be unable to grow our business, take advantage of business opportunities, respond to competitive pressures or satisfy our obligations under our indebtedness. Any of the foregoing could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

Our credit facilities, senior unsecured notes, other outstanding indebtedness and any additional indebtedness we incur in the future impose, or may impose, significant operating and financial restrictions on us. These restrictions limit our ability to, among other things, incur additional indebtedness, make investments, pay certain dividends, prepay other indebtedness, sell assets, incur certain liens, enter into agreements with our affiliates or restricting our subsidiaries' ability to pay dividends, merge or consolidate. In addition, our Senior Credit Agreement requires us to maintain specified financial ratios. We cannot assure you that these covenants will not adversely affect our ability to finance our future operations or capital needs or to pursue available business opportunities. A breach of any of these covenants or our inability to maintain the required financial ratios could result in a default under the related indebtedness. If a default occurs, the relevant lenders could elect to declare our indebtedness, together with accrued interest and other fees, to be immediately due and payable. These factors could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

THE TOTAL AMOUNT OF INDEBTEDNESS RELATED TO OUR OUTSTANDING CASH CONVERTIBLE NOTES DUE 2015 (THE CASH CONVERTIBLE NOTES) WILL INCREASE IF OUR STOCK PRICE INCREASES. IN ADDITION, OUR OUTSTANDING 1.25% SENIOR CONVERTIBLE NOTES SETTLEMENT DUE 2012 (THE SENIOR CONVERTIBLE NOTES) VALUE INCREASES AS OUR STOCK PRICE INCREASES, ALTHOUGH WE DO NOT ACCOUNT FOR THIS AS AN INCREASE IN INDEBTEDNESS. ALSO, WE HAVE ENTERED INTO NOTE HEDGES AND WARRANT TRANSACTIONS IN CONNECTION WITH THE SENIOR CONVERTIBLE NOTES AND CASH CONVERTIBLE NOTES IN ORDER TO HEDGE SOME OF THE RISK ASSOCIATED WITH THE POTENTIAL INCREASE OF INDEBTEDNESS AND SETTLEMENT VALUE. SUCH TRANSACTIONS HAVE BEEN CONSUMMATED WITH CERTAIN COUNTERPARTIES, MAINLY HIGHLY RATED FINANCIAL INSTITUTIONS. ANY INCREASE IN INDEBTEDNESS, NET EXPOSURE RELATED TO THE RISK OR FAILURE OF ANY COUNTERPARTIES TO PERFORM THEIR OBLIGATIONS, COULD HAVE ADVERSE EFFECTS ON US, INCLUDING UNDER OUR DEBT AGREEMENTS, AND COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Under applicable accounting rules, the cash conversion feature that is a term of the Cash Convertible Notes must be recorded as a liability on our balance sheet and periodically marked to fair value. If our stock price increases, the liability associated with the cash conversion feature would increase and, because this liability must be periodically marked to fair value on our balance sheet, the total amount of indebtedness related to the notes that is shown on our balance sheet would also increase. This could have adverse effects on us, including under our existing and any future debt agreements. For example, our senior credit facilities contain covenants that restrict our ability to incur debt, make capital expenditures, pay dividends and make investments if, among other things, our leverage ratio, exceeds certain levels. In addition, the interest rate we pay under our senior credit facilities increases if our leverage ratio increases. Because the leverage ratio under our senior credit facilities is calculated based on a definition of total indebtedness as defined under accounting principles generally accepted in the United States of America (GAAP), if the amount of our total indebtedness were to increase, our leverage ratio would also increase. As a result, we may not be able to comply with such covenants in the future, which could, among other things, restrict our ability to grow our business, take advantage of business opportunities or respond to competitive pressures. Any of the foregoing could have a material adverse effect on our business,

financial position and results of operations and could cause the market value of the notes and our common stock to decline.

Table of Contents

Although the conversion feature under our Senior Convertible Notes is not marked to market, the conversion feature also increases as the price of our common stock increases. If our stock price increases, the settlement value of the conversion feature increases.

In connection with the issuance of the Cash Convertible Notes and Senior Convertible Notes, we entered into note hedge and warrant transactions with certain financial institutions, each of which we refer to as a counterparty. The Cash Convertible Note hedge is comprised of purchased cash-settled call options that are expected to reduce our exposure to potential cash payments required to be made by us upon the cash conversion of the notes. The Senior Convertible Notes hedge is comprised of call options that are expected to reduce our exposure to the settlement value (issuance of common stock) upon the conversion of the notes. We have also entered into respective warrant transactions with the counterparties pursuant to which we will have sold to each counterparty warrants for the purchase of shares of our common stock. Together, each of the note hedges and warrant transactions are expected to provide us with some protection against increases in our stock price over the conversion price per share. However, there is no assurance that these transactions will remain in effect at all times. Also, although we believe the counterparties are highly rated financial institutions, there are no assurances that the counterparties will be able to perform their respective obligations under the agreement we have with each of them. Any net exposure related to conversion of the notes or any failure of the counterparties to perform their obligations under the agreements we have with them could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

ANY FUTURE ACQUISITIONS OR DIVESTITURES WOULD INVOLVE A NUMBER OF INHERENT RISKS. THESE RISKS COULD CAUSE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We may continue to seek to expand our product line through complementary or strategic acquisitions of other companies, products or assets, including those in rapidly developing economies, or through joint ventures, licensing agreements or other arrangements or may determine to divest certain products or assets. Any such acquisitions, joint ventures or other business combinations may involve significant challenges in integrating the new company's operations, and divestitures could be equally challenging. Either process may prove to be complex and time consuming and require substantial resources and effort. It may also disrupt our ongoing businesses, which may adversely affect our relationships with customers, employees, regulators and others with whom we have business or other dealings.

We may be unable to realize synergies or other benefits, including tax savings, expected to result from any acquisitions, joint ventures or other transactions or investments we may undertake, or be unable to generate additional revenue to offset any unanticipated inability to realize these expected synergies or benefits. Realization of the anticipated benefits of acquisitions or other transactions could take longer than expected, and implementation difficulties, unforeseen expenses, complications and delays, market factors or deterioration in domestic and global economic conditions could alter the anticipated benefits of any such transactions. We may also compete for certain acquisition targets with companies having greater financial resources than us or other advantages over us that may prevent us from acquiring a target. We also may inherit legal, regulatory and other risks that accrued prior to the acquisition, whether known or unknown to us. These factors could impair our growth and ability to compete, require us to focus additional resources on integration of operations rather than other profitable areas, or otherwise cause a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE ENTER INTO VARIOUS AGREEMENTS IN THE NORMAL COURSE OF BUSINESS WHICH PERIODICALLY INCORPORATE PROVISIONS WHEREBY WE INDEMNIFY THE OTHER PARTY TO THE AGREEMENT. IN THE EVENT THAT WE WOULD HAVE TO PERFORM UNDER THESE INDEMNIFICATION PROVISIONS, IT COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Table of Contents

In the normal course of business, we periodically enter into employment, legal settlement, and other agreements which incorporate indemnification provisions. We maintain insurance coverage which we believe will effectively mitigate our obligations under certain of these indemnification provisions. However, should our obligation under an indemnification provision exceed our coverage or should coverage be denied, our business, financial position and results of operations could be materially adversely affected and the market value of our common stock could decline.

OUR FUTURE SUCCESS IS HIGHLY DEPENDENT ON OUR CONTINUED ABILITY TO ATTRACT AND RETAIN KEY PERSONNEL. ANY FAILURE TO ATTRACT AND RETAIN KEY PERSONNEL COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

It is important that we attract and retain qualified personnel in order to develop new products and compete effectively. If we fail to attract and retain key scientific, technical or management personnel, our business could be affected adversely. Additionally, while we have employment agreements with certain key employees in place, their employment for the duration of the agreement is not guaranteed. If we are unsuccessful in retaining our key employees, it could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE ARE IN THE PROCESS OF ENHANCING AND FURTHER DEVELOPING OUR GLOBAL ENTERPRISE RESOURCE PLANNING SYSTEMS AND ASSOCIATED BUSINESS APPLICATIONS. AS WITH ANY ENHANCEMENTS OF SIGNIFICANT SYSTEMS, DIFFICULTIES ENCOUNTERED COULD RESULT IN BUSINESS INTERRUPTIONS, AND COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

We are enhancing and further developing our global enterprise resource planning (ERP) systems and associated applications to provide more operating efficiencies and effective management of our business operations. Such changes to ERP systems and related software carry risks such as cost overruns, project delays and business interruptions and delays. If we experience a material business interruption as a result of our ERP enhancements, it could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

WE MUST MAINTAIN ADEQUATE INTERNAL CONTROLS AND BE ABLE, ON AN ANNUAL BASIS, TO PROVIDE AN ASSERTION AS TO THE EFFECTIVENESS OF SUCH CONTROLS. FAILURE TO MAINTAIN ADEQUATE INTERNAL CONTROLS OR TO IMPLEMENT NEW OR IMPROVED CONTROLS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Effective internal controls are necessary for Mylan to provide reasonable assurance with respect to its financial reports. We are spending a substantial amount of management time and resources to comply with laws, regulations and standards relating to corporate governance and public disclosure. In the U.S., such regulations include the Sarbanes-Oxley Act of 2002, SEC regulations and the NASDAQ listing standards. In particular, Section 404 of the Sarbanes-Oxley Act of 2002 requires management's annual review and evaluation of our internal control over financial reporting and attestation as to the effectiveness of these controls by our independent registered public accounting firm. If we fail to maintain the adequacy of our internal controls, we may not be able to ensure that we can conclude on an ongoing basis that we have effective internal control over financial reporting. Additionally, internal control over financial reporting may not prevent or detect misstatements because of its inherent limitations, including the possibility of human error, the circumvention or overriding of controls, or fraud. Therefore, even effective internal controls can provide only reasonable assurance

Table of Contents

with respect to the preparation and fair presentation of financial statements. In addition, projections of any evaluation of effectiveness of internal control over financial reporting to future periods are subject to the risk that the control may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. If we fail to maintain the adequacy of our internal controls, including any failure to implement required new or improved controls, this could have a material adverse effect on our business, financial position and results of operations, and the market value of our common stock could decline.

