The Markets in Review

Dear Shareholder,

Market volatility, while remaining below the long-term average level, increased over the course of 2014 and into 2015, driven largely by higher valuations in risk assets (such as equities and high yield bonds), geopolitical risks, uneven global economic growth and uncertainty around policy moves from the world s largest central banks. As the U.S. Federal Reserve (the Fed) gradually reduced its bond buying program (which ultimately ended in October 2014), U.S. interest rates surprisingly trended lower during the period.

The first half of 2014 was generally a strong period for most asset classes; however, volatility ticked up in the summer as geopolitical tensions intensified in Ukraine and the Middle East and investors feared that better U.S. economic indicators may compel the Fed to increase short-term interest rates sooner than previously anticipated. Global credit markets tightened as the U.S. dollar strengthened versus other currencies, ultimately putting a strain on investor flows, and financial markets broadly weakened in the third quarter.

Several themes dominated the markets in the fourth quarter that resulted in the strong performance of U.S. markets versus other areas of the world. Economic growth strengthened considerably in the United States while the broader global economy showed signs of slowing. The European Central Bank and the Bank of Japan took aggressive measures to stimulate growth while the Fed moved toward tighter policy, causing further strengthening in the U.S. dollar. Fixed income investors piled into U.S. Treasuries where yields remained persistently low, but were comparatively higher than yields on international sovereign debt, while equity investors favored the relative stability of U.S.-based companies amid rising global risks.

Oil prices, which had been gradually declining since mid-summer, plummeted in the fourth quarter due to a global supply-and-demand imbalance. Energy-related assets sold off sharply and emerging markets struggled as many of those economies rely heavily on oil exports. Conversely, the consumer sectors benefited from lower oil prices as savings at the gas pumps freed up discretionary income for other goods and services.

These trends shifted in early 2015. U.S. equities underperformed international markets given high valuations and the anticipation of a rate hike from the Fed. Oil prices showed signs of stabilizing as suppliers became more disciplined in their exploration and production efforts. Markets in Europe and Japan rebounded, driven largely by central bank policy accommodation and improving economic data.

At BlackRock, we believe investors need to think globally, extend their scope across a broad array of asset classes and be prepared to move freely as market conditions change over time. We encourage you to talk with your financial advisor and visit **blackrock.com** for further insight about investing in today s markets.

Fund Summary as of February 28, 2015 BlackRock Defined Opportunity Credit Trust Fund Overview

BlackRock Defined Opportunity Credit Trust s (BHL) (the Fund) primary investment objective is to provide high current income, with a secondary objective of long-term capital appreciation. The Fund seeks to achieve its investment objectives by investing substantially all of its assets in loan and debt instruments and loan-related and debt-related instruments (collectively credit securities). The Fund invests, under normal market conditions, at least 80% of its assets in any combination of the following credit securities: (i) senior secured floating rate and fixed rate loans; (ii) second lien or other subordinated or unsecured floating rate and fixed rate loans or debt; (iii) credit securities that are rated below investment grade quality; and (iv) investment grade corporate bonds. The Fund may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Fund s investment objectives will be achieved.

Portfolio Management Commentary

How did the Fund perform?

For the six-month period ended February 28, 2015, the Fund returned (0.79)% based on market price and 1.51% based on net asset value (NAV). For the same period, the closed-end Lipper Loan Participation Funds category posted an average return of (0.11)% based on market price and 0.30% based on NAV. All returns reflect reinvestment of dividends. The Fund s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. The following discussion relates to performance based on NAV.

What factors influenced performance?

During the six months ended February 28, 2015, the loan market declined at the end of 2014, before experiencing a recovery that began around the latter part of January 2015. Overall, this resulted in a modest positive return on loans for the full period. Positive performance within the Fund was spread broadly throughout the portfolio, with the most significant contributions generally from among the Fund s top 25 holdings. Given the positive returns experienced, the Fund s use of leverage added to performance for the period.

During the six-month period, oil prices experienced a significant decline and most commodity prices came under pressure as well. As a result, prices for the Fund sholdings within the energy sector fell notably during the period and detracted from returns. The metals & mining sector, while a smaller component of the portfolio, detracted as well. The electric segment, and in particular Texas Utilities, was also a detractor. Finally, the Fund s modest position in equities was a negative contributor.

