UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT UNDER SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934.
For the Fiscal Year Ended January 31, 2012

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934.

For the transition period from **to**

Commission File Number 001-31756

ARGAN, INC.

(Exact Name of Registrant as Specified in its Charter)

Delaware
(State or Other Jurisdiction of

Incorporation or Organization)

13-1947195
(IRS Employer

Identification No.)

Edgar Filing: ARGAN INC - Form 10-K

One Church Street, Suite 201,

Rockville, Maryland
(Address of Principal Executive Offices)

20850
(Zip Code)

(301) 315-0027

(Issuer's Telephone Number, Including Area Code)

Securities registered under Section 12(b) of the Exchange Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Stock, \$0.15 par value	NYSE Amex

Securities registered under Section 12(g) of the Exchange Act:

None

Indicate by check mark if the Registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the Registrant is not required to file reports pursuant to Section 13 or 15(d) of the Exchange Act.

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the Registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the Registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendments to this Form 10-K.

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act (check one):

Large accelerated filer Accelerated filer

Non-accelerated filer Smaller reporting company

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of the common stock held by non-affiliates of the Registrant was approximately \$31,218,000 on July 31, 2011 (the last business day of the Registrant's second fiscal quarter), based upon the closing price on the NYSE Amex stock exchange as reported for that date. Shares of common stock held by each officer and director and by each person who owns 5% or more of the outstanding common shares have been excluded because such persons may be deemed to be affiliates. The determination of affiliate status is not necessarily a conclusive determination for other purposes.

Number of shares of common stock outstanding as of April 5, 2012: 13,657,865 shares

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Registrant's Proxy Statement for the 2012 Annual Meeting of Stockholders to be held on June 26, 2012 are incorporated by reference in Part III.

PART I

ITEM 1. BUSINESS.

Argan, Inc. (Argan) conducts operations through its wholly-owned subsidiaries, Gemma Power Systems, LLC and affiliates (GPS) and Southern Maryland Cable, Inc. (SMC), which together are referred to as the Company, we, us, or our . Through GPS, we provide a full range of development, consulting, engineering, procurement, construction, commissioning, operations and maintenance services to the power generation and renewable energy markets for a wide range of customers including public utilities, independent power project owners, municipalities, public institutions and private industry. We have also determined that GPS is the primary beneficiary of two variable interest entities that were formed during the year ended January 31, 2012 for the purpose of developing a pair of gas-fired power plants. The combination of GPS and the variable interest entities represents our power industry services business segment. Through SMC, we provide telecommunications infrastructure services including project management, construction and maintenance to the federal government, local governments, telecommunications and broadband service providers as well as electric utilities. SMC represents our telecommunications infrastructure services business segment. The net revenues of GPS represented approximately 93% of our consolidated net revenues from continuing operations for the fiscal year ended January 31, 2012. Financial information about our business segments is included in Note 18 to the accompanying consolidated financial statements.

Discontinued Operations

In December 2010, the Board of Directors of Argan approved management's plan to dispose of the operations of the nutritional products line of business conducted by its wholly-owned subsidiary, Vitarich Laboratories, Inc. (VLI). On March 11, 2011, we closed on the sale of substantially all of the assets of VLI to an unrelated company. The asset sale was consummated for an aggregate cash purchase price of up to \$3,100,000 and the assumption by the purchaser of certain trade payables, accrued expenses and remaining obligations under VLI's facility leases. Of the cash purchase price, \$800,000 was paid at closing and the remaining \$2,300,000 was placed into escrow. VLI was paid approximately \$1,728,000 from the escrow account, representing (i) the amounts of all accounts receivable of VLI that were collected by September 30, 2011, and (ii) the cost of all closing inventory sold, used or consumed by the purchaser within nine months of the closing. In December 2011, the funds remaining in the escrow account were returned to the purchaser. The financial results of VLI have been presented as discontinued operations in the accompanying consolidated financial statements for the years ended January 31, 2012 and 2011, and the assets and liabilities of VLI were classified as held for sale at January 31, 2011.

Holding Company Structure

Argan was organized as a Delaware corporation in May 1961. We intend to make additional acquisitions and/or investments by identifying companies with significant potential for profitable growth. We may have more than one industrial focus. We expect that companies acquired in each of these industrial groups will be held in separate subsidiaries that will be operated in a manner that best provides cash flows for us and value for our stockholders. Argan is a holding company with no operations other than its continuing investments in GPS and SMC. At January 31, 2012, there were no restrictions with respect to inter-company payments to Argan by GPS or SMC.

Financing Arrangements

We have financing arrangements with Bank of America (the Bank). The financing arrangements, as amended, provide a revolving loan with a maximum borrowing amount of \$4.25 million that is available until May 31, 2013, with interest at LIBOR plus 2.25%. There were no borrowed amounts outstanding under the revolving loan arrangement as of January 31, 2012. We may obtain standby letters of credit from the Bank in the ordinary course of business not to exceed \$10.0 million. The amended financing arrangements also covered a term loan in the amount of \$8.0 million that was used in the funding of the acquisition of GPS and that was repaid during the year ended January 31, 2011.

We have pledged the majority of our assets to secure the financing arrangements. The Bank's consent is required for acquisitions and divestitures. The amended financing arrangements contain an acceleration clause which allows the Bank to declare outstanding borrowed amounts due and payable if it determines in good faith that a material adverse change has occurred in the financial condition of the Company or any of its subsidiaries. The Bank requires that the Company comply with certain financial covenants at its fiscal year-end and at each of its fiscal quarter-ends. At January 31, 2012, we were in compliance with the financial covenants of the amended financing arrangements.

Power Industry Services

The extensive design, construction, start-up and operating experience of our power industry services business has grown with the completion of projects for more than 70 facilities representing nearly 10,000 megawatts (MW) of power-generating capacity. Power projects have included combined-cycle facilities, electricity peaking plants and boiler plant construction and renovation efforts. We have also broadened our experience into the growing renewable energy industry by providing engineering, procurement and construction services to the owners of alternative energy facilities, including biomass, wind and solar plants. The durations of our construction projects may extend to three years.

During the past two years, we completed construction of a 640 megawatt natural gas-fired power plant in California, a 200 megawatt electricity peaking plant in Connecticut and a wind-energy farm in the state of Washington, including the installation of sixty (60) wind turbines. The net revenues of GPS, which represent our power industry services business segment, were approximately \$133 million for the fiscal year ended January 31, 2012, or approximately 93% of our consolidated net revenues from continuing operations for the year. Near completion are the activities being provided under a construction contract for a wind-energy farm located in Henry County, Illinois, with a value of approximately \$61 million. This project includes the installation of approximately one-hundred thirty-four (134) wind turbines with a total power rating of approximately 200 megawatts for Bishop Hill Energy LLC, a wholly-owned subsidiary of Invenergy Wind North America LLC (Invenergy).

In May 2011, we announced that GPS had received full notice to proceed from Competitive Power Ventures, Inc. (CPV) pursuant to a contract to design, build and perform other services for an 800 megawatt simple cycle peaking power plant located near Desert Hot Springs, California, including the delivery and installation of eight gas turbines (the Sentinel Project). The current contract value for this project, which is estimated to be completed during the summer of 2013, is approximately \$268 million.

In October 2011, we announced that GPS had signed a contract with East Texas Electric Cooperative, Inc. (ETEC) covering engineering, procurement and construction (EPC) services for a 49.9 megawatt, biomass-fired power plant located near Woodville, Texas. The contract has a current value of approximately \$165 million. The Rural Utilities Service (RUS) must issue its approval of the contract and issue its Finding of No Significant Impact (FONSI) for the project prior to full effectiveness of the contract. GPS has received a limited release to start critical planning and early engineering activities with a full release expected no later than the spring of 2012. The project is estimated to be completed in December 2014.

Late in the fiscal year ended January 31, 2012, we also announced the award of separate EPC contracts for the design and construction of a 5.7 megawatt solar energy facility consisting of approximately 19,800 photovoltaic panels located on a closed capped landfill in Canton, Massachusetts, and a 30 megawatt wind-energy farm located near Ebensburg, Pennsylvania, consisting of fifteen (15) wind turbines. These EPC contracts have a combined value of approximately \$35 million.

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a client, such as a government agency or a commercial enterprise, and are generally dissolved upon completion of the project or program. Under an agreement negotiated with Moxie Energy, LLC (Moxie) during the year ended January 31, 2012, we are supporting the initial development of two power plant projects with loans and the option to provide additional development loans and/or equity investments to cover the costs of the development. In return, Moxie will provide Gemma Power, Inc. (GPI, an affiliate of GPS that is wholly owned by Argan) with the right to provide construction services for the two projects under EPC contracts. To date, the activities of the Moxie projects have been focused on 1) securing the necessary permits to build and operate the power plants and to transmit the electricity produced there to users, 2) obtaining financing for the remaining costs of development, 3) completing an electricity supply agreement with a customer and 4) engaging energy plant operators in negotiations for the purchase of the projects. The completion of negotiations and agreements that would assure our construction of the power plants may not occur until the latter half of fiscal year 2013. For the year ended January 31, 2012, we have determined that these two projects represent variable interest entities for which GPS is the primary beneficiary. Accordingly, the account balances for the variable interest entities are included in our consolidated financial statements for the year ended January 31, 2012.

Materials

In connection with the engineering and construction of traditional and renewable power plants, biodiesel plants and other power energy systems, we procure materials on behalf of our customers. Typically, the project owner procures and supplies the turbines and blades for our wind-energy projects. We are not dependent upon any one source for materials that we use to complete a particular project, and we are not currently experiencing difficulties in procuring the necessary materials for our contracted projects. However, we cannot guarantee that in the future there will not be unscheduled delays in the delivery of ordered materials and equipment.

Competition

GPS competes with numerous large and well capitalized private and public firms in the construction and engineering services industry. These competitors include SNC-Lavalin Group, Inc., a diversified Canadian construction and engineering firm with over 23,000 employees generating over \$6.3 billion in annual revenues; CH2M Hill Companies, Ltd., a worldwide professional engineering services firm with approximately 30,000 employees and with annual revenues of approximately \$5.6 billion; Shaw Group Inc., a diversified firm with approximately 27,000 employees providing consulting, engineering, construction and facilities management services and with annual revenues of approximately \$5.9 billion; Skanska AB, a leading international project development and construction company with approximately 53,000 employees worldwide and with annual revenues in excess of \$18 billion; and John Wood Group PLC, a leading services provider (including engineering and construction) for the oil & gas and power generation markets that employs over 39,000 employees worldwide with annual revenues in excess of \$5 billion. Other large competitors in this industry include Fagen Inc., Kiewit Corporation and business units of URS Corporation and EMCOR Group, Inc. GPS also may compete with regional construction services companies in the markets where projects are located.

In order to compete with these firms, we intend to emphasize our cost-effective expertise in the alternative fuel industry as well as our proven track record designing and building traditional power energy systems. Our extensive experience includes the efficient completion of gas and oil-fired combined cycle plants, wood/coal-fired plants, waste-to-energy plants, wind plants and biofuel process facilities, all performed on an engineering, procurement, and construction (EPC) basis. GPS provides a full range of competitively priced development, consulting, engineering, procurement, construction, commissioning and maintenance services to project owners. We are able to react quickly to their requirements while bringing a strong, experienced team to help navigate through difficult technical, scheduling and construction issues. We believe that we are uniquely positioned to assist in the development and delivery of innovative renewable energy solutions as world energy needs grow and efforts to combat global warming increase.

Customers

For the fiscal year ended January 31, 2012, GPS recognized net revenues under EPC contracts with CPV and Invenergy which represented approximately 43% and 30% of consolidated net revenues from continuing operations, respectively. In addition, approximately 12% of consolidated net revenues were associated with the electricity peaking plant located in Connecticut and completed in the current fiscal year for GenConn Middletown, LLC (GenConn). For the year ended January 31, 2011, the completed contract with Pacific Gas & Electric Company for the construction of a gas-fired power plant in California provided approximately 56% of our consolidated net revenues from continuing operations. In addition, construction services provided under EPC contracts with GenConn and Invenergy provided approximately 22% and 17% of consolidated net revenues from continuing operations for the year ended January 31, 2011, respectively.

Contract Backlog

Contract backlog represents the total accumulated value of projects awarded less the amounts of net revenues recognized to date on contracts at a specific point in time. We believe contract backlog is an indicator of future net revenues and earnings potential. Although contract backlog reflects business that we consider to be firm, cancellations or reductions may occur and may reduce contract backlog and the future net revenues of GPS. At January 31, 2012, the Company had power industry service contracts for the construction of five energy facilities, representing a total contract backlog of \$415 million which compares with a total contract backlog of \$291 million at January 31, 2011.

Regulation

Our power industry service operations are subject to various federal, state and local laws and regulations including: licensing for contractors; building codes; permitting and inspection requirements applicable to construction projects; regulations relating to worker safety and environmental protection; and special bidding, procurement and security clearance requirements on government projects. Many state and local regulations governing construction require permits and licenses to be held by individuals who have passed an examination or met other requirements. We believe that we have all the licenses required to conduct our current operations and that we are in substantial compliance with applicable regulatory requirements.

Telecommunications Infrastructure Services

Through SMC, we provide comprehensive technology wiring and utility construction solutions to customers in the mid-Atlantic region. We perform both outside plant and inside plant cabling services including the structuring, cabling, terminations and connectivity that provide the physical transport for high speed data, voice, video and security networks. The net revenues of SMC, which represents our telecommunications infrastructure services business segment, were \$9.3 million for the fiscal year ended January 31, 2012, or approximately 7% of our consolidated net revenues from continuing operations.

Services provided to our outside premises customers include trenchless directional boring and excavation for underground communication and power networks, aerial cabling services, and the installation of buried cable, high and low voltage electric lines, and private area outdoor lighting systems. Directional boring systems are electronically guided and can place underground networks of various sizes with little or no restoration required. We use our equipment and experienced personnel to perform the trenching, plowing and back-hoeing for underground networks, to complete the installation of a variety of network structures, and to restore work sites. We utilize aerial bucket trucks, digger derrick trucks and experienced personnel to complete a variety of aerial projects. The outside premises services are primarily provided to local governments, regional communications service providers, electric utilities and other commercial customers. The wide range of inside plant and premises wiring services that we provide to our customers include AutoCAD design; cable installation; equipment room and telecom closet design and build-out; data rack and cabinet installation; raceway design and installation; and cable identification, testing, labeling and documentation for copper, fiber optic and coax cable systems. These services are provided primarily to federal government facilities, including cleared facilities, on a direct and subcontract basis. Such facilities typically require regular upgrades to their wiring systems in order to accommodate improvements in security, telecommunications and network capabilities.

SMC may have seasonally weaker results in the first and fourth quarters of the fiscal year, and may produce stronger results in the second and third fiscal quarters. This seasonality is due to the effect of winter weather on construction and outside plant activities as well as reduced daylight hours and customer budgetary constraints. Certain customers tend to complete budgeted capital expenditures before the end of the calendar year, and postpone additional expenditures until the subsequent fiscal period.

