FORM 10-K

x **ANNUAL REPORT UNDER SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934.**
For the Fiscal Year Ended January 31, 2014

or

.. **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE**
ACT OF 1934.

For the transition period from _____ to _____

Commission File Number 001-31756

ARGAN, INC.

(Exact Name of Registrant as Specified in its Charter)

Delaware (State or Other Jurisdiction of	13-1947195 (IRS Employer
Incorporation or Organization)	Identification No.)
One Church Street, Suite 201, Rockville, Maryland (Address of Principal Executive Offices)	20850 (Zip Code)
(301) 315-0027	

(Issuer's Telephone Number, Including Area Code)

Securities registered under Section 12(b) of the Exchange Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Stock, \$0.15 par value	NYSE
Securities registered under Section 12(g) of the Exchange Act: None	

Indicate by check mark if the Registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the Registrant is not required to file reports pursuant to Section 13 or 15(d) of the Exchange Act.

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the Registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the Registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendments to this Form 10-K.

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act (check one):

Large accelerated filer Accelerated filer
Non-accelerated filer Smaller reporting company
Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes No

The aggregate market value of the common stock held by non-affiliates of the Registrant was approximately \$135,319,000 on July 31, 2013 (the last business day of the Registrant's second fiscal quarter), based upon the closing price on the NYSE MKT stock exchange as reported for that date. Shares of common stock held by each officer and director and by each person who owns 5% or more of the outstanding common shares have been excluded because such persons may be deemed to be affiliates. The determination of affiliate status is not necessarily a conclusive determination for other purposes.

Number of shares of common stock outstanding as of April 10, 2014: 14,329,401 shares

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Registrant's Proxy Statement for the 2014 Annual Meeting of Stockholders to be held on June 24, 2014 are incorporated by reference in Part III.

PART I

ITEM 1. BUSINESS.

Argan, Inc. (Argan) conducts operations through its wholly-owned subsidiaries, Gemma Power Systems, LLC and affiliates (GPS) and Southern Maryland Cable, Inc. (SMC), which together are referred to as the Company, we, our . Through GPS, we provide a full range of development, consulting, engineering, procurement, construction, commissioning, operations and maintenance services to the power generation and renewable energy markets for a variety of customers including public utilities, independent power project owners, municipalities, public institutions and private industry. Through SMC, we provide telecommunications infrastructure services including project management, construction and maintenance to the federal government, local governments, telecommunications and broadband service providers as well as electric utilities.

During the year ended January 31, 2014, we formed two joint ventures in order to perform the construction of a pair of gas-fired power plants as discussed below. We also determined that GPS was the primary beneficiary of the two variable interest entities (the VIEs) that were formed during the year ended January 31, 2012 for the purpose of developing these projects. During the year ended January 31, 2014, the VIEs were deconsolidated. GPS, including the consolidated joint ventures and consolidated variable interest entities, represents our power industry services business segment. The revenues of GPS represented approximately 96% of our consolidated revenues for the fiscal year ended January 31, 2014. SMC represents our telecommunications infrastructure services business segment. Financial information about our business segments is included in Note 16 to the accompanying consolidated financial statements.

Holding Company Structure

Argan was organized as a Delaware corporation in May 1961. We intend to make additional acquisitions and/or investments by identifying companies with significant potential for profitable growth. We may have more than one industrial focus. We expect that companies acquired in each of these industrial groups will be held in separate subsidiaries that will be operated in a manner that best provides cash flows for us and value for our stockholders. Argan is a holding company with no operations other than its continuing investments in GPS and SMC. At January 31, 2014, there were no restrictions with respect to inter-company payments to Argan by GPS or SMC.

Power Industry Services

GPS is a full service engineering, procurement and construction (EPC) contractor with the proven ability of designing, building and commissioning large-scale energy projects. The extensive design, construction, start-up and operating experience of our power industry services business has grown with the completion of projects for more than 75 facilities representing over 10,000 megawatts (MW) of power-generating capacity. Power projects have included base-load combined-cycle facilities, simple-cycle peaking plants and boiler plant construction and renovation efforts. We have also broadened our experience into the renewable energy industry by providing EPC contracting services to the owners of alternative energy facilities, including biomass plants, wind farms and solar fields. Typically, the scope of work for GPS includes complete plant design and construction from site development through electrical interconnection and plant testing. The durations of our construction projects may extend to three years. The revenues of our power industry services business segment were approximately \$219 million for the fiscal year ended January 31, 2014, or approximately 96% of our consolidated revenues for the year.

During the past three years, we completed the construction of seven significant energy projects including an 800 MW simple-cycle quick start peaking power plant located near Desert Hot Springs, California encompassing the delivery

and installation of eight gas turbines (the Sentinel Project); a 640 MW natural gas-fired combined-cycle power plant in Northern California (the Colusa Project) including a pair of combustion turbines and heat recovery steam generators; a 200 MW electricity peaking plant in Connecticut including four gas-fired turbine units; wind-energy farms in the states of Illinois and Pennsylvania including the installation of a total of approximately one-hundred fifteen wind turbines with a total power rating of approximately 230 MW; and two large solar energy fields including the installation of over 40,000 ground-mounted photovoltaic panels on capped and closed landfills in Massachusetts.

Table of Contents

We are currently completing a biomass-fired project for East Texas Electric Cooperative, Inc. (ETEC) covering EPC contracting services for a 49.9 MW power plant fueled by chipped timber located near Woodville, Texas. The contract has a contract value of approximately \$168 million. The project is estimated to be completed in December 2014. In addition, we have received contracts for the operation and maintenance of this power plant for a period of three years with an aggregate value of approximately \$28 million.

The Panda Projects

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a client, such as a government agency or a commercial enterprise, and are generally dissolved upon completion of the project or program. Under an agreement negotiated with Moxie Energy, LLC (Moxie) during the year ended January 31, 2012, we supported the development of two power plant projects with loans, covering most of the costs of the development and conceptual design. In return, Moxie provided GPS with EPC contracts for the projects that were awarded during the year ended January 31, 2014 and the right to share any project development success fees with Moxie. Supported by GPS, the activities of Moxie Liberty LLC (Moxie Liberty) and Moxie Patriot LLC (Moxie Patriot), together referred to as the Moxie Project Entities, were focused on 1) obtaining the necessary permits to build and operate the power plants, 2) completing arrangements to connect the power plants to the fuel supply and the electricity grids, 3) engaging energy plant operators in negotiations for the purchase of the projects, and 4) securing permanent financing for the projects.

Moxie closed the purchases of the Moxie Project Entities by affiliates of Panda Power Funds (Panda), Moxie Liberty in August 2013 and Moxie Patriot in December 2013. In connection with the financial closings, GPS was provided full notices-to-proceed with activities pursuant to the corresponding EPC contracts, was repaid the principal amounts of the notes and accrued interest receivable from the Moxie Project Entities in the aggregate amount of approximately \$10.8 million and was paid development success fees that totaled approximately \$27.1 million.

Soon after their formation, we determined that the Moxie Project Entities, both of which were wholly owned by Moxie, represented variable interest entities for which Gemma Power, Inc. (GPI , an affiliate of GPS and wholly owned by Argan) was the primary beneficiary. Accordingly, the accounts of these variable interest entities were included in our consolidated financial statements for the years ended January 31, 2013 and 2012. During the year ended January 31, 2014, the execution of project purchase agreements and significant financial support provided to the Moxie Project Entities by Panda prior to their purchase shifted the primary beneficiary designation for Moxie Liberty and Moxie Patriot from GPI to Panda. Accordingly, we deconsolidated both entities which resulted in pre-tax gains for us that totaled approximately \$2.4 million for the year ended January 31, 2014. The Moxie Project Entities were renamed Panda Liberty and Panda Patriot, and together they are referred to as the Panda Projects.

GPS assigned the EPC contracts for the Panda Projects to joint ventures that were formed in order to perform the work for the applicable project and to spread the bonding risk associated with the projects. Our partner for both ventures is the same large, heavy civil contracting firm. The joint venture agreements provide that GPS has the majority interest in any profits, losses, assets and liabilities that may result from the performance of these EPC contracts for the Panda Projects. However, if the joint venture partner is unable to pay its share of any losses, GPS would be fully liable. GPS has no significant commitments beyond those related to the completion of the EPC contracts for the Panda Projects. The joint venture partners will dedicate resources to the project that are necessary to complete the project and will be reimbursed for their costs. GPS will perform most of the activities of these EPC contracts for the Panda Projects. Due to our financial control over the joint ventures, they are included in our consolidated financial statements for the year ended January 31, 2014.

Edgar Filing: ARGAN INC - Form 10-K

The Panda Liberty and Panda Patriot projects are natural gas-fired power plants being built by us in the Marcellus Shale natural gas region of Pennsylvania. These power plants are located near natural gas sources and will provide electricity to the power grid in the northeastern United States, eliminating the need to transport natural gas via pipelines over long distances to supply the power generation plants. Each power plant will be a combined-cycle power facility consisting of two single-shaft trains and each plant is designed to generate over 800 MW of electrical power. Full notice-to-proceed was received by GPS for Panda Liberty in August 2013 and for Panda Patriot in December 2013. Estimated completion dates for the Panda Projects are March 2016 and June 2016, respectively.

- 4 -

Table of Contents

Materials

In connection with the engineering and construction of traditional and renewable power plants, biodiesel plants and other power energy systems, we procure materials on behalf of our customers. Typically and with our assistance, the project owner procures and supplies the turbine nacelles and blades for our wind-energy projects. We are not dependent upon any one source for materials that we use to complete a particular project, and we are not currently experiencing difficulties in procuring the necessary materials for our contracted projects. However, we cannot guarantee that in the future there will not be unscheduled delays in the delivery of ordered materials and equipment.

Competition

GPS competes with numerous large and well capitalized private and public firms in the construction and engineering services industry. These competitors include Bechtel Corporation and Fluor Corporation, global firms providing engineering, procurement, construction and project management services; SNC-Lavalin Group, Inc., a diversified Canadian construction and engineering firm; CH2M Hill Companies, Ltd., a worldwide professional engineering services firm; The Shaw Group Inc. (acquired by Chicago Bridge & Iron Company N.V. in February 2013), a diversified firm providing consulting, engineering, construction and facilities management services; Skanska AB, a leading international project development and construction company; John Wood Group PLC, a leading services provider (including engineering and construction) for the oil and gas and power generation markets; and Kiewit Corporation, an employee-owned construction firm. These and other competitors are multi-billion companies with thousands of employees. GPS also may compete with regional construction services companies in the markets where projects are located.

In order to compete with these firms, we emphasize our proven track record as a cost-effective choice for the design, build and commissioning of natural gas-fired and alternative power energy systems. Our extensive experience includes the efficient completion of gas and oil-fired combined cycle plants, wood/coal-fired plants, waste-to-energy plants, wind farms, solar fields and biofuel processing facilities, all performed on an engineering, procurement, and construction contract basis. GPS provides a full range of competitively priced development, consulting, engineering, procurement, construction, commissioning and maintenance services to project owners. We are able to react quickly to their requirements while bringing a strong, experienced team to help navigate through difficult technical, scheduling and construction issues. We believe that we are uniquely positioned to assist in the development and delivery of innovative renewable energy solutions as world energy needs grow and efforts to reduce the effects of climate change increase.

Customers

For the year ended January 31, 2014, we recognized revenues related to the Panda Projects which represented approximately 33% of consolidated revenues, including project development success fees in the approximate amount of \$27.1 million. We also recognized revenues under the EPC contract for the biomass-fired facility with ETEC and the EPC contract for the Sentinel project with CPV Sentinel, LLC (CPV). The revenues provided by the contracts with these project owners represented approximately 33% and 22% of consolidated revenues, respectively, for the year ended January 31, 2014.

For the fiscal year ended January 31, 2013, we recognized revenues under the EPC contracts with CPV and ETEC which represented approximately 56% and 18% of consolidated net revenues, respectively. For the fiscal year ended January 31, 2012, we recognized revenues under EPC contracts with CPV and a wholly-owned subsidiary of Invenergy Wind North America LLC which represented approximately 43% and 30% of consolidated revenues, respectively. In addition, approximately 12% of consolidated revenues for the year ended January 31, 2012 were

associated with the electricity peaking plant located in Connecticut and completed during the year for GenConn Middletown, LLC.

Contract Backlog

Contract backlog represents the total accumulated value of projects awarded less the amounts of revenues recognized to date on contracts at a specific point in time. We believe contract backlog is an indicator of future revenues and earnings potential. Although contract backlog reflects business that we consider to be firm, cancellations or reductions may occur and may reduce contract backlog and the future revenues of GPS. At January 31, 2014, we had EPC contracts associated with the construction of three energy facilities, including the two Panda Projects, representing a total contract backlog of \$790 million which compares with a total contract backlog of \$180 million at January 31, 2013.

Table of Contents

Regulation

Our power industry service operations are subject to various federal, state and local laws and regulations including: licensing for contractors; building codes; permitting and inspection requirements applicable to construction projects; regulations relating to worker safety and environmental protection; and special bidding, procurement, employee compensation and security clearance requirements on government projects. Many state and local regulations governing construction require permits and licenses to be held by individuals who have passed an examination or met other requirements. We believe that we have all the licenses required to conduct our current operations and that we are in substantial compliance with applicable regulatory requirements.

Telecommunications Infrastructure Services

Through SMC, we provide comprehensive technology wiring and utility construction solutions to customers in the mid-Atlantic region. We perform both outside plant and inside plant cabling services including the structuring, cabling, terminations and connectivity that provide the physical transport for high speed data, voice, video and security networks. The revenues of SMC, which represents our telecommunications infrastructure services business segment, were \$8.8 million for the fiscal year ended January 31, 2014, or approximately 4% of our consolidated revenues.

Services provided to our outside premises customers include trenchless directional boring and excavation for underground communication and power networks, aerial cabling services, and the installation of buried cable, high and low voltage electric lines, and private area outdoor lighting systems. Directional boring systems are electronically guided and can place underground networks of various sizes with little or no restoration required. We use our equipment and experienced personnel to perform the trenching, plowing and back-hoeing for underground networks, to complete the installation of a variety of network structures, and to restore work sites. We utilize aerial bucket trucks, digger derrick trucks and experienced personnel to complete a variety of aerial projects. The outside premises services are primarily provided to local governments, regional communications service providers, electric utilities and other commercial customers. The wide range of inside plant and premises wiring services that we provide to our customers include AutoCAD design; cable installation; equipment room and telecom closet design and build-out; data rack and cabinet installation; raceway design and installation; and cable identification, testing, labeling and documentation for copper, fiber optic and coax cable systems. These services are provided primarily to federal government facilities, including cleared facilities, on a direct and subcontract basis. Such facilities typically require regular upgrades to their wiring systems in order to accommodate improvements in security, telecommunications and network capabilities.

SMC may have seasonally weaker results in the first and fourth quarters of the fiscal year, and may produce stronger results in the second and third fiscal quarters. This seasonality is due to the effect of winter weather on construction and outside plant activities as well as reduced daylight hours and customer budgetary constraints. Certain customers tend to complete budgeted capital expenditures before the end of the calendar year, and postpone additional expenditures until the subsequent fiscal period.

Materials

Generally, our telecommunications infrastructure services customers supply most or all of the materials required for a particular job and we provide the personnel, tools and equipment to perform the installation, maintenance or repair services. However, for certain projects, we may supply part or all of the materials required. SMC's experience with the state of Maryland last year led to the award to us by the state of a large, fiber optic network equipment procurement order. In these instances, we are not dependent upon any one source for the materials that we customarily utilize to

complete projects. We are not presently experiencing, nor do we anticipate experiencing, any difficulties in procuring an adequate supply of materials.

Competition

SMC operates in the fragmented and competitive telecommunication and infrastructure services industry. We compete with service providers ranging from small regional companies, which service a single market, to larger firms servicing multiple regions, as well as large national and multi-national contractors. We believe that we compete favorably with the other companies in the telecommunication and utility infrastructure services industry. We intend to emphasize our high quality reputation, outstanding customer base and highly motivated work force in competing for larger and more diverse contracts. We believe that our well maintained fleet of vehicles and construction machinery and equipment is essential to meet customers' needs for high quality and on-time service. We are committed to invest in our repair and maintenance capabilities to maintain the quality and life of our equipment. Additionally, we invest annually in new vehicles and equipment. Important to the award of a significant contract by Howard County, Maryland, was SMC's ability to assemble a roster of small business and minority business enterprise subcontractors capable of participating in SMC's portion of this project. Howard County, representing a collaborative inter-government consortium of local Maryland governments, was a key partner with the Maryland Department of Information Technology in the deployment of a state-wide, high-speed, fiber optic network that connects over 1,000 community anchor institutions and spans 4,200 miles across the state.

Table of Contents

Customers

Consistently, a major portion of SMC's revenue-producing activity each year is performed pursuant to task or work orders issued under master agreements with SMC's major customers. Besides Howard County and the state of Maryland, over the last five years, these major customers have included Verizon, EDS and Southern Maryland Electric Cooperative (SMECO), a local electricity cooperative. For the year ended January 31, 2014, approximately 19% of SMC's revenues were derived from outside plant services provided under the contract with Howard County, approximately 15% of SMC's revenues related to orders fulfilled for the State of Maryland and approximately 15% of SMC's revenues were earned from outside services provided to SMECO. None of SMC's customers accounted for revenues in excess of 10% of our consolidated revenues for the fiscal years ended January 31, 2014, 2013 or 2012.

Contract Backlog

As referenced above, a substantial number of the tasks completed for Howard County, the state of Maryland and SMECO were completed under the terms of master agreements that include pre-negotiated labor rates or line item prices. At January 31, 2014 and 2013, the estimated values of unfulfilled work orders, open customer purchase orders and projects expected to be completed under current contracts were approximately \$550,000 and \$1,970,000, respectively.

Regulation

Our telecommunications infrastructure services operations are also subject to various federal, state and local laws and regulations including: licensing for contractors; building codes; permitting and inspection requirements applicable to construction projects; regulations relating to worker safety and environmental protection; and special bidding, procurement and security clearance requirements on government projects. Many state and local regulations governing construction require permits and licenses to be held by individuals who have passed an examination or met other requirements.

We believe that SMC has all the licenses required to provide its services within the region it typically conducts operations, and that we are in substantial compliance with applicable regulatory requirements. Our failure to comply with applicable regulations could result in substantial fines or revocation of our operating licenses.

Discontinued Operations

In December 2010, the Board of Directors of Argan approved management's plan to dispose of the operations of the nutritional products line of business conducted by its wholly-owned subsidiary, Vitarich Laboratories, Inc. (VLI). In March 2011, we closed on the sale of substantially all of the assets of VLI to an unrelated company. The asset sale was consummated for an aggregate cash purchase price of up to \$3,100,000 and the assumption by the purchaser of certain trade payables, accrued expenses and remaining obligations under VLI's facility leases. Of the cash purchase price, \$800,000 was paid at closing and the remaining \$2,300,000 was placed into escrow. VLI was paid approximately \$1,728,000 from the escrow account, representing (i) the amounts of all accounts receivable of VLI that were collected by September 30, 2011, and (ii) the cost of all closing inventory sold, used or consumed by the purchaser within nine months of the closing. In December 2011, the funds remaining in the escrow account were returned to the purchaser.

The financial results of this business through April 30, 2012 have been presented as discontinued operations in the accompanying consolidated financial statements, including legal costs associated with this business. Such costs incurred subsequent to April 30, 2012 have been reflected in the operating results of continuing operations; such costs

were not material for the years ended January 31, 2014 and 2013.

Table of Contents

Financing Arrangements

We have financing arrangements with Bank of America (the Bank). The financing arrangements, as amended, provide a revolving loan with a maximum borrowing amount of \$4.25 million that is available until May 31, 2015, with interest at LIBOR plus 2.25%. There were no borrowed amounts outstanding under the revolving loan arrangement as of January 31, 2014. However, during the current year, available funds in the total amount of \$1.35 million were designated to cover letters of credit issued by the Bank in support of the project development activities of a potential power plant customer. We may obtain standby letters of credit from the Bank in the ordinary course of business not to exceed \$10.0 million. We have pledged the majority of our assets to secure the financing arrangements. The Bank's consent is required for acquisitions, divestitures and cash dividends. The amended financing arrangements contain an acceleration clause which allows the Bank to declare outstanding borrowed amounts due and payable if it determines in good faith that a material adverse change has occurred in the financial condition of the Company or any of its subsidiaries. The Bank requires that the Company comply with certain financial covenants at its fiscal year-end and at each of its fiscal quarter-ends. At January 31, 2014, we were in compliance with the financial covenants of the amended financing arrangements.

Safety, Risk Management, Insurance and Performance Bonds

We are committed to ensuring that the employees of each of our businesses perform their work in a safe environment. We regularly communicate with our employees to promote safety and to instill safe work habits. GPS and SMC each have an experienced full time safety director committed to ensuring a safe work place, as well as compliance with applicable contracts, insurance and local and environmental laws. Contracts in the power and telecommunication infrastructure services industries may require performance bonds or other means of financial assurance to secure contractual performance. Under such circumstances and/or as a means to spread project risk, we may consider an arrangement with a joint venture party in order to provide the required bonding to a prospective project owner. Although we have not been required to issue any letters of credit under the current financing arrangements, our Bank has committed to provide us with up to \$10.0 million in irrevocable standby letters of credit as indicated above as collateral to support bonding commitments.

Employees

The total number of personnel employed by us is subject to the volume of construction in progress and the relative amount of work performed by subcontractors. We had approximately 359 employees at January 31, 2014, substantially all of whom were full-time. We believe that our employee relations are good.

Materials Filed with the Securities and Exchange Commission

The public may read any materials that we file with the Securities and Exchange Commission (the SEC) at the SEC's public reference room at 100 F Street, NE, Washington, D.C. 20549. The public may obtain information on the operation of the public reference room by calling the SEC at 1-800-SEC-0330. The SEC maintains an Internet site that contains reports, proxy and information statements and other information regarding issuers that file electronically with the SEC, including us, at <http://www.sec.gov>. We maintain a website on the Internet at www.arganinc.com that includes access to interactive financial data. Information on our website is not incorporated by reference into this Annual Report on Form 10-K.

Copies of our Annual Reports on Form 10-K, our Quarterly Reports on Form 10-Q, our Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 are available as soon as reasonably practicable after we electronically file such materials with, or furnish them

to, the SEC without charge upon written request to:

Table of Contents

ITEM 1A. RISK FACTORS.

Investing in our securities involves a high degree of risk. Our business, financial position and future results of operations may be impacted in a materially adverse manner by risks associated with the execution of our strategic plan and the creation of a profitable and cash-flow positive business in a challenging economic environment, our ability to obtain capital or to obtain capital on terms acceptable to us, the successful integration of acquired companies into our consolidated operations, our ability to successfully manage diverse operations remotely located, our ability to successfully compete in highly competitive industries, the successful resolution of ongoing litigation, our dependence upon key managers and employees and our ability to retain them, and potential fluctuations in quarterly operating results, among other risks.

Before investing in our securities, please consider the risks summarized in this paragraph and those risks discussed below. Our future results may also be impacted by other risk factors listed from time to time in our future filings with the SEC, including, but not limited to, our Annual Reports on Form 10-K and our Quarterly Reports on Form 10-Q.

General Risks Relating to Our Company

The sluggish economic recovery may result in soft demand for electrical power, and may cause deterioration in our financial outlook.

The sluggish economic recovery in the United States may continue to result in a lackluster demand for electrical power in the United States. Soft demand for power and a slowdown in the anticipated pace of the retirement of coal-fired power plants could result in the delay, curtailment or cancellation of future gas-fired power plant projects, thus decreasing the overall demand for our services and adversely impacting our financial outlook. In addition, project owners may experience difficulty in raising capital for the construction of power-generation plants and renewable fuel production facilities due to substantial limitations on the availability of credit and other factors. In general, if overall economic conditions do not improve steadily, the demand for our EPC contract services may be adversely affected.