Describe recent portfolio activity.

During the period, the Fund maintained its overall focus on the higher quality segments of the loan market in terms of loan structure, liquidity and overall credit quality. Since the average loan has recently been trading at a slight discount to par (i.e., with limited upside), the Fund has concentrated its investments in strong companies with stable cash flows, high quality collateral, and the ability to meet interest obligations and ultimately return principal. The Fund has been actively participating in the new-issue market when possible, however, new issuance for loans is at its lowest level in years. In view of limited upside within the CCC-rated loans space, the Fund reduced its exposure there to a modest amount in line with the benchmark. The Fund added fixed-coupon high yield bonds as valuations in that market moved to a more attractive point during the period.

Describe portfolio positioning at period end.

At period end, the Fund held a majority of its total portfolio in floating rate loan interests (bank loans), with the small remainder in corporate bonds and other interests. The Fund maintained its highest concentration in higher coupon B-rated loans of select issuers while limiting exposure to low coupon BB-rated loans. Additionally, the Fund held a modest position in CCC-rated loans, while generally maintaining low exposure to lower quality, less liquid loans.

Fund Summary as of February 28, 2015 BlackRock Floating Rate Income Strategies Fund, Inc. Fund Overview

BlackRock Floating Rate Income Strategies Fund, Inc. s (FRA) (the Fund) investment objective is to provide shareholders with high current income and such preservation of capital as is consistent with investment in a diversified, leveraged portfolio consisting primarily of floating rate debt securities and instruments. The Fund seeks to achieve its investment objective by investing, under normal market conditions, at least 80% of its assets in floating rate debt securities, including floating or variable rate debt securities that pay interest at rates that adjust whenever a specified interest rate changes and/or which reset on predetermined dates (such as the last day of a month or calendar quarter). The Fund invests a substantial portion of its investments in floating rate debt securities consisting of secured or unsecured senior floating rate loans that are rated below investment grade. The Fund may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Fund s investment objective will be achieved.

SEMI-ANNUAL REPORT FEBRUARY 28, 2015 7

Fund Summary as of February 28, 2015 BlackRock Limited Duration Income Trust Fund Overview

BlackRock Limited Duration Income Trust s (BLW) (the Fund) investment objective is to provide current income and capital appreciation. The Fund seeks to achieve its investment objective by investing primarily in three distinct asset classes:

intermediate duration, investment grade corporate bonds, mortgage-related securities, asset-backed securities and U.S. Government and agency securities;

senior, secured floating rate loans made to corporate and other business entities; and

U.S. dollar-denominated securities of U.S. and non-U.S. issuers rated below investment grade and, to a limited extent, non-U.S. dollar denominated securities of non-U.S. issuers rated below investment grade.

The Fund s portfolio normally has an average portfolio duration of less than five years (including the effect of anticipated leverage), although it may be longer from time to time depending on market conditions. The Fund may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Fund s investment objective will be achieved.

Portfolio Management Commentary

How did the Fund perform?

For the six-month period ended February 28, 2015, the Fund returned (0.71)% based on market price and 1.32% based on net asset value (NAV). For the same period, the closed-end Lipper High Yield Funds (Leveraged) category posted an average return of (2.46)% based on market price and (1.60)% based on NAV. All returns reflect reinvestment of dividends. The Fund s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. The following discussion relates to performance based on NAV.

What factors influenced performance?

The main contributors to the Fund s absolute performance were its exposure to non-U.S. dollar securities, high yield, term loans, asset-backed securities (ABS) and commercial mortgage-backed securities (CMBS). Other contributors included agency mortgage-backed securities (MBS) 15-year pass-throughs and emerging market debt.

The main detractors from the Fund s absolute performance during the period were its positions in preferred equities, its duration exposure through U.S. Treasuries and its positions in investment grade credit.

The Fund held derivatives during the reporting period, which had a neutral effect on performance..

Describe recent portfolio activity.

The Fund s allocations remained consistent throughout the six-month period, with its largest positions in high yield and investment grade corporate credit, followed by allocations in securitized credit, including ABS and CMBS.

Describe portfolio positioning at period end.