THERE ARE INHERENT UNCERTAINTIES INVOLVED IN ESTIMATES, JUDGMENTS AND ASSUMPTIONS USED IN THE PREPARATION OF FINANCIAL STATEMENTS IN ACCORDANCE WITH GAAP. ANY FUTURE CHANGES IN ESTIMATES, JUDGMENTS AND ASSUMPTIONS USED OR NECESSARY REVISIONS TO PRIOR ESTIMATES, JUDGMENTS OR ASSUMPTIONS OR CHANGES IN ACCOUNTING STANDARDS COULD LEAD TO A RESTATEMENT OR REVISION TO PREVIOUSLY CONSOLIDATED FINANCIAL STATEMENTS, WHICH COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

The Consolidated and Condensed Consolidated Financial Statements included in the periodic reports we file with the SEC are prepared in accordance with GAAP. The preparation of financial statements in accordance with GAAP involves making estimates, judgments and assumptions that affect reported amounts of assets, liabilities, revenues, expenses and income. Estimates, judgments and assumptions are inherently subject to change in the future and any necessary revisions to prior estimates, judgments or assumptions could lead to a restatement. Furthermore, although we have recorded reserves for litigation related contingencies based on estimates of probable future costs, such litigation related contingencies could result in substantial further costs. Also, any new or revised accounting standards may require adjustments to previously issued financial statements. Any such changes could result in corresponding changes to the amounts of liabilities, revenues, expenses and income. Any such changes could have a material adverse effect on our business, financial position and results of operations and could cause the market value of our common stock to decline.

CHARGES TO EARNINGS RESULTING FROM ACQUISITIONS COULD HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS, FINANCIAL POSITION AND RESULTS OF OPERATIONS AND COULD CAUSE THE MARKET VALUE OF OUR COMMON STOCK TO DECLINE.

Under the GAAP business combination accounting standards, we recognize the identifiable assets acquired, the liabilities assumed, and any non-controlling interests in acquired companies generally at their acquisition date fair values and, in each case, separately from goodwill. Goodwill as of the acquisition date is measured as the excess amount of consideration transferred, which is also generally measured at fair value, and the net of the acquisition date amounts of the identifiable assets acquired and the liabilities assumed. Our estimates of fair value are based upon assumptions believed to be reasonable but which are inherently uncertain. After we complete an acquisition, the following factors could result in material charges and adversely affect our operating results and may adversely affect our cash flows:

costs incurred to combine the operations of companies we acquire, such as transitional employee expenses and employee retention, redeployment or relocation expenses;

impairment of goodwill or intangible assets, including acquired in-process research and development;

amortization of intangible assets acquired;

a reduction in the useful lives of intangible assets acquired;

identification of or changes to assumed contingent liabilities, including, but not limited to, contingent purchase price consideration, income tax contingencies and other non-income tax contingencies, after

Table of Contents

our final determination of the amounts for these contingencies or the conclusion of the measurement period (generally up to one year from the acquisition date), whichever comes first;

charges to our operating results to eliminate certain duplicative pre-acquisition activities, to restructure our operations or to reduce our cost structure;

charges to our operating results resulting from expenses incurred to effect the acquisition; and

accretion of contingent consideration liabilities.

A significant portion of these adjustments could be accounted for as expenses that will decrease our net income and earnings per share for the periods in which those costs are incurred. Such charges could cause a material adverse effect on our business, financial position and results of operations and could cause the market value of the common stock to decline.

ITEM 1B. Unresolved Staff Comments

None.

ITEM 2. Properties

We maintain various facilities that are used for manufacturing, research and development, warehousing, distribution and administrative functions. These facilities consist of both owned and leased properties.

Table of Contents

The following summarizes the significant properties used to conduct our operations:

Primary Segment	Location	Status	Primary Use
Generics Segment	West Virginia	Owned	Manufacturing, R&D, Warehousing, Administrative
		Leased	Warehousing, Administrative
	North Carolina	Owned	Warehousing, Distribution
		Owned	Manufacturing, Warehousing, Administrative
	Texas	Owned	Manufacturing, Warehousing, Administrative
		Leased	Warehousing
	Vermont	Owned	Manufacturing, Warehousing, Administrative
	Puerto Rico	Owned	Manufacturing, Warehousing, Administrative
	Canada	Owned	Warehousing, Administrative
	Germany	Leased	Administrative, Warehousing
	France	Owned	Manufacturing

	Washington, D.C.	Leased	Administrative

We believe that all facilities are in good operating condition, the machinery and equipment are well-maintained, the facilities are suitable for their intended purposes and they have capacities adequate for current operations.

ITEM 3. Legal Proceedings

For information regarding legal proceedings, refer to Note 14, Contingencies, in the accompanying Notes to Consolidated Financial Statements in this Annual Report.

ITEM 4. Mine Safety Disclosures

Not applicable.

Table of Contents**PART II****ITEM 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Our common stock is traded on the NASDAQ Stock Market under the symbol MYL. The following table sets forth the quarterly high and low sales prices for our common stock for the periods indicated:

Year Ended December 31, 2011	High	Low
Three months ended March 31, 2011	\$ 24.17	\$ 20.95
Three months ended June 30, 2011	25.46	21.91
Three months ended September 30, 2011	25.00	16.99
Three months ended December 31, 2011	21.84	15.49

Year Ended December 31, 2010	High	Low
Three months ended March 31, 2010	\$ 23.30	\$ 16.75
Three months ended June 30, 2010	23.63	16.89
Three months ended September 30, 2010	18.99	16.55
Three months ended December 31, 2010	21.49	18.33

As of February 13, 2012, there were approximately 127,634 holders of record of our common stock, including those held in street or nominee name.

On November 15, 2010, the conversion of the 6.50% mandatorily convertible preferred stock into 125,234,172 shares of our common stock was completed.

In May 2007, in conjunction with the acquisition of the former Merck Generics business, Mylan suspended the dividend on its common stock effective upon the completion of the acquisition in October 2007. The Company does not expect to pay dividends on its common stock in the near future.

In the past three years, we have issued unregistered securities in connection with the following transactions:

In November 2010, we issued \$800.0 million aggregate principal amount of 6.0% Senior Notes due 2018 (the "2018 Senior Notes"). These notes were issued in a private offering exempt from the registration requirements of the Securities Act of 1933, as amended (the "Securities Act") to qualified institutional buyers in accordance with Rule 144A and to persons outside of the United States pursuant to Regulation S under the Securities Act.

In May 2010, we issued \$550.0 million of 7.625% Senior Notes due 2017 (the "2017 Senior Notes") and \$700.0 million of 7.875% Senior Notes due 2020 (the "2020 Senior Notes"). These notes were issued in a private offering exempt from the registration requirements of the Securities Act to qualified institutional buyers in accordance with Rule 144A and to persons outside of the United States pursuant to Regulation S under the Securities Act. In July 2010, we privately placed \$300.0 million aggregate principal amount of senior notes through a reopening of our 2020 Senior Notes.

Table of Contents

STOCK PERFORMANCE GRAPH

Set forth below is a performance graph comparing the cumulative total return (assuming reinvestment of dividends) for the nine-month period ended December 31, 2007 and the calendar years ended December 31, 2008, 2009, 2010 and 2011 of \$100 invested on March 31, 2007 in Mylan's Common Stock, the Standard & Poor's 500 Index and the Dow Jones U.S. Pharmaceuticals Index.

	3/07	12/07	12/08	12/09	12/10	12/11
Mylan Inc.	100.00	66.73	46.94	87.46	100.28	101.84
S&P 500	100.00	104.82	66.04	83.52	96.10	98.13
Dow Jones U.S. Pharmaceuticals	100.00	104.18	85.27	101.55	103.70	123.04

Table of Contents**ITEM 6. Selected Financial Data**

The selected consolidated financial data set forth below should be read in conjunction with Management's Discussion and Analysis of Results of Operations and Financial Condition and the Consolidated Financial Statements and related Notes to Consolidated Financial Statements included in Item 8 in this Form 10-K. The functional currency of the primary economic environment in which the operations of Mylan and its subsidiaries in the U.S. are conducted is the U.S. Dollar. The functional currency of non-U.S. subsidiaries is generally the local currency in the country in which each subsidiary operates.

Edgar Filing: MYLAN INC. - Form 10-K

- ⁽¹⁾ Cost of sales in 2011 includes approximately \$364.8 million primarily related to the amortization of purchased intangibles from acquisitions. In addition, the weighted average common shares outstanding include the full year effect of the conversion of the 6.50% mandatorily convertible preferred stock into approximately 125.2 million shares of common stock.