We may be unable to maintain our profitability.

Due primarily to the favorable operating results of GPS, we have generated income for six consecutive years the fiscal years ended January 31, 2009 through 2014. As described in the risks presented below, our ability to maintain profitable continuing operations depends on many factors including the ability of the power industry services business segment to continue to obtain new construction projects and to complete its projects successfully. A substantial decline in the revenues of GPS could have a material adverse effect on our ability to achieve net income in the future.

Our dependence on one or a few customers could adversely affect us.

The size of the energy plant construction projects of our power industry services segment frequently results in a limited number of projects contributing a substantial portion of our consolidated revenues as described in Note 17 to the accompanying consolidated financial statements. Should we fail to replace projects that are completed by GPS with new projects, future revenues and profits may be adversely affected.

Our dependence on large construction contracts may result in uneven quarterly financial results.

Our power industry service activities in any one fiscal quarter are typically concentrated on a few large construction projects for which we use the percentage-of-completion accounting method to determine corresponding revenues. To a substantial extent, construction contract revenues are recognized as services are provided as measured by the amount

of costs incurred. As the timing of equipment purchases, subcontractor services and other contract events may not be evenly distributed over the lives of our contracts, the amount of total contract costs may vary from quarter to quarter, creating uneven amounts of quarterly contract revenues. In addition, the timing of contract commencements and completions may exacerbate the uneven pattern. As a result of the foregoing, future amounts of consolidated revenues, cash flow from operations, net income and earnings per share reported on a quarterly basis may vary in an uneven pattern and may not be indicative of the operating results expected for any other quarter or for an entire fiscal year, thus rendering consecutive quarter comparisons of our consolidated operating results a less meaningful way to assess the growth of our business.

Table of Contents

Lawsuits could adversely affect our business.

From time to time, we, our directors and/or certain of our current officers may be named as parties to lawsuits. A discussion of our significant lawsuits appears in Item 3 of this Annual Report on Form 10-K and in Note 12 to the accompanying consolidated financial statements. It is not possible at this time to predict the likely outcome of these actions with certainty, and an adverse result in any of these lawsuits could have a material adverse effect on us. Litigation can involve complex factual and legal questions, proceedings may occur over several years and the outcomes are typically difficult to predict. Any claim that is successfully asserted against us could result in significant damage claims and other losses. Even if we were to prevail, any litigation could be costly and time-consuming and would divert the attention of our management and key personnel from our business operations over multi-year periods, which could adversely affect our financial condition, results of operations or cash flows.

We may be unsuccessful at generating internal growth which could result in an overall decline in our business.

Our ability to expand by achieving profitable organic growth of the Company will be affected by, among other factors, our success in:

expanding the range of services and products we offer to customers in order to address their evolving needs;

attracting new customers;

hiring and retaining employees; and

controlling operating and overhead expenses.

Many of the factors affecting our ability to generate internal growth may be beyond our control. Our strategies may not be successful and we may not be able to generate cash flow sufficient to fund our operations and to support internal growth. Our inability to achieve internal growth could materially and adversely affect our business, financial condition and results of operations.

Future acquisitions and/or investments may not occur which could limit the growth of our business.

We are a holding company with no operations other than our investments in GPS and SMC. The successful execution of our overall business plan could be based, in part, on our making additional acquisitions and/or investments that would provide positive cash flow to us and value to our stockholders. Additional companies meeting these criteria and that provide products and/or services to growth industries and are available for purchase at attractive prices are difficult to find. Discussions with the principal(s) of potential acquisition targets may be protracted and ultimately terminated for a variety of reasons. Due diligence investigations of attractive target companies may uncover unfavorable data. The negotiation and consummation of acquisition agreements may not be successful.

We cannot readily predict the timing or size of our acquisition efforts and therefore the capital we will need for these efforts. However, it is likely that any potential future acquisition or strategic investment transaction would require the use of cash and/or shares of our common stock as components of the purchase price. Using cash for acquisitions may limit our financial flexibility and make us more likely to seek additional capital through future debt or equity

financings. Our ability to obtain such additional financing in the future may depend upon prevailing capital market conditions, the strength of our future operating results and financial condition as well as conditions in our business; and those factors may affect our efforts to arrange additional financing on terms that are acceptable to us. Our ability to use shares of our common stock as future acquisition consideration may be limited by a variety of factors, including the future market price of shares of our common stock and a potential seller's assessment of the liquidity of our common stock. If adequate funds or the use of our common stock are not available to us, or are not available on acceptable terms, we may not be able to take advantage of acquisitions or other opportunities, to make future investments, or to respond to competitive challenges.

The Bank's consent is required for acquisitions, divestitures, the participation in joint ventures and certain other investments. There can be no assurance that our Bank will consent to future transactions. If we are unable to obtain such consents, our ability to consummate acquisitions, to make investments or to enter into other arrangements for the purpose of growing our business may be limited.

Table of Contents

The integration of acquired companies may not be successful.

Even if we do complete acquisitions in the future, we may not be able to successfully integrate such acquired companies with our other operations without substantial costs, delays or other operational or financial problems. Integrating acquired companies involves a number of special risks which could materially and adversely affect our business, financial condition and results of operations, including:

failure of acquired companies to achieve the results we expect;

diversion of management's attention from operational matters;

difficulties integrating the operations and personnel of acquired companies;

inability to retain key personnel of acquired companies;

risks associated with unanticipated events or liabilities;

the potential disruption of our business; and

the difficulty of maintaining uniform standards, controls, procedures and policies, including an effective system of internal control over financial reporting.

If one of our acquired companies suffers customer dissatisfaction or performance problems, the reputation of our entire company could be materially and adversely affected. In addition, future acquisitions could result in issuances of equity securities that would reduce our stockholders' ownership interest, the incurrence of debt, contingent liabilities, deferred stock-based compensation or expenses related to the valuation of goodwill or other intangible assets and the incurrence of large, immediate write-offs.

We may not be able to comply with certain of our debt covenants which may interfere with our ability to successfully execute our business plan.

The financing arrangements with our Bank require that we maintain compliance with certain financial covenants at each fiscal quarter-end and include an acceleration clause which allows the Bank to declare any amounts outstanding under the debt arrangements due and payable if it determines in good faith that a material adverse change has occurred in our financial condition or that of any of our subsidiaries. In addition, we are required by terms of the financing arrangements to obtain the consent of the Bank to complete certain transactions including acquisitions and divestitures.

We are currently in compliance with our debt covenants, but there can be no assurance that we will continue to be in compliance. If our future performance does not result in compliance with our financial covenants or if the Bank seeks to exercise its rights under the acceleration clause referred to above, we would seek to modify the financing

arrangements, but there can be no assurance that the Bank would not exercise its rights and remedies under the debt arrangements, including accelerating payments of any or all outstanding senior debt. These payments could have a significantly adverse impact on our liquidity and our ability to obtain additional capital thereby jeopardizing our ability to successfully execute our business plan. Noncompliance could also be a contributing factor in a decision by the Bank to deny a future request for consent to a major acquisition or divestiture transaction. As of January 31, 2014, there were no borrowings outstanding under the financing arrangements.

Our results of operations could be adversely affected as a result of impairment losses related to goodwill and other purchased intangible assets.

When we acquire a business, we record goodwill equal to the excess amount paid for the business, including liabilities assumed, over the fair value of the net assets of the acquired business. Generally accepted accounting principles require that all business combinations be accounted for using the purchase method of accounting and that certain intangible assets acquired in a business combination be recognized as assets apart from goodwill. The balances of goodwill and other intangible assets that have indefinite useful lives are not amortized, but instead must be evaluated at least annually for impairment. The amounts of intangible assets that do have finite lives are amortized over their useful lives. However, should poor performance or other conditions indicate that the carrying value of a business or long-lived asset may have suffered impairment, a determination of fair value is required to be performed in the period that such conditions are noted. If the carrying value of a business or of an individual purchased intangible asset is found to exceed the corresponding fair value, an impairment loss is recorded.

Table of Contents

The aggregate carrying amount of goodwill, other purchased intangible assets with indefinite lives and long lived purchased intangible assets included in our consolidated balance sheet as of January 31, 2014 was approximately \$20.6 million, or approximately 6% of total consolidated assets and 13% of consolidated net assets.

We have continued to perform annual impairment assessments of the carrying values of goodwill and other indefinite-lived intangible assets as of November 1. Assessments of these assets as well as our long-lived assets may be conducted more frequently if we identify indications of impairment. Should the operating results of GPS or any future acquired company experience unexpected deterioration, we could be required to record significant impairment losses related to purchased intangible assets. Impairment losses, if any, would be recognized as operating expenses and would adversely affect future profitability.

Loss of key personnel could prevent us from effectively managing our business.

Our future success is substantially dependent on the continued service and performance of our current executive team and the senior management members of our businesses. We cannot be certain that any such individual will continue in such capacity or continue to perform at a high level for any particular period of time. Our ability to operate productively and profitably, particularly in the power services industry, may also be limited by our ability to attract, employ, retain and train skilled personnel necessary to meet our future requirements. We cannot be certain that we will be able to maintain management teams and an adequate skilled labor force necessary to operate efficiently and to support our growth strategy or that our labor expenses will not increase as a result of a shortage in the supply of these skilled personnel. Labor shortages or increased labor costs could impair our ability to maintain our business or grow our revenues. The loss of key personnel, or the inability to hire and retain qualified employees in the future, could negatively impact our ability to manage our business.

Our business growth could outpace the capabilities of our senior management which could adversely affect our ability to complete the execution of our business plan.

We cannot be certain that our current management team will be adequate to support our operations as they expand. Future growth could impose significant additional responsibilities on members of our senior management, including the need to recruit and integrate new senior level managers and executives. We cannot be certain that we can recruit and retain such additional managers and executives. To the extent that we are unable to attract and retain additional qualified management members in order to manage our growth effectively, we may not be able to expand our operations or execute our business plan. Our financial condition and results of operations could be materially and adversely affected as a result.

Our actual business and financial results could differ from the estimates and assumptions that we use to prepare our consolidated financial statements, which may reduce our profits.

To prepare consolidated financial statements in conformity with generally accepted accounting principles, we are required to make estimates and assumptions as of the date of the financial statements, which affect the reported values of assets and liabilities, revenues and expenses, and disclosures of contingent assets and liabilities. For example, we may recognize revenues over the life of a contract based on the proportion of costs incurred to date compared to the total costs estimated to be incurred for the entire project.

Areas requiring significant estimates by our management include:

the application of the percentage-of-completion method of accounting and revenue recognition on contracts, change orders and contract claims;

the valuation of assets acquired and liabilities assumed in connection with business combinations;

the value of goodwill and recoverability of other purchased intangible assets;

provisions for income taxes and related valuation allowances;

accruals for estimated liabilities, including litigation reserves;

provisions for uncollectible receivables; and

the determination of stock-based compensation expense.

Our actual business and financial results could differ from those estimates, which may reduce our profits.

Table of Contents

Our employees work on projects that are inherently dangerous and a failure to maintain a safe work site could result in significant losses.

We often work on large-scale and complex projects, frequently in geographically remote locations. Our project sites can place our employees and others near large and/or mechanized equipment, moving vehicles, dangerous processes or highly regulated materials, and in challenging environments. Safety is a primary focus of our business and is critical to our reputation. Often, we are responsible for safety on the project sites where we work. Many of our clients require that we meet certain safety criteria to be eligible to bid on contracts. We maintain programs with the primary purpose of implementing effective health, safety and environmental procedures throughout our Company. If we fail to implement appropriate safety procedures and/or if our procedures fail, our employees or others may suffer injuries. The failure to comply with such procedures, client contracts or applicable regulations could subject us to losses and liability, and adversely impact our ability to obtain projects in the future.

If we fail to maintain an effective system of internal controls, we may not be able to accurately report our financial results or prevent fraud. As a result, investors could lose confidence in our financial reporting, which would harm our business and the trading price of our common stock.

Effective internal controls are necessary for us to provide reliable financial reports and prevent fraud. If we cannot provide reliable financial reports or prevent fraud, our operating results could be harmed. We devote significant attention to establishing and maintaining effective internal controls. Implementing changes to our internal controls required compliance training for our officers and employees. Substantial costs have been incurred and significant efforts have been expended by us in order to evaluate, test and remediate our internal controls over financial reporting. We cannot be certain that these present and future measures will ensure that we will successfully implement and maintain adequate controls over our financial reporting processes and related reporting requirements.

Any failure to implement required new or improved controls or difficulties encountered in their implementation could affect our operating results or cause us to fail to meet our reporting obligations and could result in a breach of a covenant in our Bank financing arrangements in future periods. Ineffective internal controls could also cause investors to lose confidence in our reported financial information, which could have a negative effect on the market price of our common stock.

We rely on information systems to conduct our business, and failure to protect these systems against security breaches could adversely affect our business and results of operations. Additionally, if these systems fail or become unavailable for any significant period of time, our business could be harmed.

The efficient operation of our business is dependent on computer hardware and software systems. Information systems are vulnerable to operational malfunctions and security breaches by computer hackers and cyber terrorists. We rely on industry accepted security measures and technology to securely maintain confidential and proprietary information retained on our information systems. However, these measures and technology may not adequately prevent unanticipated downtime or security breaches. The unavailability of the information systems or the failure of these systems to perform as anticipated for any reason could disrupt our business and could result in decreased performance and increased overhead costs, causing our business and results of operations to suffer. Any significant interruption or failure of our information systems or any significant breach of security could adversely affect our business and results of operations.

Table of Contents

Specific Risks Relating to Our Power Industry Services

Failure to successfully operate our power industry services business will adversely affect us.

The operations of our power industry services business conducted by GPS represent a significant portion of our revenues and profits. The revenues of this business segment, including development success fees in excess of \$27 million, were approximately \$219 million for the year ended January 31, 2014, representing 96% of consolidated revenues. Income from these operations before income taxes for the year ended January 31, 2014 exceeded \$72 million. Our inability to successfully manage and grow our power industry services business will adversely affect our consolidated operating results and financial condition.

Intense competition in the engineering and construction industry could reduce our market share and profits.

We serve markets that are highly competitive and in which a large number of multinational companies compete such as Bechtel Corporation, Fluor Corporation, The Shaw Group Inc. (acquired by Chicago Bridge & Iron Company N.V. in February 2013), SNC Lavalin Group, Inc., Kiewit Corporation, CH2M Hill Companies, Ltd., and Skanska AB. In particular, the engineering and construction markets are highly competitive and require substantial resources and capital investment in equipment, technology and skilled personnel. Competition also places downward pressure on our contract prices and profit margins. Intense competition is expected to continue in these markets, presenting us with significant challenges in our ability to maintain strong growth rates and acceptable profit margins. If we are unable to meet these competitive challenges and replace completed projects with new customers or projects, we could lose market share to our competitors and our business could be materially adversely affected.

Our backlog is subject to unexpected adjustments, delays and cancellations, and may be an uncertain indicator of future revenues.

As of January 31, 2014, the value of the construction contract backlog of GPS was \$790 million compared with a backlog value of \$180 million as of January 31, 2013. Projects awarded to us may remain included in our backlog for an extended period of time. In addition, project cancellations or scope adjustments may occur with respect to contracts reflected in our backlog that could reduce the dollar amount of our backlog and the revenues and profits that we actually earn. We cannot guarantee that future revenues projected by us based on our backlog at January 31, 2014 and subsequently awarded projects will be realized or will result in profitable operating results.

Should execution of these projects be interrupted, our future results of operations, including revenues, income from operations and net cash flows from operations, will be adversely affected, beginning in fiscal year 2015.

Unsuccessful efforts to develop energy plant projects could result in write-offs.

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a client, such as a government agency or a commercial enterprise, and are generally dissolved upon completion of the project or program. Under an agreement negotiated with Moxie during the year ended January 31, 2012 and amended in May 2012, we supported the development of two power plant projects with loans that totaled approximately \$8.9 million and that covered the costs of the project developments. In return, each Moxie Project negotiated an EPC Contract with GPS for the design and construction of one of the power plants. During the current year, Moxie was successful in selling its ownership interests in the Moxie Project entities to Panda Power Funds which resulted in the payment of development success fees to us in the aggregate amount of approximately \$27.1 million.

There are no assurances that we will be successful in future development efforts. Failure to complete the development of power plants in the future could result in write-off adjustments related to the balance of any project development costs. Such an adjustment could have a material adverse impact on our operating results for a future reporting period.

Table of Contents

Future construction projects may depend on the continuing acceptability of the hydraulic fracturing process in certain states.

The viability of the two potential construction projects described above was based substantially on the availability of inexpensive natural gas supplies provided through the use of hydraulic fracturing drilling techniques. Certain technological advancements in recent years have led to the widespread use of hydraulic fracturing (fracking) and horizontal drilling techniques in order to reach natural gas and oil deposits previously trapped within shale rock formations deep under the earth s surface. The new supplies are transforming the oil and gas industry in the United States. In particular, the new supplies of natural gas have depressed the price of natural gas in the United States, making the operation of natural gas-fired power plants more economically appealing. However, the process of fracking uses large volumes of highly pressurized water to break-up the shale rock formations and free the trapped natural gas and oil. This process is controversial due to concerns about the disposal of the waste water, the possible contamination of nearby water supplies and potential seismic events. As a result, not all states permit the use of fracking. Should future evidence confirm the concerns, or should a major contamination episode occur in the future, the use of fracking may be suspended, limited, or curtailed by state and/or federal regulation. As a result, the supply of inexpensive natural gas may not be available in the future and the economic viability of gas-fired power plants may be jeopardized. A reduction in the pace of the construction of new gas-fired power plants would have a significantly adverse effect on our future operating results.

Interruption of power plant construction projects could adversely affect future results of operations.

At any time, GPS has a limited number of construction contracts. Two projects represented approximately 92% of the value of our construction contract backlog at January 31, 2014. Should any unexpected suspension, termination or delay of the work under such contracts occur, our results of operations may be materially and adversely affected.

The nature of our engineering and construction business exposes us to potential liability claims and contract disputes which may reduce our profits.

We engage in engineering and construction activities for large energy plant facilities where design, construction or systems failures can result in substantial injury or damage to third parties. In addition, the nature of our business results in owners, subcontractors and vendors occasionally presenting claims against us for recovery of costs they incurred in excess of what they expected to incur, or for which they believe they are not contractually liable. We have been, and may be in the future, named as a defendant in legal proceedings where parties may make a claim for damages or other remedies with respect to our projects or other matters. These claims generally arise in the normal course of our business.

Note 12 to the accompanying consolidated financial statements describes a claim in the approximate amount of \$6.8 million that a subcontractor made against us related to a cancelled construction project. We reached an agreement with and made payment to the subcontractor that was intended to end this matter.

However, the settlement may be jeopardized by a related claim against the subcontractor. It is reasonably possible that ultimate resolution of the matter could be unfavorable to us resulting in additional loss. The amount of any additional loss could have a material negative affect on our consolidated results of operations in a future reporting period. No provision for additional loss has been recorded in the consolidated financial statements related to this matter as of January 31, 2014. If new facts become known in the future indicating that it is probable that an additional loss has been incurred by us and the amount of such loss can be reasonably estimated by us, the impact of the change will be reflected in the consolidated financial statements at that time.

In accordance with customary industry practices, we maintain insurance coverage against some, but not all, potential losses in order to protect against the risks we face. When it is determined that we have liability, we may not be covered by insurance or, if covered, the dollar amount of any liability may exceed our policy limits. Further, we may elect not to carry insurance if our management believes that the cost of available insurance is excessive relative to the risks presented. In addition, we cannot insure fully against pollution and environmental risks. Our management liability insurance policies are on a claims-made basis covering only claims actually made during the policy period currently in effect. In addition, even where insurance is maintained for such exposures, the policies have deductibles resulting in our assuming exposure for a layer of coverage with respect to any such claims. Any liability not covered by our insurance, in excess of our insurance limits or, if covered by insurance but subject to a high deductible, could result in a significant loss for us, which claims may reduce our future profits and cash available for operations.

Table of Contents

In the future, we may bring claims against project owners for additional costs exceeding the contract price or for amounts not included in the original contract price. These types of claims occur due to matters such as owner-caused delays or changes from the initial project scope, both of which may result in additional cost. Often, these claims can be the subject of lengthy arbitration or litigation proceedings, and it is difficult to accurately predict when these claims will be fully resolved. When these types of events occur and unresolved claims are pending, we have used working capital in projects to cover cost overruns pending the resolution of the relevant claims. A failure to promptly recover on these types of claims could have a negative impact on our liquidity and profitability.

Our dependence upon third parties to complete many of our contracts may adversely affect our performance under future energy plant construction contracts.

Much of the work performed under our energy plant construction contracts is actually performed by third-party subcontractors we hire. We also rely on third-party equipment manufacturers or suppliers to provide much of the equipment included in an energy project and most of the materials (such as copper, concrete and steel) used in our construction projects. If we are unable to hire qualified subcontractors or find qualified equipment manufacturers or suppliers, our ability to successfully complete a project could be impaired.

If the amount we are required to pay for subcontractors or equipment and supplies exceeds what we have estimated, especially when we are operating under a lump sum or a fixed-price type construction contract, we may suffer losses on these contracts. If a supplier, manufacturer or subcontractor fails to provide supplies, equipment or services as required under a negotiated contract for any reason, we may be required to source these supplies, equipment or services on a delayed basis or at a higher price than anticipated which could impact contract profitability in an adverse manner.

If we guarantee the timely completion or performance standards of a project, we could incur additional costs to cover our guarantee obligations.

In some instances and in many of our fixed price contracts, we guarantee a customer that we will complete a project by a scheduled date. We sometimes provide that the project, when completed, will also achieve certain performance standards. If we subsequently fail to complete the project as scheduled, or if the project subsequently fails to meet guaranteed performance standards, we may be held responsible for cost impacts to the customer resulting from any delay or modifications to the plant in order to achieve the performance standards, generally in the form of contractually agreed-upon liquidated damages. If these events would occur, the total costs of the project would exceed our original estimate, and we could experience reduced profits or a loss for that project.

If financing for new energy plants is unavailable, construction of such plants may not occur and we may lose any investment made in the projects.

Traditional gas-fired power plants have been constructed typically by large utility companies. However, to a large extent, the construction of new energy plants, including alternative and renewable energy facilities, is conducted by private investment groups. The challenge for these types of project owners to secure and maintain financing in the current credit market conditions continues to be significant. Should debt financing for the construction of new energy facilities, including alternative or renewable energy plants, not be available, investors may not be able to invest in such projects, thereby adversely affecting the likelihood that GPS will obtain contracts to construct such plants.

We are seeing a number of new business opportunities that include an opportunity to make an investment in the ownership of a new project, at least during the development phase of the project, in order to improve the probability of an EPC contract award. Because we believe in the strength of our balance sheet, we are willing to consider the

opportunities that include reasonable and manageable risks. Failure of a project owner to obtain such financing will make it likely that we will not recover the amount of any investment made by us in the project.

The inability of our customers to receive or to avoid delay in receiving the applicable regulatory approvals relating to projects may result in lost or postponed revenues for us.

The commencement and/or execution of many of the construction projects performed by our power industry services segment are subject to numerous regulatory permitting processes. Applications for permits may be opposed by individuals or environmental groups, resulting in delays and possible non-issuance of the permits. There are no assurances that our customers will obtain the necessary permits for these projects, or that the necessary permits will be obtained in order to allow construction work to proceed as scheduled. Failure to commence or complete construction work as anticipated could have material adverse impacts on our future revenues, profits and cash flows from operations.

Table of Contents

Our use of the percentage-of-completion method of accounting could result in a reduction or reversal of previously recorded revenues or profits.