At period end, the Fund maintained a diversified exposure to non-government spread sectors including high yield and investment grade corporate credit, as well as CMBS, ABS and agency and non-agency residential MBS.

The Benefits and Risks of Leveraging

The Funds may utilize leverage to seek to enhance the yield and net asset value (NAV) of their common shares (Common Shares). However, these objectives cannot be achieved in all interest rate environments.

In general, the concept of leveraging is based on the premise that the financing cost of leverage, which will be based on short-term interest rates, will normally be lower than the income earned by a Fund on its longer-term portfolio investments purchased with the proceeds from leverage. To the extent that the total assets of the Fund (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, the Fund s shareholders will benefit from the incremental net income. The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV.

To illustrate these concepts, assume a Fund s capitalization is \$100 million and it utilizes leverage for an additional \$30 million, creating a total value of \$130 million available for investment in longer-term income securities. If prevailing short-term interest rates are 3% and longer-term interest rates are 6%, the yield curve has a strongly positive slope. In this case, the Fund s financing costs on the \$30 million of proceeds obtained from leverage are based on the lower short-term interest rates. At the same time, the securities purchased by the Fund with the proceeds from leverage earn income based on longer-term interest rates. In this case, the Fund s financing cost of leverage are significantly lower than the income earned on the Fund s longer-term investments acquired from such leverage proceeds, and therefore the holders of Common Shares (Common Shareholders) are the beneficiaries of the incremental net income.

However, in order to benefit shareholders, the return on assets purchased with leverage proceeds must exceed the ongoing costs associated with the leverage. If interest and other costs of leverage exceed the Fund s return on assets purchased with leverage proceeds, income to shareholders is lower than if the Fund had not used leverage. Furthermore, the value of the Fund s portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value

of portfolio investments. In contrast, the value of the Fund s obligations under its leverage arrangement generally does not fluctuate in relation to interest rates. As a result, changes in interest rates can influence the Fund s NAV positively or negatively. Changes in the future direction of interest rates are very difficult to predict accurately, and there is no assurance that a Fund s intended leveraging strategy will be successful.

Leverage also will generally cause greater changes in the Funds NAVs, market prices and dividend rates than comparable portfolios without leverage. In a declining market, leverage is likely to cause a greater decline in the net asset value and market price of a Fund s shares than if the Fund were not leveraged. In addition, the Fund may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause the Fund to incur losses. The use of leverage may limit the Fund s ability to invest in certain types of securities or use certain types of hedging strategies. The Fund will incur expenses in connection with the use of leverage, all of which are borne by shareholders and may reduce income to the shares.

Each Fund may utilize leverage through a credit facility or reverse repurchase agreements as described in the Notes to Financial Statements.

Under the Investment Company Act of 1940, as amended (the 1940 Act), each Fund is permitted to issue debt up to $33\frac{1}{3}\%$ of its total managed assets. A Fund may voluntarily elect to limit its leverage to less than the maximum amount permitted under the 1940 Act. In addition, a Fund may also be subject to certain asset coverage, leverage or portfolio composition requirements imposed by its credit facility, which may be more stringent than those imposed by the 1940 Act.

If a Fund segregates or designates on its books and records cash or liquid assets having values not less than the value of the Fund s obligations under the reverse repurchase agreement (including accrued interest), then such transaction will not be considered a senior security and will not be subject to the foregoing limitations and requirements under the 1940 Act.

Derivative Financial Instruments

The Funds may invest in various derivative financial instruments. Derivative financial instruments are used to obtain exposure to a security, index and/or market without owning or taking physical custody of securities or to manage market, equity, credit, interest rate, foreign currency exchange rate, commodity and/or other risks. Derivative financial instruments may give rise to a form of economic leverage. Derivative financial instruments involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the transaction or illiquidity of the derivative

financial instrument. The Funds ability to use a derivative financial instrument successfully depends on the investment advisor s ability to predict pertinent market movements accurately, which cannot be assured. The use of derivative financial instruments may result in losses greater than if they had not been used, may limit the amount of appreciation a Fund can realize on an investment and/or may result in lower distributions paid to shareholders. The Funds investments in these instruments are discussed in detail in the Notes to Financial Statements.

