Summary Information

VanEck Vectors™ Long/Flat COMMODITY ETF

Investment Objective

VanEck Vectors™ Long/Flat Commodity ETF (the “Fund”) seeks long-term capital appreciation while seeking to manage volatility and reduce downside risk during sustained market declines.

Fund Fees and Expenses

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”).

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.50%
Other Expenses ^(a)	0.25%
Total Annual Fund Operating Expenses ^(b)	0.75%
Fee Waiver and Expense Reimbursement ^(b)	(0.13)%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ^(b)	0.62%

^(a) “Other Expenses” are based on estimated amounts for the current fiscal year and reflect estimated expenses at both the Fund and the Fund’s wholly-owned subsidiary (the “Subsidiary”) levels.

Van Eck Absolute Return Advisers Corporation (the “Adviser”) has agreed to waive fees and/or pay Fund and Subsidiary expenses in an amount equal to the fees paid to the Adviser by the Subsidiary and to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering ^(b)costs, trading expenses, taxes and extraordinary expenses of the Fund and the Subsidiary) from exceeding 0.65% of the Fund’s average daily net assets per year until at least May 1, 2018. During such time, the expense limitation is expected to continue until the Fund’s Board of Trustees acts to discontinue all or a portion of such expense limitation.

Expense Example

Edgar Filing: VanEck Vectors ETF Trust - Form 497

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same (except that the example incorporates the fee waiver and/or expense reimbursement arrangement for only the first year). Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR EXPENSES

1	\$63
3	\$227

Portfolio Turnover

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction

costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund's performance. Because the Fund is newly organized, no portfolio turnover figures are available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by investing, under normal circumstances, in exchange-traded commodity futures contracts and, under certain limited circumstances, other commodity-linked instruments ("Other Commodity Instruments," and collectively with exchange-traded commodity futures contracts, "Commodities Instruments"). The Fund does not seek to replicate the performance of a specified index.

The Fund will invest in Commodities Instruments primarily through a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands (the "Subsidiary"). The Subsidiary is advised by the Adviser.

The Fund (directly or indirectly through the Subsidiary) normally invests in exchange-traded commodity futures contracts that are components of the Morningstar® Long/Flat Commodity IndexSM (the "Benchmark"), an index composed of futures contracts on 20 heavily traded commodities across the energy, agriculture, industrial metals, precious metals and livestock sectors ("Index Commodity Contracts"). The Adviser employs a rules-based investment approach when selecting Commodities Instruments based upon momentum characteristics of the Commodities Instruments. Commodities Instruments are assessed on a monthly basis by comparing current prices to 12-month moving averages. The Fund's positions are either long or flat. A "long" position is a position that will increase in market price if the price of the commodity futures contract is rising during the period when the position is open. A "flat" position is a position that will not increase or decrease in market price whether the price of the commodity futures contract to which it relates is rising or falling. The Fund intends to take long positions in those Commodities Instruments whose prices are above their 12-month moving average. Conversely, the Fund intends to take flat positions to manage volatility and reduce downside risk for those Commodities Instruments whose prices are below their 12-month moving average. The Fund is not an "index tracking" ETF and may not always invest in all of the Benchmark's components, or in the same proportion, and it may invest in Commodities Instruments outside the Benchmark.

The Subsidiary is a limited company operating under Cayman Islands law. It is wholly-owned and controlled by the Fund and is advised by the Adviser. The Fund's investment in the Subsidiary may not exceed 25% of the value of the Fund's total assets at each quarter-end of the Fund's fiscal year. The Fund's investment in the Subsidiary is expected to provide the Fund with exposure to Commodities Instruments within the limits of the federal tax laws, which limit the ability of investment companies like the Fund to invest directly in such instruments. The Subsidiary has the same investment objective as the Fund and will follow the same general investment policies and restrictions, except that unlike the Fund, it may invest without limit in Commodities Instruments.