Table of Contents

- (2) The 2010 financial data includes the results of Bioniche Pharma from September 7, 2010. Cost of sales in 2010 includes approximately \$309.2 million primarily related to the amortization of purchased intangibles from acquisitions.
- (3) Cost of sales in 2009 includes approximately \$282.5 million primarily related to the amortization of purchased intangibles from acquisitions.
- (4) Cost of sales in 2008 includes approximately \$415.6 million related to the amortization of purchased intangibles and the amortization of the inventory step-up primarily associated with acquisitions. 2008 also includes a goodwill impairment loss of \$385.0 million and impairment charges on certain other assets of \$72.5 million.
- (5) Effective October 2, 2007, we changed our fiscal year end from March 31st to December 31st. The above periods include Mylan Laboratories Limited (formerly known as Matrix Laboratories Limited) from January 8, 2007 and the former Merck Generics business from October 2, 2007. The 2007 Transition Period represents the period from April 1, 2007 to December 31, 2007.
- (6) In addition to the write-off of acquired in-process research and development of \$1.27 billion, cost of sales includes approximately \$148.9 million related to the amortization of purchased intangibles and the amortization of the inventory step-up primarily associated with the acquisitions of the former Merck Generics business and Mylan Laboratories Limited.
- (7) The financial data for 2008 and the 2007 Transition Period have been revised in accordance with the updated accounting guidance regarding noncontrolling interests and accounting related to the outstanding Convertible Notes, which we adopted on January 1, 2009.
- (8) Working capital is calculated as current assets minus current liabilities.

ITEM 7. Management's Discussion and Analysis of Financial Condition And Results of Operations

The following discussion and analysis addresses material changes in the financial condition and results of operations of Mylan Inc. and subsidiaries (collectively the Company, Mylan, our or we) for the periods presented. This discussion and analysis should be read in conjunction with the Consolidated Financial Statements, the related Notes to Consolidated Financial Statements and our other Securities and Exchange Commission (SEC) filings and public disclosures.

This Form 10-K may contain forward-looking statements. These statements are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements may include, without limitation, statements about our market opportunities, strategies, competition and expected activities and expenditures, and at times may be identified by the use of words such as may, could, should, would, project, believe, anticipate, expect, plan, estimate, forecast, potential, intend, continue and comparable words. Forward-looking statements inherently involve risks and uncertainties. Accordingly, actual results may differ materially from those expressed or implied by these forward-looking statements. Factors that could cause or contribute to such differences include, but are not limited to, the risks described above under Risk Factors in Part I, Item 1A. We undertake no obligation to update any forward-looking statements for revisions or changes after the filing date of this Form 10-K.

Executive Overview

Mylan ranks among the leading generic and specialty pharmaceutical companies in the world, offering one of the industry's broadest and highest quality product portfolios, a robust pipeline and a global commercial footprint that spans approximately 150 countries and territories. With a workforce of more than 18,000 employees and external contractors, Mylan has attained leading positions in key international markets through its wide array of dosage forms and delivery systems, significant manufacturing capacity, global scale and commitment to quality and customer service. Through our subsidiary Mylan Laboratories Limited (formerly

Table of Contents

known as Matrix Laboratories Limited), Mylan operates one of the world's largest active pharmaceutical ingredient (API) manufacturers with respect to the number of drug master files filed with regulatory agencies. This capability makes Mylan one of only two global generics companies with a comprehensive, vertically integrated supply chain. We hold a leading generics sales position in three of the world's largest pharmaceutical markets, those being the United States (U.S.), France and the United Kingdom (U.K.), and we also hold leading sales positions in several other key generics markets, including Australia, Belgium, Italy, Portugal and Spain.

Mylan has two segments, Generics and Specialty. Generics primarily develops, manufactures, sells and distributes generic or branded generic pharmaceutical products in tablet, capsule, injectable or transdermal patch form, as well as API. Specialty engages mainly in the manufacture and sale of branded specialty nebulized and injectable products. We also report in Corporate/Other certain research and development expenses, general and administrative expenses, litigation settlements, amortization of intangible assets and certain purchase-accounting items, impairment charges, and other items not directly attributable to the segments.

Acquisition of the Respiratory Delivery Platform

On December 23, 2011, we completed the acquisition of the exclusive worldwide rights to develop, manufacture and commercialize a generic equivalent to GlaxoSmithKline's Advair Diskus and Seretide® Diskus incorporating Pfizer Inc.'s (Pfizer's) proprietary dry powder inhaler delivery platform (the Respiratory Delivery Platform). Advair Diskus and Seretide® Diskus are inhaled fixed-dose combinations of Fluticasone Propionate and Salmeterol delivered via a dry powder inhaler and are used to treat asthma and COPD (chronic obstructive pulmonary disorder). The acquisition of the Respiratory Delivery Platform fills an important strategic gap in our product portfolio and will expand our focus on difficult-to-produce, limited competition products, and it will serve as a base for our respiratory franchise. The Respiratory Delivery Platform and scientific expertise will also be used to develop additional branded specialty products, building upon the capabilities and assets that we have in place within our Specialty segment. As part of the agreement, we will fund the remaining development and capital requirements to bring the products to market.

This transaction was accounted for as a purchase of a business with a total purchase consideration of approximately \$348 million. This amount consisted of an initial cash payment of approximately \$22 million, approximately \$4 million in assumed liabilities and contingent consideration with an estimated fair value of approximately \$322 million to be paid upon the achievement of future development and commercial milestones and the sharing of future profits.

Senior Credit Agreement Refinancing and Receivables Agreement

In November 2011, we entered into a credit agreement (the Senior Credit Agreement) with a syndication of banks which provided \$1.25 billion in U.S. Term Loans (the U.S. Term Loans) and contains a \$1.25 billion revolving facility (the Revolving Facility, and together with the U.S. Term Loans, the Senior Credit Facilities). The proceeds of the U.S. Term Loans and borrowings under the Revolving Facility were used to repay amounts outstanding under the 2007 Amended and Restated Credit Agreement (the Prior Credit Agreement) and to pay the related fees and expenses of the foregoing transactions.

In February 2012, we entered into an agreement with a syndication of banks to borrow up to \$300 million secured by certain U.S. accounts receivable. This agreement has a maturity of three years and is a committed facility.

Financial Summary

For the year ended December 31, 2011, Mylan reported total revenues of \$6.13 billion compared to \$5.45 billion for 2010. This represents an increase of \$679.3 million, or 12.5%. Consolidated gross profit for the

Table of Contents

current year was \$2.56 billion, compared to \$2.22 billion in the prior year, an increase of \$346.0 million, or 15.6%. For the current year, earnings from operations were \$1.01 billion as compared to \$721.6 million in the prior year, an increase of \$283.9 million or 39.3%.

The net earnings attributable to Mylan Inc. common shareholders for the current year were \$536.8 million, and earnings per diluted share were \$1.22. In the prior year, net earnings attributable to Mylan Inc. common shareholders were \$223.6 million, or earnings of \$0.68 per diluted share. A more detailed discussion of the company's financial results can be found below in the section titled Results of Operations.

Included in the results for 2011 and 2010 are the following items of note:

2011:

Amortization expense, primarily related to purchased intangible assets associated with acquisitions, of \$364.8 million, which includes a \$16.2 million in-process research and development asset impairment charge;

Interest expense of \$49.8 million, primarily related to the amortization of the discounts on our convertible debt instruments and 2018 Senior Notes, net of amortization of the premium on our 2020 Senior Notes;

Net charges related to the settlement of litigation of \$48.6 million;

Charges, related to the 2011 refinancing transactions of \$34.0 million, primarily swap termination fees and the write-off of deferred financing costs included in other (expense) income, net;

Additional expenses, primarily restructuring related items totaling \$57.1 million; and

Tax expense of \$198.1 million related to the above items and other income tax related items.

2010:

Amortization expense, primarily related to purchased intangible assets associated with acquisitions, of \$309.2 million;

Interest expense of \$60.0 million, primarily related to the amortization of the discounts on our convertible debt instruments and 2018 Senior Notes, net of amortization of the premium on our 2020 Senior Notes;

Net charges related to the settlement of litigation of \$127.1 million;

Charges, related to the 2010 refinancing transactions, of \$37.4 million, primarily swap termination fees and the write-off of deferred financing costs included in other (expense) income, net;

Costs related to the acquisition of Bioniche Pharma Holdings Limited (Bioniche Pharma) in September 2010 of \$12.7 million;

Edgar Filing: MYLAN INC. - Form 10-K

Additional expenses, primarily restructuring, product transfers and loss on sale of certain non-operating assets totaling \$68.5 million; and

Tax expense of \$252.8 million related to the above items and other income tax related items; and

For comparative purposes, 2009 included the following items of note:

Amortization expense, primarily related to purchased intangible assets associated with acquisitions, of \$282.5 million;

Interest expense of \$42.9 million relating to the amortization of the discounts on our convertible debt instruments;

Table of Contents

Other revenue of approximately \$28.5 million resulting from the cancellation of product development agreements for which the revenue had been previously deferred;

Net charges related to the settlement of litigation of \$225.7 million;

An upfront payment of \$18.0 million made with respect to the execution of a co-development agreement;

Rebranding costs associated with a migration to the Mylan brand for the former Merck Generics business totaling \$21.4 million;

Additional costs, primarily restructuring, totaling \$60.7 million;

Tax expense of \$207.5 million related to the above items and other income tax related items; and

Income tax expense of approximately \$65.0 million related to losses recognized as a result of reorganizations among certain of our foreign subsidiaries.

2011 Compared to 2010

Total Revenues and Gross Profit

For the year ended December 31, 2011, Mylan reported total revenues of \$6.13 billion compared to \$5.45 billion in the prior year. Total revenues include both net revenues and other revenues from third parties. Third party net revenues for the current year were \$6.11 billion compared to \$5.40 billion for the prior year, representing an increase of \$702.0 million, or 13.0%.

Other third party revenues for the current year were \$23.5 million compared to \$46.3 million in the prior year, a decrease of \$22.8 million, primarily due to a decrease in royalty income in 2011.