Raw Materials

Generally, our telecommunications infrastructure services customers supply most or all of the materials required for a particular job and we provide the personnel, tools and equipment to perform the installation, maintenance or repair services. However, for certain projects, we may supply part or all of the materials required. In these instances, we are not dependent upon any one source for the materials that we customarily utilize to complete projects. We are not presently experiencing, nor do we anticipate experiencing, any difficulties in procuring an adequate supply of materials.

Competition

SMC operates in the fragmented and competitive telecommunication and infrastructure services industry. We compete with service providers ranging from small regional companies, which service a single market, to larger firms servicing multiple regions, as well as large national and multi-national contractors. We believe that we compete favorably with the other companies in the telecommunication and utility infrastructure services industry. We intend to emphasize our high quality reputation, outstanding customer base and highly motivated work force in competing for larger and more diverse contracts. We believe that our well maintained fleet of vehicles and construction machinery and equipment is essential to meet customers' needs for high quality and on-time service. We are committed to invest in our repair and maintenance capabilities to maintain the quality and life of our equipment. Additionally, we invest annually in new vehicles and equipment. Important to the award of the contract by Howard County, Maryland, that is discussed below, was SMC's ability to assemble a roster of small business and minority business enterprise subcontractors capable of participating in SMC's portion of this project.

Customers

Historically, a major portion of SMC's revenue-producing activity each year is performed pursuant to task or work orders issued under master agreements with SMC's major customers. For the year ended January 31, 2012, approximately 25% of SMC's net revenues were derived from outside plant services provided under a contract with Howard County, Maryland. Howard County, representing a collaborative inter-government consortium of local Maryland governments, is a key partner with the Maryland Department of Information Technology in the deployment of a state-wide, high-speed, fiber optic network that will connect over 1,000 community anchor institutions and span 4,200 miles across the state. The portion of the project which is the responsibility of Howard County represents over 60% of the state-wide project valued at approximately \$115 million. SMC's participation in this project is provided under a two-year service contract, with four one-year renewal options. Total net revenues earned under this contract could exceed \$5 million. In addition, approximately 18% of SMC's net revenues for the year ended January 31, 2012, were earned from outside services provided to Southern Maryland Electric Cooperative (SMECO), a local electricity cooperative. None of SMC's customers accounted for net revenues in excess of 10% of our consolidated net revenues from continuing operations for the fiscal years ended January 31, 2012 or 2011.

Contract Backlog

As referenced above, a substantial number of the tasks completed for Howard County and SMECO were completed under the terms of master agreements that include pre-negotiated labor rates or line item prices. At January, 31, 2012 and 2011, the estimated values of unfulfilled work orders, open customer purchase orders and projects expected to be completed under current contracts were approximately \$8.2 million and \$2.8 million, respectively, including an estimate of the value of the tasks expected to be completed over the remaining two-year term of the contract with Howard County.

Regulation

Our telecommunications infrastructure services operations are also subject to various federal, state and local laws and regulations including: licensing for contractors; building codes; permitting and inspection requirements applicable to construction projects; regulations relating to worker safety and environmental protection; and special bidding, procurement and security clearance requirements on government projects. Many state and local regulations governing construction require permits and licenses to be held by individuals who have passed an examination or met other requirements. We believe that SMC has all the licenses required to provide its services within the region it typically conducts operations, and that we are in substantial compliance with applicable regulatory requirements. Our failure to comply with applicable regulations could result in substantial fines or revocation of our operating licenses.

Safety, Risk Management, Insurance and Performance Bonds

We are committed to ensuring that the employees of each of our businesses perform their work in a safe environment. We regularly communicate with our employees to promote safety and to instill safe work habits. GPS and SMC each have an experienced full time safety director committed to ensuring a safe work place, as well as compliance with applicable contracts, insurance and local and environmental laws.

Contracts in the power and telecommunication infrastructure services industries may require performance bonds or other means of financial assurance to secure contractual performance. If we are unable to obtain surety bonds or letters of credit in sufficient amounts or at acceptable rates, we might be precluded from entering into additional contracts with certain of our customers. Under current arrangements, our Bank has committed to provide us with up to \$10.0 million in irrevocable standby letters of credit, if needed, as collateral to support future bonding commitments.

Employees

The total number of personnel employed by us is subject to seasonal fluctuations, the volume of construction in progress and the relative amount of work performed by subcontractors. In addition, for the construction of specific power facilities, we may employ union craft workers. At year end, we had approximately 239 employees, all of whom were full-time, including 106 union members. We believe that our employee relations are good.

Materials Filed with the Securities and Exchange Commission

The public may read any materials that we file with the Securities and Exchange Commission (the SEC) at the SEC's public reference room at 100 F Street, NE, Washington, D.C. 20549. The public may obtain information on the operation of the public reference room by calling the SEC at 1-800-SEC-0330. The SEC maintains an Internet site that contains reports, proxy and information statements and other information regarding issuers that file electronically with the SEC, including us, at <http://www.sec.gov>. We maintain a website on the Internet at www.arganinc.com that includes access to interactive financial data. Information on our website is not incorporated by reference into this Annual Report on Form 10-K.

Copies of our Annual Report on Form 10-K, our Quarterly Reports on Form 10-Q, our Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 are available as soon as reasonably practicable after we electronically file such materials with, or furnish them to, the SEC without charge upon written request to:

ITEM 1A. RISK FACTORS.

Investing in our securities involves a high degree of risk. Our business, financial position and future results of operations may be impacted in a materially adverse manner by risks associated with the execution of our strategic plan and the creation of a profitable and cash-flow positive business in a challenging economic environment, our ability to obtain capital or to obtain capital on terms acceptable to us, the successful integration of acquired companies into our consolidated operations, our ability to successfully manage diverse operations remotely located, our ability to successfully compete in highly competitive industries, the successful resolution of ongoing litigation, our dependence upon key managers and employees and our ability to retain them, and potential fluctuations in quarterly operating results, among other risks. Before investing in our securities, please consider the risks summarized in this paragraph and those risks discussed below. Our future results may also be impacted by other risk factors listed from time to time in our future filings with the SEC, including, but not limited to, our Annual Reports on Form 10-K and our Quarterly Reports on Form 10-Q.

General Risks Relating to Our Company

The weak economic recovery may result in reduced demand for our products and services, and may cause our financial position to deteriorate.

Our customers may be impacted by the weak economic recovery in the United States from a depressed housing market, constraints in the credit market and high unemployment. They may delay, curtail or cancel proposed and existing projects; thus decreasing the overall demand for our services and adversely impacting our liquidity. In addition, project owners may continue to experience difficulty in raising capital for the construction of power-generation plants and renewable fuel production facilities due to substantial limitations on the availability of credit and other uncertainties in the credit markets. Customers may be reluctant to establish new supply relationships as the condition of the economy causes demand for their products to be weak. In general, if overall economic conditions do not improve steadily, the demand for our products and services may be adversely affected.

We may be unable to maintain our profitability.

Due primarily to the favorable operating results of GPS, we have generated income from continuing operations for four consecutive years the fiscal years ended January 31, 2009, 2010, 2011 and 2012. As described in the risks presented below, our ability to maintain profitable continuing operations depends on many factors including the ability of the power industry services business segment to continue to obtain new construction projects and to complete its projects successfully. A substantial decline in the net revenues of GPS could have a material adverse effect on our ability to achieve net income in the future.

Our dependence on one or a few customers could adversely affect us.

The size of the energy plant construction projects of our power industry services segment frequently results in a limited number of projects contributing a substantial portion of our consolidated net revenues as described in Note 19 to the accompanying consolidated financial statements. Should we fail to replace projects that are completed by GPS with new projects, future net revenues and profits may be adversely affected.

Our dependence on large construction contracts may result in uneven quarterly financial results.

Our power industry service activities in any one fiscal quarter are typically concentrated on a few large construction projects for which we use the percentage-of-completion accounting method to determine corresponding net revenues. To a substantial extent, construction contract revenues are recognized as services are provided as measured by the amount of costs incurred. As the timing of equipment purchases, subcontractor services and other contract events may not be evenly distributed over the lives of our contracts, the amount of total contract costs may vary from quarter to quarter, creating uneven amounts of quarterly contract net revenues. In addition, the timing of contract commencements and completions may exacerbate the uneven pattern. As a result of the foregoing, future amounts of consolidated net revenues, cash flow from operations, net income and earnings per share reported on a quarterly basis may vary in an uneven pattern and may not be indicative of the operating results expected for any other quarter or for an entire fiscal year, thus rendering consecutive quarter comparisons of our consolidated operating results a less meaningful way to assess the growth of our business.

Lawsuits could adversely affect our business.

From time to time, we, our directors and/or certain of our current officers may be named as parties to lawsuits. A discussion of our significant lawsuits appears in Item 3 of this Annual Report on Form 10-K and in Note 14 to the accompanying consolidated financial statements. It is not possible at this time to predict the likely outcome of these actions with certainty, and an adverse result in any of these lawsuits could have a material adverse effect on us. Litigation can involve complex factual and legal questions and its outcome is uncertain. Any claim that is successfully asserted against us could result in significant damage claims and other losses. Even if we were to prevail, any litigation could be

Edgar Filing: ARGAN INC - Form 10-K

costly and time-consuming and would divert the attention of our management and key personnel from our business operations, which could adversely affect our financial condition, results of operations or cash flows.

- 8 -

We may be unsuccessful at generating internal growth which could result in an overall decline in our business.

Our ability to expand by achieving profitable organic growth of the Company will be affected by, among other factors, our success in:

expanding the range of services and products we offer to customers in order to address their evolving needs;

attracting new customers;

hiring and retaining employees; and

controlling operating and overhead expenses.

Many of the factors affecting our ability to generate internal growth may be beyond our control. Our strategies may not be successful and we may not be able to generate cash flow sufficient to fund our operations and to support internal growth. Our inability to achieve internal growth could materially and adversely affect our business, financial condition and results of operations.

Future acquisitions and/or investments may not occur which could limit the growth of our business.

We are a holding company with no operations other than our investments in GPS and SMC. The successful execution of our overall business plan could be based, in part, on our making additional acquisitions and/or investments that would provide positive cash flow to us and value to our stockholders. Additional companies meeting these criteria and that provide products and/or services to growth industries and are available for purchase at attractive prices may be difficult to find. Further, efforts to conduct due diligence investigations of attractive target companies and to negotiate acquisition and related agreements may not be successful.

We cannot readily predict the timing or size of our acquisition efforts and therefore the capital we will need for these efforts. However, it is likely that any potential future acquisition or strategic investment transaction would require the use of cash and/or shares of our common stock as components of the purchase price. Using cash for acquisitions may limit our financial flexibility and make us more likely to seek additional capital through future debt or equity financings. Our ability to obtain such additional financing in the future may depend upon prevailing capital market conditions, the strength of our future operating results and financial condition as well as conditions in our business; and those factors may affect our efforts to arrange additional financing on terms that are acceptable to us. Our ability to use shares of our common stock as future acquisition consideration may be limited by a variety of factors, including the future market price of shares of our common stock and a potential seller's assessment of the liquidity of our common stock. If adequate funds or the use of our common stock are not available to us, or are not available on acceptable terms, we may not be able to take advantage of acquisitions or other opportunities, to make future investments, or to respond to competitive challenges.

We have pledged the majority of our assets to secure our financing arrangements with Bank of America (the Bank). The Bank's consent is required for acquisitions, divestitures, the participation in joint ventures and certain other investments. There can be no assurance that our Bank will consent to future transactions. If we are unable to obtain such consents, our ability to consummate acquisitions, to make investments or to enter into other arrangements for the purpose of growing our business may be limited.

We may not be able to comply with certain of our debt covenants which may interfere with our ability to successfully execute our business plan.

The financing arrangements with our Bank require that we maintain compliance with certain financial covenants at each fiscal quarter-end and include an acceleration clause which allows the Bank to declare amounts outstanding under the debt arrangements due and payable if it determines in good faith that a material adverse change has occurred in our financial condition or that of any of our subsidiaries. We are currently in compliance with our debt covenants, but there can be no assurance that we will continue to be in compliance. If our performance does not result in compliance with any of our financial covenants, or if the Bank seeks to exercise its rights under the acceleration clause referred to above, we would seek to modify the financing arrangements, but there can be no assurance that the Bank would not exercise its rights and remedies under the debt arrangements, including accelerating payments of all outstanding senior debt. These payments would have a significantly adverse impact on our liquidity and our ability to obtain additional capital thereby jeopardizing our ability to successfully execute our business plan. As of January 31, 2012, there were no borrowings outstanding under the financing arrangements.

The integration of acquired companies may not be successful.

Even if we do complete acquisitions in the future, we may not be able to successfully integrate such acquired companies with our other operations without substantial costs, delays or other operational or financial problems. Integrating acquired companies involves a number of special risks which could materially and adversely affect our business, financial condition and results of operations, including:

failure of acquired companies to achieve the results we expect;

diversion of management's attention from operational matters;

difficulties integrating the operations and personnel of acquired companies;

inability to retain key personnel of acquired companies;

risks associated with unanticipated events or liabilities;

the potential disruption of our business; and

the difficulty of maintaining uniform standards, controls, procedures and policies, including an effective system of internal control over financial reporting.

If one of our acquired companies suffers customer dissatisfaction or performance problems, the reputation of our entire company could be materially and adversely affected. In addition, future acquisitions could result in issuances of equity securities that would reduce our stockholders' ownership interest, the incurrence of debt, contingent liabilities, deferred stock-based compensation or expenses related to the valuation of goodwill or other intangible assets and the incurrence of large, immediate write-offs.

Our results of operations could be adversely affected as a result of impairment losses related to goodwill and other purchased intangible assets.

When we acquire a business, we record goodwill equal to the excess amount paid for the business, including liabilities assumed, over the fair value of the net assets of the acquired business. Generally accepted accounting principles require that all business combinations be accounted for using the purchase method of accounting and that certain intangible assets acquired in a business combination be recognized as assets apart from goodwill. The balances of goodwill and other intangible assets that have indefinite useful lives are not amortized, but instead must be evaluated at least annually for impairment. The amounts of intangible assets that do have finite lives are amortized over their useful lives. However, should poor performance or other conditions indicate that the carrying value of a business or long-lived asset may have suffered impairment, a determination of fair value is required to be performed in the period that such conditions are noted. If the carrying value of a business or of an individual purchased intangible asset is found to exceed the corresponding fair value, an impairment loss is recorded. The aggregate carrying amount of goodwill, other purchased intangible assets with indefinite lives and long lived purchased intangible assets included in our consolidated balance sheet as of January 31, 2012 was approximately \$21.1 million, or approximately 10% of total consolidated assets and 21% of consolidated net assets.

We have performed annual impairment assessments of the carrying values of goodwill and other indefinite-lived intangible assets as of November 1. Assessments of these assets as well as our long-lived assets may be conducted more frequently if we identify indications of impairment. Should the operating results of GPS or any future acquired company experience unexpected deterioration, we could be required to record significant impairment losses related to purchased intangible assets. Impairment losses, if any, would be recognized as operating expenses and would adversely affect future profitability.