Edgar Filing: VanEck Vectors ETF Trust - Form 497

Except as noted, for purposes of this Prospectus, references to the Fund's investment strategies and risks include those of its Subsidiary. The Fund complies with the provisions of the Investment Company Act of 1940, as amended (the "1940 Act"), governing investment policies (Section 8) and capital structure and leverage (Section 18) on an aggregate basis with the Subsidiary.

The Fund (and the Subsidiary, as applicable) expects to invest its remaining assets in any one or more of the following: U.S. Treasuries, other U.S. government obligations, money market funds, cash and cash-like equivalents (*e.g.*, high quality commercial paper and similar instruments that are rated investment grade or, if unrated, of comparable quality, as the Adviser determines), treasury inflation-protected securities, sovereign debt obligations of non-U.S. countries and repurchase agreements that provide liquidity, serve as margin or collateralize the Fund's or the Subsidiary's investments in exchange-traded commodity futures contracts.

The Fund also may invest directly in ETFs, exchange-traded closed end funds (to the extent permitted by the 1940 Act and certain exemptive relief therefrom) and exchange-traded notes ("ETNs") that provide exposure to commodities.

Principal Risks of Investing in the Fund

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Market Risk. The trading prices of commodities futures, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's net asset value and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time. An investment in the Fund may lose money.

Commodities Risk. Commodities include, among other things, energy products, agricultural products, industrial metals, precious metals and livestock. The commodities markets may fluctuate widely based on a variety of factors, including overall market movements, economic events and policies, changes in interest rates or inflation rates, changes in monetary and exchange control programs, war, acts of terrorism, natural disasters and technological developments. Variables such as disease, drought, floods, weather, trade, embargoes, tariffs and other political events, in particular, may have a larger impact on commodity prices than on traditional securities. These additional variables may create additional investment risks that subject the Fund's investments to greater volatility than investments in traditional securities. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Because certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers, political, economic and supply-related events in such countries could have a disproportionate impact on the prices of such commodities. These factors may affect the value of the Fund in varying ways, and different factors may cause the value and the volatility of the Fund to move in inconsistent directions at inconsistent rates.

Foreign Commodity Markets Risk. The Fund engages in trading on commodity markets outside the United States. Trading on such markets is not regulated by any U.S. government agency and may involve certain risks not applicable to trading on U.S. exchanges or markets. The Fund may not have the same access to certain trades as do various other participants in foreign markets. Furthermore, as the Fund determines its net assets in U.S. dollars, with respect to trading in foreign markets the Fund is subject to the risk of fluctuations in the exchange rate between the local currency and dollars as well as the possibility of exchange controls. Certain futures contracts traded on foreign exchanges are treated differently for federal income tax purposes than are domestic contracts.

Risk of Investing in Other Investment Companies and ETNs. The Fund may invest in other investment companies, including ETFs, and ETNs. ETNs are senior, unsecured notes linked to an index. Like ETFs, they may be bought and sold on a securities exchange. However, while ETF shares represent an interest in the ETF's underlying assets, ETNs are structured products that are an obligation of the issuing bank, broker-dealer or other intermediary, whereby the

intermediary agrees to pay a return based on the target

3

index less any fees. ETNs combine certain aspects of bonds and ETFs. Investors can hold an ETN until maturity. Investments in other investment companies and ETNs will subject the Fund to the additional fees and expenses of the underlying investment company or ETN. At the same time, the Fund would continue to pay its own fees and other expenses. The ETNs in which the Fund invests may include ETNs that invest in equity and debt securities, as well as other asset categories. Additionally, the value of an ETN may be influenced by time to maturity, level of supply and demand, volatility and lack of liquidity in the underlying market (*e.g.*, the commodities market), changes in interest rates or the issuer's credit rating, and other economic, legal, political or geographic events.

Liquidity Risk. The Fund invests in Commodities Instruments, which may be less liquid than other types of investments. The illiquidity of Commodities Instruments could have a negative effect on the Fund's ability to achieve its investment objective and may result in losses to Fund shareholders. In stressed market conditions, the liquidity of the Fund's shares may begin to mirror those of the underlying portfolio holdings, which can be significantly less liquid than the Fund's shares.