Mylan's revenues are impacted by the effect of foreign currency translation, primarily reflecting changes in the U.S. dollar in comparison to the functional currencies of Mylan's Euro-denominated subsidiaries, as well as the currencies of Mylan's subsidiaries in Australia, Japan and India. The favorable impact of foreign currency translation on current year total revenues was approximately 2%.

In arriving at net revenues, gross revenues are reduced by provisions for estimates, including discounts, rebates, promotions, price adjustments, returns and chargebacks. See the section titled *Application of Critical Accounting Policies* in this Item 7, for a thorough discussion of our methodology with respect to such provisions. For 2011, the most significant amounts charged against gross revenues were \$2.13 billion related to chargebacks and \$1.26 billion related to incentives offered to our direct customers, such as promotions and volume related incentives. For 2010, the most significant amounts charged against gross revenues were for chargebacks in the amount of \$2.07 billion and incentives offered to our direct customers in the amount of \$1.27 billion.

Gross profit for the current year was \$2.56 billion and gross margins were 41.8%. For 2010, gross profit was \$2.22 billion, and gross margins were 40.7%. Gross profit for the current year is impacted by purchase accounting and other special items recorded during 2011, of approximately \$373.2 million, which consisted primarily of amortization related to purchased intangible assets associated with acquisitions. Excluding such items, gross margins would have been approximately 48%. Prior year gross profit is also impacted by similar purchase accounting and other special items in the amount of \$315.9 million. Excluding such items, gross margins in the prior year would have also been approximately 47%. The increase in gross margins is primarily the result of new products launched in the North American region of our Generics segment and favorable pricing on the EpiPen Auto-Injector in our Specialty segment and the continued vertical integration and leveraging of our manufacturing platform.

Table of Contents

of additional competition in the market. Our top ten products in terms of sales, in the aggregate, represented approximately 23% of total revenues in both 2011 and 2010.

Generics Segment Net Revenues

For the current year, Generics third party net revenues were \$5.56 billion compared to \$4.98 billion in the prior year, an increase of \$577.4 million, or 11.6%. Translating Generics 2011 third party net revenues at prior year comparative period foreign current exchange rates would have resulted in year-over-year growth of approximately 9%. Generics sales are derived primarily in or from the U.S. and Canada (collectively North America), Europe, Middle East and Africa (collectively, EMEA) and India, Australia, Japan, and New Zealand (collectively, Asia Pacific).

Third party net revenues from North America were \$2.86 billion for the current year, compared to \$2.36 billion for the prior year, representing an increase of \$496.1 million, or 21.0%. The increase in current year net revenues was primarily driven by new product launches and increased volume, including incremental revenue from the Bioniche Pharma acquisition in September 2010, together totaling approximately \$427.9 million in the current year.

During 2011, we launched approximately 50 new products in North America. Products generally contribute most significantly to revenues and gross margin at the time of their launch, even more so in periods of market exclusivity, or in periods of limited generic competition. As such, the timing of new product introductions can have a significant impact on Mylan's financial results.

The entrance into the market of additional competition generally has a negative impact on the volume and pricing of the affected products. Additionally, pricing is often affected by factors outside of the Company's control. In the current year, lower pricing, generally the result of increased competition, partially offset the favorable volume realized on sales of existing products. The effect of foreign currency translation was insignificant within North America.

Third party net revenues from EMEA were \$1.47 billion in 2011, compared to \$1.55 billion in 2010, a decrease of \$79.9 million, or 5.2%. However, translating current year third party net revenues from EMEA at prior year exchange rates would result in a decrease of approximately \$146 million, or 9%. This decrease was the result of unfavorable pricing in nearly all of the European markets in which Mylan operates. Revenue from the launch of new products throughout Europe served to offset unfavorable volume on existing products in certain markets, primarily France, the United Kingdom and Germany.

Local currency revenues from Mylan's business in France decreased as compared to the prior year as a result of the impact of lower pricing and volume due to an increasingly competitive market, partially offset by new product launches. Despite the competitive market conditions, the market share in France remained relatively stable in 2011 as compared to 2010, and we remain the market leader.

In Italy, excluding the effect of foreign currency, third party net revenues increased more than 20% as a result of successful product launches and increased market penetration, which has favorably affected sales volume. Italy is one of the fastest growing markets in Europe. Our growth in Italy outpaced the market in terms of both volume and sales value. In Spain, another fast-growing market, we saw significant growth in our market share in terms of volume, while our share in terms of value remained constant. This is due, in part, to government-imposed price reductions which resulted in overall unfavorable pricing. This unfavorable pricing was partially offset by revenue from new products and incremental volume on our existing portfolio.

In addition to Spain and Italy, certain other markets in which we do business have recently undergone government-imposed price reductions, and further

Table of Contents

sales and gross profit in these markets. However, pro-generic government initiatives in certain markets could help to offset some of this unfavorable effect by potentially increasing rates of generic substitution.

A number of markets in which we operate have implemented or may implement tender systems for generic pharmaceuticals in an effort to lower prices. Generally speaking, tender systems can have an unfavorable impact on revenue and profitability. Under such tender systems, manufacturers submit bids which establish prices for generic pharmaceutical products. Upon winning the tender, the winning company will receive a preferential reimbursement for a period of time. The tender system often results in companies underbidding one another by proposing low pricing in order to win the tender. Additionally, the loss of a tender by a third party to whom we supply API can also have a negative impact on our sales and profitability. Sales, primarily in Germany, continue to be negatively affected by the impact of tender systems.

In Asia Pacific, third party net revenues were \$1.24 billion in 2011, compared to \$1.07 billion in 2010, an increase of \$161.2 million, or 15.0%. Excluding the favorable effect of foreign currency translation, calculated as described above, the increase was approximately \$113 million, or 11%. This increase was primarily driven by higher third party sales by Mylan Laboratories Limited.

At Mylan Laboratories Limited, the increase in third party net revenues is due to double-digit growth, excluding the effect of foreign currency, in sales of both anti-retroviral (ARV) finished dosage form (FDF) generic products, which are used in the treatment of HIV/AIDS, and API. In addition to third party sales, the Asia Pacific region also supplies both FDF generic products and API to Mylan subsidiaries in conjunction with Mylan's vertical integration strategy. Intercompany revenues recognized by the Asia Pacific region were \$216.7 million in 2011, compared to \$162.2 million in the prior year. These intercompany sales eliminate within, and therefore are not included in, Generics or consolidated net revenues.

In Japan, third party net revenues increased mainly as a result of favorable volume. In Australia, local currency sales decreased versus the prior year as sales growth from new products was offset by lower pricing. As in EMEA, government-imposed price reductions in Japan and Australia have had, and could continue to have, a negative impact on sales and gross profit in these markets.

Specialty Segment Net Revenues

For the current year, Specialty reported third party net revenues of \$547.4 million, an increase of \$124.6 million, or 29.5%, from the prior year of \$422.8 million.

The most significant contributor to Specialty revenues continues to be the EpiPen Auto-Injector, which is used in the treatment of severe allergic reactions, including anaphylaxis. The EpiPen Auto-Injector is the number one epinephrine auto-injector for the treatment of severe allergic reactions with more than 95% market share in the U.S. and more than 90% market share worldwide. Specialty realized increased sales of the EpiPen Auto-Injector as a result of favorable pricing and increased volume.

In addition to the continued strong sales of the EpiPen Auto-Injector, the increase in third-party sales included higher sales volumes of Perforomist® Solution, Dey's maintenance therapy for patients with moderate to severe chronic obstructive pulmonary disease.

Operating Expenses

Research and development (R&

Table of Contents

Selling, general and administrative (SG&A) expense for the current year was \$1.21 billion, compared to \$1.09 billion for the prior year, an increase of \$128.0 million. In addition to incremental expense as a result of foreign currency and the Bioniche Pharma acquisition, SG&A increased primarily due to increased payroll and benefit costs, legal costs and higher marketing expense in the Specialty segment, in conjunction with various advertising campaigns related to the EpiPen Auto-Injector.

Litigation Settlements, net

During 2011, we recorded net litigation charges of \$48.6 million, compared to \$127.1 million during the prior year. In 2011, the net charges for litigation settlements principally related to an adverse ruling for an anti-competition claim in France, which resulted in a charge of \$24.0 million and a patent infringement claim, which resulted in a charge of \$18.0 million. In 2010, we recorded pre-tax charges of \$66.0 million in 2010 related to settlements in principal to resolve certain claims and estimated potential losses on other claims related to our outstanding pricing litigation. In addition, in 2010, the Company recorded pre-tax charges of approximately \$41.0 million to reserve for estimated potential losses and settlements in principle related to certain product liability claims.

Interest Expense

Interest expense for 2011 totaled \$335.9 million, compared to \$331.5 million for 2010. The increase is primarily due to a full year of interest associated with the 2017, 2018 and 2020 Senior Notes debt offerings in 2010, partially offset by a decrease in the amortization of discounts. Included in interest expense for the current year and the prior year are \$49.8 million and \$60.0 million primarily related to the amortization of the discounts on our convertible debt instruments and the 2018 Senior Notes, net of amortization of the premium on our 2020 Senior Notes.

Other (Expense) Income, net

Other (expense) income, net, was expense of \$14.9 million in the current year compared to expense of \$34.2 million in the prior year. Generally included in other (expense) income, net, are certain foreign exchange gains and losses and interest and dividend income. Additionally, included in the current year are charges associated with the termination of certain interest rate swaps totaling \$13.9 million and the write-off of previously deferred financing fees of \$20.1 million related to the refinancing of the senior credit facility. The prior year includes a \$4.9 million loss on the sale of certain non-operating assets, charges associated with the termination of certain interest rate swaps totaling \$18.6 million and the write-off of previously deferred financing fees of \$18.8 million.

