Item 8.01 Other Events.

On March 10, 2014, La Jolla Pharmaceutical Company (the Company) announced positive top-line results from the Company's randomized, placebo-controlled Phase 2 trial of GCS-100 in chronic kidney disease (CKD). The trial met its primary efficacy endpoint of a statistically significant improvement in kidney function. Specifically, a dose of 1.5 mg/m² led to a statistically significant (p=0.045) increase in estimated glomerular filtration rate (eGFR) compared to placebo between baseline and end of treatment. At the 30 mg/m² dose, there was no statistically significant difference. A copy of the press release announcing these results is filed herewith as Exhibit 99.1.

Item 9.01. Financial Statements and Exhibits.