Market Price Variance Risk. The Fund's shares will be listed for trading on NASDAQ and can be bought and sold in the secondary market at market prices. The market price of shares will fluctuate in response to changes in the value of the Fund's holdings, supply and demand for shares and other market factors. The Trust cannot predict whether shares will trade above, below or at a price equal to the value of the Fund's holdings. Given the fact that shares can be created and redeemed in Creation Units, as defined below, the Trust believes that large discounts or premiums to the value of the Fund's holdings should not be sustained. The Fund's investment results are measured based upon the daily NAV of the Fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by Authorized Participants ("APs") creating and redeeming directly with the Fund.

Not Individually Redeemable. Shares are not individually redeemable and may be redeemed by the Fund at its net asset value per share only in large blocks known as "creation units." You may incur brokerage costs purchasing enough shares to constitute a creation unit.

Clearing Broker Risk. The Fund's investments in exchange-traded futures contracts expose it to the risks of a clearing broker (or a futures commission merchant ("FCM")). The failure or bankruptcy of the Fund's and the Subsidiary's clearing broker could result in a substantial loss of Fund assets. Under current Commodity Futures Trading Commission ("CFTC") regulations, a clearing broker maintains customers' assets in a bulk segregated account. If a clearing broker fails to do so, or is unable to satisfy a substantial deficit in a customer account, its other customers may be subject to risk of loss of their funds in the event of that clearing broker's bankruptcy. In that event, the clearing broker's customers, such as the Fund and the Subsidiary, are entitled to recover, even in respect of property specifically traceable to them, only a proportional share of all property available for distribution to all of that clearing broker's customers.

Credit Risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely on securities. Fixed income securities are subject to varying degrees of credit risk, depending on the issuer's financial condition and on the terms of the securities, which may be reflected in credit

ratings. There is a possibility that the credit rating of a fixed income security may be downgraded after purchase or the perception of an issuer's credit worthiness may decline, which may adversely affect the value of the security.

Interest Rate Risk. Interest rate risk refers to fluctuations in the value of a fixed income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed income securities go down. When the general level of interest rates goes down, the prices of most fixed income securities go up. The historically low interest rate environment increases the

risk associated with rising interest rates, including the potential for periods of volatility and increased redemptions. The Fund may face a heightened level of interest rate risk, since the U.S. Federal Reserve Board has ended its quantitative easing program and has begun to raise rates.

Commodity Regulatory Risk. Changes in the laws or regulations of the United States or the Cayman Islands, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund or the Subsidiary. For example, in 2012, the CFTC adopted amendments to its rules that affect the ability of certain investment advisers to registered investment companies and other entities to rely on previously available exclusions or exemptions from registration under the Commodity Exchange Act of 1936, as amended (“CEA”) and regulations thereunder. As a result of the amendments and, based on the Fund’s and its Subsidiary’s current investment strategies, the Fund and the Subsidiary are each a “commodity pool” and the Adviser is considered a “commodity pool operator” (“CPO”) with respect to the Fund and the Subsidiary under the CEA. Accordingly, the Fund and the Adviser are subject to dual regulation by the CFTC and the SEC. In August 2013, the CFTC adopted regulations that seek to “harmonize” CFTC regulations with overlapping SEC rules and regulations. Pursuant to the CFTC harmonization regulations, the Fund and the Adviser may elect to meet the requirements of certain CFTC regulations by complying with specific SEC rules and regulations relating to disclosure and reporting requirements. The CFTC could deem the Fund or the Adviser in violation of an applicable CFTC regulation if the Fund or the Adviser failed to comply with a related SEC regulatory requirement under the CFTC harmonization regulations. The Fund and the Adviser will remain subject to certain CFTC-mandated disclosure, reporting and recordkeeping regulations even if they elect substitute compliance under the CFTC harmonization regulations. Compliance with the CFTC regulations could increase the Fund’s expenses, adversely affecting the Fund’s total return.