Income Tax Expense

We recorded income tax expense of \$115.8 million in 2011 compared to expense of \$10.4 million in 2010, an increase of \$105.4 million. This increase was primarily due to a higher effective tax rate and an increase in pre-tax income. The increase in the effective tax rate was the result of a greater amount of 2010 net reductions in previously established reserves for uncertain tax positions as compared to 2011. In both periods, the decreases to our tax reserves were due to favorable rulings from taxing authorities, expirations of statutes of

Table of Contents

net revenues for 2010 were \$5.40 billion compared to \$5.02 billion for 2009, representing an increase of \$388.9 million, or 7.8%.

Other third party revenues for 2010 were \$46.3 million compared to \$77.4 million in 2009, a decrease of \$31.1 million. In 2009, within Generics, we recognized \$28.5 million of incremental other revenue resulting from the cancellation of product development agreements for which the revenue had been previously deferred. During 2010, no such revenue was recognized.

The favorable impact of foreign currency translation on total revenues was less than 1%.

In arriving at net revenues, gross revenues were reduced by provisions for estimates, including discounts, rebates, promotions, price adjustments, returns and chargebacks. For 2010, the most significant amounts charged against gross revenues were for chargebacks in the amount of \$2.07 billion. For 2009, the most significant amounts charged against gross revenues were for chargebacks in the amount of \$1.89 billion.

Gross profit for 2010 was \$2.22 billion and gross margins were 40.7%. For 2009, gross profit was \$2.07 billion, and gross margins were also 40.7%. Gross profit for 2010 was impacted by certain purchase accounting related items recorded during the year of approximately \$309.2 million, which consisted primarily of amortization related to purchased intangible assets associated with acquisitions. Excluding such items, gross margins would have been approximately 46%. Gross profit for 2009 was also impacted by similar purchase accounting related items in the amount of \$282.5 million. Excluding such items, gross margins in 2009 would have also been approximately 46%.

From time to time, a limited number of our products may represent a significant portion of our net revenues, gross profit and net earnings. Generally, this is due to the timing of new product launches and the amount, if any, of additional competition in the market. Our top ten products in terms of sales, in the aggregate, represented approximately 23% of total revenues in 2010.

Generics Segment Net Revenues

For 2010, Generics third party net revenues were \$4.98 billion compared to \$4.61 billion in 2009, an increase of \$371.4 million, or 8.1%. Translating Generics 2010 third party net revenues at prior year comparative period foreign currency exchange rates would have resulted in year-over-year growth of approximately 7% or \$320 million. This increase is due principally to new product launches and, to a lesser extent, revenue from acquired businesses, together totaling approximately \$269 million. Third party net revenues from existing products were relatively constant year over year, with the increase in volume almost fully offset by lower pricing.

Third party net revenues from North America were \$2.36 billion for 2010, compared to \$2.09 billion for 2009, representing an increase of \$265.0 million, or 12.6%. The increase in 2010 net revenues was driven principally by new product launches, and to a lesser extent, revenue from acquired businesses, together totaling approximately \$213 million. North American third party net revenues from

Table of Contents

Upon receiving final approval from the FDA in July 2010, Mylan commenced immediate shipment of minocycline ER. Mylan also reached settlement and license agreements with Medicis resolving patent litigation relating to minocycline ER, and the Company ceased additional distribution. Pursuant to the terms of the agreements, Medicis released Mylan from any liability related to the prior sales of the product, and Mylan had the right to market minocycline ER in the U.S. beginning in November 2011, or earlier under certain circumstances.

As a result of significant uncertainties surrounding the pricing and market conditions with respect to this product, we were not able to reasonably estimate the amount of potential price adjustments, including product returns. Therefore, revenues on shipments of this product were deferred until the resolution of such uncertainties. Such uncertainties were resolved upon our customers' sale of this product. As a result, the Company had recognized revenue only upon our customers' sale of this product.

Third party net revenues from EMEA were \$1.55 billion in 2010, compared to \$1.64 billion in 2009, a decrease of \$90.8 million, or 5.5%. However, translating 2010 third party net revenues from EMEA at 2009 exchange rates would result in a decrease of approximately \$24 million, or 1%. This decrease was mainly the result of unfavorable pricing in many of the European markets in which Mylan operates, partially offset by new product launches throughout EMEA and a strong performance in Italy.

Excluding the unfavorable effect of foreign currency translation, our business in France experienced a low single digit year over year decline in third party net revenues primarily due to unfavorable pricing as a result of increased competition. Such competition in France included the launch, by brand companies, of generic versions of their own products. Despite this local currency decline during 2010, the market share of our French business remained relatively stable in 2010 as compared to 2009.

In Italy, excluding the effect of foreign currency, third party sales increased by approximately 43% as a result of successful product launches and increased market penetration, which had favorably affected sales volume. In addition, our Italian business benefitted from certain regulatory changes in early 2010 which resulted in an overall positive pricing effect. In June 2010, additional regulatory changes were introduced which decreased prices on certain products, partially offsetting these positive pricing impacts.

Sales in Germany were negatively affected by the continued implementation of tender systems in that country, while certain of our subsidiaries, in particular, the Netherlands, have benefited from recent tenders.

In Asia Pacific, third party net revenues were \$1.07 billion in 2010, compared to \$877.1 million in 2009, an increase of \$197.2 million, or 22.5%. Excluding the favorable effect of foreign currency translation, calculated as described above, the increase was approximately \$108 million, or 12%. This increase is primarily driven by higher third party sales by Mylan Laboratories Limited.

At Mylan Laboratories Limited, the increase in third party net revenues was due to double-digit growth, excluding the effect of foreign currency, in sales of both ARV FDF generic products, which are used in the treatment of HIV/AIDS, and API. In addition to third party sales, the Asia Pacific region also supplied both FDF generic products and API to Mylan subsidiaries in conjunction with Mylan's vertical integration strategy. Intercompany revenues recognized by the Asia Pacific region were \$162.2 million in 2010, compared to \$67.8 million in 2009. These intercompany sales eliminate within, and therefore are not included in, Generics or consolidated net revenues.

Table of Contents

Specialty Segment Net Revenues

For 2010, Specialty reported third party net revenues of \$422.8 million, an increase of \$17.5 million, or 4.3%, from 2009 of \$405.3 million. Intercompany sales by Specialty totaled \$61.8 million in 2010 compared to \$40.8 million in 2009. The increase was due to the fact that certain generic products previously sold to third parties by Specialty are now sold to Mylan subsidiaries in North America who, in turn, sell the products to third parties. These generic products contributed \$46.8 million to total revenues of the Specialty Segment in 2009. Excluding the sale of such products from 2009 third party net revenues would have resulted in an increase in third party net revenues in 2010 of \$64.3 million or 17.9%.

The most significant contributor to Specialty revenues during 2010 was the EpiPen Auto-Injector. The EpiPen Auto-Injector was the number one epinephrine auto-injector for the treatment of severe allergic reactions with more than 95% market share in the U.S. and more than 90% market share worldwide. Specialty realized increased sales of the EpiPen Auto-Injector as a result of favorable pricing and increased volume.

In addition to the continued strong sales of the EpiPen Auto-Injector, the increase in third-party sales included higher sales volumes of Perforomist® Inhalation Solution, Dey's maintenance therapy for patients with moderate to severe chronic obstructive pulmonary disease.

Operating Expenses

R&D expense in 2010 was \$282.1 million, compared to \$275.3 million in 2009, an increase of \$6.8 million, with almost one-third of this increase due to the unfavorable impact from foreign currency. Included in R&D in 2009 was an up-front payment of \$18.0 million related to our execution of a co-development agreement. Excluding this payment, as well as the effect of foreign currency, R&D increased due primarily to costs associated with higher volumes of internal and external product development and resulting submissions and R&D expense related to Bioniche Pharma.

SG&A expense for 2010 was \$1.09 billion, compared to \$1.05 billion for 2009, an increase of \$36.5 million. SG&A increased primarily as a result of increased legal costs and higher professional fees, including those related to the acquisition of Bioniche Pharma, and an unfavorable impact from foreign currency, partially offset by cost savings which resulted from restructuring programs undertaken in prior years.

Litigation Settlements, net

During 2010, we recorded net litigation charges of \$127.1 million, compared to \$225.7 million during 2009. Litigation settlements, net, during 2010 consisted primarily of charges related to the outstanding pricing litigation and product liability-related matters. With regard to our outstanding pricing litigation, the Company recorded pre-tax charges of \$66.0 million in 2010 and \$160.0 million in 2009 related to settlements in principal to resolve certain claims and estimated potential losses on other claims. In

Table of Contents

Other (Expense) Income, net

Other (expense) income, net, was expense of \$34.2 million in 2010 compared to income of \$22.1 million in 2009. Generally included in other (expense) income, net, are interest and dividend income and foreign exchange transaction gains and losses. Additionally, included in 2010 was a \$4.9 million loss on the sale of certain non-operating assets, charges associated with the termination of certain interest rate swaps totaling \$18.6 million and the write-off of previously deferred financing fees of \$18.8 million related to the repayment of the senior credit facility debt. Other income in 2009 included a favorable adjustment of \$13.9 million to the restructuring reserve as a result of a reduction in the estimated remaining spending on accrued projects, as well as a net gain of \$10.4 million realized on the termination of two joint ventures by our Mylan Laboratories Limited subsidiary, partially offset by an \$11.7 million loss on the sale, by Mylan Laboratories Limited, of a majority owned subsidiary.