Our business growth could outpace the capabilities of our senior management which could adversely affect our ability to complete the execution of our business plan.

Edgar Filing: ARGAN INC - Form 10-K

We cannot be certain that our current management team will be adequate to support our operations as they expand. Future growth could impose significant additional responsibilities on members of our senior management, including the need to recruit and integrate new senior level managers and executives. We cannot be certain that we can recruit and retain such additional managers and executives. To the extent that we are unable to attract and retain additional qualified management members in order to manage our growth effectively, we may not be able to expand our operations or execute our business plan. Our financial condition and results of operations could be materially and adversely affected as a result.

- 10 -

Loss of key personnel could prevent us from effectively managing our business.

Our future success is substantially dependent on the continued service and performance of our current executive team and the senior management members of our businesses. We cannot be certain that any such individual will continue in such capacity or continue to perform at a high level for any particular period of time. Our ability to operate productively and profitably, particularly in the power services industry, may also be limited by our ability to attract, employ, retain and train skilled personnel necessary to meet our future requirements. We cannot be certain that we will be able to maintain management teams and an adequate skilled labor force necessary to operate efficiently and to support our growth strategy or that our labor expenses will not increase as a result of a shortage in the supply of these skilled personnel. Labor shortages or increased labor costs could impair our ability to maintain our business or grow our net revenues. The loss of key personnel, or the inability to hire and retain qualified employees in the future, could negatively impact our ability to manage our business.

Our actual business and financial results could differ from the estimates and assumptions that we use to prepare our consolidated financial statements, which may reduce our profits.

To prepare consolidated financial statements in conformity with generally accepted accounting principles, we are required to make estimates and assumptions as of the date of the financial statements, which affect the reported values of assets and liabilities, net revenues and expenses, and disclosures of contingent assets and liabilities. For example, we may recognize net revenues over the life of a contract based on the proportion of costs incurred to date compared to the total costs estimated to be incurred for the entire project. Areas requiring significant estimates by our management include:

the application of the percentage-of-completion method of accounting and revenue recognition on contracts, change orders and contract claims;

the valuation of assets acquired and liabilities assumed in connection with business combinations;

the value of goodwill and recoverability of other purchased intangible assets;

provisions for income taxes and related valuation allowances;

accruals for estimated liabilities, including litigation reserves;

provisions for uncollectible receivables and recoveries of costs from subcontractors, vendors and others; and

the determination of stock-based compensation expense.

Our actual business and financial results could differ from those estimates, which may reduce our profits.

Our employees work on projects that are inherently dangerous and a failure to maintain a safe work site could result in significant losses.

We often work on large-scale and complex projects, frequently in geographically remote locations. Our project sites can place our employees and others near large and/or mechanized equipment, moving vehicles, dangerous processes or highly regulated materials, and in challenging environments. Safety is a primary focus of our business and is critical to our reputation. Often, we are responsible for safety on the project sites where we work. Many of our clients require that we meet certain safety criteria to be eligible to bid on contracts. We maintain programs with the primary purpose of implementing effective health, safety and environmental procedures throughout our Company. If we fail to implement appropriate safety procedures and/or if our procedures fail, our employees or others may suffer injuries. The failure to comply with such procedures, client contracts or applicable regulations could subject us to losses and liability, and adversely impact our ability to obtain projects in the future.

Terrorist attacks could negatively impact the economy in the United States and the markets in which we operate.

Terrorist attacks, like those that occurred on September 11, 2001, have contributed to economic instability in the United States. Future acts of terrorism, violence or war could affect the markets in which we conduct operations, our business and our expectations. Armed hostilities may increase, or terrorist attacks, or responses from the United States, may lead to further acts of terrorism and civil disturbances in the United States or elsewhere, which may further contribute to economic instability in the United States. These attacks or armed conflicts may affect our operations or those of our customers or suppliers and could impact our net revenues, our production capability and our ability to complete contracts in a timely manner.

If we fail to maintain an effective system of internal controls, we may not be able to accurately report our financial results or prevent fraud. As a result, investors could lose confidence in our financial reporting, which would harm our business and the trading price of our common stock.

Effective internal controls are necessary for us to provide reliable financial reports and prevent fraud. If we cannot provide reliable financial reports or prevent fraud, our operating results could be harmed. We devote significant attention to establishing and maintaining effective internal controls. Implementing changes to our internal controls required compliance training of our officers and employees. Substantial costs have been incurred and significant efforts have been expended by us in order to evaluate, test and remediate our internal controls over financial reporting. We cannot be certain that these measures and future measures will ensure that we will successfully implement and maintain adequate controls over our financial reporting processes and related reporting requirements. Any failure to implement required new or improved controls or difficulties encountered in their implementation could affect our operating results or cause us to fail to meet our reporting obligations and could result in a breach of a covenant in our Bank financing arrangements in future periods. Ineffective internal controls could also cause investors to lose confidence in our reported financial information, which could have a negative effect on the market price of our common stock.

We rely on information systems to conduct our business, and failure to protect these systems against security breaches could adversely affect our business and results of operations. Additionally, if these systems fail or become unavailable for any significant period of time, our business could be harmed.

The efficient operation of our business is dependent on computer hardware and software systems. Information systems are vulnerable to operational malfunctions and security breaches by computer hackers and cyber terrorists. We rely on industry accepted security measures and technology to securely maintain confidential and proprietary information maintained on our information systems. However, these measures and technology may not adequately prevent unanticipated downtime or security breaches. The unavailability of the information systems or the failure of these systems to perform as anticipated for any reason could disrupt our business and could result in decreased performance and increased overhead costs, causing our business and results of operations to suffer. Any significant interruption or failure of our information systems or any significant breach of security could adversely affect our business and results of operations.

Specific Risks Relating to Our Power Industry Services

Failure to successfully operate our power industry services business will adversely affect us.

The operations of our power industry services business conducted by GPS represent a significant portion of our net revenues and profits. The net revenues of this business segment were approximately \$133 million for the year ended January 31, 2012, representing 93% of consolidated net revenues from continuing operations. Income from these operations for the year ended January 31, 2012 was \$15.1 million. Our inability to successfully manage and grow our power industry services business will adversely affect our consolidated operating results and financial condition.

Intense competition in the engineering and construction industry could reduce our market share and profits.

We serve markets that are highly competitive and in which a large number of multinational companies compete such as The Shaw Group Inc., URS Corporation (the Washington Division), SNC Lavalin Group, Inc., Kiewit Corporation, Foster Wheeler AG, CH2M Hill Companies, Ltd., and EMCOR Group, Inc. In particular, the engineering and construction markets are highly competitive and require substantial resources and capital investment in equipment, technology and skilled personnel. Competition also places downward pressure on our contract prices and profit margins. Intense competition is expected to continue in these markets, presenting us with significant challenges in our ability to maintain strong growth rates and acceptable profit margins. If we are unable to meet these competitive challenges and replace completed projects with new customers or projects, we could lose market share to our competitors and our business could be materially adversely affected.

Our backlog is subject to unexpected adjustments, delays and cancellations, and may be an uncertain indicator of future net revenues.

As of January 31, 2012, the value of the construction contract backlog of GPS was \$415 million compared with a backlog value of \$291 million as of January 31, 2011. Projects awarded to us may remain included in our backlog for an extended period of time. In addition, project cancellations or scope adjustments may occur with respect to contracts reflected in our backlog that could reduce the dollar amount of our backlog and the net revenues and profits that we actually earn. We cannot guarantee that future net revenues projected by us based on our backlog at January 31, 2012 and subsequently awarded projects will be realized or will result in profitable operating results.

Interruption of power plant construction projects could adversely affect future results of operations.

At any time, GPS has a limited number of construction contracts. For example, three customers represented over 91% of the net revenues of the power industry services business for the year ended January 31, 2012. Should any unexpected suspension, termination or delay of the work under such contracts occur, our results of operations may be materially and adversely affected.

Unsuccessful efforts to develop energy plant projects could result in write-offs.

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a client, such as a government agency or a commercial enterprise, and are generally dissolved upon completion of the project or program. Under an agreement negotiated with Moxie during the year ended January 31, 2012, we are supporting the initial development of two power plant projects with loans and the option to provide additional development loans and/or equity investments to cover anticipated costs of the developments. In return, Moxie will provide GPI with the right to provide construction services for the two projects under EPC Contracts.

As of January 31, 2012, GPI had provided approximately \$1.5 million in cash to the Moxie Projects under short term initial development loans scheduled to be repaid during fiscal year 2013. An additional \$730,000 of loans was authorized by us for the Moxie Projects at year end.

To date, the activities of the Moxie Projects have been focused on 1) securing the necessary permits to build and operate the power plants and to transmit the electricity produced there to users, 2) obtaining financing for the remaining costs of development, 3) completing an electricity supply agreement with a customer and 4) engaging energy plant operators in negotiations for the purchase of the projects. The completion of negotiations and agreements that would assure our construction of the power plants may not occur until the latter half of fiscal year 2013. In the event that successful continuation and/or completion of the planned development of the Moxie Projects would not occur, we may not receive repayment of current and future loans which could result in a write-off of the balance of the loans that may be significant to a future reporting period.

The nature of our engineering and construction business exposes us to potential liability claims and contract disputes which may reduce our profits.

We engage in engineering and construction activities for large energy plant facilities where design, construction or systems failures can result in substantial injury or damage to third parties. In addition, the nature of our business results in owners, subcontractors and vendors occasionally presenting claims against us for recovery of costs they incurred in excess of what they expected to incur, or for which they believe they are not contractually liable. We have been and may in the future be named as a defendant in legal proceedings where parties may make a claim for damages or other remedies with respect to our projects or other matters. These claims generally arise in the normal course of our business.

Note 14 to the accompanying consolidated financial statements describes a matter which includes a claim in the approximate amount of \$6.8 million that a subcontractor has made against us related to a cancelled construction project. Assurance cannot be provided that we will be successful in defending against this claim. It is reasonably possible that resolution of the matters discussed above could occur in a manner or with a decision unfavorable to us. Any resulting loss could have a material negative affect on our consolidated results of operations in a future reporting period. No provision for loss has been recorded in the consolidated financial statements related to this matter as of January 31, 2012. If new facts become known in the future indicating that it is probable that a loss has been incurred by us and the amount of loss can be reasonably estimated by us, the impact of the change will be reflected in the consolidated financial statements at that time.

In accordance with customary industry practices, we maintain insurance coverage against some, but not all, potential losses in order to protect against the risks we face. When it is determined that we have liability, we may not be covered by insurance or, if covered, the dollar amount of any liability may exceed our policy limits. Further, we may elect not to carry insurance if our management believes that the cost of available insurance is excessive relative to the risks presented. In addition, we cannot insure fully against pollution and environmental risks. Our professional liability coverage is on a claims-made basis covering only claims actually made during the policy period currently in effect. In addition, even where insurance is maintained for such exposures, the policies have deductibles resulting in our assuming exposure for a layer of coverage with respect to any such claims. Any liability not covered by our insurance, in excess of our insurance limits or, if covered by insurance but subject to a high deductible, could result in a significant loss for us, which claims may reduce our future profits and cash available for operations.

In the future, we may bring claims against project owners for additional costs exceeding the contract price or for amounts not included in the original contract price. These types of claims occur due to matters such as owner-caused delays or changes from the initial project scope, both of which may result in additional cost. Often, these claims can be the subject of lengthy arbitration or litigation proceedings, and it is difficult to accurately predict when these claims will be fully resolved. When these types of events occur and unresolved claims are pending, we have used working capital in projects to cover cost overruns pending the resolution of the relevant claims. A failure to promptly recover on these types of claims could have a negative impact on our liquidity and profitability.

Our dependence upon third parties to complete many of our contracts may adversely affect our performance under future energy plant construction contracts.

Much of the work performed under our energy plant construction contracts is actually performed by third-party subcontractors we hire. We also rely on third-party equipment manufacturers or suppliers to provide much of the equipment included in an energy project and most of the materials (including concrete and steel) used in our construction projects. If we are unable to hire qualified subcontractors or find qualified equipment manufacturers or suppliers, our ability to successfully complete a project could be impaired. If the amount we are required to pay for subcontractors or equipment and supplies exceeds what we have estimated, especially when we are operating under a lump sum or a fixed-price type construction contract, we may suffer losses on these contracts. If a supplier, manufacturer or subcontractor fails to provide supplies, equipment or services as required under a negotiated contract for any reason, we may be required to source these supplies, equipment or services on a delayed basis or at a higher price than anticipated which could impact contract profitability in an adverse manner.

If we guarantee the timely completion or performance standards of a project, we could incur additional costs to cover our guarantee obligations.

In some instances and in many of our fixed price contracts, we guarantee a customer that we will complete a project by a scheduled date. We sometimes provide that the project, when completed, will also achieve certain performance standards. If we subsequently fail to complete the project as scheduled, or if the project subsequently fails to meet guaranteed performance standards, we may be held responsible for cost impacts to the customer resulting from any delay or modifications to the plant in order to achieve the performance standards, generally in the form of contractually agreed-upon liquidated damages. If these events would occur, the total costs of the project would exceed our original estimate, and we could experience reduced profits or a loss for that project.

If financing for new energy plants is unavailable, construction of such plants may not occur and we may lose any investment made in the projects.

Traditional gas-fired power plants have been constructed typically by large utility companies. However, to a large extent, the construction of new energy plants, including alternative and renewable energy facilities, is conducted by private investment groups. The challenge for these types of project owners to secure and maintain financing in the midst of the current credit crisis continues to be significant. Should debt financing for the construction of new energy facilities, including alternative or renewable energy plants, not be available, investors may not be able to invest in such projects, thereby adversely affecting the likelihood that GPS will obtain contracts to construct such plants.

We are seeing a number of new business opportunities that include an opportunity to make an investment in the ownership of the new project, at least during the development phase of the project, in order to improve the probability of an EPC contract award. Because we believe in the strength of our balance sheet, we are willing to consider the opportunities that include reasonable and manageable risks. Failure of a project owner to obtain such financing will make it likely that we will not recover the amount of any investment made by us in the project, which could exceed \$1.0 million per project.

The inability of our customers to receive or to avoid delay in receiving the applicable regulatory approvals relating to projects may result in lost or postponed net revenues for us.

The commencement and/or execution of many of the construction projects performed by our power industry services segment are subject to numerous regulatory permitting processes. Applications for permits may be opposed by individuals or environmental groups, resulting in delays and possible non-issuance of the permits. There are no assurances that our customers will obtain the necessary permits for these projects, or that the necessary permits will be obtained in order to allow construction work to proceed as scheduled. Failure to commence or complete construction work as anticipated could have material adverse impacts on our future net revenues, profits and cash flows from operations.

Our use of the percentage-of-completion method of accounting could result in a reduction or reversal of previously recorded net revenues or profits.