Futures Risk. The Fund invests in futures primarily through the Subsidiary. All futures and futures-related products are highly volatile. Futures contracts involve the risk of mispricing or improper valuation and the risk that changes in the value of a futures contract may not correlate perfectly with the underlying indicator. Even a well-conceived futures transaction may be unsuccessful due to market events. Price movements are influenced by, among other things, changing supply and demand relationships; climate; government agricultural, trade, fiscal, monetary and exchange control programs and policies; national and international political and economic events; crop diseases; the purchasing and marketing programs of different nations; and changes in interest rates. In addition, governments from time to time intervene, directly and by regulation, in certain markets, particularly those in currencies.

Gap Risk. The Fund is subject to the risk that a commodity price will change from one level to another with no trading in between. Usually such movements occur when there are adverse news announcements, which can cause a commodity price to drop substantially from the previous day’s closing price.

Volatility Risk. Frequent or significant short-term price movements could adversely impact the performance of the Fund. In addition, the net asset value of the Fund over short-term periods may be more volatile than other investment options because of the Fund’s significant use of financial instruments that have a leveraging effect. For example, because of the low margin deposits required, futures trading involves an extremely high degree of leverage and as a result, a relatively small price movement in a Commodities Instrument may result in immediate and substantial losses to the Fund.

Derivatives Risk. The use of derivatives, including Commodities Instruments, presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying security, commodity, asset, index or reference rate. Derivative strategies often involve leverage, which may exaggerate a loss, potentially causing the Fund to lose more money than it would have lost had it

invested in the underlying security. Also, a liquid secondary market may not always exist for the Fund's derivative positions at times when the Fund might wish to terminate or sell such positions. Over the counter instruments may be illiquid, and transactions in derivatives traded in the over-the-counter market are subject to counterparty risk.

Additionally, in December 2015, the SEC proposed new regulations applicable to an ETF's use of derivatives and related instruments. If adopted as proposed, these regulations could significantly limit or impact the Fund's ability to invest in derivatives and other instruments and adversely affect the Fund's performance and ability to pursue their investment objectives.

Margin Call Risk. Margin requirements are computed intra-day by a commodity broker, and may be computed after-hours or when the futures exchanges on which each of the Commodities Instruments typically trade is closed. When the market value of a particular open futures contract position changes to a point where the margin on deposit does not satisfy maintenance margin requirements, a margin call is made by the commodity broker. The Fund will attempt to meet a margin call with available cash or cash equivalents. If the Fund does not have a sufficient amount of cash or cash equivalents to satisfy the margin call, the Fund will be required to liquidate its holdings of Commodities Instruments or Other Commodity Instruments (if any). If the margin call is not met within a reasonable time, or if the Fund is not provided sufficient notice of the margin call, the broker may close out all or a portion of the Fund's positions at any time. Margin calls may be accompanied by periods of pronounced market volatility and low liquidity which may exacerbate losses to the Fund.

Subsidiary Investment Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary are organized, respectively, could result in the inability of the Fund to operate as intended and could negatively affect the Fund and its shareholders. The Subsidiary is not registered under the 1940 Act and is not subject to all the investor protections of the 1940 Act. Thus, the Fund, as an investor in the Subsidiary, will not have all the protections offered to investors in registered investment companies.

Tax Risk. Historically, the Internal Revenue Service ("IRS") has issued private letter rulings in which the IRS specifically concluded that income and gains from investments in certain commodity index-linked structured notes or a wholly-owned foreign subsidiary that invests in commodity-linked instruments are "qualifying income" for purposes of compliance with Subchapter M of the Internal Revenue Code. The Fund has not received such a private letter ruling, and is not able to rely on private letter rulings issued to other taxpayers. Additionally, the IRS has suspended the granting of such private letter rulings, pending review of its position on this matter. Based on the principles underlying private letter rulings previously issued to other taxpayers, the Fund intends to treat its income from commodity index-linked structured notes and the Subsidiary as qualifying income without any such ruling from the IRS. The tax treatment of the Fund's investments in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains and distributions made by the Fund.