Income Tax Expense

We recorded income tax expense of \$10.4 million in 2010, compared to a \$20.8 million benefit for 2009. 2010 included a net foreign tax credit of \$28.0 million, while 2009 included a \$65.0 million tax benefit related to losses recognized as a result of reorganizations among certain of our foreign subsidiaries. In addition to these items, the change in the provision year over year was driven primarily by changes in losses of certain foreign subsidiaries for which we have not recognized the related income tax benefit and different levels of income in different tax jurisdictions. Also, there were net decreases to our tax reserves due to favorable tax rulings from taxing authorities, expirations of statutes of limitations, and participation in voluntary disclosure agreements with certain tax jurisdictions.

Liquidity and Capital Resources

Our primary source of liquidity is cash provided by operations, which was \$720.4 million for the year ended December 31, 2011. We believe that cash provided by operating activities and available liquidity will continue to allow us to meet our needs for working capital, capital expenditures, interest and principal payments on debt obligations and other cash needs. Nevertheless, our ability to satisfy our working capital requirements and debt service obligations, or fund planned capital expenditures, will substantially depend upon our future operating performance (which will be affected by prevailing economic conditions), and financial, business and other factors, some of which are beyond our control.

Net cash provided by operating activities decreased by \$211.0 million to \$720.4 million for the year ended December 31, 2011, as compared to \$931.4 million for the year ended December 31, 2010. The net decrease in cash provided by operating activities was principally due to the following:

a net increase in the amount of cash used by changes in accounts receivable of \$340.7 million, as a result of higher receivable balances at December 31, 2011, due principally to the increase in sales in the fourth quarter of 2011, and cash received for deferred revenue in 2010;

the receipt of an income tax refund in the first quarter of 2010 of approximately \$99

Table of Contents

provided by changes in trade accounts payable due to a corresponding increase in inventory and the timing of payments.

For 2012, the timing of litigation settlements, income taxes and amounts due to Merck KGaA related to the anticipated income tax benefits on indemnified litigation may lead to a reduction of \$100 million or more in cash flows from operations as compared to 2011.

Net cash provided by operating activities increased by \$326.3 million to \$931.4 million for the year ended December 31, 2010 as compared to \$605.1 million for the year ended December 31, 2009. The net increase in cash provided by operating activities was principally due to the following:

an increase in net income of \$97.8 million;

a net increase in the amount of cash provided by changes in accounts receivable of \$197.7 million, as a result of the timing of both sales and cash collections;

a net increase in the amount of cash provided by changes in income taxes of \$136.0 million, driven primarily by the receipt of an income tax refund in the first quarter of 2010 of approximately \$99 million and lower income taxes paid as a result of anticipated tax benefits on the indemnified litigation;

a net increase in the amount of cash provided by changes in deferred income taxes of \$165.9 million due to a lower amount of net deferred tax assets generated during 2010;

a net decrease of \$114.8 million in the amount of cash generated through changes in inventory balances. In the current year, inventories increased to support an expected increase in future demand, whereas in the prior year inventory balances decreased as a result of the timing of shipments near year end; and

a net decrease of \$168.9 million in the amount of cash provided by changes in other assets and liabilities. The current year includes a reduction, as a result of continued spending, in certain restructuring reserves, as well as the payment of approximately \$69 million with respect to the Company's pricing litigation settlements.

Cash used in investing activities was \$332.0 million for the year ended December 31, 2011 as compared to \$725.4 million for the year ended December 31, 2010, a decrease of \$393.4 million. This decrease is the result of less cash paid for acquisitions in 2011 in the amount of \$482.3 million, offset by an increase in current year capital expenditures of \$87.1 million. In 2010, we acquired Bioniche Pharma, a privately held, global injectable pharmaceutical company, for \$543.7 million. In 2011, cash paid for acquisitions totaled \$80.5 million. Additionally, non-cash investing activities in 2011 included the acquisition of intangible assets through contingent consideration in the amount of approximately \$376.1 million, most of which relates to our acquisition of the Respiratory Delivery Platform.

Capital expenditures, primarily for property, plant and equipment,

Table of Contents

We believe that through the refinancing of our Prior Credit Agreement, and several capital market transactions completed in 2010 and 2011, Mylan's debt maturity schedule was substantially improved. The Company has approximately \$694 million due in 2012, of which \$600 million relates to a convertible note maturing on March 15, 2012, and approximately \$94 million due in 2013. Our current intention is to repay such amounts at maturity using available liquidity or our Receivables Facility.

As of December 31, 2011, because the closing price of our common stock for at least 20 trading days in the period of 30 consecutive trading days ending on the last trading day in the December 31, 2011 period was more than 130% of the applicable conversion reference price of \$13.32 at December 31, 2011, the \$575.0 million of Cash Convertible Notes were currently convertible. Although the Company's experience is that convertible debentures are not normally converted by investors until close to their maturity date, it is possible that debentures could be converted prior to their maturity date if, for example, a holder perceives the market for the debentures to be weaker than the market for the common stock. Upon an investor's election to convert, the Company is required to pay the full conversion value in cash. The amount payable per \$1,000 notional bond would be calculated as the product of (1) the conversion reference rate (currently 75.0751) and (2) the average Daily Volume Weighted Average Price per share of common stock for a specified period following the conversion date. Any payment above the principal amount is matched by a convertible note hedge. Should holders elect to convert, we intend to draw on our revolving credit facility to fund any principal payments. The facility is a secured revolving credit agreement expiring in November 2016, with available capacity of \$1.2 billion at December 31, 2011.

We are involved in various legal proceedings that are considered normal to our business. While it is not possible to predict the outcome of such proceedings, an adverse outcome in any of these proceedings could materially affect our financial position and results of operations, including our operating cash flow. We have approximately \$200 million accrued for such legal contingencies. Additionally, for certain contingencies assumed in conjunction with the acquisition of the former Merck Generics business, Merck KGaA, the seller, has indemnified Mylan. The inability or denial of Merck KGaA to pay on an indemnified claim could have a material adverse effect on our financial position, results of operations or cash flows.

We are actively pursuing, and are currently involved in, joint projects related to the development, distribution and marketing of both generic and branded products. Many of these arrangements provide for payments by us upon the attainment of specified milestones. While these arrangements help to reduce the financial risk for unsuccessful projects, fulfillment of specified milestones or the occurrence of other obligations may result in fluctuations in cash flows.

We are continuously evaluating the potential acquisition of products, as well as companies, as a strategic part of our future growth. Consequently, we may utilize current cash reserves or incur additional indebtedness to finance any such acquisitions, which could impact future liquidity. In addition, on an ongoing basis, we review our operations including the evaluation of potential divestitures of products and businesses as part of our future strategy. Any divestitures could impact future liquidity.

At December 31, 2011 and December 31, 2010, we had \$79.8 million and

Table of Contents

Mandatory minimum repayments remaining on the outstanding borrowings under the term loans and notes at December 31, 2011, excluding the discounts, premium and conversion features, are as follows for each of the periods ending December 31:

	U.S. Term Loans	Senior Convertible Notes	Cash Convertible Notes	2017 Senior Notes	2018 Senior Notes	2020 Senior Notes	Total
<i>(In thousands)</i>							
2012	\$ 93,750	\$ 600,000	\$	\$	\$	\$	\$ 693,750
2013	93,750						93,750
2014	125,000						125,000
2015	187,500		575,000				762,500
2016	750,000						750,000
Thereafter				550,000	800,000	1,000,000	2,350,000
Total	\$ 1,250,000	\$ 600,000	\$ 575,000	\$ 550,000	\$ 800,000	\$ 1,000,000	\$ 4,775,000

The Senior Credit Agreement contains customary affirmative covenants for facilities of this type, including among others, covenants pertaining to the delivery of financial statements, notices of default and certain material events, maintenance of business and insurance, collateral matters and compliance with laws, as well as customary negative covenants for facilities of this type, including limitations on the incurrence of indebtedness and liens, mergers and certain other fundamental changes, investments and loans, acquisitions, transactions with affiliates, dispositions of assets, payments of dividends and other restricted payments, prepayments or amendments to the terms of specified indebtedness and changes in our lines of business. The Senior Credit Agreement contains financial covenants requiring maintenance of a minimum interest coverage ratio and a maximum consolidated leverage ratio. We have been compliant with the financial covenants during 2011, and we expect to remain in compliance for the next twelve months.

Table of Contents

We lease certain property under various operating lease arrangements that expire generally over the next five years. These leases generally provide us with the option to renew the lease at the end of the lease term.

At December 31, 2011, the \$937.2 million of debt related to the Cash Convertible Notes reported in our financial statements consists of \$477.2 million of debt (\$575.0 million face amount, net of \$97.8 million discount) and a liability with a fair value of \$460.0 million related to the bifurcated conversion feature. The bifurcated conversion feature is not included in contractual obligations as there is an offsetting hedge asset.

Holders may convert their notes subject to certain conversion provisions including (i) during any quarter if the closing price of our common stock exceeds 130% of the respective conversion price per share during a defined period at the end of the previous quarter; (ii) during a defined period following five consecutive trading days in which the trading price per \$1,000 principal amount was less than 98% of the product of the closing price of our common stock on such day and the applicable conversion reference rate; (iii) if we make specified distributions to holders of our common stock including sales of rights or common stock on a preferential basis, certain distribution of assets or other securities or rights to all holders of our common stock or certain transactions resulting in substantially all shares of our common stock being converted into cash, securities or other property; or (iv) upon a change of control or if our securities cease to be traded on a major U.S. stock exchange. The amount payable per \$1,000 notional bond would be calculated as the product of (1) the conversion reference rate (currently 75.0751) and (2) the average Daily Volume Weighted Average Price per share of common stock for a specified period following the conversion date. Any payment above the principal amount is matched by a convertible note hedge.