Under our accounting procedures, we measure and recognize a large portion of our net revenues under the percentage-of-completion accounting methodology. This methodology allows us to recognize net revenues and contract profits ratably over the life of a contract by comparing the amount of the costs incurred to date against the total amount of costs expected to be incurred. The effects of revisions to net revenues and estimated costs are recorded when the amounts are known and can be reasonably estimated, and these revisions can occur at any time and could be material. Given the uncertainties associated with these types of contracts, it is possible for actual costs to vary from estimates previously made, which may result in reductions or reversals of previously recorded net revenues and profits.

Future bonding requirements may adversely affect our ability to compete for new energy plant construction projects.

Our construction contracts frequently require that we obtain payment and performance bonds from surety companies on behalf of project owners as a condition to the award of such contracts. Surety market conditions have in the last few years become more difficult as a result of significant losses incurred by many surety companies, both in the construction industry as well as in certain large corporate bankruptcies. Consequently, less overall bonding capacity is available in the market than in the past, and surety bonds have become more expensive and restrictive. Historically, we have had a strong bonding capacity but, under standard terms in the surety market, surety companies issue bonds on a project-by-project basis and can decline to issue bonds at any time or require the posting of additional collateral as a condition to issuing any bonds.

Current or future market conditions, changes in our surety's assessment of its own operating and financial risk or larger future projects could cause our surety company to decline to issue, or substantially reduce the amount of, bonds for our work and could increase our bonding costs. These actions can be taken on short notice. If our surety company were to limit or eliminate our access to bonding, our alternatives would include seeking bonding capacity from other surety companies, joint venturing with other construction firms, increasing business with clients that do not require bonds and posting other forms of collateral for project performance, such as letters of credit, or cash. We may be unable to make alternative arrangements in a timely manner, on acceptable terms, or at all. Accordingly, if we were to experience an interruption, reduction or other alteration in the availability of bonding capacity, we may be unable to compete for or work on certain projects.

As we bear the risk of cost overruns in the completion of our construction contracts, we may experience reduced profits or, in some cases, losses under these contracts if actual costs exceed our estimates.

We conduct our business under various types of contractual arrangements including fixed price contracts. We bear a significant portion of the risk for cost overruns on these types of contracts where contract prices are established in part on cost and scheduling estimates. Our estimates may be based on a number of assumptions about future economic conditions and the future prices and availability of labor, equipment and materials, and other exigencies. From time to time, we may also assume a project's technical risk, which means that we may have to satisfy certain technical requirements of a project despite the fact that at the time of project award, we may not have previously produced the system or product in question. Unexpected or increased costs may occur due to the following factors among others:

shortages of skilled labor, materials and energy plant equipment including power turbines;

unanticipated escalation in the price of construction commodities;

unscheduled delays in the delivery of ordered materials and equipment;

engineering problems, including those relating to the commissioning of newly designed equipment;

declines in the productivity of construction workers;

work stoppages;

weather interference;

inability to develop or non-acceptance of new technologies to produce alternative fuel sources; and

the difficulty in obtaining necessary permits or approvals.

If our estimates prove inaccurate, or circumstances change, cost overruns may occur and we could experience reduced profits, or in some cases, incur a loss on a particular project.

If we are unable to collect amounts billed to project owners as scheduled, our cash flows may be materially and adversely affected.

Many of our contracts require us to satisfy specified design, engineering, procurement or construction milestones in order to receive payment for work completed or equipment or supplies procured prior to achievement of the applicable contract milestone. As a result, under these types of arrangements, we may incur significant costs or perform significant amounts of services prior to receipt of payment. If the customer determines not to proceed with the completion of the project, delays in making payment of billed amounts or defaults on its payment obligations, we may face delays or other difficulties in collecting payment of amounts due to us for the costs previously incurred or for the amounts previously expended to purchase equipment or supplies. Such problems may impact the planned cash flows of affected projects and result in unanticipated reductions in the amounts of future cash flows from operations.

If the development of renewable energy sources does not occur, the demand for our construction services could decline.

The expected increase in momentum towards more environmentally friendly power generation facilities has not occurred at the pace expected just a few years ago. The federal government has failed to pass comprehensive energy legislation, including incentives or mandates for the retirement of existing coal burning power plants and caps on the volume of carbon emissions. At present, there is no bipartisan agreement regarding the approval of government incentives for sources of renewable power in either legislative house of Congress. With the future availability of renewable energy tax incentives unknown, potential energy project developers and investors may be hesitant to make commitments related to new renewable energy generation facilities. Although certain coal-fired power plants have been shut down, existing coal plants are proving to be a challenge to retrofit or replace. Coal prices are widely considered to be stable and certain states see the availability of inexpensive, coal-fired electricity as a key driver of economic growth. The extent to which recent regulations issued by the Environmental Protection Agency, that are intended to make smokestack emissions cleaner, will accelerate the pace of coal-fired power plant retirements is not yet known.

Should government investment incentives fail to be extended or should anti-pollution regulations be repealed, the pace of the development of alternative renewable energy sources may slow, thereby reducing the future opportunities for GPS to construct such plants.

We could be subject to compliance with environmental, health and safety laws and regulations that would add costs to our business.

Our operations are subject to compliance with federal, state and local environmental, health and safety laws and regulations, including those relating to discharges to air, water and land, the handling and disposal of solid and hazardous waste, and the cleanup of properties affected by hazardous substances. Certain environmental laws impose substantial penalties for non-compliance and others, such as the federal Comprehensive Environmental Response, Compensation and Liability Act, impose strict, retroactive, joint and several liability upon persons responsible for releases of hazardous substances. We continually evaluate whether we must take additional steps to ensure compliance with environmental laws, however, there can be no assurance that these requirements will not change and that compliance will not adversely affect our operations in the future.

Specific Risks Relating to Our Telecommunications Infrastructure Services Business

Failure to replace significant customers could adversely affect our SMC business.

Historically, significant portions of the net revenues of SMC have been provided by a few major customers under long-term master service-type contracts. In recent years, we lost the business with Verizon as our master agreement expired without renewal and the prime contract that EDS had with the federal government expired pursuant to which we performed inside plant services at various government installations throughout the mid-Atlantic region. A significant challenge for SMC is the replacement of the lost business provided under the arrangements with Verizon and EDS. SMC has had a certain amount of success in obtaining projects from new customers in the midst of a very difficult economic environment. However, despite our business development efforts and expectations regarding the amount of future work under the contract with Howard County, we cannot provide assurance that SMC will maintain its current level of net revenues for the fiscal year ending January 31, 2013.

If we fail to compete successfully against current or future competitors, our business, financial condition and results of operations could be materially and adversely affected.

We operate in highly competitive markets. We compete with service providers ranging from small regional companies which service a single market, to larger firms servicing multiple regions, as well as large national and multi-national entities. In addition, there are few barriers to entry in the telecommunications infrastructure industry. As a result, any organization that has adequate financial resources and access to technical expertise may become one of our competitors. Competition in the telecommunications infrastructure industry depends on a number of factors, including price. Certain of our competitors may have lower overhead cost structures than we do and may, therefore, be able to provide their services at lower rates than we can. In addition, some of our competitors are larger and have significantly greater financial resources than we do.

Edgar Filing: ARGAN INC - Form 10-K

Our competitors may develop the expertise, experience and resources to provide services that are superior in price and quality to our services. Similarly, we may not be able to maintain or enhance our competitive position within our industry. We may also face competition from the in-house service organizations of our existing or prospective customers.

- 16 -

A significant portion of our business involves providing services, directly or indirectly as a subcontractor, to the federal government under government contracts. The federal government may limit the competitive bidding on any contract under a small business or minority set-aside, in which bidding is limited to companies meeting the criteria for a small business or minority business, respectively, which may exclude us from consideration.

We may not be able to compete successfully against our competitors in the future. If we fail to compete successfully against our current or future competitors, our business, financial condition, and results of operations could be materially and adversely affected.

Rapid technological change and/or customer consolidations could reduce the demand for the telecommunication services we provide.

The telecommunications infrastructure industry is undergoing rapid change as a result of technological advances that could in certain cases reduce the demand for our services or otherwise negatively impact our business. New or developing technologies could displace the wire-line systems used for voice, video and data transmissions, and improvements in existing technology may allow telecommunications companies to significantly improve their networks without physically upgrading them. In addition, consolidation, competition or capital constraints in the utility, telecommunications or computer networking industries may result in reduced spending or the loss of one or more of our customers.

Our substantial dependence upon fixed price contracts may expose us to losses in the event that we fail to accurately estimate the costs that we will incur to complete such projects.

We currently generate, and expect to continue to generate, a significant portion of our net revenues under fixed price contracts. We must estimate the costs of completing a particular project to bid for these fixed price contracts. Although historically we have been able to estimate costs accurately, the cost of labor and materials may, from time to time, vary from costs originally estimated. These variations, along with other risks inherent in performing fixed price contracts, may cause actual net revenues and gross profits for a project to differ from those we originally estimated and could result in reduced profitability or losses on projects. Depending upon the size of a particular project, variations from the estimated contract costs could have a significant impact on our operating results for any fiscal quarter or year.

Compliance with government regulations may increase the costs of our operations, expose us to substantial civil and criminal penalties in the event that we violate applicable law, and include the right of customers to terminate contracted work for convenience.

We provide, either directly as a contractor or indirectly as a sub-contractor, products and services to the federal and local governments under government contracts. These contracts and related customer orders subject us to various laws and regulations covering government contractors and subcontractors, which generally are more restrictive than for non-government contractors. We could be subject to 1) examinations by government auditors and investigators, from time to time, to ensure compliance and review costs, and 2) contract clauses permitting government customers to terminate contracted work for convenience. Violations may result in costs disallowed, and substantial civil or criminal liabilities (including, in severe cases, denial of future contracts). A loss or interruption in our ability to perform work for federal and local government agencies could have a material adverse effect on our business.

Risks Relating to Our Securities

Our acquisition strategy may result in dilution to our stockholders.

Our business strategy calls for the strategic acquisition of other businesses. We anticipate that future acquisitions will require cash and issuances of our capital stock, including our common stock. To the extent we are required to pay cash for any acquisition, we anticipate that we would be required to obtain additional equity and/or debt financing. Equity financing would result in dilution for our then current stockholders. Stock issuances and financing, if obtained, may not be on terms favorable to us and could result in substantial dilution to our stockholders at the time(s) of these stock issuances and financings.

Our officers, directors and certain key employees have substantial control over Argan, Inc.

As of January 31, 2012, our executive officers and directors as a group owned approximately 15% of our voting shares giving effect to an aggregate of 482,000 shares of common stock that may be purchased upon the exercise of warrants and stock options held by our executive officers and directors (and deemed exercisable at January 31, 2012), and 1,257,000 shares beneficially owned by William F. Griffin, Jr. (a former owner of GPS and newly appointed member of our Board of Directors). An additional 4% of the outstanding shares are controlled by Allen & Company entities Allen. One of our independent directors is an officer of Allen. This small group of stockholders may have significant influence over corporate actions such as an amendment to our certificate of incorporation, the consummation of any merger, or the sale of all or substantially all of our assets, and may substantially influence the election of directors and other actions requiring stockholder approval.

A major portion of our outstanding shares of common stock is owned by a small number of stockholders.

As of January 31, 2012, three unaffiliated stockholders owned over 53% of our voting shares in total. The individual beneficial ownership percentages as of January 31, 2012 were 35%, 12% and 6%, respectively. Therefore, this small group of stockholders may have significant influence over corporate actions such as an amendment to our certificate of incorporation, the consummation of any merger, or the sale of all or substantially all of our assets, and may substantially influence the election of directors and other actions requiring stockholder approval.

As our common stock is thinly traded, the stock price may be volatile and investors may have difficulty disposing of their investments at prevailing market prices.

In August 2007, our common stock was approved for listing on the NYSE Amex stock exchange (formerly the American Stock Exchange) and commenced trading under the symbol AGX. Despite the listing on the larger stock exchange, our common stock remains thinly and sporadically traded and no assurances can be given that a larger market will ever develop, or if developed, that it will be maintained.

Availability of significant amounts of our common stock for sale could adversely affect its market price.

We have filed registration statements covering significant amounts of our common stock that are possibly available for resale including a registration statement covering the resale of 879,730 shares of our common stock that was declared effective by the SEC in March 2012. If our stockholders sell substantial amounts of our common stock in the public market, including the shares registered in this registration statement, the market price of our common stock could fall.

We may issue preferred stock with rights that are superior to our common stock.

Our certificate of incorporation, as amended, permits our board of directors to authorize the issuance of up to 500,000 shares of preferred stock and to designate the terms of the preferred stock. The issuance of shares of preferred stock by us could adversely affect the rights of holders of common stock by, among other factors, establishing dividend rights, liquidation rights and voting rights that are superior to the rights of the holders of the common stock.

Provisions of our certificate of incorporation and Delaware law could deter takeover attempts.

Provisions of our certificate of incorporation and Delaware law could delay, prevent, or make more difficult a merger, tender offer or proxy contest involving us. Among other things, as stated above, our board of directors may issue up to 500,000 shares of our preferred stock and may determine the price, rights, preferences, privileges and restrictions, including voting and conversion rights, of these shares of preferred stock. In addition, Delaware law limits transactions between us and persons that acquire significant amounts of our stock without approval of our board of directors.

We may not pay cash dividends in the future.

In the past, we have not paid cash dividends on our common stock and have retained earnings to finance the development and expansion of our business. However, in November 2011, we paid to stockholders a special cash dividend of \$0.50 per share of common stock reflecting our board of directors' confidence in the strong financial performance of GPS and the size of its construction contract backlog. Annually, our board of directors intends to evaluate the Company's ongoing operational and financial performance in determining what role strategically aligned dividends should play in creating shareholder value.

ITEM 1B. UNRESOLVED STAFF COMMENTS.

None.

ITEM 2. PROPERTIES.

We occupy our corporate headquarters in Rockville, Maryland, under a lease that expires on February 28, 2014 covering 2,521 square feet of office space. The headquarters of GPS, located in Glastonbury, Connecticut, is occupied pursuant to a lease that expires in October 2012 and that covers 8,304 square feet of office space. The offices of GRP, a wholly-owned subsidiary of GPS, are occupied pursuant to a lease that has been extended on a month-to-month basis to June 30, 2012, covering 4,412 square feet of office space located in Rocky Hill, Connecticut. SMC is located in Tracys Landing, Maryland, occupying facilities under a lease that expires on December 31, 2013 and that includes extension options available through December 31, 2019. The SMC facility includes approximately four acres of land, a 2,400 square foot maintenance facility and approximately 3,900 square feet of office space. SMC also utilizes one storage and staging lot in St. Mary's County, Maryland, under a lease with a current term that expires late in fiscal year 2016. The operations of GPS and SMC in the field may require us to occupy additional facilities for staging or on customer premises or job sites. Accordingly, we may rent local construction offices and equipment storage yards under arrangements that are temporary or short-term in nature. These costs are expensed as incurred and are included in cost of revenues.