Portfolio Turnover Risk. In pursuing its investment strategy, particularly when "rolling" futures contracts, the Fund may engage in frequent trading of its portfolio securities, resulting in a high portfolio turnover rate. A high portfolio

turnover rate (such as 100% or more) could result in high brokerage costs for the Fund and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example thereunder, may affect the Fund's performance

Management Risk. The Fund is subject to management risk because it is an actively-managed ETF. In managing the Fund's portfolio, the Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results.

Risk of Cash Transactions. Unlike other ETFs, the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. As such, investments in Shares may be less tax-efficient than an investment in a conventional ETF. In addition, as a result of the Fund's investment strategies, it is expected that distributions by the Fund will generally be taxable as ordinary income. Because the Fund currently intends to effect its redemptions principally for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs (e.g., brokerage costs).

Issuer-Specific Changes Risk. The value of individual securities or instruments or particular types of securities or instruments in the Fund's portfolio can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Repurchase Agreements Risk. Repurchase agreements are subject to risks associated with the possibility of default by the seller at a time when the collateral has declined in value, or insolvency of the seller, which may affect the Portfolio's right to control the collateral and result in certain costs and delays. Repurchase agreements may involve a greater degree of credit risk than investments in U.S. government securities.

Non-Diversified Risk. The Fund is classified as a "non-diversified" investment company under the 1940 Act. Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as APs, none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing. The AP concentration risk may be heightened because APs may be required to post collateral, which only certain APs may be able to do. To the extent that APs exit the business or are unable to process creations or redemptions or similar activities, there may be a significantly diminished trading market for Shares.

Absence of Prior Active Market. The Fund is a newly organized series of an investment company and thus has no operating history. While the Fund's Shares are expected to be listed on NASDAQ, there can be no assurance that active trading markets for the Shares will develop or be maintained especially for recently organized funds. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods in times of market stress because market makers and APs may step away from making a

market in the Shares and in executing creation and redemption orders, which could cause a material decline in the Fund's NAV. Van Eck Securities Corporation, the distributor of the Shares (the "Distributor"), does not maintain a secondary market in the Shares. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those authorized participants creating and redeeming directly with the Fund.

Trading Issues. Trading in Shares on NASDAQ may be halted due to market conditions or for reasons that, in the view of NASDAQ, make trading in Shares inadvisable. In addition, trading in Shares on NASDAQ is subject to trading halts caused by extraordinary market volatility pursuant to NASDAQ's "circuit breaker" rules. There can be no assurance that the requirements of NASDAQ necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Fund Shares Trading, Premium/Discount Risk and Liquidity Risk of Fund Shares. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NASDAQ. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NASDAQ is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NASDAQ and the resulting premium or discount to the Shares' NAV may widen. Additionally, in stressed market conditions, the market for the Fund's shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings.

Performance

The Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.vaneck.com.

Portfolio Management

Investment Adviser. Van Eck Absolute Return Advisers Corporation.

Portfolio Managers. The following individuals are primarily and jointly responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Roland Morris, Jr.	Portfolio Manager	September 2016
Gregory F. Krenzer, CFA	Portfolio Manager	September 2016

Purchase and Sale of Fund Shares

The Fund issues and redeems Shares at NAV only in a large specified number of Shares, each called a "Creation Unit," or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are expected to be approved for listing, subject to notice of issuance, on The NASDAQ Stock Market, Inc. (“NASDAQ”) and because Shares will trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

Tax Information

The Fund’s distributions are taxable and will generally be taxed as both ordinary income and capital gains. As a result of the Fund’s investment strategies, it is expected that distributions by the Fund will generally be taxable as ordinary income.