Under our accounting procedures, we measure and recognize a large portion of our revenues under the percentage-of-completion accounting methodology. This methodology allows us to recognize revenues and contract profits ratably over the life of a contract by comparing the amount of the costs incurred to date against the total amount of costs expected to be incurred. The effects of revisions to revenues and estimated costs are recorded when the amounts are known and can be reasonably estimated, and these revisions can occur at any time and could be material. Given the uncertainties associated with these types of contracts, it is possible for actual costs to vary from estimates previously made, which may result in reductions or reversals of previously recorded revenues and profits.

Future bonding requirements may adversely affect our ability to compete for new energy plant construction projects.

Our construction contracts frequently require that we obtain payment and performance bonds from surety companies on behalf of project owners as a condition to the award of such contracts. Surety market conditions have in the last few years become more difficult as a result of steadily increasing loss ratios endured by the surety industry. Consequently, less overall bonding capacity is available in the market than in the past, and surety bonds have become more expensive and restrictive. Historically, we have had a strong bonding capacity but, under standard terms in the surety market, surety companies issue bonds on a project-by-project basis and can decline to issue bonds at any time or require the posting of additional collateral as a condition to issuing any bonds.

Current or future market conditions, changes in our surety's assessment of its own operating and financial risk or larger future projects could cause our surety company to decline to issue, or substantially reduce the amount of, bonds for our work and could increase our bonding costs. These actions can be taken on short notice. If our surety company were to limit or eliminate our access to bonding, our alternatives would include seeking bonding capacity from other surety companies, joint venturing with other construction firms, increasing business with clients that do not require bonds and posting other forms of collateral for project performance, such as letters of credit, or cash. We may be unable to make alternative arrangements in a timely manner, on acceptable terms, or at all. Accordingly, if we were to experience an interruption, reduction or other alteration in the availability of bonding capacity, we may be unable to compete for or work on certain projects.

As we bear the risk of cost overruns in the completion of our construction contracts, we may experience reduced profits or, in some cases, losses under these contracts if actual costs exceed our estimates.

We conduct our business under various types of contractual arrangements including fixed price contracts. We bear a significant portion of the risk for cost overruns on these types of contracts where contract prices are established in part on cost and scheduling estimates. Our estimates may be based on a number of assumptions about future economic conditions and the future prices and availability of labor, equipment and materials, and other exigencies. From time to time, we may also assume a project's technical risk, which means that we may have to satisfy certain technical requirements of a project despite the fact that at the time of project award, we may not have previously produced the system or product in question. Unexpected or increased costs may occur due to the following factors among others:

shortages of skilled labor, materials and energy plant equipment including power turbines;

unanticipated escalation in the price of construction commodities;

unscheduled delays in the delivery of ordered materials and equipment;

engineering problems, including those relating to the commissioning of newly designed equipment;

declines in the productivity of construction workers;

work stoppages;

weather interference;

inability to develop or non-acceptance of new technologies to produce alternative fuel sources; and

the difficulty in obtaining necessary permits or approvals.

If our estimates prove inaccurate, or circumstances change, cost overruns may occur and we could experience reduced profits, or in some cases, incur a loss on a particular project.

Table of Contents

If we are unable to collect amounts billed to project owners as scheduled, our cash flows may be materially and adversely affected.

Many of our contracts require us to satisfy specified design, engineering, procurement or construction milestones in order to receive payment for work completed or equipment or supplies procured prior to achievement of the applicable contract milestone. As a result, under these types of arrangements, we may incur significant costs or perform significant amounts of services prior to receipt of payment. If the customer determines not to proceed with the completion of the project, delays in making payment of billed amounts or defaults on its payment obligations, we may face delays or other difficulties in collecting payment of amounts due to us for the costs previously incurred or for the amounts previously expended to purchase equipment or supplies. Such problems may impact the planned cash flows of affected projects and result in unanticipated reductions in the amounts of future cash flows from operations.

If the development of renewable energy sources does not occur, the demand for our construction services could decline.

The expected increase in momentum towards more environmentally friendly power generation facilities has not occurred at the pace expected prior to the latest recession. The federal government has failed to pass comprehensive energy legislation, including incentives or mandates for the retirement of existing coal burning power plants and caps on the volume of carbon emissions. At present, there is no bipartisan agreement regarding the long-term future of government incentives for sources of renewable power in either legislative house of Congress. With the future long-term availability of renewable energy tax incentives unknown and the development pipeline depleted, potential energy project developers and investors are not making commitments related to new renewable energy generation facilities. As a result, we were not successful in booking any substantial amount of renewable energy projects during the year ended January 31, 2014, and the likelihood of our booking additional wind and solar power projects next year is uncertain.

Although certain coal-fired power plants have been shut down and the demand for coal has been adversely affected by the inexpensive supply of natural gas in the United States, existing coal plants are proving to be a challenge to retrofit or replace. Coal prices are widely considered to be stable and certain states see the availability of inexpensive, coal-fired electricity as a key driver of economic growth. New regulations regarding air pollution are being promulgated by states and the U.S. Environmental Protection Agency (the EPA). However, these measures are subject to a number of legal challenges. In early 2012, a federal appeals court upheld the EPA's greenhouse gas regulations, affirming the EPA's finding that greenhouse gases such as carbon dioxide endanger public health and likely have been responsible for recent climate changes. In August 2012, the same appeals court struck down an EPA rule that placed tight curbs on coal-fired power plant emissions across state lines.

The extent to which regulations issued by the EPA, that are intended to make smokestack emissions cleaner, will accelerate the pace of coal-fired power plant retirements or eliminate coal-fired power plants unplanned is not yet known. Should government investment incentives fail to be extended into the future or should anti-pollution regulations be repealed, the pace of the development of alternative renewable energy sources may slow, thereby reducing the future opportunities for GPS to construct such plants.

We could be subject to compliance with environmental, health and safety laws and regulations that would add costs to our business.

Our operations are subject to compliance with federal, state and local environmental, health and safety laws and regulations, including those relating to discharges to air, water and land, the handling and disposal of solid and hazardous waste, and the cleanup of properties affected by hazardous substances. Certain environmental laws impose

substantial penalties for non-compliance and others, such as the federal Comprehensive Environmental Response, Compensation and Liability Act, impose strict, retroactive, joint and several liability upon persons responsible for releases of hazardous substances. We continually evaluate whether we must take additional steps to ensure compliance with environmental laws, however, there can be no assurance that these requirements will not change and that compliance will not adversely affect our operations in the future.

Table of Contents

Specific Risks Relating to Our Telecommunications Infrastructure Services Business

Failure to replace significant customers could adversely affect our SMC business.

Historically, significant portions of the revenues of SMC have been provided by a few major customers under master service-type contracts with multi-year terms. The revenues of this business segment for the three years ended January 31, 2014 were elevated by the execution of tasks and fulfillment of orders awarded to SMC under arrangements with Howard County (Maryland) and the state of Maryland. For the fiscal years ended January 31, 2014, 2013 and 2012, these arrangements provided approximately 34%, 54% and 25% of this segment's revenues, respectively.

During fiscal year 2014, activity under the related programs was completed. In recent years, we also lost the business with Verizon as our master agreement expired without renewal. The prime contract that EDS had with the federal government also expired pursuant to which we performed inside plant services at various government installations throughout the mid-Atlantic region.

A significant challenge for SMC is the replacement of the lost business provided under its expiring multi-year arrangements. We cannot provide assurance that SMC will increase its current level of revenues for the fiscal year ending January 31, 2015.

If we fail to compete successfully against current or future competitors, our business, financial condition and results of operations could be materially and adversely affected.

We operate in highly competitive markets. We compete with service providers ranging from small regional companies which service a single market, to larger firms servicing multiple regions, as well as large national and multi-national entities. In addition, there are few barriers to entry in the telecommunications infrastructure industry. As a result, any organization that has adequate financial resources and access to technical expertise may become one of our competitors. Competition in the telecommunications infrastructure industry depends on a number of factors, including price. Certain of our competitors may have lower overhead cost structures than we do and may, therefore, be able to provide their services at lower rates than we can. In addition, some of our competitors are larger and have significantly greater financial resources than we do. Our competitors may develop the expertise, experience and resources to provide services that are superior in price and quality to our services. Similarly, we may not be able to maintain or enhance our competitive position within our industry. We may also face competition from the in-house service organizations of our existing or prospective customers.

A significant portion of our business involves providing services, directly or indirectly as a subcontractor, to the federal government under government contracts. The federal government may limit the competitive bidding on any contract under a small business or minority set-aside, in which bidding is limited to companies meeting the criteria for a small business or minority business, respectively, which may exclude us from consideration.

We may not be able to compete successfully against our competitors in the future. If we fail to compete successfully against our current or future competitors, our business, financial condition, and results of operations could be materially and adversely affected.

Rapid technological change and/or customer consolidations could reduce the demand for the telecommunication services we provide.

The telecommunications infrastructure industry is undergoing rapid change as a result of technological advances that could in certain cases reduce the demand for our services or otherwise negatively impact our business. New or developing technologies could displace the wire-line systems used for voice, video and data transmissions, and improvements in existing technology may allow telecommunications companies to significantly improve their networks without physically upgrading them. In addition, consolidation, competition or capital constraints in the utility, telecommunications or computer networking industries may result in reduced spending or the loss of one or more of our customers.

Table of Contents

Our substantial dependence upon fixed price contracts may expose us to losses in the event that we fail to accurately estimate the costs that we will incur to complete such projects.

We currently generate, and expect to continue to generate, a significant portion of our revenues under fixed price contracts. We must estimate the costs of completing a particular project to bid for these fixed price contracts. Although historically we have been able to estimate costs accurately, the cost of labor and materials may, from time to time, vary from costs originally estimated. These variations, along with other risks inherent in performing fixed price contracts, may cause actual revenues and gross profits for a project to differ from those we originally estimated and could result in reduced profitability or losses on projects. Depending upon the size of a particular project, variations from the estimated contract costs could have a significant impact on our operating results for any fiscal quarter or year.

Compliance with government regulations may increase the costs of our operations, expose us to substantial civil and criminal penalties in the event that we violate applicable law, and include the right of customers to terminate contracted work for convenience.

We provide, either directly as a contractor or indirectly as a sub-contractor, products and services to the federal and local governments under government contracts. These contracts and related customer orders subject us to various laws and regulations covering government contractors and subcontractors, which generally are more restrictive than for non-government contractors. We could be subject to 1) examinations by government auditors and investigators, from time to time, to ensure compliance and review costs, and 2) contract clauses permitting government customers to terminate contracted work for convenience. Violations may result in costs disallowed, and substantial civil or criminal liabilities (including, in severe cases, denial of future contracts). A loss or interruption in our ability to perform work for federal and local government agencies could have a material adverse effect on our business.

Risks Relating to Our Securities

Our acquisition strategy may result in dilution to our stockholders.

Our business strategy calls for the strategic acquisition of other businesses. We anticipate that future acquisitions will require cash and issuances of our capital stock, including our common stock. To the extent we are required to pay cash for any acquisition, we anticipate that we would be required to obtain additional equity and/or debt financing. Equity financing would result in dilution for our then current stockholders. Stock issuances and financing, if obtained, may not be on terms favorable to us and could result in substantial dilution to our stockholders at the time(s) of these stock issuances and financings.

Our officers, directors and certain unaffiliated stockholders have substantial control over Argan, Inc.

As of January 31, 2014, our executive officers and directors as a group owned approximately 10.96% of our voting shares giving effect to an aggregate of 435,000 shares of common stock that may be purchased upon the exercise of stock options held by our executive officers and directors (and deemed exercisable at January 31, 2014), and 704,993 shares beneficially owned by William F. Griffin, Jr. (a founder and the current chief executive officer of GPS and member of our Board of Directors). An additional 3.72% of the outstanding shares are controlled by Allen & Company entities (Allen). One of our independent directors is an officer of Allen. In addition, two (2) other stockholders owned approximately 12.94% of our voting shares in total. The approximate individual beneficial ownership percentages as of January 31, 2014 were 6.76% and 6.18%, respectively.

These small groups of stockholders may have significant influence over corporate actions such as an amendment to our certificate of incorporation, the consummation of any merger, or the sale of all or substantially all of our assets, and may substantially influence the election of directors and other actions requiring stockholder approval.

As our common stock is thinly traded, the stock price may be volatile and investors may have difficulty disposing of their investments at prevailing market prices.

Our common stock is listed for trading on the NYSE stock exchange and trades under the symbol AGX. Despite the listing on this national stock exchange, our common stock remains thinly and sporadically traded and no assurances can be given that a larger market will ever develop, or if developed, that it will be maintained.

Table of Contents

We may not pay cash dividends in the future.

Historically, we have not paid cash dividends on our common stock and have retained earnings to finance the development and expansion of our business. However, in November 2013, we paid to stockholders a special cash dividend of \$0.75 per share of common stock reflecting our board of directors' confidence in the strong financial performance of GPS and the related cash flow. In November 2012 and 2011, we paid special cash dividends of \$0.60 and \$0.50 per share, respectively. Annually, our board of directors intends to evaluate the Company's ongoing operational and financial performance in determining what role strategically aligned dividends should play in creating shareholder value. In addition, under our financing arrangements with our Bank, we are required to obtain the Bank's consent to the payment of cash dividends. We have obtained consents related to the special cash dividends paid for the last three years.

There can be no assurance that the evaluations of our board of directors will result in the payment of cash dividends in the future, or that we will be successful in obtaining the required consent of the Bank to pay such cash dividends.

We may issue preferred stock with rights that are superior to our common stock.

Our certificate of incorporation, as amended, permits our board of directors to authorize the issuance of up to 500,000 shares of preferred stock and to designate the terms of the preferred stock. The issuance of shares of preferred stock by us could adversely affect the rights of holders of common stock by, among other factors, establishing dividend rights, liquidation rights and voting rights that are superior to the rights of the holders of the common stock.

Provisions of our certificate of incorporation and Delaware law could deter takeover attempts.

Provisions of our certificate of incorporation and Delaware law could delay, prevent, or make more difficult a merger, tender offer or proxy contest involving us. Among other things, as stated above, our board of directors may issue up to 500,000 shares of our preferred stock and may determine the price, rights, preferences, privileges and restrictions, including voting and conversion rights, of these shares of preferred stock. In addition, Delaware law limits transactions between us and persons that acquire significant amounts of our stock without approval of our board of directors.

ITEM 1B. UNRESOLVED STAFF COMMENTS.

None.

ITEM 2. PROPERTIES.

In June 2012, GPS purchased a three story office building (23,380 square feet) and the underlying land (1.75 acres) which has sufficient space to locate the staff of GPS in one facility. The purchase eliminated the need for leased office space in Connecticut. SMC is located in Tracys Landing, Maryland, occupying facilities under a lease that expires on December 31, 2015 and that includes extension options available through December 31, 2019. The SMC facility includes approximately four acres of land, a 2,400 square foot maintenance facility and approximately 3,900 square feet of office space. SMC also utilizes one storage and staging lot in St. Mary's County, Maryland, under a lease with a current term that expires late in fiscal year 2016. We occupy our corporate headquarters in Rockville, Maryland, under a lease that expires on February 28, 2017 covering 2,521 square feet of office space. The operations of GPS and SMC in the field may require us to occupy additional facilities for staging or on customer premises or job sites.

Accordingly, we may rent local construction offices and equipment storage yards under arrangements that are temporary or short-term in nature. These costs are expensed as incurred and are included in cost of revenues.

ITEM 3. LEGAL PROCEEDINGS.

Included below and in Note 12 to the consolidated financial statements included in Item 8 of Part II of this Annual Report on Form 10-K are discussions of specific legal proceedings as of January 31, 2014. In the normal course of business, the Company may have other pending claims and legal proceedings. It is our opinion, based on information available at this time, that any other current claim or proceeding will not have a material effect on our consolidated financial statements.

Table of Contents

Altra Matters

GPS was the contractor for engineering, procurement and construction services related to an anhydrous ethanol plant in Carleton, Nebraska (the Project). The Project owner was ALTRA Nebraska, LLC (Altra). In November 2007, GPS and Altra agreed to a suspension of the Project while Altra sought to obtain financing to complete the Project. By March 2008, financing had not been arranged which terminated the construction contract prior to completion of the Project.

In March 2008, GPS filed a mechanic's lien against the Project in the approximate amount of \$23.8 million, which amount included sums owed to subcontractors/suppliers of GPS and their subcontractors/suppliers. Several other claimants also filed mechanic's liens against the Project.

In August 2009, Altra filed for bankruptcy protection. Proceedings resulted in a court-ordered liquidation of Altra's assets. The incomplete plant was sold at auction in October 2009. Remaining net proceeds of approximately \$5.5 million are being held by the bankruptcy court and have not been distributed to Altra's creditors. The court separated the lien action into two phases relating to the priority of the claims first and the validity and amount of each party's lien claim second. In November 2011, the court held that the claim of the project lender is superior to the lien claim of GPS. Fact discovery related to the second phase was completed in January 2012, but the court has continued to stay this action pending the final resolution of the claim against the Company's payment bond that is discussed below.

Delta-T Corporation (Delta-T) was a major subcontractor to GPS on the Project. In January 2009, GPS and Delta-T executed a Project Close-Out Agreement (the Close-Out) which settled all contract claims between the parties and included a settlement payment in the amount of \$3.5 million that GPS made to Delta-T. In the Close-Out, Delta-T also agreed to prosecute any lien claims against Altra, to assign to GPS the first \$3.5 million of any resulting proceeds and to indemnify and defend any claims against GPS related to the Project. In addition, GPS received a guarantee from Delta-T's parent company in support of the indemnification commitment. Delta-T assigned its lien rights related to the Project to GPS which advised the parties that it would be pursuing only the assigned lien rights of Delta-T, amounting to approximately \$21.2 million, for the remainder of this action.

In April 2009, a subcontractor (DCR) to Delta-T received an arbitration award in its favor against Delta-T in the amount of approximately \$6.8 million (the Judgment Award). In December 2009, the Judgment Award was confirmed in federal district court in Florida. In April 2009, DCR also filed suit in the District Court of Thayer County, Nebraska, in order to recover its claimed amount of \$6.8 million, as amended, from a payment bond issued to Altra on behalf of GPS. Delta-T did not pay or satisfy any portion of the award and it abandoned its defense of the surety company. In December 2011, DCR filed a separate lawsuit against GPS relating to the Project in the District Court of Thayer County, Nebraska, that alleged claims against GPS for failure to furnish the surety bond upon request and unjust enrichment. DCR claimed that, to the extent that the bonding company was successful in asserting a notice defense to DCR's claim, GPS was liable for DCR's damages for failing to furnish the bond when requested. DCR's unjust enrichment claim alleged that GPS received payments from Altra that exceeded the scope of GPS's work on the Project and should have been paid to lower tier subcontractors such as DCR; its complaint sought damages in the amount of \$6.1 million plus interest, costs and attorney fees.

In August 2012, the applicable parties executed settlement agreements that resulted in the dismissal of the claims against GPS and its surety company, with prejudice, and the assignment of DCR's mechanics lien claim against the escrowed Altra Project sales proceeds to GPS. In connection with these settlements, GPS made cash payments to DCR in August 2012 that totaled \$1,875,000. The payments were funded, in part, by a cash payment received during the year from Delta-T's parent company in the amount of \$275,000. The net amount of \$1,600,000 was included as a charge to the cost of revenues of GPS in July 2012.

Subsequent to the execution of the settlement agreements and the payments made by GPS, DCR's former counsel filed notice of a charging lien, claiming that DCR is indebted to counsel in excess of \$1.8 million in fees and costs. In addition, a subcontractor to DCR on the Altra Project filed a motion asking the court to set aside the dismissals or, in the alternative, to reconsider them. In October 2012, the court vacated the prior orders of dismissal and permitted DCR's former counsel and former subcontractor to file complaints. A trial for the charging lien and subcontractor claims was held in April 2013. The court ordered the parties to submit post-trial briefs which were provided to the court in August 2013. The parties currently await the court's verdict.

Table of Contents

We intend to vigorously pursue the enforcement of the settlement agreements and the pursuit of the lien claims against the Altra Project assigned to GPS. Due to the uncertainty of the ultimate outcomes of these legal proceedings, assurance cannot be provided by us that we will be successful in these efforts. However, management does not believe that resolution of the matters discussed above will result in additional loss with material negative effect on our consolidated operating results in a future reporting period. No additional provision for loss related to these matters was recorded in the consolidated statement of operations for the year ended January 31, 2014. If new facts become known in the future indicating that it is probable that a loss has been incurred by GPS and the amount of additional loss can be reasonably estimated by GPS, the impacts of the change will be reflected in the consolidated financial statements at that time.

Tampa Bay Nutraceutical Company

On or about September 19, 2007, Tampa Bay Nutraceutical Company, Inc. (TBN) filed a civil action in the Circuit Court of Florida for Collier County (the Circuit Court) against Vitarich Laboratories, Inc. (VLI , see Note 19). The causes of action related to an order for product issued by TBN to VLI in June 2007 and alleged (1) breach of contract; (2) fraudulent misrepresentation; and (3) various warranty breaches, among other allegations. TBN alleged compensatory damages in excess of \$42 million.

Since 2011, the parties were engaged primarily in legal activity concerning TBN 's failure to provide proper discovery responses to VLI. In August 2012, the Circuit Court ordered TBN to pay to VLI, by September 17, 2012, a sanction award covering the costs and expenses incurred by VLI as a result of TBN 's repeated disobedience of court orders. As TBN failed to do so, the Circuit Court issued a judgment in favor of VLI, ordering that TBN 's pleadings in this matter be stricken and dismissing all of plaintiff 's claims with prejudice. However, in September 2012, TBN filed an appeal in the Florida 's Second District Court of Appeal (the Appeal Court) for reconsideration of the sanction award decision. In July 2013, the Appeal Court affirmed the Circuit Court 's decision. As a result, the judgment of the Circuit Court became final.

In connection with this matter, VLI had accrued a liability in its financial statements for expected litigation costs in the amount of approximately \$1,304,000. With the termination of this matter, VLI reversed the legal accrual in July 2013 which, accordingly, resulted in a favorable adjustment to selling, general and administrative expenses in the Company 's consolidated financial statements for the year ended January 31, 2014.

Table of Contents**PART II****ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES.**

The table below sets forth the high and low closing prices for our common stock during each quarter in the three-year period ended January 31, 2014 and during the period February 1, 2014 through April 10, 2014. Shares of our common stock have traded under the symbol AGX on the NYSE stock exchange since October 2, 2013. For all of the periods presented below prior to that date, our common stock traded on the NYSE MKT stock exchange (formerly the American Stock Exchange) also under the symbol AGX.

	High Close	Low Close
Fiscal Year Ended January 31, 2012		
1st Quarter	\$ 9.61	\$ 8.32
2nd Quarter	11.45	8.91
3rd Quarter	14.20	9.26
4th Quarter	17.38	11.18
Fiscal Year Ended January 31, 2013		
1st Quarter	\$ 17.00	\$ 14.40
2nd Quarter	16.36	12.85
3rd Quarter	17.97	15.38
4th Quarter	19.41	17.41
Fiscal Year Ended January 31, 2014		
1st Quarter	\$ 19.02	\$ 14.09
2nd Quarter	17.97	15.13
3rd Quarter	23.00	15.34
4th Quarter	30.60	21.31
Fiscal Year Ending January 31, 2015		
1st Quarter (through April 10, 2014)	\$ 30.00	\$ 27.06

As of April 10, 2014, we had approximately 119 stockholders of record.

