On June 1, 2015, the Company announced that the U.S. Food and Drug Administration had cleared the Investigational New Drug application to conduct a Phase 2 clinical study of ADXS-HPV (ADXS11-001) alone or in combination with Incyte Corporation's investigational oral indoleamine 2,3-dioxygenase 1 (IDO1) inhibitor, epacadostat (INCB24360), for the treatment of Stage I-IIIb human papillomavirus (HPV)-associated cervical cancer. The proposed Phase 2 protocol is designed as a multicenter, open-label, preoperative window-study designed to evaluate the safety and efficacy of ADXS-HPV as monotherapy and in combination with epacadostat in approximately 30 patients with Stage I-IIIb HPV-associated cervical cancer. The results will be used to determine whether further clinical development of this combination is warranted.