Payments to Broker-Dealers and Other Financial Intermediaries

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of the Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENT STRATEGIES AND RISKS

Principal Investment Strategies

The Fund is an actively managed ETF that seeks to achieve its investment objective by investing, under normal circumstances, in Commodities Instruments. The Fund does not seek to replicate the performance of a specified index.

The Fund will invest in Commodities Instruments primarily through the Subsidiary. The Subsidiary is advised by the Adviser.

The Fund (directly or indirectly through the Subsidiary) normally invests in exchange-traded commodity futures contracts that are components of the Benchmark, an index composed of futures contracts on 20 heavily traded commodities across the energy, agriculture, industrial metals, precious metals and livestock sectors ("Index Commodity Contracts"). The Adviser employs a rules-based investment approach when selecting Commodities Instruments based upon momentum characteristics of the Commodities Instruments. Commodities Instruments are assessed on a monthly basis by comparing current prices to 12-month moving averages. The Fund's positions are either long or flat. A "long" position is a position that will increase in market price if the price of the commodity futures contract is rising during the period when the position is open. A "flat" position is a position that will not increase or decrease in market price whether the price of the commodity futures contract to which it relates is rising or falling. The Fund intends to take long positions in those Commodities Instruments whose prices are above their 12-month moving average. Conversely, the Fund intends to take flat positions to manage volatility and reduce downside risk for those Commodities Instruments whose prices are below their 12-month moving average. The Fund is not an "index tracking" ETF and may not always invest in all of the Benchmark's components, or in the same proportion, and it may invest in Commodities Instruments outside the Benchmark.

The Subsidiary is a limited company operating under Cayman Islands law. It is wholly-owned and controlled by the Fund and is advised by the Adviser. The Fund's investment in the Subsidiary may not exceed 25% of the value of the Fund's total assets at each quarter-end of the Fund's fiscal year. The Fund's investment in the Subsidiary is expected to provide the Fund with exposure to Commodities Instruments within the limits of the federal tax laws, which limit the ability of investment companies like the Fund to invest directly in such instruments. The Subsidiary has the same investment objective as the Fund and will follow the same general investment policies and restrictions, except that unlike the Fund, it may invest without limit in Commodities Instruments.

Except as noted, for purposes of this Prospectus, references to the Fund's investment strategies and risks include those of its Subsidiary.

Edgar Filing: VanEck Vectors ETF Trust - Form 497

The Fund (and the Subsidiary, as applicable) expects to invest its remaining assets in any one or more of the following: U.S. Treasuries, other U.S. government obligations, money market funds, cash and cash-like equivalents (*e.g.*, high quality commercial paper and similar instruments that are rated investment grade or, if unrated, of comparable quality, as the Adviser determines), treasury inflation-protected securities, sovereign debt obligations of non-U.S. countries and repurchase agreements that provide liquidity, serve as margin or collateralize the Fund's or Subsidiary's investments in exchange-traded commodity futures contracts.

The Fund also may invest directly in ETFs, exchange-traded closed end funds (to the extent permitted by the 1940 Act and certain exemptive relief therefrom) and ETNs that provide exposure to commodities.

Additional Investment Strategies

The Fund may also invest in securities issued by other investment companies, equity securities, fixed income securities and money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments. For temporary defensive purposes, the Fund may invest without limit in money market instruments, including repurchase agreements or other funds which invest exclusively in money market instruments. The Fund may also make temporary defensive positions in anticipation of or in an attempt to respond to adverse market, economic, political or other conditions. Such a position could have the effect of reducing any benefit the Fund may receive from a market increase.

An authorized participant that is not a “qualified institutional buyer,” as such term is defined under Rule 144A of the Securities Act of 1933, as amended (“Securities Act”), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A.