At December 31, 2011, the \$594.0 million of debt related to the Senior Convertible Notes reported in our financial statements is net of a \$6.0 million discount.

Scheduled interest payments represent the estimated interest payments related to our outstanding borrowings under term loans, notes and other debt. Variable debt interest payments are estimated using current interest rates.

We are contractually obligated to make potential future development, regulatory and commercial milestone, royalty and/or profit sharing payments in conjunction with collaborative agreements or acquisitions we have entered into with third parties. The most significant of these relates to the potential future consideration related to the Respiratory Delivery Platform. These payments are contingent upon the occurrence of certain future events and, given the nature of these events, it is unclear when, if ever, we may be required to pay such amounts. These contingent payments have not been included in the table above. The amount of contingent consideration accrued was \$376.1 million at December 31, 2011. In addition, the Company expects to incur approximately \$30-40 million of annual accretion expense related to the increase in the net present value of the contingent consideration liability.

We have entered into an exclusive collaboration on the development, manufacturing, supply and commercialization of multiple, high value generic biologic compounds for the global marketplace. Mylan has committed to provide funding related

Table of Contents

We have entered into employment and other agreements with certain executives and other employees that provide for compensation and certain other benefits. These agreements provide for severance payments under certain circumstances.

Impact of Currency Fluctuations and Inflation

Because Mylan's results are reported in U.S. Dollars, changes in the rate of exchange between the U.S. Dollar and the local currencies in the markets in which Mylan operates, mainly the Euro, Australian Dollar, Indian Rupee, Japanese Yen, Canadian Dollar, and Pound Sterling, affect Mylan's results as noted previously.

Application of Critical Accounting Policies

Our significant accounting policies are described in Note 2 to Consolidated Financial Statements and were prepared in accordance with accounting principles generally accepted in the United States of America (GAAP).

Included within these policies are certain policies which contain critical accounting estimates and, therefore, have been deemed to be critical accounting policies. Critical accounting estimates are those which require management to make assumptions about matters that were uncertain at the time the estimate was made and for which the use of different estimates, which reasonably could have been used, or changes in the accounting estimates that are reasonably likely to occur from period to period could have a material impact on our financial condition or results of operations. We have identified the following to be our critical accounting policies: the determination of net revenue provisions, intangible assets, goodwill and contingent consideration, income taxes, and the impact of existing legal matters.

Net Revenue Provisions

Net revenues are recognized for product sales when title and risk of loss have transferred to the customer and when provisions for estimates, including discounts, sales allowances, price adjustments, returns, chargebacks and other promotional programs are reasonably determinable. Accruals for these provisions are presented in the Consolidated Financial Statements as reductions in determining net revenues and in accounts receivable and other current liabilities. Accounts receivable are presented net of allowances relating to these provisions, which were \$763.0 million and \$751.8 million at December 31, 2011 and 2010. Other current liabilities include \$147.9 million and \$167.0 million at December 31, 2011 and 2010, for certain sales allowances and other adjustments that are paid to indirect customers. The following is a rollforward of the most significant provisions for estimated sales allowances during 2011:

	Balance at 12/31/2010	Checks/ Credits Issued to Third Parties	Current Provision Related to Sales Made in the Current Period	Effects of Foreign Exchange	Balance at 12/31/2011
<i>(In thousands)</i>					
Chargebacks	\$ 276,012	\$ (2,162,291)	\$ 2,133,127	\$ (	

Table of Contents

The reserve for chargebacks at December 31, 2010, included amounts related to products launched near year-end. The absence of similar reserves at December 31, 2011 is the reason for the overall decrease in this balance. The accruals for incentives offered to direct customers and for returns both increased in the current year mainly as a result of an increase in related sales.

Provisions for estimated discounts, sales allowances, promotional and other credits require a lower degree of subjectivity and are less complex in nature, yet, combined, represent a significant portion of the overall provisions. These provisions are estimated based on historical payment experience, historical relationships to revenues, estimated customer inventory levels and contract terms. Such provisions are determinable due to the limited number of assumptions and consistency of historical experience. Others, such as chargebacks and returns, require management to make more subjective judgments and evaluate current market conditions. These provisions are discussed in further detail below.

Chargebacks The provision for chargebacks is the most significant and complex estimate used in the recognition of revenue. Mylan markets products directly to wholesalers, distributors, retail pharmacy chains, mail order pharmacies and group purchasing organizations. We also market products indirectly to independent pharmacies, managed care organizations, hospitals, nursing homes and pharmacy benefit management companies, collectively referred to as indirect customers. Mylan enters into agreements with its indirect customers to establish contract pricing for certain products. The indirect customers then independently select a wholesaler from which to actually purchase the products at these contracted prices. Alternatively, certain wholesalers may enter into agreements with indirect customers that establish contract pricing for certain products, which the wholesalers provide. Under either arrangement, Mylan will provide credit to the wholesaler for any difference between the contracted price with the indirect party and the wholesaler's invoice price. Such credit is called a chargeback, while the difference between the contracted price and the wholesaler's invoice price is referred to as the chargeback rate. The provision for chargebacks is based on expected sell-through levels by our wholesaler customers to indirect customers, as well as estimated wholesaler inventory levels. For the latter, in most cases, inventory levels are obtained directly from certain of our largest wholesalers. Additionally, internal estimates are prepared based upon historical buying patterns and estimated end-user demand. Such information allows us to estimate the potential chargeback that we may ultimately owe to our customers given the quantity of inventory on hand. We continually monitor our provision for chargebacks and evaluate our reserve and estimates as additional information becomes available. A change of 5% in the estimated sell-through levels by our wholesaler customers and in the estimated wholesaler inventory levels would have an effect on our reserve balance of approximately \$13 million.

Returns Consistent with industry practice, we maintain a return policy that allows our customers to return product within a specified period prior to and subsequent to the expiration date. Although application of the policy varies from country to country in accordance with local practices, generally, product may be returned for a period beginning six months prior to its expiration date to up to one year after its expiration date. The majority of our product returns occurs as a result of product dating, which falls within the range set by our policy, and are settled through the issuance of a credit to our customer. Although the introduction of additional generic competition does not give our customers the right to return product outside of our established policy, we do recognize that such competition could ultimately lead to increased returns. We analyze this on a case-by-case basis, when significant, and make adjustments to increase our reserve for product returns as necessary. Our estimate of the provision for returns is based upon our historical experience with actual returns, which is applied to the level of sales for the period that corresponds

Table of Contents

Intangible Assets, Goodwill and Contingent Consideration

We account for acquired businesses using the purchase method of accounting, which requires that the assets acquired and liabilities assumed be recorded at the date of acquisition at their respective estimated fair values. The cost to acquire a business has been allocated to the underlying net assets of the acquired business based on estimates of their respective fair values. For business acquisitions subsequent to 2009, amounts allocated to acquired in-process research and development (IPR&D) are capitalized at the date of acquisition. Intangible assets are amortized over the expected life of the asset. Any excess of the purchase price over the estimated fair values of the net assets acquired is recorded as goodwill.

The judgments made in determining the estimated fair value assigned to each class of assets acquired and liabilities assumed, as well as asset lives, can materially impact our results of operations. Fair values and useful lives are determined based on, among other factors, the expected future period of benefit of the asset, the various characteristics of the asset and projected cash flows. Because this process involves management making estimates with respect to future sales volumes, pricing, new product launches, government reform actions, anticipated cost environment and overall market conditions, and because these estimates form the basis for the determination of whether or not an impairment charge should be recorded, these estimates are considered to be critical accounting estimates.

We record contingent consideration resulting from a business combination at its fair value on the acquisition date. Each reporting period thereafter, we revalue these obligations and record increases or decreases in their fair value as an adjustment to contingent consideration expense within the Consolidated Statements of Operations. Changes in the fair value of the contingent consideration obligations can result from adjustments to the discount rates, payment periods and adjustments in the probability of achieving future development steps, regulatory approvals, market launches, sales targets and profitability. These fair value measurements represent Level 3 measurements as they are based on significant inputs not observable in the market.

Significant judgment is employed in determining the assumptions utilized as of the acquisition date and for each subsequent measurement period. Accordingly, changes in assumptions described above, could have a material impact on our consolidated results of operations.

Goodwill and intangible assets, including IPR&D, are reviewed for impairment annually and/or when events or other changes in circumstances indicate that the carrying amount of the assets may not be recoverable. Impairment of goodwill and indefinite-lived intangibles is determined to exist when the fair value is less than the carrying value of the net assets being tested. Impairment of definite-lived intangibles is determined to exist when undiscounted cash flows related to the assets are less than the carrying value of the assets being tested. Future events and decisions may lead to asset impairment and/or related costs.

Goodwill is allocated among and evaluated for impairment at the reporting unit level, which is defined as an operating segment or one level below an operating segment. Mylan has four reporting units, of which three are included in the Generics segment with the remaining reporting unit consisting of our Specialty segment. As of the date of our most recent annual impairment test, April 1, 2011, approximately 90% of Mylan's total goodwill is allocated to the three reporting units within the Generics segment as follows: North America (\$810 million), EMEA (\$1,229 million) and Asia Pacific (\$1,295 million), with the remainder (\$322 million) allocated to our Specialty

Table of Contents

Income Approach: Under this approach to determine fair value, we discounted the expected future cash flows of each reporting unit. We used a discount rate, which reflected the overall level of inherent risk and the rate of return an outside investor would have expected to earn. To estimate cash flows beyond the final year of our model, we used a terminal value approach. Under this approach, we used estimated earnings before interest, taxes, depreciation and amortization (EBITDA) in the final year of our model, adjusted to estimate a normalized cash flow, applied a perpetuity growth assumption, and discounted by a perpetuity discount factor to determine the terminal value. We incorporated the present value of the resulting terminal value into our estimate of fair value.