Prior to November 2011, we did not pay cash dividends on our common stock, choosing to retain earnings in order to finance the development and expansion of our business. However, in November 2011, we paid a special cash dividend of \$0.50 per share reflecting the confidence of our board of directors in the strong financial performance of GPS and the related cash flow. In November 2012 and 2013, we paid to stockholders special cash dividends of \$0.60 per share of common stock and \$0.75 per share of common stock, respectively.

Annually, our board of directors intends to evaluate the Company's ongoing operational and financial performance in determining what role strategically aligned dividends should play in creating shareholder value. There can be no assurance that these evaluations will result in the payment of cash dividends in the future.

Table of Contents**Common Stock Price Performance Graph**

The following graph compares the percentage change in the cumulative total stockholder return on our common stock for the last five years with the *S&P 500*, a broad market index, and the *Dow Jones US Heavy Construction Index*, a group index of companies whose focus is limited primarily to heavy civil construction. The returns are calculated assuming that an investment with a value of \$100 was made in our common stock and in each index at January 31, 2009, and that all dividends were reinvested in additional shares of common stock. The graph lines merely connect the measuring dates and do not reflect fluctuations between those dates. The stock performance shown on the graph is not intended to be indicative of future stock performance.

	Years Ended January 31,					
	2009	2010	2011	2012	2013	2014
Argan, Inc.	100.00	126.33	82.47	133.55	179.27	280.49

Table of Contents**Equity Compensation Plan Information**

In June 2011, the stockholders approved the adoption of the 2011 Stock Plan (the **Stock Plan**) including 500,000 shares of our common stock reserved for issuance thereunder. In June 2013, the stockholders approved an amendment to the Stock Plan which increased the number of shares reserved for issuance thereunder to 1,250,000. The Stock Plan, which will expire in July 2021, serves to replace the Argan, Inc. 2001 Stock Option Plan (the **Option Plan**) which expired in July 2011. As was the case under the Option Plan, we may make awards under the Stock Plan to officers, directors and key employees. Awards may include incentive stock options (**ISOs**) or nonqualified stock options (**NSOs**), and restricted or unrestricted stock. ISOs granted under the Option Plan shall have an exercise price per share at least equal to the common stock's market value per share at the date of grant, typically have a seven to ten-year term, and typically become fully exercisable one year from the date of grant. NSOs may be granted at an exercise price per share that differs from the common stock's market value per share at the date of grant, may have up to a ten-year term, and become exercisable as determined by our board of directors.

The following table sets forth certain information, as of January 31, 2014, concerning securities authorized for issuance under options to purchase our common stock.

	Number of Securities Issuable under Outstanding Options	Weighted Average Exercise Price of Outstanding Options	Number of Securities Remaining Available for Future Issuance (1)
Equity Compensation Plans Approved by the Stockholders (2)	916,150	\$ 17.36	532,500
Equity Compensation Plans Not Approved by the Stockholders			
Totals	916,150	\$ 17.36	532,500

(1) Represents the number of shares of common stock reserved for future awards and excludes the number of securities reflected in the first column of this table.

(2) Approved plans include the Company's 2011 Stock Plan and the 2001 Stock Option Plan.

Recent Sales of Unregistered Securities

None.

Table of Contents**ITEM 6. SELECTED FINANCIAL DATA**

The following selected consolidated financial data should be read in conjunction with Management's Discussion and Analysis of Financial Condition and Results of Operations, the Consolidated Financial Statements and the notes thereto, and the other financial information appearing elsewhere in this Annual Report on Form 10-K.

	As of January 31,				
	2014	2013	2012	2011	2010
Balance Sheet Data⁽⁵⁾					
Total assets	\$ 323,306,000	\$ 234,724,000	\$ 205,252,000	\$ 130,542,000	\$ 120,273,000
Stockholders equity	\$ 156,308,000	\$ 120,917,000	\$ 101,264,000	\$ 97,645,000	\$ 88,368,000
Total equity	157,777,000	119,168,000	100,963,000	97,645,000	88,368,000

- (1) For the year ended January 31, 2014, net income attributable to noncontrolling interests was \$3,219,000 (see Note 3 to our accompanying consolidated financial statements).
- (2) For the years ended January 31, 2013 and 2012, the net losses attributable to noncontrolling interests were \$1,448,000 and \$302,000, respectively (see Note 3 to our consolidated financial statements).
- (3) Vitarich Laboratories, Inc. (VLI), the wholly owned subsidiary that represented our nutritional products business segment, completed the sale of substantially all of its assets to an unrelated party during the year

ended January 31, 2012. VLI recognized a pretax gain of approximately \$1,312,000 related to the asset sale which amount was reflected in income from discontinued operations for the year ended January 31, 2012 of \$1,562,000 (see Note 19 to our accompanying consolidated financial statements).

- (4) For the years ended January 31, 2011 and 2010, the losses from the discontinued operations of VLI were \$2,233,000 and \$1,261,000, respectively.
- (5) During the period January 31, 2010 through January 31, 2014, we did not have any long-term obligations or redeemable preferred stock.

Table of Contents

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

The following discussion summarizes the financial position of Argan, Inc. and its subsidiaries as of January 31, 2014, and the results of their operations for the years ended January 31, 2014, 2013 and 2012, and should be read in conjunction with the consolidated financial statements and notes thereto included elsewhere in Item 8 of this Annual Report on Form 10-K (the 2014 Annual Report).

Cautionary Statement Regarding Forward Looking Statements

The Private Securities Litigation Reform Act of 1995 provides a safe harbor for certain forward-looking statements. We have made statements in this Item 7 and elsewhere in this 2014 Annual Report that may constitute forward-looking statements. The words believe, expect, anticipate, plan, intend, foresee, should, would, other similar expressions are intended to identify forward-looking statements. These forward-looking statements are based on our current expectations and beliefs concerning future developments and their potential effects on us. There can be no assurance that future developments affecting us will be those that we anticipate. All comments concerning our expectations for future revenues and operating results are based on our forecasts for our existing operations and do not include the potential impact of any future acquisitions. Our forward-looking statements, by their nature, involve significant risks and uncertainties (some of which are beyond our control) and assumptions. They are subject to change based upon various factors including, but not limited to, the risks and uncertainties described in Item 1A of this 2014 Annual Report. Should one or more of these risks or uncertainties materialize, or should any of our assumptions prove incorrect, actual results may vary in material respects from those projected in the forward-looking statements. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Business Description

Argan, Inc. (the Company, we, us, or our) conducts continuing operations through its wholly owned subsidiaries, Gemma Power Systems, LLC and affiliates (GPS) and Southern Maryland Cable, Inc. (SMC). Through GPS, we provide a full range of development, consulting, engineering, procurement, construction, commissioning, operations and maintenance services to the power generation and renewable energy markets for a wide range of customers including independent power project owners, public utilities, municipalities, public institutions and private industry. The combination of GPS and consolidated joint ventures and variable interest entities represents our power industry services business segment. Through SMC, we provide telecommunications infrastructure services including project management, construction and maintenance to local governments, the federal government, telecommunications and broadband service providers as well as electric utilities. Argan, Inc. is a holding company with no operations other than its investments in GPS and SMC. At January 31, 2014, there were no restrictions with respect to inter-company payments from GPS or SMC to the holding company.

Overview

Primarily due to the recognition of the energy project development success fees related to the Panda Projects in the aggregate amount of \$27.1 million, our gross profit increased by approximately \$28.7 million for the year ended January 31, 2014 compared with the prior year, and our gross profit percentage increased to approximately 35% of revenues for the current year from 18% for the year ended January 31, 2013. In addition, our profitability for the year ended January 31, 2014 reflected the favorable financial effects of the completion of a gas-fired peaking power plant project ahead of schedule, including a successful commissioning process. Selling, general and administrative expenses decreased by approximately \$1.4 million from the comparable prior year amount to \$12.9 million for the current year.

The favorable conclusion of a litigation matter enabled us to reverse the accrued liability established for anticipated legal costs during the second quarter of the current year which resulted in a reduction of selling, general and administrative expenses in the approximate amount of \$1.3 million for the year ended January 31, 2014. We also recorded pre-tax gains in the aggregate amount of \$2.4 million during the year ended January 31, 2014 in connection with the deconsolidation of the variable interest entities as discussed below.

Due substantially to the items discussed above, net income attributable to our stockholders increased to \$40.1 million, or \$2.78 per diluted share of our common stock, for the year ended January 31, 2014. We reported net income attributable to our stockholders of approximately \$23.3 million, or \$1.65 per diluted share, for the year ended January 31, 2013.

Table of Contents

Net cash provided by operating activities for the year ended January 31, 2014 was approximately \$99.0 million, reflecting primarily the income from continuing operations for the year of \$43.3 million and payments received from project owners related to the achievement of certain billing milestones which represented a source of cash in the amount of \$61.4 million for the year.

For the year ended January 31, 2014, consolidated revenues were \$227.5 million, which represented a decrease of \$51.2 million from revenues of \$278.6 million last year. The revenues of the operating segments, power industry services and telecommunications infrastructure services, declined in the current year by 16% and 49%, respectively, to \$218.6 million and \$8.8 million, respectively. The revenues of these business segments for the year ended January 31, 2013 were \$261.3 million and \$17.3 million, respectively. Reduced revenues related to the completed peaking plant and the absence of new wind-energy projects represented the primary factors in the reduction of our consolidated revenues for the year.

For the year ended January 31, 2013, the consolidated revenues of continuing operations were \$278.6 million which represented an increase of \$136.8 million, or 96%, from the revenues of continuing operations of \$141.9 million for the year ended January 31, 2012. Net income attributable to our stockholders for the year ended January 31, 2013 was approximately \$23.3 million, or \$1.65 per diluted share. We reported net income attributable to our stockholders of \$9.3 million, or \$0.67 per diluted share, for the year ended January 31, 2012. The increase in consolidated revenues was due primarily to an increase of 97% in the revenues of the power industry services business, which represented 94% of consolidated revenues for the year ended January 31, 2013. The revenues of the telecommunications infrastructure services business for the year ended January 31, 2013 also improved substantially, increasing by 85%, to \$17.3 million for the year compared with revenues of approximately \$9.3 million for the year ended January 31, 2012. Our balance of cash and cash equivalents increased by \$18.6 million to \$175.1 million during the year ended January 31, 2013.

Most significantly for GPS, construction efforts associated with one project provided approximately 60% of the revenues of the power industry services business segment for the year ended January 31, 2013. The telecommunications infrastructure services segment earned a substantial portion of its revenues for the year ended January 31, 2013 by providing outside plant services to customers under an initiative sponsored by the state of Maryland for the deployment of a state-wide, high-speed, fiber optic network. This effort was planned to connect over 1,000 community anchor institutions in every county in the state while interconnecting and extending three independent information networks.

By comparison, the revenues for the year ended January 31, 2012 were depressed, reflecting the transition for us between major projects. In the period December 2010 to July 2011, we substantially completed three energy plant construction projects. Substantial work on new projects did not commence until the latter half of the year ended January 31, 2012. As a result, the revenues and income from the operations of our power industry services business for the year ended January 31, 2012 were adversely impacted.

Primarily due to the increase in revenues in the year ended January 31, 2013, gross profit rose by approximately \$27.0 million compared with the year ended January 31, 2012. Selling, general and administrative expenses increased by \$3.2 million, or approximately 28%, for the year ended January 31, 2013 compared with the comparable expense amount for prior year. The net result was that income from continuing operations before income taxes for the year ended January 31, 2013 increased by approximately \$23.7 million, to \$35.7 million from \$12.0 million for the year ended January 31, 2012.

As of January 31, 2014, the value of our construction contract backlog was \$790 million compared with a backlog value of \$180 million as of January 31, 2013. Approximately 92% of our current backlog relates to the design and

construction of two natural-gas fired power plants in the Marcellus Shale region of Pennsylvania. The corresponding engineering, procurement and construction (EPC) contracts were awarded to us during the current year. Once completed, each plant will provide over 800 MW of electricity to the power grid on the East Coast. Revenues related to these two projects and a biomass-fired power plant under construction in East Texas represented approximately 55% of consolidated revenues for the year ended January 31, 2014.

Table of Contents**The Panda Projects**

Beginning in May 2011, Gemma Power, Inc. (GPI, an affiliate of GPS and wholly owned by Argan) supported the development of two power plant projects by Moxie Energy, LLC (Moxie) with funding for working capital. The two natural gas-fired power plants are being built by us in the Marcellus Shale natural gas region of Pennsylvania. These power plants (the Moxie Projects) are located near the natural gas source and will provide electricity to the power grid in the northeastern United States, eliminating the need to transport natural gas via pipelines over long distances to supply the power generation plants. The Moxie Projects were engaged for several years in the lengthy process of planning and obtaining permits and financing for the construction, ownership and operation of the power plants.

Under a development agreement with Moxie, as amended and restated, the support provided by GPI to the two projects primarily consisted of loans, in the aggregate amount of approximately \$8.9 million, that were made in order to cover most of the costs of the development efforts. Moxie supported the arrangement by providing GPI with a series of liens, security interests, guarantees and development fee preferences (see Note 3 to the accompanying consolidated financial statements) which, together with the loans, provided us with substantial financial control over the Moxie Projects. Pursuant to the development agreement, Moxie provided GPI with the right to receive development success fees and granted GPS the right to provide construction services for the two projects under EPC contracts.

We concluded that the Moxie Projects were variable interest entities (VIEs). Despite not having an ownership interest in the Moxie Projects, GPI was the primary beneficiary of these VIEs due substantially to the significance of GPI's loans to the entities, the risk that GPI could absorb significant losses if the development projects were not successful, the opportunity for GPI to receive development success fees and the intent of the parties for GPS to be awarded large contracts for the construction of the two power plants. Accordingly, the assets, liabilities and financial results of the Moxie Projects were included in our consolidated financial statements for the years ended January 31, 2013 and 2012.

In March and May 2013, Moxie reached agreements for the purchase of its membership interests in the Moxie Projects, Moxie Liberty LLC (Moxie Liberty) and Moxie Patriot LLC (Moxie Patriot), respectively, by affiliates of Panda Power Funds (Panda). In each case, the consummation of the purchase was contingent upon Panda securing permanent financing for the project. However, Panda made several sizable commitments of cash in order to support the continuing progress of the projects. These included commitments 1) to provide collateral for the support of bids to connect to the electricity grid, 2) to make equipment deposit payments to the manufacturer of the natural gas-fired turbines, and 3) to commence payments to GPS pursuant to the limited notice-to-proceed under the corresponding engineering, procurement and construction contract.

The membership interest purchase agreements required the Moxie Projects to continue to conduct the remaining development activities. The equipment deposit funding was provided by Panda under secured loans. GPI consented to each secured lending arrangement and agreed to equal priority regarding claims (neither party having a priority of payment over or being subordinate to the other) and the method for sharing the proceeds of any debt payments made by either of the Moxie Projects. In April 2013 and July 2013, GPS entered into EPC contracts for the Liberty and Patriot Power Projects, respectively, which are hereinafter referred to as the EPC Contracts. The addition of the contract values for the EPC Contracts on the dates of award raised our construction project backlog by \$770 million.

The power to direct the economic activities of the Moxie Projects that most affected their economic performance shifted to Panda with the execution of the agreements described above. GPI was no longer the primary beneficiary of these variable interest entities. Panda became the primary source of financial support for the pre-construction phase of each project, providing significant financing in order to secure connection to the electricity grid and to pay for the natural gas-fired turbines, the most significant equipment components of the power plants. Through the EPC

Contracts, GPS transitioned into its typical role of engineering, procurement and construction contractor where it became subject to the direction of each project owner. With funding obtained from Panda in each case, the Moxie Projects began to make payments directly to GPS in order to cover certain costs incurred under the EPC Contracts.

As a result, we stopped including the Moxie Project entities in our consolidated financial statements during the first and second quarters of the current year, respectively. The elimination of the accounts of the Moxie Project entities from our consolidated financial statements, including the accumulated net losses of the VIEs, resulted in gains for us which we recorded in the current year. The deconsolidation of the Moxie Project entities resulted in pre-tax gains that totaled approximately \$2.4 million. The deconsolidation transactions also resulted in the elimination of capitalized project costs from our consolidated balance sheet in the amount of approximately \$5.9 million.

Table of Contents

Panda completed the purchase of and permanent financing for each Moxie Project, now named Panda Liberty LLC (Panda Liberty) and Panda Patriot LLC (Panda Patriot), in August 2013 and December 2013, respectively. Together, they are referred to as the Panda Projects. In connection with the closings, GPI received cash in the approximate aggregate amount of \$37,863,000 including development success fees in the total amount of \$27,052,000, which were included in the revenues of the power industry services segment for the year ended January 31, 2014, and the repayment of notes receivable and accrued interest in the total amount of \$10,811,000. Also, GPS received full notices-to-proceed with the engineering, procurement and construction efforts pursuant to the EPC Contracts.

Construction Joint Ventures

During the second and third quarters of the current fiscal year, GPS assigned the EPC Contracts to contractual joint ventures that were formed in order to perform the work for the applicable project and to spread the bonding risk associated with the projects. Our partner for both ventures is the same large, heavy civil contracting firm. The joint venture agreements provide that GPS has the majority interest in any profits, losses, assets and liabilities that may result from the performance of the EPC Contracts. However, if the joint venture partner is unable to pay its share of any losses, GPS would be fully liable. GPS has no significant commitments beyond those related to the completion of the EPC Contracts. The joint venture partners will dedicate resources to the project that are necessary to complete the project and will be reimbursed for their costs. GPS will perform most of the activities of the EPC Contracts.

Outlook

Although we are technically in the midst of an overall economic recovery, the progress is sluggish, particularly in the construction sectors. Recently published economic statistics for overall construction spending in the United States have been favorable. However, the positive results have been achieved primarily in the residential housing sector. The year-over-year percentage increases in private, non-residential construction spending reported for periods early in calendar 2013 have moderated considerably. Month-to-month and year-to-year comparisons have recently been unfavorable. Construction activity in the power sector in the current year remains approximately 10% of total construction spending. The power industry has not fully recovered from the recessionary decline in the demand for power in the United States. After a two-year decline, total electric power generation from all sources increased slightly by 0.3% in 2013, reaching approximately 98% of the peak power generation level of 2007. Recently published government forecasts project an annual increase in power generation of approximately 1% per year for the next 25 years.

For calendar year 2013, electricity generated by natural gas-fired power plants comprised approximately 27% of total generation which represented a 9% annual decline that was due substantially to increased natural gas prices. On the other hand, the share of coal-generated electricity increased by approximately 5% for 2013, and represented 39% of total electricity power generation for the year. However, the statistics for 2013 are inconsistent with the long-term power generation trends. Over the last 10 years, total power generation has increased by approximately 5%. Over the same period, the amount of electricity generated by natural-gas fired power sources increased by 71%, and the amount of electric power generated by coal-fired plants declined by 20%. The amount of electricity provided by nuclear power plants increased over the last 10 years by only 3%. Electrical power generated by renewable energy sources (excluding hydroelectric sources) tripled over the last ten years, but represents only 6% of total generation.

Recent increases in the price for natural gas have been driven by the fast growth of consumption in the industrial and electric power sectors. Future demand for export at liquid natural gas (LNG) facilities will also represent an upward pressure on natural gas prices. However, recent projections of future power generation assume the sustained increase in natural gas production, which should lead to slower price growth in the future. The availability of competitively priced natural gas, the existence of certain programs encouraging renewable fuel use, and the implementation of

environmental rules should dampen future coal use. Additional announcements by electric utilities of the retirement of coal-fired and nuclear power plants have been made recently, citing the availability of cheap natural gas, increasingly stringent environmental regulations and the significant costs of refurbishment and relicensing. The future retirements of coal and nuclear plants will result in the need for new capacity, and new natural gas-fired plants are much cheaper to build than coal, nuclear, or renewable plants.

Table of Contents

However, the expected increase in momentum towards more environmentally friendly power generation facilities has not occurred at the pace expected prior to the latest recession. The Environmental Protection Agency has been stridently exercising an expansion of regulatory power over air quality and electric power generation. The renewable energy sector was bolstered by legislation enacted at the beginning of calendar 2013 extending tax credits for various renewable technologies. However, the federal government has not passed comprehensive energy legislation that might include national renewable energy standards, incentives or mandates for the retirement of existing coal-fired power plants and caps on the volume of carbon emissions. Although certain coal-fired power plants have been shut down and the demand for coal has been adversely affected by the inexpensive supply of natural gas in the United States, existing coal-fired plants are proving to be a challenge to retrofit or replace. Coal prices are widely considered to be stable and certain states see the availability of inexpensive, coal-powered electricity as a key driver of economic growth. In addition, simplified designs are intended to make new nuclear plants easier and less expensive to build, to operate and to maintain. As a result, certain electric utilities, primarily in the South, have plans to construct and operate new nuclear power plants.

Due to concerns that energy tax credit and grant programs would be expiring permanently, there was a rush to complete wind and solar projects by December 31, 2012. With the future long-term availability of renewable energy tax incentives unknown and the development pipeline depleted, potential energy project developers and investors made very few commitments related to new renewable energy generation facilities in the current year. As a result, the likelihood of our booking additional wind and solar power projects next year is uncertain.

We believe that it is likely that the soft demand for power will continue to limit the number of new energy plant construction opportunities that we will see in the upcoming year. In addition, we expect that the new opportunities which do arise will continue to result in fierce competition among bidders. The reduction in the number of new commercial, industrial and infrastructure construction projects has created an extremely competitive bid environment in our construction sector. Certain of our competitors are global engineering and construction firms, substantially larger than us. On occasion, our relatively smaller size is evaluated to be a risk by potential project owners. Known competitors have reduced prices, presumably willing to sacrifice margin in order to keep project teams and work crews busy. Other construction companies have entered our sector of the industry looking for new work at low margins.

Nevertheless, we continue to believe that the long-term prospects for energy plant construction are extremely favorable. Major advances in horizontal drilling and the practice of hydraulic fracturing (fracking) have led to a boom in natural gas supply. There is evidence that the abundant availability of cheap, less carbon-intense, natural gas will continue to be a significant factor in the economic assessment of the future for coal-fired power plants. New carbon emission standards have also become a significant obstacle for any plans to build new coal-fired power plants. The coal industry fears that future regulations limiting carbon emissions may jeopardize the continuing operation of existing coal-fired power plants. The future of clean burning coal is also uncertain as two significant plants being built by large southern utilities, touted as the showcase technology for generating clean electricity from low-quality coal, have experienced soaring construction costs.

On the other hand, the EPA has demonstrated restraint in the amount of regulation contained in its initial federal fracking rules despite the concerns voiced by environmentalists and certain state governments. We also expect continuing concerns about the safety, high cost and construction cost overrun risk of nuclear power plants. Finally, the demand for electric power in this country is expected to grow slowly but steadily over the long term. Increasing demands for electricity, the ample supply of natural gas, and the expected retirement of old coal, nuclear and oil-powered energy plants, should result in natural gas-fired and renewable energy plants, like wind, biomass and solar, representing the substantial majority of new power generation additions in the future and an increased share of the power generation mix. Market concerns about emissions should continue to dampen the expansion of coal-fired

capacity. Low fuel prices for new natural gas-fired plants also affect the relative economics of coal-fired capacity, as does the continued rise in construction costs for new coal-fired power plants. The future development of renewable and cleaner natural gas-fired power generation facilities should result in new power facility construction opportunities for us.

Recently published forecasts of power generation reflect slightly higher coal-fired power generation over the next few years than forecasted previously because of higher natural gas prices during that period, as well as pending nuclear retirements that necessitate additional base load generation. However, electricity generation from coal is projected to flatten out and remain lower than previously projected because more coal-fired capacity is expected to be retired and fewer new coal plants are expected to be built. Coal-fired electricity generation has traditionally been the largest component of electricity generation, representing 39% of total generation in 2013. By 2035, however, natural gas generation is projected to equal coal generation. Coal and natural gas are each expected to represent 34% of total generation by 2035, but by 2040 the coal share is expected to drop to 32%, and the natural gas share is expected to increase to 35%. A separate and recent industry report forecasts that the consumption growth in natural gas and renewables in power generation is expected to offset large declines in oil, coal and nuclear demand over the next twenty to twenty-five years. It suggests that natural gas will hold a 35% share of the energy mix in the United States by 2025, replacing oil as the leading fuel in our country's energy consumption.

