GOL Plans 20% Reduction in Carbon Dioxide Emissions per ASK by 2012

São Paulo, October 3, 2007 - GOL Linhas Aéreas Inteligentes S.A. (NYSE: GOL and Bovespa: GOLL4), the parent company of Brazil's low-cost airlines GOL Transportes Aéreos S.A. (GTA, that operates the GOL brand) and VRG Linhas Aéreas S.A. (VRG, that operates the VARIG brand), plans a 20 percent reduction in carbon dioxide emissions per ASK by 2012. Between January 2004 and December 2006, GOL reduced carbon dioxide emissions by 6 percent per ASK as the Company added a number of modern aircraft with new engines that burn less fuel and run more efficiently to its fleet. By maintaining one of the youngest and most modern fleets in South America, GOL's fuel burn efficiency, and therefore carbon emission rate, is one of the lowest in the world.

While the Intergovernmental Panel on Climate Change (IPCC) estimates airlines are responsible for two percent of total worldwide carbon dioxide emissions, it is extremely important that we do all we can to reduce our impact on the environment, says Fernando Rockert de Magalhães, Executive Vice President-Technical of GOL. This 20 percent reduction in GOL's emissions per ASK represents almost 750 million kilograms of carbon dioxide—a figure that's equal to what would be absorbed by approximately 4.3 million trees over 25 years.

Supporting the global initiative to reduce pollutants and improve the environment is an important part of GOL's daily operations. In 2006, the Company saved approximately 163 tons of paper through its paperless ticket policy, collected 8,500 kilos of plastic for recycling, planted 15,000 trees as part of its reforestation program, and saved another 123 from processing through its recycling program.