Market-Based Approach: The Company also utilizes a market-based approach to estimate fair value, principally utilizing the guideline company method which focuses on comparing our risk profile and growth prospects to a select group of publicly traded companies with reasonably similar guidelines.

The Company performed its annual impairment test as of April 1, 2011, and the estimated fair value of three of the four reporting units was well in excess of the carrying value of these reporting units. For the Asia Pacific reporting unit, the estimated fair value of this business exceeded its carrying value by approximately 10%. The Asia Pacific reporting unit has been impacted by government pricing reform measures in Australia and Japan and increased levels of competition. As it relates to the income approach for the Asia Pacific unit, we forecasted cash flows for the next nine years. During the forecast period, the revenue compound annual growth rate (CAGR) was approximately 10%. A terminal value year was calculated with a 4% revenue growth rate. The CAGR in EBITDA margins was approximately 1% over the period of estimated cash flows. The discount rate utilized was 11.5%. Under the market-based approach, we utilized an estimated range of market multiples of 7.5 to 9.5 times EBITDA plus a control premium of 10%. The averaging of the two valuation methods did not significantly impact the estimated fair value of the Asia Pacific reporting unit.

Due to declining actual and projected revenue and cash flows in the Asia Pacific and EMEA reporting units, the Company concluded that potential goodwill impairment indicators existed as of December 31, 2011. As a result, the Company performed an interim goodwill impairment analysis during the fourth quarter of 2011.

As it relates to the income approach for the EMEA unit, we forecasted cash flows for the next ten years. During the forecast period, the revenue CAGR was approximately 4%. A terminal value year was calculated with a 3% revenue growth rate. The discount rate utilized was 9.0%. Under the market-based approach, we utilized an estimated range of market multiples of 8.0 to 9.5 times EBITDA plus a control premium of 15%. The estimated fair value of the EMEA reporting unit exceeded its carrying value by approximately 40%. The excess fair value of the EMEA reporting unit over its carrying value, however, declined by approximately 30% as compared to the results of the annual impairment test.

As it relates to the Asia Pacific reporting unit, the significant assumptions utilized in the interim goodwill impairment test performed in the fourth quarter were consistent with the annual impairment test. The interim impairment test included updated projected operating results, and the discount rate utilized was 11.0%. Consistent with the results of the annual impairment test, the estimated fair

Table of Contents

with the implied fair value of that goodwill. The implied fair value of goodwill is the excess of the fair value of the reporting unit over the fair value amounts assigned to all of the assets and liabilities of that unit as if the reporting unit was acquired in a business combination and the fair value of the reporting unit represented the purchase price. If the carrying value of goodwill exceeds its implied fair value, an impairment loss equal to such excess would be recognized, which would likely materially impact the Company's reported results of operations.

As a result of the interim goodwill impairment test performed for the Asia Pacific and EMEA reporting units, we have also assessed the recoverability of certain long-lived assets contained within these two reporting units. Any impairment of these assets must be considered prior to our impairment review of goodwill. The assessment for impairment is based on our ability to recover the carrying value of the long-lived assets by analyzing the expected future undiscounted pre-tax cash flows specific to the asset grouping.

We assess the recoverability of the carrying value of long-lived assets at the lowest level for which identifiable undiscounted cash flows are largely independent of the cash flows of other assets and liabilities. For the Asia Pacific and EMEA reporting units, this assessment is generally performed at the country level within the reporting units. If these cash flows are less than the carrying value of long-lived assets within the asset group, an impairment loss is measured based on the difference between the estimated fair value and carrying value. Significant management judgment is involved in estimating the recoverability of these assets and is dependent upon the accuracy of the assumptions used in making these estimates, as well as how the estimates compare to the eventual future operating performance of the specific asset grouping. While the results of our analysis performed in the fourth quarter of 2011 indicate that the undiscounted pre-tax cash flows in the individual asset groupings were sufficient to support the recoverability of the long-lived assets, our operating units in Japan and Portugal remain at risk for potential impairment charges if projected operating results are not achieved. Any future long-lived assets impairment charges would likely materially impact the Company's reported Results of Operations.

Income Taxes

We compute our income taxes based on the statutory tax rates and tax planning opportunities available to Mylan in the various jurisdictions in which we generate income. Significant judgment is required in determining our income taxes and in evaluating our tax positions. We establish reserves in accordance with Mylan's policy regarding accounting for uncertainty in income taxes. Our policy provides that the tax effects from an uncertain tax position be recognized in Mylan's financial statements, only if the position is more likely than not of being sustained upon audit, based on the technical merits of the position. We adjust these reserves in light of changing facts and circumstances, such as the settlement of a tax audit. Our provision for income taxes includes the impact of reserve provisions and changes to reserves. Favorable resolution would be recognized as a reduction to our provision for income taxes in the period of resolution.

Management assesses the available positive and negative evidence to estimate if sufficient future taxable income will be generated to utilize the existing deferred tax assets. A significant piece of objective negative evidence evaluated was the cumulative loss incurred in certain taxing jurisdictions over the three-year period ended December 31, 2011. Such objective evidence limits the ability to consider other subjective evidence such as our projections for future growth.

Based on this evaluation, as of December 31, 2011, a valuation allowance of \$231.4

Table of Contents

actual resolution and realization of these tax items would have an effect on our reserve balance and valuation allowance of approximately \$9 million and \$12 million, respectively.

Legal Matters

Mylan is involved in various legal proceedings, some of which involve claims for substantial amounts. An estimate is made to accrue for a loss contingency relating to any of these legal proceedings if it is probable that a liability was incurred as of the date of the financial statements and the amount of loss can be reasonably estimated. Because of the subjective nature inherent in assessing the outcome of litigation and because of the potential that an adverse outcome in a legal proceeding could have a material adverse effect on our financial position, results of operations, and our cash flow, such estimates are considered to be critical accounting estimates.

A variance of 5% between estimated and recorded litigation reserves (excluding indemnified claims) and actual resolution of certain legal matters would have an effect on our litigation reserve balance of approximately \$10 million.

Recent Accounting Pronouncements

In June and December 2011, the Financial Accounting Standards Board issued revised accounting guidance for the presentation of comprehensive income. Under this guidance, an entity has the option to present the total of comprehensive income, the components of net income, and the components of other comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. The guidance eliminates the option to present the components of other comprehensive income as a part of the statement of changes in stockholders' equity. The amended guidance is effective for fiscal years beginning after December 15, 2011, and it must be applied retrospectively. The guidance is not expected to have a material effect on our financial condition or results of operations, though it will change our financial statement presentation.

ITEM 7A. Quantitative and Qualitative Disclosures About Market Risk

Foreign Currency Exchange Risk

A significant portion of our revenues and earnings are exposed to changes in foreign currency exchange rates. We seek to manage this foreign exchange risk in part through operational means, including managing same currency revenues in relation to same currency costs, and same currency assets in relation to same currency liabilities.

Foreign exchange risk is also managed through the use of foreign currency forward-exchange contracts. These contracts are used to offset the potential earnings effects from mostly intercompany foreign currency assets and liabilities that arise from operations and from intercompany loans. Mylan's primary areas of foreign exchange risk relative to the U.S. Dollar are the Euro, Indian Rupee, Japanese Yen, Australian Dollar, Canadian Dollar, and Pound Sterling.

Our financial instrument holdings at year end were analyzed to determine their sensitivity to foreign exchange rate changes. The fair values of these instruments were determined as follows:

Table of Contents

If there were an adverse change in foreign currency exchange rates of 10%, the expected net effect on net income related to Mylan's foreign currency denominated financial instruments would be not be material.

Interest Rate and Long-Term Debt Risk

Mylan's exposure to interest rate risk arises primarily from our U.S. Dollar borrowings and investments. We invest primarily on a variable-rate basis, and we borrow on both a fixed and variable basis. In order to maintain a certain ratio of fixed to variable rate debt, from time to time, depending on market conditions, Mylan will use derivative financial instruments such as interest rate swaps to fix interest rates on variable-rate borrowings or will swap interest rates on fixed rate borrowings to variable rates using fair value hedges.

Mylan's long-term borrowings consist principally of \$1.25 billion in U.S. dollar denominated loans under our Senior Credit Agreement, \$600.0 million notational value in Senior Convertible Notes, \$575.0 million notational value in Cash Convertible Notes and \$2.38 billion in Senior Notes.

Generally, the fair value of fixed interest rate debt will decrease as interest rates rise and increase as interest rates fall. The fair value of the Senior Convertible Notes and the Cash Convertible Notes will fluctuate as the market value of our common stock fluctuates. As of December 31, 2011, the fair value of our Senior Notes and Senior Convertible Notes was approximately \$3.15 billion and the fair value of Mylan's Cash Convertible Notes was approximately \$1.00 billion. A 100 basis point change in interest rates on the variable rate debt, net of interest rate swaps, would result in a change in interest expense of approximately \$14 million per year.

Investments

In addition to available-for-sale securities, investments are made in overnight deposits, highly rated money market funds and marketable securities with maturities of less than three months. These instruments are classified as cash equivalents for financial reporting purposes and have minimal or no interest rate risk due to their short-term nature.