Table of Contents

During this difficult time for the construction industry, particularly in our sector, and until the recovery for our sector of the construction industry becomes more robust, we have been focused on the effective and efficient completion of our current construction projects and the control of costs. Despite the intensely competitive business environment, we are committed to the rational pursuit of new construction projects. This approach may result in a lower volume of new business bookings until the demand for new power generation facilities and the other construction industry sectors recover fully. We will strive to conserve cash and to maintain an overall strong balance sheet. However, as we see future business opportunities that include an opportunity to make an investment in the ownership of a new project, at least during the development phase of the project, in order to assure the award of the related EPC contract, we may consider the pursuit of them. Because we believe in the strength of our balance sheet, we are willing to consider the opportunities that include reasonable and manageable risks. Our involvement with the development of the Moxie Projects reflected careful evaluation of the opportunities and risks. We structured the terms of our involvement in order to minimize the financial risks and to benefit substantially from the successful development of the projects.

Although the uncertain economic conditions do hamper our forecasting visibility to an unusual degree, we remain cautiously optimistic about our long-term growth opportunities. We are focused on expanding our position in the growing power markets where we expect investments to be made based on forecasts of increasing electricity demand covering decades into the future. We believe that our expectations are reasonable and that our future plans are based on reasonable assumptions.

Our performance on current projects should provide a stable base of business activity for the next 2 to 3 years, and a return to more typical gross margins due to the absence of sizable development success fees like those earned in the current year.

Discontinued Operations

In March 2011, we completed the sale of substantially all of the assets of Vitarich Laboratories, Inc. (VLI), a wholly-owned subsidiary that represented our nutritional products business, to NBTY Florida, Inc. (NBTY). The asset sale was consummated for an aggregate cash purchase price of up to \$3,100,000 and the assumption by the purchaser of certain trade payables, accrued expenses and remaining obligations under VLI s facility leases. Of the cash purchase price, \$800,000 was paid at closing and the remaining \$2,300,000 was placed into escrow. Subsequently, VLI was paid approximately \$1,700,000 cash from the escrow amount as purchased inventory was used in production by NBTY and purchased accounts receivable balances were collected. Amounts received from the escrow account were recorded as sale proceeds upon receipt. In December 2011 and pursuant to the terms of the asset sale agreement, the funds remaining in the escrow account were returned to NBTY. The financial results of this business through April 30, 2012 have been presented as discontinued operations in the accompanying consolidated financial statements, including legal costs associated with this business.

Such legal costs incurred subsequent to April 30, 2012, which were not material, have been reflected in the operating results of continuing operations. The litigation matter identified above that was resolved during the current year related to VLI. The favorable effect of the reversal of the accrual established for anticipated legal costs was reflected in the selling, general and administrative expenses of continuing operations for year ended January 31, 2014. The loss from discontinued operations for the fiscal year ended January 31, 2013 was \$285,000. We reported income from discontinued operations for the year ended January 31, 2012 in the amount of \$1,562,000 including net gain on the sale of assets, before income taxes, in the amount of \$1,312,000 and approximately \$1,280,000 in income tax benefit related to the deduction, for income tax return purposes, for the worthless stock of VLI. These favorable amounts were offset partially by costs of operations incurred prior to the sale of assets and those related to the legal matter which is discussed in Note 12 to the accompanying consolidated financial statements. Net cash used by the discontinued activities of VLI for the years ended January 31, 2013 and 2012 were approximately \$78,000 and \$1,335,000 for the

years ended January 31, 2013 and 2012, respectively. VLI was liquidated in December 2013.

Table of Contents**Comparison of the Results of Operations for the Years Ended January 31, 2014 and 2013**

The following schedule compares the results of our continuing operations for the years ended January 31, 2014 and 2013. Except where noted, the percentage amounts represent the percentage of revenues for the corresponding year. As analyzed below the schedule, we reported net income attributable to our stockholders of approximately \$40,125,000, or \$2.78 per diluted share, for the fiscal year ended January 31, 2014. For the fiscal year ended January 31, 2013, we reported a comparable net income amount of \$23,265,000, or \$1.65 per diluted share.

	2014		2013	
Revenues				
Power industry services	\$ 218,649,000	96.1%	\$ 261,327,000	93.8%
Telecommunications infrastructure services	8,806,000	3.9%	17,308,000	6.2%
Revenues	227,455,000	100.0%	278,635,000	100.0%
Cost of revenues **				
Power industry services	141,807,000	64.9%	214,817,000	82.2%
Telecommunications infrastructure services	6,800,000	77.2%	13,683,000	79.1%
Cost of revenues	148,607,000	65.3%	228,500,000	82.0%
Gross profit	78,848,000	34.7%	50,135,000	18.0%
Selling, general and administrative expenses	12,918,000	5.7%	14,350,000	5.2%
	65,930,000	29.0%	35,785,000	12.8%
Gains on the deconsolidation of variable interest entities	2,444,000	1.1%		
Other income (expense), net	961,000	0.4%	(43,000)	*
Income from continuing operations before income taxes	69,335,000	30.5%	35,742,000	12.8%
Income tax expense	25,991,000	11.4%	13,640,000	4.9%
Income from continuing operations	\$ 43,344,000	19.1%	\$ 22,102,000	7.9%
Net income attributable to stockholders	\$ 40,125,000	17.6%	\$ 23,265,000	8.3%

* Less than 0.1%.

** The cost of revenues percentage amounts represents the percentage of net revenues of the applicable segment.

Revenues**Power Industry Services**

The revenues of the power industry services business decreased by \$42.7 million, or 16%, to \$218.6 million for the year ended January 31, 2014 compared with revenues of \$261.3 million last year. The revenues of this business represented 96% of consolidated revenues for the year ended January 31, 2014, and 94% of consolidated revenues for the year ended January 31, 2013. Last year, the revenues of this business segment reflected the substantial amount of construction activity underway on the natural gas-fired peaking plant that was completed in the second quarter of the current year. The final construction and commissioning phase activities performed on this project during the current year provided revenues that were approximately \$105 million less than the revenues earned on this project during the year ended January 31, 2013, representing approximately 23% of this segment's revenues for the current year. Construction activities related to a biomass-fired plant and a solar energy facility provided combined revenues representing approximately 40% of the revenues of this business segment for the current year. Revenues recognized on the EPC Contracts with the Panda Projects plus the development success fees in the amount of \$27.1 million earned on the purchase of the projects by Panda represented approximately 35% of the revenues of the power industry services segment for the year ended January 31, 2014.

Table of Contents***Telecommunications Infrastructure Services***

The revenues of this business segment decreased by approximately 49% for the current year compared with last year. For the year ended January 31, 2014, approximately 32% of SMC's revenues were derived from outside plant services provided for a statewide communications networking initiative. Our largest customer in this program was Howard County, Maryland, a key partner with the state representing a collaborative inter-government consortium of local Maryland governments that is deploying a state-wide, high-speed, fiber optic network. However, deployment efforts wound down in the current year. For the year ended January 31, 2014, revenues associated with the initiative declined by approximately 58% compared with the revenues provided by these customers last year. SMC's exposure to the state of Maryland under this program last year also led to the award to us by the state of a large, fiber optic network equipment procurement order. Fulfillment of the deliveries under this arrangement was completed earlier this year. Deliveries of equipment under this order resulted in revenues that represented approximately 15% of SMC's business last year, but only 2% for the current year.

Cost of Revenues

Due primarily to the decrease in consolidated revenues for the year ended January 31, 2014 compared with consolidated revenues for the year ended January 31, 2013, the corresponding consolidated cost of revenues also decreased. These costs were \$148.6 million and \$228.5 million for the years ended January 31, 2014 and 2013, respectively. However, the improvement of the gross profit percentage for the current year, compared with the gross profit percentage achieved last year, was due substantially to the contribution represented by the development success fees, and secondarily to the favorable project performance in the current year, particularly on the gas-fired peaking power plant project where we reached substantial completion three months ahead of schedule. In addition, the profitability of our operations last year was adversely affected by the \$1.6 million charge to cost of revenues related to the Altra legal matter that is described in Note 12 to our consolidated financial statements.

Selling, General and Administrative Expenses

These costs declined by \$1,432,000, or 10%, to \$12,918,000 for the year ended January 31, 2014 from \$14,350,000 for the year ended January 31, 2013. The favorable conclusion of the litigation matter that involved Tampa Bay Nutraceutical Company and that is described in Note 12 to our consolidated financial statements enabled us to reverse the accrual established for anticipated legal costs which resulted in a reduction of selling, general and administrative expenses for the year ended January 31, 2014 in the approximate amount of \$1,304,000. In addition, last year we included approximately \$1,129,000 of general and administrative expenses incurred by the Moxie Projects in our consolidated selling, general and administrative expenses; only \$90,000 was recorded in the current year prior to the deconsolidations. These favorable effects were partially offset by an overall increase in compensation-related expenses for the current year in the amount of \$491,000.

Income Tax Expense

For the year ended January 31, 2014, we incurred income tax expense related to continuing operations of \$25,991,000 reflecting an annual effective income tax rate for continuing operations of 37.5%. This rate differs from the expected federal income tax rate of 35% due to the unfavorable effects of state income taxes and unfavorable income tax adjustments partially offset by the favorable effect of permanent differences, primarily the domestic manufacturing deduction, the deconsolidation of the VIEs and the exclusion from income of the noncontrolling interests in the income of the joint ventures for income tax reporting purposes. For the year ended January 31, 2013, we incurred income tax expense related to continuing operations of \$13,640,000 reflecting an annual effective income tax rate for continuing operations of 38.2% which differed from the expected federal income tax rate of 35% due primarily to the

estimated effects of state income taxes and other unfavorable income tax adjustments partially offset by the favorable effect of permanent differences. Other amounts reflected in the income tax provision amounts for the years ended January 31, 2014 and 2013 included federal income tax return-to-provision and other adjustments of \$255,000 and \$410,000, respectively.

Other Income

The current year deconsolidation of the Moxie Projects resulted in a total pre-tax gain for the year ended January 31, 2014 in the aggregate amount of \$2,444,000. Other income for the year ended January 31, 2014 also included investment income of \$961,000 (net of \$10,000 in interest expense) including primarily interest earned on the notes receivable from the Moxie Projects. Last year, the interest income related to these notes was eliminated in the consolidation of the Moxie Project variable interest entities with the financial statements of Argan and our other consolidated subsidiaries.

Table of Contents**Comparison of the Results of Operations for the Years Ended January 31, 2013 and 2012**

The following schedule compares the results of our continuing operations for the years ended January 31, 2013 and 2012. Except where noted, the percentage amounts represent the percentage of revenues for the corresponding year. As analyzed below the schedule, we reported net income attributable to our stockholders of approximately \$23.3 million for the fiscal year ended January 31, 2013, or \$1.65 per diluted share of our common stock. For the fiscal year ended January 31, 2012, we reported a comparable net income amount of \$9.3 million, or \$0.67 per diluted share.

	2013		2012	
Revenues				
Power industry services	\$ 261,327,000	93.8%	\$ 132,519,000	93.4%
Telecommunications infrastructure services	17,308,000	6.2%	9,331,000	6.6%
Revenues	278,635,000	100.0%	141,850,000	100.0%
Cost of revenues **				
Power industry services	214,817,000	82.2%	111,193,000	83.9%
Telecommunications infrastructure services	13,683,000	79.1%	7,555,000	81.0%
Cost of revenues	228,500,000	82.0%	118,748,000	83.7%
Gross profit	50,135,000	18.0%	23,102,000	16.3%
Selling, general and administrative expenses	14,350,000	5.2%	11,186,000	7.9%
	35,785,000	12.8%	11,916,000	8.4%
Other income (expense), net	(43,000)	*	48,000	*
Income from continuing operations before income taxes	35,742,000	12.8%	11,964,000	8.4%

Income from continuing operations	\$ 22,102,000	7.9%	\$ 7,408,000	5.2%
Net income attributable to stockholders	\$ 23,265,000	8.3%	\$ 9,272,000	6.5%

* Less than 0.1%.

** The cost of revenues percentage amounts represents the percentage of net revenues of the applicable segment.

Revenues**Power Industry Services**

The revenues of the power industry services business increased significantly for the year ended January 31, 2013 to \$261.3 million for the year from \$132.5 million for the prior year, an increase of 97%. The revenues of this business represented approximately 94% and 93% of consolidated revenues for the years ended January 31, 2013 and 2012,

respectively. The revenues of this business last year reflected performance on seven construction projects, including substantial construction activity related to a gas-fired peaking power plant, as well as equipment procurement and the commencement of construction related to a biomass-fired power plant for which we received the full notice to proceed in May 2012. We completed two wind farm efforts and a solar-panel installation project during the year. The revenues associated with the gas-fired and the biomass projects represented approximately 79% of this segment's revenues for the year.

During the year ended January 31, 2012, we substantially completed three energy plant construction projects. Substantial work on new projects did not commence until the latter half of the fiscal year ended January 31, 2012. As a result, the revenues of our power industry services business for the year were depressed, particularly during the first three quarters of the year. For the year ended January 31, 2012, the revenues related to two projects also represented approximately 79% of the revenues of the segment. These projects included a gas-fired peaking facility and a wind-energy project that was completed early in the year ended January 31, 2013. In addition, we also completed construction of a peaking power plant that contributed revenues which represented 13% of this segment's revenues for the year ended January 31, 2012.

Table of Contents***Telecommunications Infrastructure Services***

Primarily due to the new business discussed below, the revenues of the telecommunications services business of SMC increased by 85% to \$17.3 million for the year ended January 31, 2013 compared with revenues in the amount of \$9.3 million for the year ended January 31, 2012. Historically, a major portion of this segment's revenue-producing activity has been performed pursuant to task or work orders issued under master agreements with SMC's major customers. For the year ended January 31, 2013, approximately 39% of SMC's revenues were derived from outside plant services provided to counties and agencies of the state of Maryland. We believe that SMC's exposure to the state of Maryland under this program led to the award to us by the state of a fiber optic network equipment procurement order. Our fulfillment of this order resulted in revenues for the year ended January 31, 2013 that represented approximately 15% of SMC's business for the year.

Cost of Revenues

Due primarily to the increase in consolidated revenues for the year ended January 31, 2013, the corresponding consolidated cost of revenues also increased. These costs were \$228.5 million and \$118.7 million for the years ended January 31, 2013 and 2012, respectively. Our gross profit percentage increased for the year ended January 31, 2013 to 18.0% of corresponding revenues from a comparable percentage of 16.3% for the prior year due to the profitable performance of activities on several projects of both business segments. Favorable estimated profit increases were reflected during the year as work ramped up on the gas-fired peaking facility and as the wind-farm project was completed. SMC was successful in continuing to improve the profitability of most elements of its business; its gross profit percentage was 21% for the year ended January 31, 2013 compared with 19% for the year ended January 31, 2012. The profitability of our operations for the year ended January 31, 2013 was adversely affected by a charge to cost of revenues in the amount of \$1.6 million recorded in the second quarter. This charge related to the Altra legal matter that is described above and in Note 12 to our consolidated financial statements.

Selling, General and Administrative Expenses

These costs increased by approximately \$3.2 million, or 28%, to \$14.4 million for the year ended January 31, 2013 from approximately \$11.2 million for the year ended January 31, 2012. However, expressed as a percentage of corresponding consolidated revenues, these costs declined to 5.2% for the current year from 7.9% last year. The largest expense increases between years related to the increased costs associated with the Moxie Projects in the amount of \$921,000, increased stock option compensation expense in the amount of \$679,000, increased cash bonuses for management and staff in the amount of \$612,000, compensation costs related to new employees in the amount of \$268,000 and increased accounting and audit fees in the amount of \$253,000 due, in part, to the Sarbanes-Oxley Act requirement for an integrated independent audit for the current year as the Company graduated to accelerated filer status at January 31, 2013.

Income Tax Expense

For the year ended January 31, 2013, we incurred income tax expense related to continuing operations in the amount of \$13.6 million representing an annual effective income tax rate of 38.2%. The effective tax rate was higher than the expected federal income tax rate of 35.0% due primarily to state income taxes and unfavorable adjustments offset partially by favorable income tax effects of permanent differences, primarily the domestic manufacturing deduction. During the year, we recorded return-to-provision and other adjustments that totaled approximately \$410,000. For the year ended January 31, 2012, we incurred income tax expense related to continuing operations of \$4.6 million which reflected an annual effective income tax rate of 38.1% that differed from the expected federal income tax rate of 34% due primarily to the unfavorable effects of state income taxes offset partially by the favorable income tax effects of

permanent differences.

Liquidity and Capital Resources as of January 31, 2014

The amount of cash and cash equivalents increased by \$97,067,000 during the current fiscal year to a balance of \$272,209,000 as of January 31, 2014 compared with a balance of \$175,142,000 as of January 31, 2013. In addition, consolidated working capital increased during the current year by over \$45 million to a balance of \$133,323,000 as of January 31, 2014 from \$88,562,000 as of January 31, 2013. We have an available balance of \$2.9 million under our revolving line of credit financing arrangement with Bank of America (the Bank), reduced during the current year by \$1.35 million to cover letters of credit issued by the Bank in support of the project development activities of a potential power plant customer. During the current year, the expiration date of this arrangement was extended by the Bank to May 31, 2015.

- 37 -

Table of Contents

Last year, the amount of cash and cash equivalents increased during the year by \$18,618,000 from a balance of \$156,524,000 as of January 31, 2012. Consolidated working capital increased during the year by approximately \$12 million from \$76,298,000 as of January 31, 2012.

Net cash in the amount of \$98,983,000 was provided by the operating activities of continuing operations during the year ended January 31, 2014 which contributed income for the year of \$43,344,000. The expected reduction during the current year in the amount of billings in excess of costs and estimated earnings related to completed projects was more than offset by the temporary increase in such amounts related to other projects, including the Panda Projects and the biomass-fired plant, resulting in a net increase to cash and cash equivalents in the amount of \$61,377,000. Primarily due to the completion of the large peaking power plant construction project during the year, the balance of accounts payable and accrued liabilities declined by \$9,937,000 during the current year, which represented a use of cash. Payments included funds retained by us from amounts previously billed by subcontractors and suppliers to this project. The decrease in amounts due from project owners, non-cash adjustments to income from continuing operations for the current year and the decrease in prepaid expenses and other assets provided net cash amounts of \$2,016,000, \$1,585,000 and \$598,000 during the current year, respectively.

During the year ended January 31, 2014, we used cash in financing and investing activities in the net amount of \$1,916,000. Most significantly, we paid cash dividends in November 2013 that totaled \$10,640,000 and made loans to the Moxie Project entities (subsequent to their deconsolidation) that totaled \$2,450,000. In addition, the deconsolidation of the Moxie Project VIEs during the current year resulted in the elimination of their cash balances from our consolidated balance sheet in the amount of \$399,000. Substantially offsetting these uses of cash were the following. Upon the purchases by Panda of Moxie Liberty in August 2013 and Moxie Patriot in December 2013, we received repayment of notes receivable in the aggregate amount of \$8,915,000. In addition, the amount of cash proceeds received from the exercise of stock options by employees during the year ended January 31, 2014 was \$3,794,000.

Net cash in the amount of \$31,564,000 was provided by the operating activities of continuing operations during the year ended January 31, 2013, including income from continuing operations of \$22,102,000. The increase in construction efforts on projects active during the prior year resulted in an increase of \$6,489,000 in the balance of accounts payable and accrued expenses, a source of cash for the year ended January 31, 2013, and an increase in the balance of accounts receivable in the amount of \$8,826,000, a use of cash during the current year. We also received payments on projects during the current year due to the achievement of billing milestones, which resulted in a \$5,389,000 temporary increase in the net amount of billings in excess of costs and estimated earnings. The balance of costs and estimated earnings in excess of billings declined during the year ended January 31, 2013, providing cash in the amount of \$1,603,000. The decrease in prepaid and other assets during the prior year represented a source of cash in the amount of \$2,943,000. The aggregate amount of non-cash adjustments to income from continuing operations represented a net source of cash of approximately \$1,942,000 for the prior year.

During the year ended January 31, 2013, we declared and paid a cash dividend in the amount of \$8,359,000. We also expended net cash in the amount of \$7,263,000 for property and equipment, including approximately \$3.8 million used in the power plant development activities of the Moxie Project entities and approximately \$2.9 million used by GPS for the purchase and fit-up of an office property including a building large enough to combine the staff of GPS into one facility and to eliminate the need for multiple leased offices in Connecticut. During the year ended January 31, 2013, we received cash in the amount of \$2,676,000 due to the receipt of cash proceeds from the exercise of stock options and the conversion of warrants in the amounts of \$1,436,000 and \$1,240,000, respectively.

We have pledged the majority of the Company's assets to secure our financing arrangements with the Bank, as amended. Its consent is required for acquisitions, divestitures, cash dividends and certain investments. During the

current year, we did obtain the consent of the Bank to the formation of the joint ventures described above. The amended financing arrangements contain an acceleration clause which allows the Bank to declare amounts outstanding under the financing arrangements due and payable if it determines in good faith that a material adverse change has occurred in the financial condition of any of our companies.

The arrangements also require the measurement of certain financial covenants at our fiscal year-end and at each of our fiscal quarter-ends (using a rolling 12-month period), determined on a consolidated basis, including requirements that the ratio of total funded debt to EBITDA (as defined) not exceed 2 to 1, that the ratio of senior funded debt to EBITDA (as defined) not exceed 1.50 to 1, and that the fixed charge coverage ratio not be less than 1.25 to 1. At January 31, 2014 and January 31, 2013, we were in compliance with each of these financial covenants; we had no senior debt outstanding at either date.

Table of Contents

We believe that the Company will continue to comply with its financial covenants under the financing arrangement. If the Company's performance results in our noncompliance with any of the financial covenants, or if the Bank seeks to exercise its rights under the acceleration clause referred to above, we would seek to modify the financing arrangement, but there can be no assurance that the Bank would not exercise its rights and remedies under the financing arrangements including accelerating the payment of all then outstanding senior debt due and payable.

At January 31, 2014, most of the balance of cash and cash equivalents was invested in a high-quality money market fund with at least 80% of its net assets invested in U.S. Treasury obligations and repurchase agreements secured by U.S. Treasury obligations. The fund is sponsored by an investment division of the Bank. Our operating bank accounts are maintained with the Bank. We believe that cash on hand and cash generated from our future operations, with or without funds available under our line of credit, will be adequate to meet our general business needs in the foreseeable future without deterioration of working capital. Any future acquisitions, or other significant unplanned cost or cash requirement, may require us to raise additional funds through the issuance of debt and/or equity securities. There can be no assurance that such financing will be available on terms acceptable to us, or at all. If additional funds are raised by issuing equity securities, significant dilution to the existing stockholders may result.

Contractual Obligations

Contractual obligations outstanding as of January 31, 2014 are summarized below:

	Amount of Commitment Expiration per Period				
	Less Than One Year	1-3 Years	4-5 Years	Over 5 Years	Total Commitment
Contractual Obligations					
Long-term debt	\$	\$	\$	\$	\$
Capital lease obligations					
Operating leases	181,000	365,000	178,000	81,000	805,000
Purchase commitments ⁽¹⁾	430,000	2,000			432,000
Other long-term liabilities ⁽²⁾					
Totals	\$ 611,000	\$ 367,000	\$ 178,000	\$ 81,000	\$ 1,237,000

(1) Amounts represent primarily current service arrangements of Argan, Inc. Commitments pursuant to purchase orders and subcontracts related to construction contracts are not included as such amounts are expected to be funded under contract billings. We have no obligation for materials or subcontract services beyond those required to complete contracts awarded to us.