For Fund compliance purposes, the Fund s industry classifications refer to any one or more of the industry sub-classifications used by one or more widely recognized market indexes or ratings group indexes, and/or as defined by the investment advisor. These definitions may not apply for purposes of this report, which may combine such industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments and derivative financial instruments. These inputs to valuation techniques are categorized into a disclosure hierarchy consisting of three broad levels for financial statement purposes. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). Accordingly, the degree of judgment exercised in determining fair value is greatest for instruments categorized in Level 3. The inputs used to measure fair value may fall into

different levels of the fair value hierarchy. In such cases, for disclosure purposes, the fair value hierarchy classification is determined based on the lowest level input that is significant to the fair value measurement in its entirety. The categorization of a value determined for investments and derivative financial instruments is based on the pricing transparency of the investment and derivative financial instrument and is not necessarily an indication of the risks associated with investing in those securities. The three levels of the fair value hierarchy are as follows:

Level 1 unadjusted quoted prices in active markets/exchanges for identical assets or liabilities that the Fund has the ability to access

Level 2 other observable inputs (including, but not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs)

Level 3 unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Fund s own assumptions used in determining the fair value of investments and derivative financial instruments)

Changes in valuation techniques may result in transfers into or out of an assigned level within the disclosure hierarchy. In accordance with the Fund s policy, transfers between different levels of the fair value disclosure hierarchy are deemed to have occurred as of the beginning of the reporting period. For information about the Fund s policy regarding valuation of investments and derivative financial instruments, refer to Note 2 of the Notes to Financial Statements.

As of February 28, 2015, the following tables summarize the Fund s investments and derivative financial instruments categorized in the disclosure hierarchy:

For Fund compliance purposes, the Fund s industry classifications refer to any one or more of the industry sub-classifications used by one or more widely recognized market indexes or ratings group indexes, and/or as defined by the investment advisor. These definitions may not apply for purposes of this report, which may combine such industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments and derivative financial instruments. These inputs to valuation techniques are categorized into a disclosure hierarchy consisting of three broad levels for financial statement purposes. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). Accordingly, the degree of judgment exercised in determining fair value is greatest for instruments categorized in Level 3. The inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, for disclosure purposes, the fair value hierarchy classification is determined based on the lowest level input that is significant to the fair value measurement in its entirety. The categorization of a value determined for investments and derivative financial instruments is based on the pricing transparency of the investment and derivative financial instrument and is not necessarily an indication of the risks associated with investing in those securities. The three levels of the fair value hierarchy are as follows: unadjusted quoted prices in active markets/exchanges for identical assets or liabilities that the Fund has the Level 1 ability to access

Level 2 other observable inputs (including, but not limited to, quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs) unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Fund s own assumptions used in determining the fair value of investments and derivative financial instruments)

Changes in valuation techniques may result in transfers into or out of an assigned level within the disclosure hierarchy. In accordance with the Fund s policy, transfers between different levels of the fair value disclosure hierarchy are deemed to have occurred as of the beginning of the reporting period. For information about the Fund s policy regarding valuation of investments and derivative financial instruments, refer to Note 2 of the Notes

to Financial Statements.

As of February 28, 2015, the following tables summarize the Fund s investments and derivative financial instruments categorized in the disclosure hierarchy:

¹ As of August 31, 2014, the Fund used observable inputs in determining the value of certain investments. As of February 28, 2015, the Fund used significant unobservable inputs in determining the value of the same investments. As a result, investments with a beginning of period value of \$18,783,503 transferred from Level 2 to Level 3 in the

disclosure hierarchy.

As of August 31, 2014, the Fund used significant unobservable inputs in determining the value of certain investments. As of February 28, 2015, the Fund used observable inputs in determining the value of the same investments. As a result, investments with a beginning of period value of \$27,221,859 transferred from Level 3 to Level 2 in the disclosure hierarchy.

Included in the related net change in unrealized appreciation/depreciation in the Consolidated Statements of Operations.

Any difference between Net change in unrealized appreciation/depreciation and Net change in unrealized 4appreciation/depreciation on investments still held at February 28, 2015 is generally due to investments no longer held or categorized as Level 3 at period end.