ITEM 3. LEGAL PROCEEDINGS.

In the normal course of business, we have pending claims and legal proceedings against us. In our opinion, based on information available at this time, we do not believe that any of the current claims and proceedings could have a material effect on our consolidated financial statements other than the matters discussed below.

Altra Matters

GPS was the contractor for engineering, procurement and construction services related to an anhydrous ethanol plant in Carleton, Nebraska (the Project). The Project owner was ALTRA Nebraska, LLC (Altra). In November 2007, GPS and Altra agreed to a suspension of the Project while Altra sought to obtain financing to complete the Project. By March 2008, financing had not been arranged which terminated the construction contract prior to completion of the Project. In March 2008, GPS filed a mechanic's lien against the Project in the approximate amount of \$23.8 million, which amount included sums owed to subcontractors/suppliers of GPS and their subcontractors/suppliers. Several other claimants have also filed mechanic's liens against the Project. In August 2009, Altra filed for bankruptcy protection. Proceedings resulted in a court-ordered liquidation of Altra's assets. The incomplete plant was sold at auction in October 2009. Remaining net proceeds of approximately \$5.5 million are being held by the bankruptcy court and have not been distributed to Altra's creditors. The court has separated the lien action into two phases relating to the priority of the claims first and the validity and amount of each party's lien claim second. In November 2011, the court held that the claim of the project lender is superior to the lien claim of GPS. Fact discovery related to the second phase was completed in January 2012, and the court stayed this action pending the resolution of the claim against our payment bond that is discussed below.

Delta-T Corporation (Delta-T) was a major subcontractor to GPS on the Project. In January 2009, GPS and Delta-T executed a Project Close-Out Agreement (the Close-Out) which settled all contract claims between the parties and included a settlement payment in the amount of \$3.5 million that GPS made to Delta-T. In the Close-Out, Delta-T also agreed to prosecute any lien claims against Altra, to assign to GPS the first \$3.5 million of any resulting proceeds and to indemnify and defend any claims against GPS related to the Project. In addition, GPS received a guarantee from Delta-T's parent company in support of the indemnification commitment. Delta-T assigned its lien rights related to the Project to GPS which has advised the parties that it will be pursuing only the assigned lien rights of Delta-T, amounting to approximately \$21.2 million, for the remainder of this action.

In April 2009, one of the subcontractors to Delta-T (DCR) received an arbitration award in its favor against Delta-T in the amount of approximately \$6.8 million, including approximately \$662,000 in interest and \$2.3 million identified in the award as amounts applied to other projects (the Judgment Award). In April 2009, DCR also filed suit in the District Court of Thayer County, Nebraska, in order to recover its claimed amount of \$3.6 million unpaid by Delta-T on the Altra project from a payment bond issued to Altra on behalf of GPS. In December 2009, the Judgment Award was confirmed in federal district court in Florida. In February 2010, DCR amended the amount of its complaint filed in the Nebraska court against the payment bond to \$6.8 million, plus interest, to match the amount of the Judgment Award. Delta-T has not paid or satisfied any portion of the award and it has abandoned its defense of the surety company. The parties are currently engaged in the discovery phase of this litigation.

In December 2011, DCR filed a separate lawsuit against GPS relating to the Project in the District Court of Thayer County, Nebraska, and alleging claims against GPS for failure to furnish the surety bond upon request and unjust enrichment. DCR claims, that to the extent that the bonding company is successful in asserting a notice defense to DCR's claim, GPS is liable for DCR's damages for failing to furnish the bond when requested. DCR's unjust enrichment claim alleges that GPS received payments from Altra that exceed the scope of GPS's work on the Project and should have been paid to lower tier subcontractors such as DCR; its complaint seeks damages in the amount of \$6,125,000 plus interest, costs and attorney fees.

The Company intends to vigorously pursue its assigned lien claim against the Altra project as well as to defend these matters for itself and the surety company, to investigate the inclusion of the \$2.3 million applied to other projects in the Judgment Award, to demand that Delta-T satisfy its obligations under the Close Out, and/or to enforce the guarantee provided to GPS by Delta-T's parent company. Due to the early stages of these legal proceedings, assurance cannot be provided by the Company that it will be successful in these efforts. It is reasonably possible that resolution of the matters discussed above could result in a loss with a material negative effect on the Company's consolidated operating results in a future reporting period. However, at this time, management cannot make an estimate of the amount or range of loss, if any, related to these matters. No provision for loss has been recorded in the consolidated financial statements as of January 31, 2012 related to these matters. If new facts become known in the future indicating that it is probable that a loss has been incurred by GPS and the amount of loss can be reasonably estimated by GPS, the impacts of the change will be reflected in the consolidated financial statements at that time.

Tampa Bay Nutraceutical Company

On or about September 19, 2007, Tampa Bay Nutraceutical Company, Inc. (Tampa Bay) filed a civil action in the Circuit Court of Florida for Collier County against VLI. The current causes of action relate to an order for product issued by Tampa Bay to VLI in June 2007 and sound in (1) breach of contract; (2) promissory estoppel; (3) fraudulent misrepresentation; (4) negligent misrepresentation; (5) breach of express warranty; (6) breach of implied warranty of merchantability; (7) breach of implied warranty of fitness for a particular purpose; and (8) non-conforming goods. Tampa Bay alleges compensatory damages in excess of \$42 million. Depositions are ongoing. The Company is vigorously defending this litigation. Over the last twelve months, the parties have been engaged primarily in legal activity concerning the plaintiff's failure to provide proper discovery responses to us. We have prevailed on the legal issues and sanctions were recently issued by the court against the plaintiff without any noticeable impact on plaintiff's discovery responses. Although the Company believes it has meritorious defenses, it is impracticable to assess the likelihood of an unfavorable outcome of a trial or to estimate a likely range of damages, if any, at this stage of the litigation. It is reasonably possible that the ultimate resolution of the litigation with Tampa Bay could result in a material adverse effect on the results of operations of the Company for a future reporting period.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES.

The table below sets forth the high and low closing prices for our common stock which trades under the symbol AGX on the NYSE Amex stock exchange for our quarters during the fiscal years ended January 31, 2011 and 2012.

	High Close	Low Close
Fiscal Year Ended January 31, 2011		
1st Quarter	\$ 16.10	\$ 10.67
2nd Quarter	11.39	8.32
3rd Quarter	10.18	7.47
4th Quarter	10.01	8.31
Fiscal Year Ended January 31, 2012		
1st Quarter	\$ 9.61	\$ 8.32
2nd Quarter	11.45	8.91
3rd Quarter	14.20	9.26
4th Quarter	17.38	11.18
Fiscal Year Ending January 31, 2013		
1st Quarter (through April 5, 2012)	\$ 17.00	\$ 14.47

In the past, we have not paid cash dividends on our common stock and have retained earnings to finance the development and expansion of our business. However, in November 2011, we paid to stockholders a special cash dividend of \$0.50 per share of common stock reflecting our board of directors' confidence in the strong financial performance of GPS and the size of its construction contract backlog. Annually, our board of directors intends to evaluate the Company's ongoing operational and financial performance in determining what role strategically aligned dividends should play in creating shareholder value.

As of April 5, 2012, we had approximately 135 stockholders of record.

Stock Options and Warrants

In June 2011, the stockholders approved the adoption of the 2011 Stock Plan (the "Stock Plan") including 500,000 shares of our common stock reserved for issuance thereunder. The Stock Plan, which will expire in July 2021, serves to replace the Argan, Inc. 2001 Stock Option Plan (the "Option Plan") which expired in July 2011. As was the case under the Option Plan, we may make awards under the Stock Plan to officers, directors and key employees. Awards may include incentive stock options ("ISOs") or nonqualified stock options ("NSOs"), and restricted or unrestricted stock. ISOs granted under the Option Plan shall have an exercise price per share at least equal to the common stock's market value per share at the date of grant, a ten-year term, and typically shall become fully exercisable one year from the date of grant. NSOs may be granted at an exercise price per share that differs from the common stock's market value per share at the date of grant, may have up to a ten-year term, and become exercisable as determined by our board of directors.

In connection with our private placement offering of common stock that occurred in April 2003, we also issued warrants to purchase 230,000 shares of common stock to various parties. Included were (1) warrants to purchase an aggregate of 180,000 shares of common stock that were issued to three individuals (including the current CEO and CFO) who became executive officers of the Company upon completion of the offering, and (2) warrants to purchase 50,000 shares of common stock that were issued to MSR Advisors, Inc. (a former member of our board of directors is the President of MSR Advisors, Inc.). The purchase price per share of common stock under all of these warrants is \$7.75 and the warrants expire in December 2012. As of January 31, 2012, warrants to purchase 160,000 shares of common stock were outstanding.

Equity Compensation Plan Information

The following table sets forth certain information, as of January 31, 2012, concerning securities authorized for issuance under options to purchase our common stock.

	Number of Securities Issuable under Outstanding Options	Weighted Average Exercise Price of Outstanding Options	Number of Securities Remaining Available for Future Issuance (1)
Equity Compensation Plans Approved by the Stockholders (2) (3)	817,186	\$ 12.10	369,500
Equity Compensation Plans Not Approved by the Stockholders			
Totals	817,188	\$ 12.10	369,500

- (1) Excludes the number of securities reflected in the first column of this table.
- (2) Excludes 5,000 shares of restricted stock awarded to an employee during the year ended January 31, 2012 under the 2011 Stock Plan, with a two-year vesting schedule.
- (3) Approved plans include the Company's 2011 Stock Plan and the 2001 Stock Option Plan. As of January 31, 2012, a total of 1,191,686 shares of our common stock were authorized by the stockholders for issuance under the plans.

Recent Sales of Unregistered Securities

None.

ITEM 6. SELECTED FINANCIAL DATA

Not required for companies permitted to use the scaled disclosures for smaller reporting companies.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATION.

The following discussion summarizes the financial position of Argan, Inc. and its subsidiaries as of January 31, 2012, and the results of their operations for the years ended January 31, 2012 and 2011, and should be read in conjunction with the consolidated financial statements and notes thereto included elsewhere in Item 8 of this Annual Report on Form 10-K (the 2012 Annual Report).

Cautionary Statement Regarding Forward Looking Statements

The Private Securities Litigation Reform Act of 1995 provides a safe harbor for certain forward-looking statements. We have made statements in this Item 7 and elsewhere in this 2012 Annual Report that may constitute forward-looking statements. The words believe, expect, anticipate, plan, intend, foresee, should, would, could, or other similar expressions are intended to identify forward-looking statements. These forward-looking statements are based on our current expectations and beliefs concerning future developments and their potential effects on us. There can be no assurance that future developments affecting us will be those that we anticipate. All comments concerning our expectations for future net revenues and operating results are based on our forecasts for our existing operations and do not include the potential impact of any future acquisitions. Our forward-looking statements, by their nature, involve significant risks and uncertainties (some of which are beyond our control) and assumptions. They are subject to change based upon various factors including, but not limited to, the risks and uncertainties described in Item 1A of this 2012 Annual Report. Should one or more of these risks or uncertainties materialize, or should any of our assumptions prove incorrect, actual results may vary in material respects from those projected in the forward-looking statements. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Business Description

Argan, Inc. (the Company, we, us, or our) conducts continuing operations through its wholly owned subsidiaries, Gemma Power Systems, LLC and affiliates (GPS) and Southern Maryland Cable, Inc. (SMC). Through GPS, we provide a full range of development, consulting, engineering, procurement, construction, commissioning, operations and maintenance services to the power generation and renewable energy markets for a wide range of customers including public utilities, independent power project owners, municipalities, public institutions and private industry. We have also determined that GPS is the primary beneficiary of two variable interest entities that were formed during the year ended January 31, 2012 for the purpose of developing a pair of gas-fired power plants. The combination of GPS and the variable interest entities represent our power industry services business segment. Through SMC, we provide telecommunications infrastructure services including project management, construction and maintenance to local governments, the federal government, telecommunications and broadband service providers as well as electric utilities. Argan, Inc. is a holding company with no operations other than its investments in GPS and SMC. At January 31, 2012, there were no restrictions with respect to inter-company payments from GPS or SMC to the holding company.

Overview and Outlook

For the year ended January 31, 2012, the consolidated net revenues of continuing operations were \$141.9 million which represented a decrease of \$40.7 million from the net revenues of continuing operations of \$182.6 million for the prior year. Income from continuing operations for the year ended January 31, 2012 was approximately \$7.4 million, or \$0.56 per diluted share. Income from continuing operations was \$10.0 million, or \$0.73 per diluted share, for the year ended January 31, 2011. Net income for the year ended January 31, 2012 attributable to our stockholders was approximately \$9.3 million, or \$0.67 per diluted share. We reported net income of \$7.8 million, or \$0.57 per diluted share, for the year ended January 31, 2011. The reduction in consolidated net revenues from continuing operations for the year ended January 31, 2012, compared with the net revenues from continuing operations for the year ended January 31, 2011, was due primarily to a decrease of 24% in the net revenues of the power industry services business, which represented 93% of consolidated net revenues for the year ended January 31, 2012. The net revenues of the telecommunications infrastructure services business for the year ended January 31, 2012 increased by 22%, to \$9.3 million for the current year compared with net revenues of approximately \$7.7 million for the year ended January 31, 2011.

The financial results for the year ended January 31, 2012 reflect the transition for us between major projects. In the period December 2010 to July 2011, we substantially completed three energy plant construction projects that sustained us through the year ended January 31, 2011. Substantial work on new projects did not commence until the latter half of the year ended January 31, 2012. As a result, the net revenues of our power industry services business for the year ended January 31, 2012 were adversely impacted, particularly during the first two quarters. During the first quarter, we completed the construction of a gas-fired power plant in northern California; this major project represented our most significant construction activity for the previous two fiscal years. During the second quarter, we substantially completed construction of the gas-fired peaking plant in Connecticut. In addition, construction activity on a wind-energy farm project was completed late in the fiscal year ended January 31, 2011. In total, these three projects provided approximately 95% of consolidated net revenues of continuing operations for the year ended January 31, 2011.

As of January 31, 2012, the value of our construction contract backlog was \$415 million compared with a backlog value of \$291 million as of January 31, 2011, including over \$160 million related to a project awarded to us in October 2011 for the engineering and construction of a 49.9 megawatt biomass-fired power plant in east Texas. Although we do not expect to receive a full notice to proceed on this contract from the project owner until the first fiscal quarter of fiscal year 2013, we have begun critical planning and early engineering activities on this project. Completion of this project is expected to occur in December 2014. The current backlog also includes two other projects; the design and construction of a gas-fired electricity peaking facility in southern California and a wind energy farm in Illinois. We substantially commenced the construction activities on the Illinois wind farm in the second quarter, including the installation of up to one-hundred thirty-four (134) wind turbines with a total power rating of approximately 200 megawatts. This contract was awarded to us last November with a planned project-completion date in late calendar 2012. In May 2011, we received the anticipated full notice to proceed from the project owner in southern California pursuant to which we immediately commenced activity for the design and construction of an 800 MW, eight-unit simple cycle peaking power plant near Desert Hot Springs, California. This project is scheduled to be completed during the summer of calendar year 2013. Together, these two projects represented approximately 73% of net revenues from continuing operations for the year ended January 31, 2012.