(2) Amounts required for disclosure are long-term liabilities reflected in the consolidated balance sheet in accordance with US GAAP.

Off-Balance Sheet Arrangements

As is common in our industry, general construction contractors execute certain contracts jointly with third parties through joint ventures, limited partnerships and limited liability companies for the purpose of executing a project or program for a project owner such as a government agency or a commercial enterprise. These teaming arrangements

are generally dissolved upon completion of the project or program. In addition, as discussed previously, we may obtain interests in VIEs formed by its owners for a specific purpose. During the current year and as discussed previously, the third party investor for each Moxie Project became the primary beneficiary of the corresponding VIE. Accordingly, we removed the accounts of Moxie Liberty and Moxie Patriot from our consolidated financial statements during the first and second quarters, respectively, of the current year.

We maintain a variety of commercial commitments that are generally made available to provide support for various commercial provisions in the engineering, procurement and construction contracts. We provide guarantees related to our services or work. If our services under a guaranteed project would be determined to have resulted in a material defect or other material deficiency, then we may be responsible for monetary damages or other legal remedies. When sufficient information about claims on guaranteed projects would be available and monetary damages or other costs or losses would be determined to be probable, we would record such guarantee losses.

Table of Contents

In the ordinary course of business, our customers may request that we obtain surety bonds in connection with construction contract performance obligations that are not required to be recorded in our consolidated balance sheets. We would be obligated to reimburse the issuer of our surety bonds for any payments made. Each of our commitments under performance bonds generally ends concurrently with the expiration of the related contractual obligation. If necessary, we may request the Bank to issue standby letters of credit for our benefit in the ordinary course of business, not to exceed \$10 million.

We also have a line of credit committed by the Bank in the amount of \$4.25 million for general purposes. During the current year approximately \$1.35 million of the available funds have been designated to cover letters of credit issued by the Bank in support of the project development activities of a potential power plant customer.

From time to time, we may arrange for bonding to be issued by our surety firm for the benefit of the owner of an energy project for which we are not providing construction services. We collect fees from the provider of such services as consideration for the use of our bonding capacity. As of January 31, 2014, the total amount of outstanding surety bonds issued under such arrangements was approximately \$14.0 million.

Inflation

Our monetary assets, consisting primarily of cash, cash equivalents and accounts receivables, and our non-monetary assets, consisting primarily of goodwill and other purchased intangible assets, are not affected significantly by inflation. We believe that replacement costs of our building, improvements, equipment and furniture will not materially affect our operations. However, the rate of inflation affects our costs and expenses, such as those for employee compensation and benefits and commodities used in construction projects, which may not be readily recoverable in the price of services offered by us.

Earnings before Interest, Taxes, Depreciation and Amortization (Non-GAAP Measurement)

We believe that Earnings before Interest, Taxes, Depreciation and Amortization (EBITDA) is a meaningful presentation that enables us to assess and compare our operating cash flow performance on a consistent basis by removing from our operating results the impacts of our capital structure, the effects of the accounting methods used to compute depreciation and amortization and the effects of operating in different income tax jurisdictions. Further, we believe that EBITDA is widely used by investors and analysts as a measure of performance.

As EBITDA is not a measure of performance calculated in accordance with generally accepted accounting principles in the United States (US GAAP), we do not believe that this measure should be considered in isolation from, or as a substitute for, the results of our operations presented in accordance with US GAAP that are included in our consolidated financial statements. In addition, our EBITDA does not necessarily represent funds available for discretionary use and is not necessarily a measure of our ability to fund our cash needs.

The following table presents EBITDA for continuing operations for the years ended January 31, 2014, 2013 and 2012:

	2014	2013	2012
Income from continuing operations, as reported	\$ 43,344,000	\$ 22,102,000	\$ 7,408,000
Interest expense	10,000	63,000	
Income tax expense	25,991,000	13,640,000	4,556,000

Edgar Filing: ARGAN INC - Form 10-K

Depreciation	549,000	522,000	455,000
Amortization of purchased intangible assets	243,000	243,000	334,000
EBITDA from continuing operations	70,137,000	36,570,000	12,753,000
Noncontrolling interests -			
Income (loss) from operations	3,219,000	(1,448,000)	(302,000)
Interest expense	171,000	751,000	94,000
Income tax expense (benefit)	432,000	(432,000)	
EBITDA of noncontrolling interests	3,822,000	(1,129,000)	(208,000)
EBITDA attributable to the stockholders of Argan, Inc.	\$ 66,315,000	\$ 37,699,000	\$ 12,961,000

- 40 -

Table of Contents

As we believe that our net cash flow from continuing operations is the most directly comparable performance measure determined in accordance with US GAAP, the following table reconciles the amounts of EBITDA from continuing operations for the applicable years, as presented above, to the corresponding amounts of net cash flows provided by continuing operating activities that are presented in our consolidated statements of cash flows:

	2014	2013	2012
EBITDA	\$ 70,137,000	\$ 36,570,000	\$ 12,753,000
Current income tax expense	(24,290,000)	(13,779,000)	(4,607,000)
Interest expense	(10,000)	(63,000)	
Non-cash stock option compensation expense	1,536,000	1,316,000	637,000
Gains on the deconsolidation of VIEs	(2,444,000)		
Decrease in escrowed cash			1,243,000
Decrease (increase) in accounts receivable	1,294,000	(8,826,000)	(2,976,000)
Change related to the timing of scheduled billings	62,099,000	6,992,000	56,750,000
(Decrease) increase in accounts payable and accrued liabilities	(9,937,000)	6,489,000	20,270,000
Other, net	598,000	2,943,000	(4,020,000)
Net cash provided by continuing operations	\$ 98,983,000	\$ 31,642,000	\$ 80,050,000

Critical Accounting Policies

A description of the Company's significant accounting policies, including those discussed below, is included in Note 2 to the accompanying consolidated financial statements for the year ended January 31, 2014. We consider the accounting policies related to revenue recognition on long-term construction contracts; the valuation of goodwill, other indefinite-lived assets and long-lived assets; the valuation of employee stock options; income tax reporting, and the reporting of legal matters to be most critical to the understanding of our financial position and results of operations, as well as the accounting and reporting for variable interest entities. In addition, our accounting for revenues associated with project development services provided by the power industry services segment was significant to the financial results reported for the year ended January 31, 2014.

Critical accounting policies are those related to the areas where we have made what we consider to be particularly subjective or complex judgments in making estimates and where these estimates can significantly impact our financial results under different assumptions and conditions. These estimates, judgments, and assumptions affect the reported amounts of assets, liabilities and equity and disclosure of contingent assets and liabilities at the date of financial statements and the reported amounts of revenues and expenses during the reporting periods. We base our estimates on historical experience and various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets, liabilities and equity that are not readily apparent from other sources. Actual results and outcomes could differ from these estimates and assumptions.

For example, during the periods since Tampa Bay Nutraceutical Company filed suit against VLI (see Note 12 to the accompanying consolidated financial statements), we established an accrued liability for legal fees that were expected to be incurred in order to defend ourselves against the allegations through the conclusion of a trial. The amount of the accrual was reversed in the current year in connection with the termination of this matter resulting in a favorable

adjustment in the amount of \$1,304,000 which was recorded in selling, general and administrative expenses for the year ended January 31, 2014.

Variable Interest Entities

Primarily due to the Moxie Projects not having sufficient equity investment to permit them to finance their activities without additional financial support, these entities were considered to be variable interest entities. A company with interests in a VIE must consolidate the entity if the company is deemed to be the primary beneficiary of the VIE; that is, if it has both (1) the power to direct the economically significant activities of the entity and (2) the obligation to absorb losses of, or the right to receive benefits from, the entity that could potentially be significant to the VIE. Such a determination requires management to evaluate circumstances and relationships that may be difficult to understand and to make a significant judgment, and to repeat the evaluation at each subsequent reporting date.

Table of Contents

Our updated evaluation reaffirmed that, despite not having an ownership interest in the Moxie Projects, GPI was the primary beneficiary of both VIEs as of January 31, 2013 due primarily to the significance of GPI's loans to the entities, the risk that GPI could absorb significant losses if the development projects were not successful, the opportunity for GPI to receive development success fees and the intent of the parties for GPS to be awarded large EPC contracts for the construction of the two power plants. As a result, the accounts of both Moxie Project entities were included in our consolidated financial statements as of January 31, 2013.

As discussed in Note 3 to the accompanying consolidated financial statements, due to events that occurred during the current year, we determined that we were no longer the primary beneficiary of either Moxie Project entity. We recognized gains totaling \$2,444,000 in the year ended January 31, 2014 in connection with the deconsolidation of these VIEs, representing reversals of the net losses incurred by the Moxie Projects prior to the deconsolidation. The deconsolidation of the Moxie Projects resulted in the removal from our consolidated balance sheet of capitalized project costs incurred by the Moxie Projects in the aggregate amount of \$5,872,000. In addition, and consistent with this accounting, our consolidated statement of operations for the year ended January 31, 2014 included interest income earned on the notes receivable from the Moxie Projects subsequent to the deconsolidation of the Moxie Projects in the amount of \$952,000.

Revenue Recognition

We enter into construction contracts principally on the basis of competitive bids. The types of contracts may vary and include agreements under which revenues are based on a fixed-price or cost-plus-fee basis. Revenues from cost-plus-fee construction agreements are recognized on the basis of costs incurred during the period plus the fee earned, measured using the cost-to-cost method. Components of fee based on our achievement of certain cost or schedule objectives are included when we believe it is probable that such amounts have been earned. Revenues from fixed-price construction contracts are recognized on the percentage-of-completion method. The percentage-of-completion method measures the ratio of costs incurred and accrued to date for each contract to the estimated total costs for each contract at completion. This requires us to prepare on-going estimates of the costs to complete each contract as the project progresses. In preparing these estimates, we make significant judgments and assumptions concerning our significant costs, including materials, labor and equipment, and we evaluate contingencies based on possible schedule variances, production delays or other productivity factors.

Actual costs may vary from the costs we estimate. Variations from estimated contract costs along with other risks inherent in fixed-price contracts may result in actual revenues and gross profits differing from those we estimate and could result in losses on projects or other significant unfavorable impacts on our operating results for any fiscal quarter or year. If a current estimate of total contract cost indicates a loss on a contract, the projected loss is recognized in full when determined, without regard to the percentage of completion. We review the estimate of total cost on each significant contract monthly. We believe our exposure to losses on fixed price contracts is limited by management's experience in estimating contract costs and in making early identification of unfavorable variances as work progresses.

We consider unapproved change orders to be contract variations on which we have customer approval for scope change, but not for the price associated with that scope change. The costs associated with a scope change are expensed as incurred and included in the estimated amount of cost to complete the contract. We recognize revenue on an unapproved change order when realization of price approval is probable. As of January 31, 2014, there were no material unapproved change orders included in the total contract value amounts or reflected in the estimated total cost amounts of the contracts in progress. Disputed change orders that are unapproved in regard to both scope and price are considered claims. The Company recognizes revenues from a claim only when an agreement on the amount of the claim has been reached.

In addition to revenues recorded during the current periods related to the core services provided by the power industry services segment, we recognized revenues associated with project development services provided by us to the Moxie Projects in the aggregate amount of \$27,052,000 during the current year as presented and described in Notes 2 and 3 to the accompanying consolidated financial statements. As we were not relieved of our responsibility to provide working capital funding for the Moxie Projects (our primary responsibility under the related development agreement) until the closing of their purchases by Panda, and as the Moxie Projects did not have the means to pay development success fees until the financial closings occurred, we did not consider the development success fees related to each Moxie Project to be earned or realizable until we received payment of the fees at the closing of each purchase. We concluded that the earnings process related to the development success fees was completed on the closing dates which occurred in December 2013 and August 2013 for Moxie Patriot and Moxie Liberty, respectively. Accordingly, we recognized the fees related to each project at the time of the corresponding closing.

Table of Contents**Goodwill and Other Indefinite-Lived Intangible Assets**

In connection with the acquisitions of GPS and SMC, we recorded substantial amounts of goodwill and other purchased intangible assets including contractual and other customer relationships, non-compete agreements and trade names. Other than goodwill, most of our purchased intangible assets were determined to have finite useful lives. At January 31, 2014, the total carrying value of goodwill was approximately \$18.5 million, which represented approximately 6% of consolidated total assets and is related to the acquisition of GPS. The Company has reviewed for impairment, at least annually, the carrying value of goodwill. The annual review performance date is November 1. We also perform tests for impairment of goodwill more frequently if events or changes in circumstances indicate that its value might be impaired.

As prescribed by current accounting guidance, we determine whether goodwill has been impaired or not using a two-step process of analysis. The first step of our goodwill impairment testing process is to identify a potential impairment by comparing the fair value of a reporting unit with its carrying amount, including goodwill. We utilized the assistance of a professional appraisal firm in the determination of the fair value of GPS as of November 1, 2013. A variety of alternative valuation approaches were considered. As a result of the analysis, we concluded that the market multiple and the discounted cash flow analysis approaches were the most appropriate valuation techniques for this exercise.

For the market multiple valuation, a fair value estimate for GPS was determined based on an evaluation of the market values of a selected number of reasonably similar publicly traded companies. A separate estimate was determined using a discounted cash flow analysis. Projected cash flows for GPS were developed based on its historical financial performance, a short-term projection of operating results based on the existing backlog of current business and the assumed addition of certain identified future projects, and published projected growth rates for the power construction industry. The projected cash flow amounts were discounted to present value based on rates of return which were determined considering prevalent rates of return, business risks for the industry and risks specifically related to GPS. A 50/50 weighting was applied to the results of the market multiple valuation and the discounted cash flow analysis of fair value in order to arrive at an average amount considered the fair value of GPS. As a result of this valuation, we concluded that the fair value of the net assets of GPS substantially exceeded its carrying amount. Therefore, the goodwill of GPS was deemed not to be impaired, and the performance of step two of the impairment assessment process was not required.

In September 2011, the Financial Accounting Standards Board issued Accounting Standards Update 2011-08, *Testing Goodwill for Impairment*, which is intended to simplify the two-step goodwill impairment test required by current guidance. The amendment allows an entity to first assess qualitative factors to determine whether it is necessary to perform the two-step quantitative goodwill impairment test. An entity is no longer required to calculate the fair value of a reporting entity unless the entity determines, based on a qualitative assessment, that it is more likely than not that its fair value is less than its carrying amount. The guidance includes discussions of the types of factors which should be considered in conducting the qualitative assessment including macroeconomic, industry, market and entity-specific factors.

We chose to conduct our assessment of goodwill as of November 1, 2013 in accordance with the testing requirements of the guidance before amendment. However, in the future we may elect to perform qualitative evaluations of GPS in order to support the position that impairment of the goodwill of GPS has not occurred and that its fair value continues to exceed its carrying value, thus avoiding the performance of the two-step quantitative goodwill impairment test for GPS.

Long-Lived Assets

Our long-lived assets consist primarily of the building purchased by us during the year ended January 31, 2013, related building improvements and equipment used in our operations. Fixed assets are carried at cost and such costs other than land are depreciated over their estimated useful lives, ranging from five to thirty-nine years, using the straight-line method for financial reporting purposes and accelerated methods for tax reporting purposes. The carrying value of certain long-lived assets is evaluated periodically when events or changes in circumstances indicate that the carrying amount of an asset or a group of assets may not be recoverable. If events and circumstances such as poor operating results of the applicable business segment indicate that the asset(s) should be reviewed for possible impairment, we use projections to assess whether future cash flows, including disposition, on a non-discounted basis related to the tested assets, are likely to exceed the recorded carrying amount of the assets to determine if an impairment exists. If we identify a potential impairment, we will estimate the fair value of the assets through known market transactions of similar equipment and other valuation techniques, which could include the use of similar projections on a discounted basis. We will record a loss to the extent that the carrying value of the impaired assets exceeds their fair value.

Table of Contents**Deferred Tax Assets**

As of January 31, 2014 and 2013, our consolidated balance sheets included net deferred tax liabilities and net deferred tax assets in the amounts of \$114,000 and \$1,639,000, respectively. These amounts reflect differences in the periods in which certain transactions are recognized for financial and income tax reporting purposes. The movement in the net deferred tax position during the current year reflected the realization of the deferred tax assets associated with the legal accrual that was reversed as discussed above and the losses accumulated by the Moxie Project entities prior to their deconsolidation. In addition, we are building deferred tax liability balances related to the portion of goodwill that is being amortized for income tax reporting purposes and the allowable deferral of the gross profit earned on the Panda Patriot project during the initial phase of construction.

In assessing whether deferred tax assets may be realizable, we consider whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. Our ability to realize our deferred tax assets depends primarily upon the generation of sufficient future taxable income to allow for the utilization of our deductible temporary differences and tax planning strategies. If such estimates and assumptions change in the future, we may be required to record valuation allowances against some or all of the deferred tax assets resulting in additional income tax expense in our consolidated statement of operations. At this time, we believe that the historically strong earnings performance of our power industry services business segment will continue during the periods in which the applicable temporary income tax differences become deductible. Accordingly, we believe that it is more likely than not that we will realize the benefit of any of our deferred tax assets.

Stock Options

We measure the cost of equity compensation to our employees and independent directors based on the estimated grant-date fair value of the awards and recognize the corresponding expense amounts over the vesting periods which are typically one year. Options to purchase 303,000, 293,000 and 212,500 shares of our common stock were awarded during the three years ended January 31, 2014 with weighted average fair value per share amounts of \$4.40, \$5.65 and \$5.09, respectively. The amounts of compensation expense recorded during the corresponding years related to vesting stock options were \$1,536,000, \$1,316,000 and \$637,000, respectively. We use the Black-Scholes option pricing model to compute the fair value of stock options. The Black-Scholes model requires the use of highly subjective assumptions in the computations which are disclosed in Note 13 to the accompanying consolidated financial statements and include the risk-free interest rate, the expected volatility of the market price of our common stock and the expected life of the stock option. We use the simplified method in developing the estimates of the expected lives of stock options, as we believe that our historical stock option exercise experience is insufficient to provide a reasonable basis upon which to estimate expected lives. Changes in these assumptions can cause significant fluctuations in the fair value of stock option awards. In addition, during the current year, we began to include an estimated dividend yield in the assumptions used to determine the fair value of stock option awards in recognition of our recent history of paying annual cash dividends to our stockholders.

Legal Contingencies

As discussed in Note 12 to the accompanying consolidated financial statements, we do become involved in legal matters where litigation has been initiated or claims have been made against us. At this time, we do not believe that a material loss is probable related to any of the current matters discussed therein. However, we do maintain accrued expense balances for the estimated amounts of legal costs expected to be billed related to each matter. We review the status of each matter and assess the adequacy of the accrued expense balances at the end of each fiscal quarter, and make adjustments to the balances if necessary. Should our assessments of the outcomes of these legal matters change, significant losses or additional costs may be recorded. On the other hand, and as discussed above, the final outcome of

a legal matter may result in the reversal of accrued liabilities established in prior periods.

Adopted and Other Recently Issued Accounting Pronouncements

There are no recently issued accounting pronouncements that have not yet been adopted that we consider material to our consolidated financial statements.

Table of Contents

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK.

In the normal course of business, our results of operations may be subject to risks related to fluctuations in interest rates. During the three years in the period ended January 31, 2014, we did not enter into derivative financial instruments for trading, speculation or other purposes that would expose the Company to market risk.

In addition, we are subject to fluctuations in prices for commodities including copper, concrete, steel products and fuel. Although we attempt to secure firm quotes from our suppliers, we generally do not hedge against increases in prices for copper, concrete, steel and fuel. Commodity price risks may have an impact on our results of operations due to the fixed-price nature of many of our contracts. We attempt to include the anticipated amounts of price increases in the costs of our bids.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA.

See the Index to the Consolidated Financial Statements on page 52 of this Annual Report on Form 10-K.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE.

None.

ITEM 9A. CONTROLS AND PROCEDURES.

Attached as exhibits to this Annual Report on Form 10-K are certifications of our Chief Executive Officer (CEO) and Chief Financial Officer (CFO), which are required in accordance with Rule 13a-14 of the Securities Exchange Act of 1934, as amended (the Exchange Act). This Controls and Procedures section includes information concerning the controls and controls evaluation referred to in the certifications and a reference to the report of Grant Thornton LLP, our independent registered public accounting firm, regarding its audit of our internal control over financial reporting. This section should be read in conjunction with the certifications and the report of Grant Thornton LLP for a more complete understanding of the topics presented.

Evaluation of Disclosure Controls and Procedures

We conducted an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures (Disclosure Controls) as of the end of the year covered by this Annual Report on Form 10-K. The controls evaluation was conducted under the supervision and with the participation of management, including our CEO and CFO. Disclosure Controls are controls and procedures designed to reasonably assure that information required to be disclosed in our reports filed under the Exchange Act, such as this Annual Report on Form 10-K, is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms. Disclosure Controls are also designed to reasonably assure that such information is accumulated and communicated to our management, including the CEO and CFO, as appropriate to allow timely decisions regarding required disclosure. Our quarterly evaluation of Disclosure Controls includes an evaluation of some components of our internal control over financial reporting, and internal control over financial reporting is also separately evaluated on an annual basis for purposes of providing the management report, which is set forth below.

Based on the controls evaluation, our CEO and CFO have concluded that, as of the end of the year covered by this Annual Report on Form 10-K, our Disclosure Controls were effective to provide reasonable assurance that information required to be disclosed in our Exchange Act reports is recorded, processed, summarized, and reported

within the time periods specified by the SEC, and the material information related to Argan, Inc. and its consolidated subsidiaries is made known to management, including the CEO and CFO, particularly during the period when our periodic reports are being prepared.

Table of Contents

Management Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States (US GAAP). Internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company s assets that could have a material effect on the consolidated financial statements.

Management assessed our internal control over financial reporting as of January 31, 2014, the end of the fiscal year, based on assessment criteria established in the 1992 *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Management s assessment included evaluation of elements such as the design and operating effectiveness of key financial reporting controls, process documentation, accounting policies, and our overall control environment.

Based on our assessment, management has concluded that our internal control over financial reporting was effective as of the end of the fiscal year to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external reporting purposes in accordance with US GAAP. We reviewed the results of management s assessment with the Audit Committee of our Board of Directors. In addition, on a quarterly basis we will evaluate any changes to our internal control over financial reporting to determine if material change occurred.

Attestation Report of the Independent Registered Public Accounting Firm

The effectiveness of our internal control over financial reporting as of January 31, 2014 has been audited by Grant Thornton LLP, our independent registered public accounting firm, who also audited our consolidated financial statements included in this Annual Report on Form 10-K, as stated in their reports which appear with our accompanying consolidated financial statements.

Changes in Internal Controls

No change in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) occurred during the fiscal quarter ended January 31, 2014 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

The Company s management, including the CEO and CFO, does not expect that our Disclosure Controls or our internal control over financial reporting will prevent or detect all errors and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system s objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple

error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders of Argan, Inc.

We have audited the internal control over financial reporting of Argan, Inc. (a Delaware corporation) and subsidiaries (the Company) as of January 31, 2014, based on criteria established in the 1992 *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of January 31, 2014, based on criteria established in the 1992 *Internal Control Integrated Framework* issued by COSO.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements of the Company as of and for the year ended January 31, 2014, and our report dated April 11, 2014 expressed an unqualified opinion on those financial statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders of Argan, Inc.

