**BHP BILLITON TO INCREASE METALLURGICAL COAL CAPACITY
TO 100 MILLION TONNES PER ANNUM**

BHP Billiton today announced its intention to increase metallurgical coal production capacity to around 100 million tonnes per annum (100 per cent basis) by 2010*.

The increase in capacity will be achieved through high value incremental expansions of the BHP Billiton Mitsubishi Alliance (BMA) and BHP Mitsui Coal Pty Ltd (BMC) coal operations in Queensland, Australia and potential new developments such as the Maruwai prospect in Kalimantan.

Options for expanding BHP Billiton's Illawarra coal business in New South Wales, Australia are also under consideration.

Group President Carbon Steel Materials Bob Kirkby said the change in the rate of growth in the global steel industry in recent years had created a significant increase in demand for steel making raw materials, including seaborne metallurgical coal.

"BHP Billiton and its partners are ideally placed to capture a significant share of the forecast growth in the metallurgical coal market through the addition of low cost, high value production capacity," he said.

"Our resources and infrastructure are second to none, and the growth strategy will build on the incremental expansion projects that are already underway in Queensland and New South Wales."

In March this year BHP Billiton outlined plans to increase capacity at the Queensland coal operations from 52Mtpa to 57Mtpa by mid 2005. This project included the purchase of additional mining equipment at several mines, upgrades to the coal preparation plants at the Saraji and Peak Downs mines and the awarding of 132 million bank cubic metres (Mbcm) of overburden stripping contracts.

Mr Kirkby said the next stage of the Queensland coal expansion program had also been approved as part of the overall growth strategy. The program will increase production capacity to 59Mtpa by the second half of 2006.

Capital expenditure for this next stage is expected to be US\$175 million (BHP Billiton share US\$87.5 million) and includes increasing throughput capacity at the Hay Point Coal Terminal from 34Mtpa to 40Mtpa and the acquisition of additional stripping equipment and mining equipment.

In order to facilitate the increased production, 32Mbcm of overburden stripping contracts will be let at the Saraji mine.

*Production at the metallurgical coal mines owned by BHP Billiton, BMA and BMC in FY2004 was 58 Mtpa (BHP Billiton share 34 million tonnes, excluding 20 per cent outside equity interest in BMC). On completion of the expansion projects in 2010, BHP Billiton's attributable production capacity is expected to rise to in excess of 60 Mtpa.