In the most recent fourth fiscal quarter, we announced that GPS, through its wholly-owned subsidiary, Gemma Renewable Power, LLC (GRP), had signed an EPC contract with a solar power project development firm for the design and build of a solar energy facility located on a closed capped landfill in Canton, Massachusetts. GRP has received a full release to start all engineering and construction activities on this project that is expected to be completed during the summer of calendar 2012. The award of this project increased backlog by approximately \$17 million. Late in the year ended January 31, 2012, we were also awarded another wind-energy project, located in Pennsylvania, with a contract value of approximately \$18 million.

Primarily due to the decrease in net revenues from continuing operations, gross profit declined by approximately \$6.0 million between years. However, our overall gross profit percentage was maintained at a consistent level for both years. We reduced selling, general and administrative expenses by \$943,000, or approximately 8%, for the year ended January 31, 2012 compared with the comparable expense amount for the prior year. As a result, income from continuing operations before income taxes for the year ended January 31, 2012 declined by approximately \$5.1 million, to \$11.9 million from \$17.0 million for the year ended January 31, 2011. Cash and cash equivalents increased during the current year by over \$73 million to approximately \$156.5 million at January 31, 2012 due primarily to net cash provided by the operating activities of continuing operations.

Current economic conditions in the United States reflect ongoing weakness in employment, housing and many other industry sectors. Stubbornly high unemployment, the depressed state of the housing industry, reduced state and local government budgets and sluggish manufacturing activity have all contributed significantly to a reduction in construction spending in the United States. Affecting us more specifically, these factors have resulted in lower demand for electricity which in turn has resulted in power plant operators experiencing less urgency to build new electricity-generating power plants. In addition, the significant instability in the financial markets may be continuing to make it difficult for certain of our customers, particularly for projects funded by private investment, to access the credit markets to obtain financing for new construction projects on satisfactory terms or at all. The sharp reduction in the number of new commercial, industrial and infrastructure construction projects has created an extremely competitive bid environment in our construction sector. Many known competitors have reduced prices, willing to sacrifice margin in order to keep work crews busy. Other construction companies have entered our sector of the industry looking for new work at low margins.

The power industry has not fully recovered from the recessionary decline in the demand for power in the United States. As it will likely take at least several years for power consumption to reach 2007 peak levels, existing power plants will continue to operate with spare capacity to produce electricity. Despite the reductions in the demand for power, certain regions of the country continued to add power generation facilities over the last several years, wind energy facilities in particular. The combination of these new electricity generation plants and excess power generation capacity elsewhere may obviate the need to build power plants during the power demand recovery period.

The expected increase in momentum towards more environmentally friendly power generation facilities has not occurred at the pace expected just a few years ago. The federal government has failed to pass comprehensive energy legislation, including incentives or mandates for the retirement of existing coal burning power plants and caps on the volume of carbon emissions. At present, there is no bipartisan agreement regarding the approval of government incentives for sources of renewable power in either legislative house of Congress. With the future availability of renewable energy tax incentives unknown, potential energy project developers and investors may be hesitant to make commitments related to new renewable energy generation facilities. Although certain coal-fired power plants have been shut down, existing coal plants are proving to be a challenge to retrofit or replace. Coal prices are widely considered to be stable and certain states see the availability of inexpensive, coal-fired electricity as a key driver of economic growth.

We believe that it is likely that this unfavorable energy construction environment will continue to limit the number of new energy plant construction opportunities through our fiscal year ending January 31, 2013. In addition, we expect that the new opportunities which do arise will result in fierce competition among bidders.

However, we continue to believe that the long-term prospects for energy plant construction are extremely favorable. We expect that the negative environmental impact of burning coal, political focus on energy independence and renewed concerns about the safety of nuclear power plants eventually will spur the development of renewable and cleaner gas-fired power generation facilities which should result in new power facility construction opportunities for us in the future. The demand for electrical power in this country is expected to recover and grow steadily over the long term. This demand, and the expected retirement of old coal, nuclear and oil powered energy plants, should result in gas-fired and renewable energy plants, like wind and biomass, representing the substantial majority of new power generation additions in the future and an increased share of the power generation mix. Utilities and other power-generating companies in our country have announced the retirement of aging, inefficient coal-fired power plants and dropped future plans to build new ones. We understand that calendar 2011 was the second straight year in which construction did not begin on a single new coal-fired power plant in the United States.

New regulations regarding air pollution are being developed by states and the U.S. Environmental Protection Agency (the EPA). For instance, in July 2011, the EPA finalized a new rule, which is designed to reduce sulfur dioxide and nitrogen oxide emissions into the atmosphere. Also, in March 2011, the EPA proposed standards for power plants intended to increase controls over mercury and other air pollutants. Although these measures are subject to a number of legal challenges, we believe they represent additional obstacles for coal-fired power plants.

Although our federal government has failed to enact national renewable energy standards, more than half of the states have adopted formal renewable energy portfolio standards which have contributed to an expansion of the wind energy industry. Since 2007, wind energy farms have represented over 35% of all new electricity generating capacity in the United States, second only to natural gas and more than coal and nuclear combined. Further, there is federal support for improving the power infrastructure, for example the streamlining of power transmission line permitting and the modernization of the power grid, which is essential for the growth of intermittent power generation sources like wind and solar. During the year ended January 31, 2012, we began construction of a new 200 megawatt wind energy farm in Illinois.

We continue to observe interest in gas-fired generation as electric utilities and independent power producers look to diversify their power generation options. We believe that the initiatives in many states to reduce emissions of carbon dioxide and other greenhouse gases, and the desire by utilities to fill demand for additional power prior to the completion of more sizeable, expensive or controversial projects, will stimulate and sustain demand for more efficient gas-fired power plants. Natural gas is the cleanest burning fossil fuel, emitting fewer pollutants into the atmosphere. In addition, gas-fired generation of electricity can complement wind, solar and other alternative generation facilities because gas-fired facilities can be brought on-line quickly to smooth the inherently variable generation pattern of these alternative energy sources. We would also expect power producers to increase future capital spending on gas-fired power plants to take advantage of recent lower natural gas prices and the prospect that these prices may remain stable for some time because of the rapidly expanding supply of natural gas coming from shale-gas field development projects in the United States. While it is unclear what the future impact of economic conditions might have on the timing or financing of future projects, we expect that gas-fired power plants will continue to be an important component of long-term power generation development in the United States and believe our capabilities and expertise will position us as a market leader for these projects. The completed projects in northern California and Connecticut, and the southern California peaking plant project, all utilize gas-fired electricity generation.

During this difficult time for our industry, we are focused on the effective and efficient completion of our current construction projects and the control of costs, which we expect to result in higher net revenues and favorable profit results for our fiscal year ending January 31, 2013. Despite the intensely competitive business environment, we are committed to the rational pursuit of new construction projects. This approach may result in a lower volume of new business bookings until the demand for new power generation facilities and the other construction industry sectors recover fully. We will strive to conserve cash and to maintain an overall strong balance sheet. However, we are seeing new business opportunities that include an opportunity to make an investment in the ownership of a new project, at least during the development phase of the project, in order to improve the probability of an EPC contract award (see Note 6 to the consolidated financial statements). Because we believe in the strength of our balance sheet, we are willing to consider the opportunities that include reasonable and manageable risks. Alternatively, in order to be considered for large opportunities in the future, project owners may require us to team with a larger construction firm partner in order to reduce the perceived performance risk. This type of arrangement may also be acceptable to us in certain circumstances.

Although the uncertain economic conditions do impair our forecasting visibility to an unusual degree, we remain cautiously optimistic about our long-term growth opportunities. We are focused on expanding our position in the growing power markets where we expect investments to be made based on forecasts of increasing electricity demand covering decades into the future. We believe that our expectations are reasonable and that our future plans are based on reasonable assumptions.

Moxie Energy Projects

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a project owner such as a government agency or a commercial enterprise. These teaming arrangements are generally dissolved upon completion of the project or program. In November 2011, Gemma Power, Inc. (GPI, an affiliate of GPS that is wholly owned by us) agreed to the amendment of a development agreement with Moxie Energy, LLC (Moxie) which was executed earlier in the year ended January 31, 2012, and which has provided GPI with an opportunity to support the initial development of two power plant projects with loans and the option to provide additional development loans and/or equity investments to cover the anticipated costs of the developments.

Moxie has two natural gas-fired power plant projects under development located in the Marcellus Shale gas region of Pennsylvania. The strategy of Moxie is to develop these power plants (the Moxie Projects) near the natural gas source and to provide transmitted electricity to the power grid in the northeastern United States, eliminating the need to transport natural gas via pipeline from well to power production plant.

As of January 31, 2012, GPI had provided approximately \$1.5 million in cash to the Moxie Projects under short term initial development loans scheduled to be repaid during the fiscal year ending January 31, 2013. An additional \$730,000 of loans was authorized by us for the Moxie Projects at year end. Moxie has supported the arrangement by providing GPI with a series of liens, security interests, guarantees and development fee preferences (see Note 6 to the accompanying consolidated financial statements) which, together with the loans, provide us with substantial financial control over the Moxie Projects. In return for GPI's providing the initial development loans described above, Moxie will provide GPI with the right to provide construction services for the two projects under EPC contracts.

We have evaluated the Moxie Projects to be variable interest entities under current accounting guidance (VIEs). Despite not having an ownership interest in the Moxie Projects, we have concluded that GPI is currently the primary beneficiary of these VIEs due primarily to the significance of GPI's loans to the entities, the risk that GPI could absorb significant losses if the development projects are not successful, the opportunity for GPI to receive development success fees and the possibility of GPI obtaining two large EPC contracts for the construction of the power plants. Accordingly, the assets, liabilities and financial results of the Moxie Projects are included in our consolidated financial statements for the year ended January 31, 2012.

To date, the activities of the Moxie Projects have been focused on 1) securing the necessary permits to build and operate the power plants and to transmit the electricity produced there to users, 2) obtaining financing for the remaining costs of development, 3) completing an electricity supply agreement with a customer and 4) engaging energy plant operators in negotiations for the purchase of the projects. The completion of negotiations and agreements that would assure our construction of the power plants may not occur until the latter half of the fiscal year ending January 31, 2013. In the event that successful continuation and/or completion of the planned development of the Moxie Projects would not occur, we may not receive repayment of current and future loans which could result in a write-off of the balance of the loans that may be significant to a future reporting period.

Discontinued Operations

On March 11, 2011, we completed the sale of substantially all of the assets of Vitarich Laboratories, Inc. (VLI), a wholly-owned subsidiary that represented our nutritional products business, to NBTY Florida, Inc. (NBTY). The asset sale was consummated for an aggregate cash purchase price of up to \$3,100,000 and the assumption by the purchaser of certain trade payables, accrued expenses and remaining obligations under VLI 's facility leases. Of the cash purchase price, \$800,000 was paid at closing and the remaining \$2,300,000 was placed into escrow. Subsequently, VLI was paid approximately \$1,728,000 cash from the escrow amount as purchased inventory was used in production by NBTY and purchased accounts receivable balances were collected. Amounts received from the escrow account were recorded as sale proceeds upon receipt. In December 2011 and pursuant to the terms of the asset sale agreement, the funds remaining in the escrow account were returned to NBTY.

The financial results for VLI have been presented as discontinued operations in the accompanying consolidated financial statements. Income associated with discontinued operations for the year ended January 31, 2012 was approximately \$1,562,000, including net gain on the sale of assets, before income taxes, in the amount of \$1,312,000 and approximately \$1,280,000 in income tax benefit related to the deduction, for income tax return purposes, for the worthless stock of VLI. These favorable amounts were offset partially by costs of operations incurred prior to the sale of assets and those related to the legal matter discussed in Note 14 to the accompanying consolidated financial statements. We incurred a loss from discontinued operations for the year ended January 31, 2011 in the approximate amount of \$2.2 million. Due to the cash proceeds received from the sale of assets, net cash provided by the discontinued activities of VLI for the year ended January 31, 2012 was approximately \$1.4 million. For the year ended January 31, 2011, discontinued operations used \$2.9 million in cash. The assets and liabilities of VLI as of January 31, 2011 were classified as held for sale in the accompanying consolidated balance sheet.

Comparison of the Results of Operations for the Years Ended January 31, 2012 and 2011

The following schedule compares the results of our continuing operations for the years ended January 31, 2012 and 2011. Except where noted, the percentage amounts represent the percentage of net revenues for the corresponding year. As analyzed below the schedule, we reported net income attributable to our stockholders of approximately \$9.3 million for the fiscal year ended January 31, 2012. For the fiscal year ended January 31, 2011, we reported a comparable net income amount of \$7.8 million.

	2012		2011	
Net revenues				
Power industry services	\$ 132,519,000	93.4%	\$ 174,938,000	95.8%
Telecommunications infrastructure services	9,331,000	6.6%	7,654,000	4.2%
Net revenues	141,850,000	100.0%	182,592,000	100.0%
Cost of revenues **				
Power industry services	111,193,000	83.9%	146,976,000	84.0%
Telecommunications infrastructure services	7,555,000	81.0%	6,493,000	84.8%
Cost of revenues	118,748,000	83.7%	153,469,000	84.1%
Gross profit	23,102,000	16.3%	29,123,000	15.9%
Selling, general and administrative expenses	11,186,000	7.9%	12,129,000	6.6%
	11,916,000	8.4%	16,994,000	9.3%
Other income, net	48,000	*	50,000	*
Income from continuing operations before income taxes	11,964,000	8.4%	17,044,000	9.3%
Income tax expense	4,556,000	3.2%	7,037,000	3.8%
Income from continuing operations	\$ 7,408,000	5.2%	\$ 10,007,000	5.5%
Net income attributable to stockholders	\$ 9,272,000	6.5%	\$ 7,774,000	4.3%

** The cost of revenues percentage amounts represents the percentage of net revenues of the applicable segment.

- 26 -

Net Revenues***Power Industry Services***

For the year ended January 31, 2012, the net revenues related to two new projects represented approximately 46% and 33% of the net revenues of the segment, respectively, and approximately 43% and 30% of consolidated net revenues from continuing operations, respectively. These projects include the Sentinel Project in southern California and the wind-energy project located in Illinois. For the year ended January 31, 2011, substantially all of the net revenues of this segment were associated with three projects that have been completed. For the year ended January 31, 2012, these completed projects represented only 15% of the net revenues of this segment. Most significantly, the operating results for the year ended January 31, 2012 reflected the final activity on this segment's major project for the previous three years, a gas-fired power plant located in northern California, which was completed during the first quarter. For the year ended January 31, 2011, the net revenues related to this project represented 59% and 56% of segment net revenues and consolidated net revenues from continuing operations, respectively. In addition, during the year ended January 31, 2012, we completed construction of a power plant in Connecticut that contributed net revenues which represented 13% and 23% of this segment's net revenues for the years ended January 31, 2012 and 2011, respectively. As a result, the net revenues of this business declined by 24% to \$132.5 million for the current year compared with net revenues in the amount of \$174.9 million for the year ended January 31, 2011. However, at year end, this segment had six active projects and, as described above, construction contract backlog of \$415 million.