We have audited the accompanying consolidated balance sheets of Argan, Inc. (a Delaware corporation) and subsidiaries (the Company) as of January 31, 2014 and 2013, and the related consolidated statements of operations, changes in stockholders' equity and cash flows for each of the three years in the period ended January 31, 2014. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Argan, Inc. and subsidiaries as of January 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended January 31, 2014, in conformity with accounting principles generally accepted in the United States of America.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of January 31, 2014, based on criteria established in the 1992 *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated April 11, 2014 expressed an unqualified opinion on the Company's internal control over financial reporting.

ARGAN, INC. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

JANUARY 31, 2014, 2013 AND 2012

NOTE 1 DESCRIPTION OF THE BUSINESS

Argan, Inc. (Argan) conducts continuing operations through its wholly owned subsidiaries, Gemma Power Systems, LLC and affiliates (GPS), which provide the substantial portion of consolidated revenues, and Southern Maryland Cable, Inc. (SMC). Argan and these consolidated subsidiaries are hereinafter referred to as the Company. Through GPS, the Company provides a full range of engineering, procurement, construction, commissioning, operations management, maintenance and consulting services to the power generation and renewable energy markets for a wide range of customers including public utilities and independent power project owners. The combination of GPS and its consolidated joint ventures and variable interest entities represents our power industry services business segment. Through SMC, the services of the telecommunications infrastructure services segment include project management, construction, installation and maintenance provided to commercial, local government and federal government customers primarily in the mid-Atlantic region.

NOTE 2 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation The consolidated financial statements include the accounts of Argan, its wholly-owned subsidiaries, its majority-controlled joint ventures and any variable interest entities for which GPS is deemed to be the primary beneficiary (see Note 3). The Company's fiscal year ends on January 31. All significant inter-company balances and transactions have been eliminated in consolidation. In Note 16, the Company has provided certain financial information relating to the operating results and assets of its industry segments based on the manner in which management disaggregates the Company's financial reporting for purposes of making internal operating decisions.

Use of Estimates The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America (US GAAP) requires management to make use of estimates and assumptions that affect the reported amounts of assets and liabilities, revenues, expenses, and certain financial statement disclosures. Management believes that the estimates, judgments and assumptions upon which it relies are reasonable based upon information available to it at the time that these estimates, judgments and assumptions are made. Estimates are used for, but are not limited to, the Company's accounting for revenue recognition, the determination of the allowance for doubtful accounts, the valuation of assets with long and indefinite lives including goodwill, the evaluation of contingent obligations and the valuation of deferred taxes. Actual results could differ from these estimates.

Fair Values Current professional accounting guidance applies to all assets and liabilities that are being measured and reported on a fair value basis. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or most advantageous market. The requirements prescribe a fair value hierarchy that has three levels of inputs, both observable and unobservable, with use of the lowest possible level of input to determine fair value. A Level 1 input includes a quoted market price in an active market or the price of an identical asset or liability. Level 2 inputs are market data other than Level 1 inputs that are observable either directly or indirectly including quoted market prices for similar assets or liabilities, quoted market prices in an inactive market, and other observable information that can be corroborated by market data. Level 3 inputs are unobservable and corroborated by little or no market data.

The carrying value amounts of the Company's cash and cash equivalents, accounts and notes receivable, accounts payable and other current liabilities are reasonable estimates of their fair values due to the short-term nature of these instruments. The fair value of business segments (as needed for purposes of determining indications of impairment to the carrying value of goodwill) is determined using an average of valuations based on market multiples and discounted cash flows, and consideration of our market capitalization.

Table of Contents

Property, Plant and Equipment Property, plant and equipment are stated at cost. Depreciation amounts are determined using the straight-line method over the estimated useful lives of the assets, other than land, which are generally from five to thirty-nine years. Building and leasehold improvements are amortized on a straight-line basis over the shorter of the estimated useful life of the related asset or the lease term, as applicable. The costs of maintenance and repairs are expensed as incurred and major improvements are capitalized. When assets are sold or retired, the cost and related accumulated depreciation are removed from the accounts and the resulting gain or loss is included in earnings.

Goodwill At least annually, the Company reviews the carrying value of goodwill for impairment. Goodwill impairment is determined using the two-step process.

The first step of the impairment test is to identify a potential impairment by comparing the fair value of the reporting unit with its carrying amount, including goodwill. The estimate of fair value of the reporting unit, generally a company's operating segment, is determined using various valuation techniques, with the principal techniques being a discounted cash flow analysis and market multiple valuation. A discounted cash flow analysis requires making various judgmental assumptions, including assumptions about future cash flows, growth rates and discount rates. After taking into consideration industry and company trends, if the fair value of the reporting unit exceeds its carrying amount, goodwill of the reporting unit is not deemed impaired and the second step of the impairment test is not performed. If the carrying amount of the reporting unit exceeds its fair value, the second step of the impairment test is performed to measure the amount of impairment loss, if any.

The second step of the impairment test compares the implied fair value of the reporting unit's goodwill with the corresponding carrying amount. If the carrying amount of the reporting unit's goodwill exceeds the implied fair value of that goodwill, an impairment loss is recognized in an amount equal to that excess. The implied fair value of goodwill is determined in the same manner as the amount of goodwill recognized in a business combination. Accordingly, the fair value of the reporting unit is allocated to all of the assets and liabilities of that reporting unit (including any unrecognized intangible assets) as if the reporting unit had been acquired in a business combination and the fair value of the reporting unit was the purchase price paid to acquire the reporting unit. Nonetheless, the Company would evaluate any of these assets for impairment more frequently if events or changes in circumstances indicate that an asset value might be impaired.

Long-Lived Assets The carrying amount of long-lived assets, consisting primarily of property, plant and equipment and purchased intangible assets with definite lives, are reviewed for impairment whenever events or changes in circumstances indicate that a carrying amount should be assessed. The Company compares the carrying value of the long-lived asset to the undiscounted future cash flows expected to result from the use of the asset. In the event the Company determines that the carrying value of the asset is not recoverable, a loss would be recognized based on the amount by which the carrying value exceeds the fair value of the asset. Fair value is generally determined by using quoted market prices or valuation techniques such as the present value of expected future cash flows, appraisals, or other pricing models as appropriate. The useful lives and amortization of purchased intangible assets are described in Note 9.

Revenue Recognition, Power Industry Services Revenues are recognized under various construction agreements, including agreements for which revenues are based on either a fixed price or cost-plus-fee basis, with typical durations of one to three years. Revenues from cost-plus-fee construction agreements are recognized on the basis of costs incurred during the period plus the fee earned, measured using the cost-to-cost method. Revenues from fixed price construction agreements, including a portion of estimated profit, are recognized as services are provided, based on costs incurred and estimated total contract costs using the percentage of completion method. Changes to total estimated contract costs or losses, if any, are recognized in the period in which they are determined.

Unapproved change orders, which represent contract variations for which the Company has project owner approval for scope changes but not for the price associated with the scope changes, are reflected in revenues when it is probable that the applicable costs will be recovered through a change in the contract price. As of January 31, 2014, there were no material unapproved change orders included in the total contract value amounts or reflected in the estimated total cost amounts of the contracts in progress. Disputed change orders that are unapproved in regard to both scope and price are considered claims. The Company recognizes revenues related to a claim only when an agreement on the amount has been reached with the project owner. Construction agreements may contain incentive fees that provide for increasing the Company's total fee on a particular contract based on the actual amount of costs incurred in relation to an agreed upon target cost. The Company includes such fees in the determination of total estimated revenues when management believes that it is probable that such fees have been earned, which is typically near the end of the contract performance period.

Table of Contents

The following schedule presents revenues for the two categories of power industry services provided during the years ended January 31, 2014, 2013 and 2012. Core services represent primarily the ongoing activities conducted pursuant to engineering, construction and procurement contracts for energy plant project owners. The revenues associated with project development services include additional amounts earned upon the success of activities performed by project developers including the closing of permanent financing.

Category of Service	2014	2013	2012
Core services	\$ 191,597,000	\$ 261,327,000	\$ 132,519,000
Project development services	27,052,000		
Revenues	\$ 218,649,000	\$ 261,327,000	\$ 132,519,000

Revenue Recognition, Telecommunications Infrastructure Services This business segment generates revenues under various arrangements, including contracts for which revenues are based on either a fixed price or a time and materials basis. Revenues from time and materials contracts are recognized when the related services are provided to the customer. Revenues from fixed price contracts, including portions of estimated profit, are recognized as services are provided, based on costs incurred and estimated amounts of total contract costs using the percentage of completion method. Many of the contracts include multiple deliverables. Because these projects are fully integrated undertakings, the Company cannot separate the services provided into individual components. Losses on contracts, if any, are recognized in the periods in which they become known.

Income Taxes Deferred tax assets and liabilities are recognized using enacted tax rates for the effects of temporary differences between the book and tax bases of recorded assets and liabilities. If management believes that it is more likely than not that some portion or all of a deferred tax asset will not be realized, the carrying value will be reduced by a valuation allowance. The Company adopted the accounting and disclosure guidance for uncertainty in income taxes. There has not been any material effect on the consolidated financial statements as the result of adopting these requirements.

Stock-Based Compensation The Company measures and recognizes compensation expense for all share-based payment awards made to employees and directors based upon fair value at the date of award using a fair value based option pricing model. The compensation expense is recognized over the requisite service period.

NOTE 3 SPECIAL PURPOSE ENTITIES**Consolidation of the Moxie Project Entities**

Moxie Energy, LLC (Moxie), a Delaware limited liability company, formed a pair of wholly-owned limited liability companies in order to sponsor the development of two natural gas-fired power plant projects (the Moxie Projects). The strategy of Moxie was to build the corresponding power plants in the Marcellus Shale region of Pennsylvania near the natural gas source, eliminating the need to transport natural gas via pipelines over long distances to supply the power production plants. The Moxie Project entities, Moxie Liberty LLC (Moxie Liberty) and Moxie Patriot LLC (Moxie Patriot) together referred to as the Moxie Project Entities, were engaged in the lengthy process of planning, obtaining permits and arranging financing for the construction, ownership and operation of the power plants.

Under a development agreement with Moxie, as amended and restated, Gemma Power, Inc. (GPI, an affiliate included in the GPS group of companies and wholly owned by Argan) supported the development of these two projects with

loans that were made in order to cover most of the costs of the development efforts. GPI was authorized by the Company's board of directors to extend loans to the Moxie Project Entities that could total up to \$10 million. Moxie supported the arrangement by providing GPI with a first priority lien and security interest in all of the assets of the Moxie Project Entities, limited recourse guarantees of all of the obligations of the entities, and first priority liens on its membership interests in the two entities. The admission of any additional investor that would change the control of Moxie or either of the Moxie Project Entities required the prior approval of GPI. Pursuant to the development agreement, Moxie provided GPI with the right to receive development success fees and granted GPS the right to provide construction services for the two projects under engineering, procurement and construction contracts.

Primarily due to the Moxie Project Entities not having sufficient equity investment to permit the entities to finance their activities without additional financial support, these entities were considered to be variable interest entities (VIEs). Despite not having an ownership interest in the Moxie Project Entities, GPI was the primary beneficiary of these VIEs due substantially to the significance of GPI's loans to the entities, the risk that GPI could absorb significant losses if the development projects were not successful, the opportunity for GPI to receive development success fees and the intent of the parties for GPS to be awarded large contracts for the construction of the two power plants. Accordingly, the Company included the accounts of the VIEs of Moxie in its consolidated financial statements for the years ended January 31, 2013 and 2012.

Table of Contents

The loss (net of income tax benefit) associated with the Moxie Project Entities incurred prior to the deconsolidation of the entities described below, and therefore included in the consolidated results of operations for the year ended January 31, 2014, was approximately \$77,000. The losses (net of income tax benefit) associated with the Moxie Project Entities and included in the consolidated results of operations for the years ended January 31, 2013 and 2012 totaled \$1,448,000 and \$302,000, respectively.

Deconsolidation of the Moxie Project Entities

During the year ended January 31, 2014, Moxie reached agreements for the purchase of its membership interests in the Moxie Project Entities by affiliates of Panda Power Funds (Panda). The consummation of the purchase of each Moxie Project Entity was contingent upon Panda securing permanent financing for the corresponding project. In order to support the continuing progress of each project, Panda 1) provided collateral supporting the rights of Moxie Liberty and Moxie Patriot to connect to the electricity grid, 2) made equipment deposit payments to the manufacturer of the natural gas-fired turbines, and 3) commenced payments to GPS under the corresponding engineering, procurement and construction contracts after the Moxie Project Entities provided GPS with limited notices-to-proceed. The equipment deposit funding was provided by Panda under secured loans. The membership interest purchase agreements required the Moxie Project Entities to continue to conduct the remaining development activities. However, the rights of the Moxie Project Entities to conduct any activities that deviated from the development plans were subject to the approval of Panda. Also, GPI consented to the secured lending arrangements with Panda and agreed to equal priority regarding claims (neither party had a priority of payment over or was subordinate to the other) and the methods for sharing the proceeds of any debt payments made by the Moxie Project Entities. In addition, the Moxie Project Entities entered into separate engineering, procurement and construction contracts with GPS for the Liberty and Patriot Power Projects (the EPC Contracts).

With the completion of the agreements described above, the power to direct the economic activities of the Moxie Project Entities that most affected their economic performance shifted. GPI was no longer the primary beneficiary of either of the VIEs. Panda became the primary source of financial support for the pre-construction phase of the related projects, providing significant financing in order to secure connections to the electricity grid and to pay for the natural gas-fired turbines, the most significant equipment components of the power plants. Through the EPC Contracts, GPS transitioned into its typical role of engineering, procurement and construction contractor where it is subject to the direction of the owner of the projects. Panda funded payments made to GPS in order to cover certain costs incurred under the EPC Contracts. Further, the identification of sources and structuring of the permanent financing for the Moxie Projects were activities directed and completed primarily by Panda. As a result, the Company ceased the consolidation of the Moxie Project Entities during the current fiscal year. The elimination of the accounts of Moxie Project Entities from the Company's consolidated financial statements, including the accumulated net losses of these VIEs, resulted in pre-tax gains recognized by GPI which totaled \$2,444,000.

Development Success Fees Associated with the Moxie Project Entities

In August and December 2013, respectively, Panda completed the purchase of and permanent financing for Moxie Liberty and Moxie Patriot and renamed the project entities Panda Liberty LLC (Panda Liberty) and Panda Patriot LLC (Panda Patriot). Also, GPS received full notices-to-proceed under the EPC Contracts. In connection with the closings, GPI received cash from the Moxie Project Entities in the aggregate amount of \$37,863,000, including the receipt of the development success fees in the total amount of \$27,052,000 which has been included in the revenues of the power industry services segment for the year ended January 31, 2014 and the repayment of notes receivable and accrued interest in the aggregate amount of \$10,811,000. From the dates of deconsolidation through the dates of purchase of the Moxie Project Entities by Panda, GPI earned interest income on its notes receivable in the aggregate amount of \$952,000. This amount was included in other income in the consolidated statement of operations for the

year ended January 31, 2014.

As GPI was not relieved of its responsibility to provide working capital funding for the Moxie Projects (its primary responsibility under the related development agreement) until the closing of their purchases by Panda, and as the Moxie Projects did not have the means to pay development success fees until the financial closings occurred, the development success fees related to each Moxie Project were not earned or realizable until GPI received payment of the fees at the closing of each purchase. Management concluded that the earnings process related to the development success fees was completed on the closing dates which occurred in December 2013 and August 2013 for Moxie Patriot and Moxie Liberty, respectively. Accordingly, we recognized the fees related to each project at the time of the corresponding closing.

Table of Contents**Construction Joint Ventures**

During the current year, GPS assigned the EPC Contracts to two separate joint ventures that were formed in order to perform the work for the applicable project and to spread the bonding risk of each project. The joint venture partner for both projects is a large, heavy civil contracting firm. The joint venture agreements provide that GPS has the majority interest in any profits, losses, assets and liabilities that may result from the performance of the EPC Contracts. However, if the joint venture partner is unable to pay its share of any losses, GPS would be fully liable for those losses incurred under the EPC Contracts. GPS has no significant commitments under these arrangements beyond those related to the completion of the EPC Contracts. The joint venture partners will dedicate resources that are necessary to complete the projects and will be reimbursed for their costs. GPS expects to perform most of the activities of the EPC Contracts. Due to the financial control of GPS, the accounts of the joint ventures were included in the consolidated financial statements for the year ended January 31, 2014.

NOTE 4 PAYMENT OF SPECIAL CASH DIVIDENDS

In September 2013, the Company's board of directors declared a special cash dividend of \$0.75 per share of common stock, which was paid on November 7, 2013 to stockholders of record at the close of business on October 15, 2013. During the years ended January 31, 2013 and 2012, the Company declared and paid special cash dividends of \$0.60 and \$0.50 per share of common stock, respectively.

NOTE 5 CASH AND CASH EQUIVALENTS

The Company holds cash on deposit in excess of federally insured limits and has liquid mutual fund investments at Bank of America (the Bank). Management does not believe that the risks associated with keeping deposits in excess of federal deposit limits or holding investments in liquid mutual funds represent material risks.

The Company considers all liquid investments with original maturities of three months or less at the time of purchase to be cash equivalents. At January 31, 2014, a significant portion of the balance of cash and cash equivalents was invested in a high-quality money market fund with at least 80% of its net assets invested in U.S. Treasury obligations and repurchase agreements secured by U.S. Treasury obligations. The fund is sponsored by an investment division of the Bank.

The amount of cash and cash equivalents in the consolidated balance sheet as of January 31, 2014 included cash held within the consolidated joint venture entities that were formed during the current year. Such cash, which amounted to approximately \$117.7 million as of January 31, 2014, will be used for activities of those construction joint ventures including future distributions to joint venture partners.

NOTE 6 ACCOUNTS RECEIVABLE

Amounts retained by project owners under construction contracts and included in accounts receivable at January 31, 2014 and 2013 were approximately \$22.7 million and \$20.2 million, respectively. Such retainage amounts represent funds withheld by construction project owners until a defined phase of a contract or project has been completed and accepted by the project owner. The lengths of retention periods may vary, but for material amounts outstanding as of January 31, 2014, the remaining periods range between ten (10) and twenty-nine (29) months.

The Company conducts business and may extend credit to customers based on an evaluation of the customers financial condition, generally without requiring collateral. Exposure to losses on accounts receivable is expected to differ by customer due to the varying financial condition of each customer. The Company monitors its exposure to

credit losses and maintains allowances for anticipated losses considered necessary under the circumstances based on historical experience with uncollected accounts and a review of its currently outstanding accounts receivable.

Table of Contents

The amount of the allowance for doubtful accounts at January 31, 2014 and 2013 was approximately \$5.5 million. In fiscal year 2010, the balance of the accounts receivable from the owner of a partially completed construction project was written down to \$5.5 million, the amount of the net proceeds remaining from a public auction of the facility. As the amount that the Company may ultimately receive in a distribution of the auction proceeds, if any, is not known at this time, this remaining accounts receivable amount was fully reserved. The amounts of the provision for accounts receivable losses for the years ended January 31, 2014, 2013 and 2012 were not material.

NOTE 7 COSTS, ESTIMATED EARNINGS AND BILLINGS ON UNCOMPLETED CONTRACTS

The Company's billing practices are governed primarily by the contract terms of each project based on the achievement of milestones, pre-agreed schedules or progress towards completion approved by the project owner. Billings do not necessarily correlate with revenues recognized under the percentage-of-completion method of accounting.

The tables below set forth the aggregate amount of costs incurred and earnings accrued on uncompleted contracts compared with the billings on those contracts through January 31, 2014 and 2013, and reconcile the net amounts of billings in excess of costs and estimated earnings to the amounts included in the consolidated balance sheets at those dates.

	2014	2013
Costs incurred on uncompleted contracts	\$ 162,137,000	\$ 259,390,000
Estimated accrued earnings	21,961,000	48,724,000
	184,098,000	308,114,000
Less Billings to date	318,307,000	380,295,000
	\$ 134,209,000	\$ 72,181,000
Costs and estimated earnings in excess of billings	\$ 527,000	\$ 1,178,000
Billings in excess of costs and estimated earnings	134,736,000	73,359,000
	\$ 134,209,000	\$ 72,181,000

Contract costs include all direct costs, such as material and labor, and those indirect costs related to contract performance such as payroll taxes, insurance, job supervision and equipment charges. The amounts of costs and estimated earnings in excess of billings are expected to be billed and collected in the normal course of business.

NOTE 8 PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment consisted of the following at January 31, 2014 and 2013:

	2014	2013
Land and improvements	\$ 473,000	\$ 471,000
Building and improvements	2,779,000	2,587,000

Edgar Filing: ARGAN INC - Form 10-K

Furniture, machinery and equipment	3,560,000	3,060,000
Trucks and other vehicles	1,578,000	1,803,000
Construction project costs of variable interest entities		5,309,000
	8,390,000	13,230,000
Less accumulated depreciation	4,207,000	3,762,000
Property, plant and equipment, net	\$ 4,183,000	\$ 9,468,000

In June 2012, GPS purchased an office building and the underlying land for a cash price of \$1,955,000. The building is large enough to combine the staff of GPS into one facility, and the purchase eliminated the need for leased office space in Connecticut. Depreciation expense amounts related to continuing operations for property and equipment were \$549,000, \$522,000 and \$455,000 for the fiscal years ended January 31, 2014, 2013 and 2012, respectively. The costs of maintenance and repairs related to continuing operations were \$250,000, \$325,000 and \$295,000 for the years ended January 31, 2014, 2013 and 2012, respectively.

- 64 -

Table of Contents**NOTE 9 PURCHASED INTANGIBLE ASSETS**

In connection with the acquisitions of GPS and SMC, the Company recorded substantial amounts of goodwill and other purchased intangible assets including trade names and non-compete agreements. The goodwill included in the balance sheets at January 31, 2014 and 2013 in the amount of \$18,476,000 relates entirely to the acquisition of GPS. For income tax reporting purposes, goodwill allocated to GPS in the approximate amount of \$12.3 million is being amortized on a straight-line basis over periods of 15 years. The excess amount of the Company's goodwill is not amortizable for income tax reporting purposes.

The Company's other purchased intangible assets consisted of the following elements. The Company determined the fair values of the GPS and SMC trade names using a relief-from-royalty methodology. The Company also considered recognition by potential customers of a trade name such as GPS. The Company believes that the useful life of the GPS trade name is fifteen years, the period over which the trade name is expected to contribute to future cash flows. Management concluded that the useful life of the SMC trade name was indefinite since it is expected to contribute directly to future cash flows in perpetuity. The fair value amounts of three non-compete agreements with the former owners of acquired businesses were determined at the time of the acquisitions by discounting the estimated reductions in the cash flows that would be expected if the key employees were to leave the Company. The Company amortized the fair value amounts ascribed to the non-compete agreements over five years, the contractual length of each non-compete agreement.

The net carrying amounts of the Company's intangible assets, other than goodwill, consisted of the following at January 31, 2014 and 2013:

	2014	2013
Trade name GPS	\$ 1,907,000	\$ 2,150,000
Trade name SMC	181,000	181,000
Totals	\$ 2,088,000	\$ 2,331,000

As of January 31, 2014 and 2013, the amounts of accumulated amortization associated with the trade name of GPS were \$1,736,000 and \$1,493,000, respectively. Amortization expense was \$243,000, \$243,000 and \$334,000 for the years ended January 31, 2014, 2013 and 2012, respectively, including \$91,000 in the year ended January 31, 2012 associated with fully amortized non-compete agreements. The estimated amounts of amortization expense related to the trade name of GPS for the next five fiscal years are presented below:

2015	\$ 243,000
2016	243,000
2017	243,000
2018	243,000
2019	243,000
Thereafter	692,000
Total	\$ 1,907,000

NOTE 10 FINANCING ARRANGEMENTS

The Company maintains financing arrangements with the Bank. The financing arrangements, as amended, provide a revolving loan with a maximum borrowing amount of \$4.25 million that is available until May 31, 2015, with interest at LIBOR plus 2.25%. During the current year, available funds in the total amount of \$1.35 million were designated to cover letters of credit issued by the Bank in support of the project development activities of a potential power plant customer. The Company may obtain standby letters of credit from the Bank for use in the ordinary course of business not to exceed \$10.0 million. There were no actual borrowings outstanding under the Bank financing arrangements as of January 31, 2014 or 2013.