Telecommunications Infrastructure Services

During the year ended January 31, 2012, the net revenues of the telecommunications services business of SMC increased by 22% to \$9.3 million compared with net revenues in the amount of \$7.7 million for the prior year. The net revenues of the telecommunications infrastructure services business, expressed as a percentage of consolidated net revenues from continuing operations, also increased to 7% for the current period compared with 4% for the year ended January 31, 2011. The increases were primarily due to the net revenues earned pursuant to the new contract arrangement with Howard County, Maryland, which represented approximately 25% of the net revenues of SMC for the year ended January 31, 2012. SMC was also effective in increasing the amount net revenues earned pursuant to bid business awarded by a variety of other new customers by approximately 35% during the year ended January 31, 2012. This business represented 48% of SMC's net revenues for the year ended January 31, 2012. Conversely, net revenues related to the performance of inside premises activities for SMC's most significant prior year customer declined from approximately 28% of this segment's net revenues for the year ended January 31, 2011 to less than 10% of net revenues for the year ended January 31, 2012. Our customer had a prime contract with the federal government that expired during the year ended January 31, 2011, adversely affecting the number and amount of subcontracted projects awarded to us in the subsequent year.

Cost of Revenues

Due substantially to the decline in consolidated net revenues from continuing operations for the year ended January 31, 2012 compared with the year ended January 31, 2011, the corresponding consolidated cost of revenues also declined. These costs were \$118.7 million and \$153.5 million for the years ended January 31, 2012 and 2011, respectively. However, the overall gross profit percentage was maintained during the year ended January 31, 2012 compared with previous year at approximately 16% of corresponding consolidated net revenues from continuing operations. The gross profit percentage achieved by GPS for the years ended January 31, 2012 and 2011 was also maintained at 16%, substantially due to the recognition during the year ended January 31, 2012 of net revenues related to final change orders and contract cost close-out adjustments associated with the completion of major construction projects. SMC was successful in improving the profitability of most elements of its business; its gross profit percentage was 19% for the year ended January 31, 2012 compared with 15% for the year ended January 31, 2011, which reflected losses recognized on two projects that totaled approximately \$306,000 in the earlier year.

Selling, General and Administrative Expenses

These costs decreased by \$943,000, or 8%, to approximately \$11.2 million for the year ended January 31, 2012 from approximately \$12.1 million for the year ended January 31, 2011, reflecting decreases between years in stock compensation expense and cash bonus expense of \$849,000 and \$361,000, respectively, and the addition of approximately \$208,000 in costs incurred by the Moxie Projects. The amounts for these accounts for the year ended January 31, 2011, included substantial stock compensation expense related to stock options awarded to two new senior executives and bonuses earned by employees of GPS in connection with the completion of the gas-fired power plant in northern California.

Income Tax Expense

For the year ended January 31, 2012, we incurred income tax expense related to continuing operations in the amount of \$4.6 million representing an annual effective income tax rate of 38.1%. The effective tax rate was higher than the expected federal income tax rate of 34.0% due primarily to state income taxes offset partially by favorable income tax effects of permanent differences, including \$185,000 related to the domestic manufacturing deduction. For the year ended January 31, 2011, we incurred income tax expense related to continuing operations of \$7.0 million which reflected an annual effective income tax rate of 41.3% that differed from the expected federal income tax rate of 34% due primarily to the unfavorable effects of state income taxes and income tax return to provision true-up adjustments in the approximate amount of \$338,000.

Liquidity and Capital Resources as of January 31, 2012

The balance of cash and cash equivalents increased during the current year to a balance of \$156.5 million as of January 31, 2012 compared with a balance of \$83.3 million as of January 31, 2011. Despite profitable operations, consolidated working capital increased only slightly during the current year to \$76.3 million as of January 31, 2012 from approximately \$73.2 million as of January 31, 2011 due to the use of funds to pay a cash dividend in the amount of \$6.8 million to stockholders in November 2011. We have an available balance of \$4.25 million under our revolving line of credit financing arrangement with Bank of America (the Bank) that expires in May 2013.

Net cash of \$80.0 million was provided by the operating activities of continuing operations during the year ended January 31, 2012. Income from continuing operations for the year ended January 31, 2012 was \$7.4 million. We also received payments on new projects during the year ended January 31, 2012 to cover outstanding accounts payable and equipment purchases, which resulted in a \$58.1 million temporary increase in the amount of billings in excess of costs and estimated earnings during the year. The increasing construction activity associated with new projects also caused the amounts of accounts receivable and costs and estimated earnings in excess of billings to increase during the year ended January 31, 2012, representing uses of cash in the amounts of \$3.0 million and \$1.3 million, respectively. On the other hand, the increase in accounts payable and accrued liabilities related primarily to the new construction activity provided net cash during the year ended January 31, 2012 in the amount of \$20.3 million. In addition, the completion of the construction project in northern California resulted in the release of restrictions on the cash balance segregated for this project providing cash in the amount of \$1.2 million during the year ended January 31, 2012. The amount of non-cash adjustments to income from continuing operations for the year ended January 31, 2012 represented a net source of cash of approximately \$1,390,000, including primarily stock compensation, depreciation and amortization expense amounts of \$652,000, \$455,000 and \$334,000, respectively. The balance of prepaid expenses and other current assets increased by \$4.0 million during the year ended January 31, 2012 as net cash was used to make advance payments on certain expenditures associated with the gas-fired power plant construction project in southern California and to prepay certain annual insurance premiums. Net cash of \$1,335,000 was used by the operating activities of discontinued operations during the year ended January 31, 2012.

For the year ended January 31, 2011, net cash provided by continuing operating activities was \$22.2 million. We reported income from continuing operations of approximately \$10.0 million last year. The amount of non-cash adjustments to income from continuing operations last year represented a net source of cash of approximately \$2.9 million, including stock compensation expense of \$1,502,000, amortization and depreciation of \$992,000 and deferred income tax expense of \$410,000. During the prior year, accounts receivable increased, representing a \$10.4 million use of cash as construction activity increased for the gas-fired power peaking facility that was under construction in Connecticut. However, the allowable billings on this project included amounts covering forecasted short-term costs resulting in an increase during the prior year in billings in excess of actual costs and estimated earnings as well. This increase represents a source of cash in the amount of \$8.0 million. The decrease in construction activity on the gas-fired power plant located in northern California was the primary cause for the decreases in costs and estimated earnings in excess of billings and accounts payable and accrued expenses which represented net cash amounts of \$11.5 million and \$5.1 million provided by and used in operating activities during the prior year, respectively. Last year, we also reduced the amount of cash subject to restrictions, providing net cash in the amount of \$3.8 million. Despite the use of cash by the discontinued operations of VLI in the amount of \$2.9 million during the year ended January 31, 2011, net cash provided by operations was \$19.3 million last year.

During the year ended January 31, 2012, net cash was provided by investing activities in the amount of \$790,000 due primarily to the receipt of cash proceeds from the sale of the assets of VLI offset partially by expenditures for property and equipment, including \$1,469,000 made by the Moxie Projects. The exercise of stock options and warrants provided net cash proceeds from financing activities in the aggregate amount of approximately \$531,000 during the year ended January 31, 2012. During the year ended January 31, 2011, we used net cash in connection with financing and investing activities in the amounts of \$1,715,000 and \$483,000, respectively, due primarily to principal payments made during the year to retire our remaining term note with the Bank totaling \$1,833,000 and the net purchases of property plant and equipment by continuing operations in the amount of \$483,000.

We have pledged the majority of the Company's assets to secure the financing arrangement. Under the financing arrangement with the Bank, its consent is required for acquisitions and divestitures. The amended financing arrangement contains an acceleration clause which allows the Bank to declare amounts outstanding under the financing arrangements due and payable if it determines in good faith that a material adverse change has occurred in the financial condition of any of our companies. The Bank arrangement also requires the measurement of certain financial covenants at our fiscal year-end and at each of our fiscal quarter-ends (using a rolling 12-month period), determined on a consolidated basis, including requirements that the ratio of total funded debt to EBITDA (as defined) not exceed 2 to 1, that the ratio of senior funded debt to EBITDA (as defined) not exceed 1.50 to 1, and that the fixed charge coverage ratio not be less than 1.25 to 1. At January 31, 2012 and January 31, 2012, we were in compliance with each of these financial covenants.

We believe that the Company will continue to comply with its financial covenants under the financing arrangement. If the Company's performance results in our noncompliance with any of the financial covenants, or if the Bank seeks to exercise its rights under the acceleration clause referred to above, we would seek to modify the financing arrangement, but there can be no assurance that the Bank would not exercise its rights and remedies under the financing arrangement including accelerating payment of all outstanding senior debt due and payable. During the year ended January 31, 2012, we did receive the required consents from the Bank in order to complete the disposition of substantially all of the assets of VLI and to declare the cash dividend paid to stockholders in November 2011. In May 2011, we reached agreement with the Bank on a new amendment to the financing arrangement which extended the expiration date of the revolving line of credit to May 31, 2013 and permits investments or loans, as described in the amendment, in amounts not to exceed \$10 million under certain conditions.

At January 31, 2012, most of the balance of cash and cash equivalents was invested in a money market fund without any exposure to European sovereign bonds and sponsored by an investment division of the Bank. Our operating and restricted bank accounts are maintained with the Bank.

We believe that cash on hand, cash generated from our future operations and funds available under our line of credit will be adequate to meet our general business needs in the foreseeable future without deterioration of working capital. Any future acquisitions, or other significant unplanned cost or cash requirement, may require us to raise additional funds through the issuance of debt and/or equity securities. There can be no assurance that such financing will be available on terms acceptable to us, or at all. If additional funds are raised by issuing equity securities, significant dilution to the existing stockholders may result.

Off-Balance Sheet Arrangements

We maintain a variety of commercial commitments that are generally made available to provide support for various commercial provisions in the engineering, procurement and construction contracts. We provide guarantees related to our services or work. If our services under a guaranteed project would be determined to have resulted in a material defect or other material deficiency, then we may be responsible for monetary damages or other legal remedies. When sufficient information about claims on guaranteed projects would be available and monetary damages or other costs or losses would be determined to be probable, we would record such guarantee losses.

In the ordinary course of business, our customers may request that we obtain surety bonds in connection with construction contract performance obligations that are not required to be recorded in our consolidated balance sheets. We would be obligated to reimburse the issuer of our surety bonds for any payments made. Each of our commitments under performance bonds generally ends concurrently with the expiration of the related contractual obligation. If necessary, we may obtain standby letters of credit from the Bank in the ordinary course of business, not to exceed \$10.0 million. The financial crisis associated with the recession has not disrupted our insurance or surety programs or limited our ability to access needed insurance or surety capacity. We also have a line of credit committed by the Bank in the amount of \$4.25 million for general purposes.

From time to time, we may arrange for bonding to be issued by our surety firm for the benefit of the owner of an energy project for which we are not providing construction services. We collect fees from the provider of such services as consideration for the use of our bonding capacity. As of January 31, 2012, the total amount of outstanding surety bonds issued under such arrangements was approximately \$4.6 million. We earned approximately \$51,000 in fees during the year ended January 31, 2012 in connection with such arrangements.

Earnings before Interest, Taxes, Depreciation and Amortization (Non-GAAP Measurement)

We believe that Earnings before Interest, Taxes, Depreciation and Amortization (EBITDA) is a meaningful presentation that enables us to assess and compare our operating cash flow performance on a consistent basis by removing from our operating results the impacts of our capital structure, the effects of the accounting methods used to compute depreciation and amortization and the effects of operating in different income tax jurisdictions. Further, we believe that EBITDA is widely used by investors and analysts as a measure of performance. As EBITDA is not a measure of performance calculated in accordance with generally accepted accounting principles in the United States (US GAAP), we do not believe that this measure should be considered in isolation from, or as a substitute for, the results of our operations presented in accordance with US GAAP that are included in our consolidated financial statements. In addition, our EBITDA does not necessarily represent funds available for discretionary use and is not necessarily a measure of our ability to fund our cash needs.

Edgar Filing: ARGAN INC - Form 10-K

The following table presents the determinations of EBITDA for continuing operations for the years ended January 31, 2012 and 2011:

	2012	2011
Income from continuing operations, as reported	\$ 7,408,000	\$ 10,007,000
Interest expense		35,000
Income tax expense	4,556,000	7,037,000
Amortization of purchased intangible assets	334,000	350,000
Depreciation and other amortization	455,000	642,000
 EBITDA	 \$ 12,753,000	 \$ 18,071,000

As we believe that our net cash flow from continuing operations is the most directly comparable performance measure determined in accordance with US GAAP, the following table reconciles the amounts of EBITDA for the applicable years, as presented above, to the corresponding amounts of net cash flows provided by (used in) continuing operating activities that are presented in our consolidated statements of cash flows:

	2012	2011
EBITDA	\$ 12,753,000	\$ 18,071,000
Current income tax expense	(4,607,000)	(6,627,000)
Interest expense		(35,000)
Non-cash stock option compensation expense	652,000	1,502,000
Decrease in escrowed cash	1,243,000	3,759,000
Decrease in accounts receivable	(2,976,000)	(10,359,000)
Change related to the timing of scheduled billings	56,750,000	19,530,000
Increase (decrease) in accounts payable and accrued liabilities	20,252,000	(5,097,000)
Other, net	(4,017,000)	1,490,000
 Net cash provided by continuing operations	 \$ 80,050,000	 \$ 22,234,000

Inflation

Our monetary assets, consisting primarily of cash, cash equivalents and accounts receivables, and our non-monetary assets, consisting primarily of goodwill and other purchased intangible assets, are not affected significantly by inflation. We believe that replacement costs of equipment, furniture, and leasehold improvements will not materially affect our operations. However, the rate of inflation affects our costs and expenses, such as those for employee compensation and benefits and commodities used in construction projects, which may not be readily recoverable in the price of services offered by us.

Critical Accounting Policies

We consider the accounting policies related to revenue recognition on long-term construction contracts; the valuation of goodwill, other indefinite-lived assets and long-lived assets; the valuation of employee stock options; income tax reporting and the reporting of legal matters to be most critical to the understanding of our financial position and results of operations.

Critical accounting policies are those related to the areas where we have made what we consider to be particularly subjective or complex judgments in making estimates and where these estimates can significantly impact our financial results under different assumptions and conditions. These estimates, judgments, and assumptions affect the reported amounts of assets, liabilities and equity and disclosure of contingent assets and liabilities at the date of financial statements and the reported amounts of net revenues and expenses during the reporting periods. We base our estimates on historical experience and various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets, liabilities and equity that are not readily apparent from other sources. Actual results and outcomes could differ from these estimates and assumptions. A description of the Company's significant accounting policies, including those discussed below, is included in Note 2 to the accompanying consolidated financial statements for the year ended January 31, 2012.