The Company has pledged the majority of its assets to secure the financing arrangements. The Bank's consent is required for acquisitions, divestitures, certain investments and cash dividends. The Bank requires that the Company comply with certain financial covenants at its fiscal year-end and at each of its fiscal quarter-ends (using a rolling 12-month period) including covenants that (1) the ratio of total funded debt to EBITDA (as defined by the Bank) not exceed 2 to 1, (2) the fixed charge coverage ratio be not less than 1.25 to 1, and (3) the ratio of senior funded debt to EBITDA not exceed 1.50 to 1.

- 65 -

Table of Contents

At January 31, 2014 and 2013, the Company was in compliance with the financial covenants of its amended financing arrangements. Management believes that the Company will continue to comply with its financial covenants under the financing arrangements.

NOTE 11 COMMITMENTS

The Company leases certain office space and other facilities under non-cancelable operating leases expiring on various dates through February 2017. Certain leases contain renewal options. As it is management's intention to continue to occupy the headquarters facility of SMC, the future minimum lease payment amounts presented below include the payment amounts associated with three remaining two-year option terms. None of the Company's leases include significant amounts for incentives, rent holidays, penalties, or price escalations. Under certain lease agreements, the Company is obligated to pay property taxes, insurance, and maintenance costs.

The amounts of rent included in the selling, general and administrative expenses of continuing operations were \$171,000, \$390,000 and \$443,000 for the years ended January 31, 2014, 2013 and 2012, respectively. The amounts of rent incurred on construction projects and included in the costs of revenues of continuing operations were \$3,612,000, \$7,567,000 and \$4,386,000 for the years ended January 31, 2014, 2013 and 2012, respectively. The following is a schedule of future minimum lease payments for the operating leases of continuing operations that had initial or remaining non-cancelable lease terms in excess of one year as of January 31, 2014:

2015	\$ 181,000
2016	183,000
2017	182,000
2018	89,000
2019	89,000
Thereafter	81,000
Total	\$ 805,000

NOTE 12 LEGAL CONTINGENCIES

In the normal course of business, the Company has pending claims and legal proceedings. It is the opinion of management, based on information available at this time, that none of the current claims and proceedings could have a material effect on the Company's consolidated financial statements other than the matters discussed below. The material amounts of any legal fees expected to be incurred in connection with these matters are accrued when such amounts are estimable.

Altra Matters

GPS was the contractor for engineering, procurement and construction services related to an anhydrous ethanol plant in Carleton, Nebraska (the Project). The Project owner was ALTRA Nebraska, LLC (Altra). In November 2007, GPS and Altra agreed to a suspension of the Project while Altra sought to obtain financing to complete the Project. By March 2008, financing had not been arranged which terminated the construction contract prior to completion of the Project. In March 2008, GPS filed a mechanic's lien against the Project in the approximate amount of \$23.8 million, which amount included sums owed to subcontractors/suppliers of GPS and their subcontractors/suppliers. Several other claimants also filed mechanic's liens against the Project.

In August 2009, Altra filed for bankruptcy protection. Proceedings resulted in a court-ordered liquidation of Altra's assets. The incomplete plant was sold at auction in October 2009. Remaining net proceeds of approximately \$5.5 million are being held by the bankruptcy court and have not been distributed to Altra's creditors. The court separated the lien action into two phases relating to the priority of the claims first and the validity and amount of each party's lien claim second. In November 2011, the court held that the claim of the project lender is superior to the lien claim of GPS. Fact discovery related to the second phase was completed in January 2012, but the court has continued to stay this action pending the final resolution of the claim against the Company's payment bond that is discussed below.

Table of Contents

In January 2009, GPS and Delta-T Corporation (Delta T), a major subcontractor to GPS on the Project, executed a Project Close-Out Agreement (the Close-Out) which settled all contract claims between the parties and included a payment in the amount of \$3.5 million that GPS made to Delta-T. In the Close-Out, Delta-T also agreed to prosecute any lien claims against Altra, to assign to GPS the first \$3.5 million of any resulting proceeds and to indemnify and defend any claims against GPS related to the Project. In addition, GPS received a guarantee from Delta-T's parent company in support of the indemnification commitment. Delta-T assigned its lien rights related to the Project to GPS which advised the parties that it would be pursuing only the assigned lien rights of Delta-T, amounting to approximately \$21.2 million, for the remainder of this action.

In April 2009, a subcontractor (DCR) to Delta-T received an arbitration award in its favor against Delta-T in the amount of approximately \$6.8 million (the Judgment Award). In December 2009, the Judgment Award was confirmed in federal district court in Florida. In April 2009, DCR also filed suit in the District Court of Thayer County, Nebraska, in order to recover its claimed amount of \$6.8 million, as amended, from a payment bond issued to Altra on behalf of GPS. Delta-T did not pay or satisfy any portion of the award and it abandoned its defense of the surety company. In December 2011, DCR filed a separate lawsuit against GPS relating to the Project in the District Court of Thayer County, Nebraska, that alleged claims against GPS for failure to furnish the surety bond upon request and unjust enrichment. DCR claimed that, to the extent that the bonding company was successful in asserting a notice defense to DCR's claim, GPS was liable for DCR's damages for failing to furnish the bond when requested. DCR's unjust enrichment claim alleged that GPS received payments from Altra that exceeded the scope of GPS's work on the Project and should have been paid to lower tier subcontractors such as DCR; its complaint sought damages in the amount of \$6.1 million plus interest, costs and attorney fees.

In August 2012, the applicable parties executed settlement agreements that resulted in the dismissal of the claims against GPS and its surety company, with prejudice, and the assignment of DCR's mechanics lien claim against the escrowed Altra Project sales proceeds to GPS. In connection with these settlements, GPS made cash payments to DCR in August 2012 that totaled \$1,875,000. The payments were funded, in part, by a cash payment received during the year from Delta-T's parent company in the amount of \$275,000. The net amount of \$1,600,000 was included as a charge to the cost of revenues of GPS in July 2012. Subsequent to the execution of the settlement agreements and the payments made by GPS, DCR's former counsel filed notice of a charging lien, claiming that DCR is indebted to counsel in excess of \$1.8 million in fees and costs. In addition, a subcontractor to DCR on the Altra Project filed a motion asking the court to set aside the dismissals or, in the alternative, to reconsider them. In October 2012, the court vacated the prior orders of dismissal and permitted DCR's former counsel and former subcontractor to file complaints. A trial for the charging lien and subcontractor claims was held in April 2013. The court ordered the parties to submit post-trial briefs which were provided to the court in August 2013. The parties currently await the court's verdict.

The Company intends to vigorously pursue the enforcement of the settlement agreements and the pursuit of the lien claims against the Altra Project assigned to GPS. Due to the uncertainty of the ultimate outcomes of these legal proceedings, assurance cannot be provided by the Company that it will be successful in these efforts. However, management does not believe that resolution of the matters discussed above will result in additional loss with material negative effect on the Company's consolidated operating results in a future reporting period. No additional provision for loss related to these matters was recorded in the consolidated statement of operations for the year ended January 31, 2014. If new facts become known in the future indicating that it is probable that a loss has been incurred by GPS and the amount of additional loss can be reasonably estimated by GPS, the impacts of the change will be reflected in the consolidated financial statements at that time.

Tampa Bay Nutraceutical Company

On or about September 19, 2007, Tampa Bay Nutraceutical Company, Inc. (TBN) filed a civil action in the Circuit Court of Florida for Collier County (the Circuit Court) against Vitarich Laboratories, Inc. (VLI , see Note 19). The causes of action related to an order for product issued by TBN to VLI in June 2007 and alleged (1) breach of contract; (2) fraudulent misrepresentation; and (3) various warranty breaches, among other allegations. TBN alleged compensatory damages in excess of \$42 million.

Since 2011, the parties were engaged primarily in legal activity concerning TBN s failure to provide proper discovery responses to VLI. In August 2012, the Circuit Court ordered TBN to pay to VLI, by September 17, 2012, a sanction award covering the costs and expenses incurred by VLI as a result of TBN s repeated disobedience of court orders. As TBN failed to do so, the Circuit Court issued a judgment in favor of VLI, ordering that TBN s pleadings in this matter be stricken and dismissing all of plaintiff s claims with prejudice.

Table of Contents

However, in September 2012, TBN filed an appeal in the Florida's Second District Court of Appeal (the Appeal Court) for reconsideration of the sanction award decision. In July 2013, the Appeal Court affirmed the Circuit Court's decision. As a result, the judgment of the Circuit Court has now become final.

In connection with this matter, VLI accrued a liability in order to cover expected litigation costs in the amount of approximately \$1,304,000. With the termination of this matter, VLI reversed the legal accrual in July 2013 which, accordingly, resulted in a favorable adjustment to selling, general and administrative expenses in the Company's consolidated financial statements for the year ended January 31, 2014.

NOTE 13 STOCK-BASED COMPENSATION

In June 2013, the stockholders approved the amendment of the 2011 Stock Plan (the Stock Plan) in order to increase the number of shares of the Company's common stock authorized for issuance thereunder by 750,000 shares to a total of 1,250,000 shares. The Stock Plan, which will expire in July 2021, was established in order to succeed the Argan, Inc. 2001 Stock Option Plan (the Option Plan) which expired in July 2011. As was the case under the Option Plan, the Company's Board of Directors may make awards under the Stock Plan to officers, directors and key employees.

Awards may include incentive stock options (ISOs) or nonqualified stock options (NSOs), and restricted or unrestricted stock. ISOs granted under the Stock Plan shall have an exercise price per share at least equal to the common stock's market value per share at the date of grant, shall have a term no longer than ten years, and typically become fully exercisable one year from the date of grant. NSOs may be granted at an exercise price per share that differs from the common stock's market value per share at the date of grant, may have up to a ten-year term, and typically become exercisable one year from the date of award.

At January 31, 2014, there were 1,448,650 remaining shares of the Company's common stock reserved for issuance under the two plans, including approximately 532,500 shares of the Company's common stock available for awards under the Stock Plan.

A summary of activity under the Option and Stock Plans for the three years ended January 31, 2014 is presented below:

	Shares	Weighted Average Exercise Price	Weighted Average Remaining Term (years)	Weighted Average Fair Value
Outstanding, February 1, 2011	675,724	\$ 11.29	5.78	\$ 5.79
Granted	212,500	\$ 13.92		
Exercised	(55,038)	\$ 9.36		
Forfeited	(16,000)	\$ 11.36		
Outstanding, January 31, 2012	817,186	\$ 12.10	4.94	\$ 5.68
Granted	293,000	\$ 17.36		
Exercised	(153,962)	\$ 9.33		
Forfeited	(30,000)	\$ 8.66		
Outstanding, January 31, 2013	926,224	\$ 14.34	5.39	\$ 5.93

Edgar Filing: ARGAN INC - Form 10-K

Granted	303,000	\$ 21.32		
Exercised	(309,074)	\$ 12.20		
Forfeited	(4,000)	\$ 17.33		
Outstanding, January 31, 2014	916,150	\$ 17.36	6.04	\$ 5.58
Exercisable, January 31, 2014	613,150	\$ 15.40	5.09	\$ 6.15

The total intrinsic values for the stock options exercised during the years ended January 31, 2014, 2013 and 2012 were \$3,158,000, \$1,242,000 and \$238,000, respectively. At January 31, 2014, the aggregate intrinsic value amounts for outstanding and exercisable stock options were \$10,124,000 and \$7,977,000, respectively.

Table of Contents

A summary of the change in the number of shares of common stock subject to non-vested options to purchase such shares for the three years ended January 31, 2014 is presented below:

	Shares	Weighted Average Fair Value
Non-vested, February 1, 2011	237,000	\$ 6.31
Granted	212,500	\$ 5.09
Vested	(232,000)	\$ 6.34
Forfeited (non-vested)	(5,000)	\$ 4.98
Non-vested, January 31, 2012	212,500	\$ 5.09
Granted	293,000	\$ 5.65
Vested	(112,000)	\$ 4.51
Forfeited (non-vested)	(5,000)	\$ 6.32
Non-vested, January 31, 2013	388,500	\$ 5.67
Granted	303,000	\$ 4.40
Vested	(384,500)	\$ 5.67
Forfeited (non-vested)	(4,000)	\$ 5.71
Non-vested, January 31, 2014	303,000	\$ 4.40

Compensation expense amounts recorded in the years ended January 31, 2014, 2013 and 2012 related to stock options were \$1,536,000, \$1,316,000 and \$637,000, respectively. At January 31, 2014, there was \$825,000 in unrecognized compensation cost related to stock options granted under the Stock Plan. The end of the period over which the compensation expense for these awards is expected to be recognized is December 2014.

The Company estimates the weighted average fair value of stock options on the date of award using a Black-Scholes option pricing model, which was developed for use in estimating the fair value of traded options that have no vesting restrictions and are fully transferable. Current guidance provided by the SEC permits the use of a simplified method in developing the estimates of the expected terms of plain-vanilla share options under certain circumstances, including situations where a company having historical stock option exercise experience that is insufficient to provide a reasonable basis upon which to estimate expected terms. The Company utilizes the simplified method to estimate the expected terms of its stock option awards. The risk-free interest rates and expected volatility factors used in the determinations of the fair value of stock options awarded during the year ended January 31, 2014 ranged from 0.73% to 1.52% and from 32.3% to 34.3%, respectively. For stock options awarded during the year ended January 31, 2013, the comparable ranges were 1.82% to 2.01% and 34.5% to 36.4%, respectively. For stock options awarded during the year ended January 31, 2012, the comparable ranges were 1.98% to 3.42% and 36.1% to 57.6%, respectively. The calculations of the expected volatility factors were based on the monthly closing prices of the Company's common stock for the five-year periods preceding the dates of the corresponding awards.

The fair value amounts per share of options to purchase shares of the Company's common stock awarded during the fiscal years ended January 31, 2014, 2013 and 2012 were determined at the dates of grant using the following weighted-average assumptions:

	2014	2013	2012
Risk-free interest rate	1.33%	1.93%	2.57%
Expected volatility	32.73%	35.51%	44.88%
Expected life	4.70 years	4.56 years	4.26 years
Dividend yield	3.39%	%	%

During the years ended January 31, 2012, the Company awarded 5,000 shares of restricted stock to an employee. The aggregate market value of the shares was amortized to compensation expense over the two-year vesting period, which was approximately \$10,000, \$25,000 and \$15,000 for the years ended January 31, 2014, 2013 and 2012, respectively.

Table of Contents

Warrants for the purchase of 160,000 shares of the Company's common stock were converted in the year ended January 31, 2013. The warrants, convertible at a price of \$7.75 per share, were issued in connection with the Company's private placement of common stock in April 2003 to three individuals who became the executive officers of the Company upon completion of the offering and also to an investment advisory firm. A former director of the Company is the chief executive officer of the investment advisory firm. The aggregate fair value amount of the warrants, \$849,000, was treated as a cost of the related stock offering.

The Company also has 401(k) savings plans pursuant to which the Company makes discretionary contributions for the eligible and participating employees. The Company's expense for these defined contribution plans totaled approximately \$677,000 for the year ended January 31, 2014, including a profit-sharing contribution of \$404,000. The comparable expense amounts for the years ended January 31, 2013 and 2012 were \$36,000 and \$31,000, respectively.

NOTE 14 INCOME TAXES

The components of the Company's income tax expense related to continuing operations for the years ended January 31, 2014, 2013 and 2012 are presented below:

	2014	2013	2012
Current:			
Federal	\$ 20,765,000	\$ 11,555,000	\$ 3,771,000
State	3,525,000	2,224,000	836,000
	24,290,000	13,779,000	4,607,000
Deferred:			
Federal	1,419,000	(207,000)	41,000
State	282,000	68,000	(92,000)
	1,701,000	(139,000)	(51,000)
Income tax expense	\$ 25,991,000	\$ 13,640,000	\$ 4,556,000

The actual income tax expense amounts for the years ended January 31, 2014, 2013 and 2012 differed from the expected tax amounts computed by applying the U.S. federal corporate income tax rate of 35% for the year ended January 31, 2014 and 2013, and 34% for the year ended January 31, 2012, to income from continuing operations before income taxes as presented below:

	2014	2013	2012
Computed expected income tax	\$ 24,267,000	\$ 12,510,000	\$ 4,068,000
Increase (decrease) resulting from:			
State income taxes, net	2,574,000	1,459,000	460,000
Permanent differences	(1,105,000)	(730,000)	(138,000)
Federal income tax true-up and other adjustments	255,000	401,000	166,000

Income tax expense	\$ 25,991,000	\$ 13,640,000	\$ 4,556,000
--------------------	---------------	---------------	--------------

For the year ended January 31, 2014, the favorable tax effects of permanent differences related primarily to the domestic manufacturing deduction, the deconsolidation of the VIEs and the exclusion of the noncontrolling interests of the Company's partner in the income of the joint ventures for income tax reporting purposes. For the years ended January 31, 2013 and 2012, the favorable tax effects of permanent differences related primarily to the tax benefit of the domestic manufacturing deduction.

As of January 31, 2014 and 2013, the amounts presented in the consolidated balance sheets for accrued expenses included accrued income taxes of approximately \$303,000 and \$1,362,000, respectively. The Company's consolidated balance sheet as of January 31, 2014 included net deferred tax liabilities in the amount of approximately \$114,000. The consolidated balance sheet as of January 31, 2013 included net deferred tax assets in the amount of approximately \$1,639,000.

Table of Contents

The Company's ability to realize its deferred tax assets depends primarily upon the generation of sufficient future taxable income to allow for the utilization of the Company's deductible temporary differences and tax planning strategies. If such estimates and assumptions change in the future, the Company may be required to record additional valuation allowances against some or all of the deferred tax assets resulting in additional income tax expense in the consolidated statement of operations. At this time, based substantially on the strong earnings performance of the Company's power industry services business segment, management believes that it is more likely than not that the Company will realize a benefit for its deferred tax assets.

The tax effects of temporary differences that gave rise to deferred tax assets and liabilities as of January 31, 2014 and 2013 are presented below:

	2014	2013
Assets:		
Purchased intangibles	\$ 1,255,000	\$ 1,407,000
Stock options	1,623,000	1,675,000
Accrued liabilities	514,000	855,000
Moxie Project net operating losses		432,000
Other	50,000	144,000
	3,442,000	4,513,000
Liabilities:		
Purchased intangibles	(2,563,000)	(2,258,000)
Property and equipment	(612,000)	(581,000)
Long-term contracts	(313,000)	
Other	(68,000)	(35,000)
	(3,556,000)	(2,874,000)
Net deferred tax (liabilities) assets	\$ (114,000)	\$ 1,639,000

The Company is subject to income taxes in the United States of America and in various state jurisdictions. Tax regulations within each jurisdiction are subject to the interpretation of the related tax laws and regulations and require significant judgment to apply. With few exceptions, the Company is no longer subject to federal, state and local income tax examinations by tax authorities for its fiscal years ended on or before January 31, 2010. During the current year, an audit of the income tax returns filed in Florida by Vitarich Laboratories, Inc. (VLI, see Note 19), a wholly owned subsidiary of Argan, for the income tax years ended January 31, 2010, 2011 and 2012 was completed. There were no material changes to its income tax liability resulting from the outcome of this audit.

Income tax penalties recorded during the years ended January 31, 2014, 2013 and 2012, and included in the corresponding amounts of selling, general and administrative expenses, were not material. Interest amounts related to late income tax payments recorded during the years ended January 31, 2014, 2013 and 2012, and included in the corresponding amounts of income tax expense, were not material.

NOTE 15 EARNINGS (LOSS) PER SHARE ATTRIBUTABLE TO THE STOCKHOLDERS OF ARGAN, INC.

Basic earnings (loss) per share amounts for the years ended January 31, 2014, 2013 and 2012 were computed by dividing income (loss) amounts attributable to the stockholders of Argan by the weighted average number of shares of common stock that were outstanding during the applicable year.

Diluted earnings per share amounts for the years ended January 31, 2014, 2013 and 2012 were computed by dividing the income amounts attributable to the stockholders of Argan by the weighted average number of outstanding common shares for the applicable year plus 356,000, 330,000 and 180,000 common stock equivalent shares representing their total dilutive effects for the years, respectively. The diluted weighted average number of shares outstanding for the years ended January 31, 2014, 2013 and 2012 excluded the effects of options to purchase approximately 222,000, 404,000 and 556,000 shares of common stock, respectively, because such anti-dilutive common stock equivalents had exercise prices that were in excess of the average market price of the Company's common stock during the applicable year.

Table of Contents

Diluted loss per share for discontinued operations for the year ended January 31, 2013 was computed by dividing the loss amount by the weighted average number of outstanding common shares for the year. The effects of outstanding options and warrants to purchase shares of common stock were not reflected in the computation as the loss made the common stock equivalents anti-dilutive for the year.

The earnings per share amounts for continuing operations attributable to the stockholders of Argan for the years ended January 31, 2014, 2013 and 2012 were based on the amounts of income from continuing operations excluding the net income attributable to the noncontrolling interests of \$3,219,000 for the current year and excluding the net losses attributable to the noncontrolling interests of \$1,448,000 and \$302,000, respectively, for the prior two years.

NOTE 16 SEGMENT REPORTING

Segments are defined as components of an enterprise about which separate financial information is available that is evaluated regularly by the chief operating decision maker, or decision making group, in deciding how to allocate resources and in assessing performance. The Company's reportable segments, power industry services and telecommunications infrastructure services, are organized in separate business units with different management teams, customers, technologies and services. The business operations of each segment are conducted primarily by the Company's wholly-owned subsidiaries GPS and SMC, respectively.

Presented below are summarized operating results and certain financial position data of the Company's reportable continuing business segments for the years ended January 31, 2014, 2013 and 2012. The Other column includes the Company's corporate and unallocated expenses.

Fiscal Year Ended January 31, 2014

	Power Industry Services	Telecom Infrastructure Services	Other	Consolidated
Revenues	\$ 218,649,000	\$ 8,806,000	\$	\$ 227,455,000

(1) The operating results for the three months ended October 31, 2013 were favorably affected by the development success fee related to the purchase of Moxie Liberty by Panda which was recognized as revenue by the Company in the amount of \$14.3 million.

- (2) The operating results for the three months ended January 31, 2014 were favorably affected by the development success fee related to the purchase of Moxie Patriot by Panda which was recognized as revenue by the Company in the amount of \$12.8 million.
- (3) The earnings per share amounts are attributable to the stockholders of Argan, Inc.

Table of Contents

NOTE 19 DISPOSITION OF DISCONTINUED OPERATIONS

VLI, the wholly owned subsidiary that represented the Company's nutritional products business segment, completed the sale of substantially all of its assets to an unrelated party in March 2011 for cash proceeds that approximated \$2,528,000 (the "Asset Sale"). VLI recognized a pretax gain of approximately \$1,312,000 related to the Asset Sale which amount was reflected in income from discontinued operations for the year ended January 31, 2012.

The financial results of this business through April 30, 2012 have been presented as discontinued operations in the accompanying consolidated financial statements, including legal costs associated with this business. Such costs incurred subsequent to April 30, 2012 were reflected in the operating results of continuing operations; such costs were not material for the years ended January 31, 2014 and 2013. Net revenues of the discontinued operations for the year ended January 31, 2012 were \$1,460,000. VLI was liquidated in December 2013.