Revenue Recognition

We enter into construction contracts principally on the basis of competitive bids. The types of contracts may vary and include agreements under which net revenues are based on a fixed-price or cost-plus-fee basis. Net revenues from cost-plus-fee construction agreements are recognized on the basis of costs incurred during the period plus the fee earned, measured using the cost-to-cost method. Components of fee based on our achievement of certain cost or schedule objectives are included when we believe it is probable that such amounts have been earned. Net revenues from fixed-price construction contracts are recognized on the percentage-of-completion method. The percentage-of-completion method measures the ratio of costs incurred and accrued to date for each contract to the estimated total costs for each contract at completion. This requires us to prepare on-going estimates of the costs to complete each contract as the project progresses. In preparing these estimates, we make significant judgments and assumptions concerning our significant costs, including materials, labor and equipment, and we evaluate contingencies based on possible schedule variances, production delays or other productivity factors.

Actual costs may vary from the costs we estimate. Variations from estimated contract costs along with other risks inherent in fixed-price contracts may result in actual net revenues and gross profits differing from those we estimate and could result in losses on projects or other significant unfavorable impacts on our operating results for any fiscal quarter or year. If a current estimate of total contract cost indicates a loss on a contract, the projected loss is recognized in full when determined, without regard to the percentage of completion. We review the estimate of total cost on each significant contract monthly. We believe our exposure to losses on fixed price contracts is limited by management's experience in estimating contract costs and in making early identification of unfavorable variances as work progresses.

We consider unapproved change orders to be contract variations on which we have customer approval for scope change, but not for the price associated with that scope change. The costs associated with a scope change are expensed as incurred and included in the estimated amount of cost to complete the contract. We recognize net revenue on an unapproved change order when realization of price approval is probable. As of January 31, 2012, unapproved change orders in the aggregate amount of approximately \$975,000 were included in the total contract value amounts and reflected in the estimated total cost amounts of the corresponding contracts. Disputed change orders that are unapproved in regard to both scope and price are considered claims. The Company recognizes net revenues from a claim only when an agreement on the amount of the claim has been reached.

Goodwill and Other Indefinite-Lived Intangible Assets

In connection with the acquisitions of GPS and SMC, we recorded substantial amounts of goodwill and other purchased intangible assets including contractual and other customer relationships, non-compete agreements and trade names. Other than goodwill, most of our purchased intangible assets were determined to have finite useful lives. At January 31, 2012, the total carrying value of goodwill and the remaining purchased intangible asset with an indefinite life totaled approximately \$18.7 million, which represented approximately 9% of consolidated total assets. This amount included \$18.5 million in goodwill related to the acquisition of GPS.

The Company has reviewed for impairment, at least annually, the carrying values of goodwill and other purchased intangible assets deemed to have an indefinite life. The annual review performance date is November 1. We also perform tests for impairment of goodwill and other intangible assets with indefinite lives more frequently if events or changes in circumstances indicate that an asset value might be impaired.

As prescribed by current accounting guidance, we determine whether goodwill has been impaired or not using a two-step process of analysis. The first step of our goodwill impairment testing process is to identify a potential impairment by comparing the fair value of a reporting unit with its carrying amount, including goodwill. We utilized the assistance of a professional appraisal firm in the determination of the fair value of GPS as of November 1, 2011. A variety of alternative valuation approaches were considered. As a result of the analysis, we concluded that the market multiple and the discounted cash flow analysis approaches were the most appropriate valuation techniques for this exercise.

For the market multiple valuation, a fair value estimate for GPS was determined based on an evaluation of the market values of a selected number of reasonably similar publicly traded companies. A separate estimate was determined using a discounted cash flow analysis. Projected cash flows for GPS were developed based on its historical financial performance, a short-term projection of operating results based on the existing backlog of current business and the assumed addition of certain identified future projects, and published projected growth rates for the power construction industry. The projected cash flow amounts were discounted to present value based on rates of return which were determined considering prevalent rates of return, business risks for the industry and risks specifically related to GPS. A 50/50 weighting was applied to the results of the market multiple valuation and the discounted cash flow analysis of fair value in order to arrive at an average amount considered the fair value of GPS. As a result of this valuation, we concluded that the fair value of the net assets of GPS substantially exceeded its carrying amount. Therefore, the goodwill of GPS was deemed not to be impaired, and the performance of step two of the impairment assessment process was not required. Using a discounted cash flow analysis, we determined that the fair value of our other indefinite-lived asset, the trade name of SMC, exceeded the corresponding carrying value of \$181,000 at November 1, 2011.

In September 2011, the Financial Accounting Standards Board (the "FASB") issued Accounting Standards Update 2011-08, *Testing Goodwill for Impairment* (ASU 2011-08), which is intended to simplify the two-step goodwill impairment test required by current guidance. The amendment will allow an entity to first assess qualitative factors to determine whether it is necessary to perform the two-step quantitative goodwill impairment test. An entity no longer will be required to calculate the fair value of a reporting entity unless the entity determines, based on a qualitative assessment, that it is more likely than not that its fair value is less than its carrying amount. The guidance includes discussions of the types of factors which should be considered in conducting the qualitative assessment including macroeconomic, industry, market and entity-specific factors. Although early adoption is permitted, we elected to conduct our assessment of goodwill as of November 1, 2011 in accordance with the testing requirements of the guidance before amendment. However, in the future we may elect to perform qualitative evaluations of GPS in order to support the position that impairment of the goodwill of GPS has not occurred and that its fair value continues to exceed its carrying value, thus avoiding the performance of the two-step quantitative goodwill impairment test for GPS.

Long-Lived Assets

Our long-lived assets consist primarily of equipment used in our operations. Fixed assets are carried at cost and are depreciated over their estimated useful lives, ranging from five to twenty years, using the straight-line method for financial reporting purposes and accelerated methods for tax reporting purposes. The carrying value of certain long-lived assets is evaluated periodically when events or changes in circumstances indicate that the carrying amount of an asset or a group of assets may not be recoverable. If events and circumstances such as poor operating results of the applicable business segment indicate that the asset(s) should be reviewed for possible impairment, we use projections to assess whether future cash flows, including disposition, on a non-discounted basis related to the tested assets, are likely to exceed the recorded carrying amount of the assets to determine if an impairment exists. If we identify a potential impairment, we will estimate the fair value of the assets through known market transactions of similar equipment and other valuation techniques, which could include the use of similar projections on a discounted basis. We will record a loss to the extent that the carrying value of the impaired assets exceeds their fair value.

Deferred Tax Assets

As of January 31, 2012 and 2011, our consolidated balance sheets included net deferred tax assets in the total amounts of \$1,529,000 and \$1,090,000, respectively, resulting from our future deductible temporary differences. In assessing whether deferred tax assets may be realizable, we consider whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. Our ability to realize our deferred tax assets depends primarily upon the generation of sufficient future taxable income to allow for the utilization of our deductible temporary differences and tax planning strategies. If such estimates and assumptions change in the future, we may be required to record valuation allowances against some or all of the deferred tax assets resulting in additional income tax expense in our consolidated statement of operations. At this time, we believe that the historically strong earnings performance of our power industry services business segment will continue during the periods in which the applicable temporary income tax differences become deductible. Accordingly, we believe that it is more likely than not that we will realize the benefit of our net deferred tax assets. The amounts of income from operations before income taxes for this business segment were \$15.1 million and \$21.6 million for the fiscal years ended January 31, 2012 and 2011, respectively.

Stock Options

We measure the cost of equity compensation to our employees and independent directors based on the estimated grant-date fair value of the awards and recognize the corresponding expense amounts over the vesting periods. Options to purchase 212,000 shares of our common stock were awarded during the year ended January 31, 2012 with a weighted average fair value per share amount of \$5.09. The amounts of compensation expense recorded during the years ended January 31, 2012 and 2011 related to vesting stock options were \$637,000 and \$1,502,000, respectively. We use the Black-Scholes option pricing model to compute the fair value of stock options. The Black-Scholes model requires the use of highly subjective assumptions in the computations which are disclosed in Note 15 to the accompanying condensed consolidated financial statements and include the risk-free interest rate, the expected volatility of the market price of our common stock and the expected life of the stock option. We use the "simplified method" in developing the estimates of the expected lives of stock options, as we believe that our historical stock option exercise experience is insufficient to provide a reasonable basis upon which to estimate expected lives. Changes in these assumptions can cause significant fluctuations in the fair value of stock option awards.

Legal Contingencies

As discussed in Note 14 to the accompanying condensed consolidated financial statements, we are involved in several legal matters where litigation has been initiated or claims have been made against us. We intend to vigorously defend ourselves in each case. At this time, we do not believe that a material loss is probable related to any of the current matters discussed therein. However, we do maintain accrued expense balances for the estimated amounts of legal costs expected to be billed related to each matter. We review the status of each matter and assess the adequacy of the accrued expense balances at the end of each fiscal quarter, and make adjustments to the balances if necessary. Should our assessments of the outcomes of these legal matters change, significant losses or additional costs may be recorded.

Adopted and Other Recently Issued Accounting Pronouncements

New disclosures and clarifications of existing disclosures required by Accounting Standards Update No. 2010-06, *Fair Value Measurements and Disclosures*, which provided amendments to Accounting Standards Codification subtopic 820-10, *Fair Value Measurements and Disclosures Overall Subtopic*, became effective for the Company's interim and annual reporting periods beginning February 1, 2010, except for certain Level 3 activity disclosures. A disaggregation requirement for the reconciliation disclosure of Level 3 measurements became effective for the Company on February 1, 2011. This enhanced disclosure requirement had no effect on the Company's consolidated financial statements.

Other than ASU 2011-08 that is discussed above, there are no recently issued accounting pronouncements that have not yet been adopted that we consider material to our consolidated financial statements.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK.

Not required for companies permitted to use the scaled disclosures for smaller reporting companies.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA.

See the Index to the Consolidated Financial Statements on page 40 of this Annual Report on Form 10-K.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE.

None.

ITEM 9A. CONTROLS AND PROCEDURES.

Attached as exhibits to this Annual Report on Form 10-K are certifications of our Chief Executive Officer (CEO) and Chief Financial Officer (CFO), which are required in accordance with Rule 13a-15 of the Securities Exchange Act of 1934, as amended (the Exchange Act). This Controls and Procedures section includes information concerning the controls and controls evaluation referred to in the certifications.

Evaluation of Disclosure Controls and Procedures

We conducted an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures (Disclosure Controls) as of the end of the year covered by this Annual Report on Form 10-K. The controls evaluation was conducted under the supervision and with the participation of management, including our CEO and CFO. Disclosure Controls are controls and procedures designed to reasonably assure that information required to be disclosed in our reports filed under the Exchange Act, such as this Annual Report on Form 10-K, is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms. Disclosure Controls are also designed to reasonably assure that such information is accumulated and communicated to our management, including the CEO and CFO, as appropriate to allow timely decisions regarding required disclosure. Our quarterly evaluation of Disclosure Controls includes an evaluation of some components of our internal control over financial reporting, and internal control over financial reporting is also separately evaluated on an annual basis for purposes of providing the management report, which is set forth below.

Based on the controls evaluation, our CEO and CFO have concluded that, as of the end of the year covered by this Annual Report on Form 10-K, our Disclosure Controls were effective to provide reasonable assurance that information required to be disclosed in our Exchange Act reports is recorded, processed, summarized, and reported within the time periods specified by the SEC, and the material information related to Argan, Inc. and its consolidated subsidiaries is made known to management, including the CEO and CFO, particularly during the period when our periodic reports are being prepared.

Management Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States (US GAAP). Internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company s assets that could have a material effect on the consolidated financial statements.

Management assessed our internal control over financial reporting as of January 31, 2012, the end of the fiscal year. Management based its assessment on criteria established in Internal Control Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. Management s assessment included evaluation of elements such as the design and operating effectiveness of key financial reporting controls, process documentation, accounting policies, and our overall control environment.

Based on our assessment, management has concluded that our internal control over financial reporting was effective as of the end of the fiscal year to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external reporting purposes in accordance with US GAAP. We reviewed the results of management s assessment with the Audit Committee of our Board of Directors. In addition, on a quarterly basis we will evaluate any changes to our internal control over financial reporting to determine if material change occurred.

Changes in Internal Controls

No change in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) occurred during the fiscal quarter ended January 31, 2012 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

The Company s management, including the CEO and CFO, does not expect that our Disclosure Controls or our internal control over financial reporting will prevent or detect all error and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system s objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

ITEM 9B. OTHER INFORMATION.

Not Applicable.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE.

The information required by this item will be incorporated by reference to our 2012 Proxy Statement relating to the election of directors and other matters, which is expected to be filed by us pursuant to Regulation 14A, within 120 days after the close of our fiscal year.

ITEM 11. EXECUTIVE COMPENSATION.

The information required by this item will be incorporated by reference to our 2012 Proxy Statement relating to the election of directors and other matters, which is expected to be filed by us pursuant to Regulation 14A, within 120 days after the close of our fiscal year.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS.

The information required by this item will be incorporated by reference to our 2012 Proxy Statement relating to the election of directors and other matters, which is expected to be filed by us pursuant to Regulation 14A, within 120 days after the close of our fiscal year.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE.

The information required by this item will be incorporated by reference to our 2012 Proxy Statement relating to the election of directors and other matters, which is expected to be filed by us pursuant to Regulation 14A, within 120 days after the close of our fiscal year.

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES.

The information required by this item will be incorporated by reference to our 2012 Proxy Statement relating to the election of directors and other matters which is expected to be filed by us pursuant to Regulation 14A, within 120 days after the close of our fiscal year.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENTS.

The following exhibits are filed as part of this Annual Report on Form 10-K:

Exhibit No.	Description
3.1	Certificate of Incorporation, as amended. Incorporated by reference to the Company's Form 10-KSB filed with the Securities and Exchange Commission on April 27, 2004.
3.2	Bylaws. Incorporated by reference to the Company's Form 10-K filed with the Securities and Exchange Commission on April 14, 2009.
4.1	Stock Purchase Agreement dated as of May 4, 2006 between Argan, Inc. and the purchasers identified on Schedule A attached thereto. ^(a)
4.2	Stock Purchase Agreement dated as of December 8, 2006 by and among Argan, Inc. and the purchasers identified on Schedule A attached thereto. ^(b)
4.3	Stock Purchase Agreement dated as of December 8, 2006 by and between Argan, Inc. and Argan Investments LLC. ^(b)

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders of Argan, Inc.

We have audited the accompanying consolidated balance sheets of Argan, Inc. (a Delaware corporation) and subsidiaries (the Company) as of January 31, 2012 and 2011, and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the two years in the period ended January 31, 2012. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Argan, Inc. and subsidiaries as of January 31, 2012 and 2011, and the results of their operations and their cash flows for each of the years then ended, in conformity with accounting principles generally accepted in the United States of America.