Additionally, to a limited extent the Fund may invest in Other Commodity Instruments, which includes commodity-based swap agreements cleared through an a central clearing house or the clearing house’s affiliate (“Cleared Swaps”), forward contracts on commodities, exchange-traded options on futures contracts, and commodity-based swaps other than Cleared Swaps, as described below. The Fund intends to invest first in exchange-traded commodity futures contracts. Thereafter, if the Fund reaches the position limits applicable to one or more Index Commodity Contracts or a futures exchange imposes limitations on the Fund’s ability to maintain or increase its positions in exchange-traded commodity future contracts after reaching accountability levels or a price limit is in effect on exchange-traded commodity future contracts during the last 30 minutes of its regular trading session, the Fund’s intention is to invest first in Cleared Swaps to the extent permitted under the position limits applicable to Cleared Swaps and appropriate in light of the liquidity in the Cleared Swaps market, and then, using its commercially reasonable judgment, in Other Commodity Instruments.

The Fund may also invest in commodity-related foreign and domestic equity securities.

Borrowing Money

The Fund may borrow money from a bank up to a limit of one-third of the market value of its assets. To the extent that the Fund borrows money, it will be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of the Fund’s portfolio securities.

Fundamental and Non-Fundamental Policies

The Fund's investment objective and each of its other investment policies are non-fundamental policies that may be changed by the Board of Trustees without shareholder approval, except as noted in this Prospectus or the Statement of Additional Information ("SAI") under the section entitled "Investment Policies and Restrictions—Investment Restrictions."

Lending Portfolio Securities

The Fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the Fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being loaned. This collateral is marked-to-market on a daily basis. Although the Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a

borrower fail to return the borrowed securities (*e.g.*, the Fund would have to buy replacement securities and the loaned securities may have appreciated beyond the value of the collateral held by the Fund) or become insolvent. The Fund may pay fees to the party arranging the loan of securities. In addition, the Fund will bear the risk of loss of any cash collateral that it invests.

Risks of Investing in the Fund

The following section provides additional information regarding the principal risks identified under “Principal Risks of Investing in the Fund” in the Fund’s “Summary Information” section followed by additional risk information.

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund’s Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.

Market Risk. The trading prices of commodities futures, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund’s net asset value and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time. An investment on the Fund may lose money.

Commodities Risk. Commodities include, among other things, energy products, agricultural products, industrial metals, precious metals and livestock. The commodities markets may fluctuate widely based on a variety of factors, including overall market movements, economic events and policies, changes in interest rates or inflation rates, changes in monetary and exchange control programs, war, acts of terrorism, natural disasters and technological developments. Variables such as disease, drought, floods, weather, trade, embargoes, tariffs and other political events, in particular, may have a larger impact on commodity prices than on traditional securities. These additional variables may create additional investment risks that subject the Fund’s investments to greater volatility than investments in traditional securities. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Because certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers, political, economic and supply-related events in such countries could have a disproportionate impact on the prices of such commodities. These factors may affect the value of the Fund in varying ways, and different factors may cause the value and the volatility of the Fund to move in inconsistent directions at inconsistent rates.

Foreign Commodity Markets Risk. The Fund engages in trading on commodity markets outside the United States. Trading on such markets is not regulated by any U.S. government agency and may involve certain risks not applicable to trading on U.S. exchanges or markets. The Fund may not have the same access to certain trades as do various other

participants in foreign markets. Furthermore, as the Fund determines its net assets in U.S. dollars, with respect to trading in foreign markets the Fund is subject to the risk of fluctuations in the exchange rate between the local currency and dollars as well as the possibility of exchange controls. Certain futures contracts traded on foreign exchanges are treated differently for federal income tax purposes than are domestic contracts.

Foreign Currency Risk. Because the Fund's assets may be invested in securities denominated in foreign currencies, the income received by the Fund from these investments will generally be in foreign currencies. The Fund's exposure to foreign currencies and changes in the value of foreign currencies versus the U.S. dollar may result in reduced returns for the Fund. Moreover, the Fund may incur costs in

connection with conversions between U.S. dollars and foreign currencies. The value of an emerging market country's currency may be subject to a high degree of fluctuation. This fluctuation may be due to changes in interest rates, investors' expectations concerning inflation and interest rates, the emerging market country's debt levels and trade deficit, the effects of monetary policies issued by the United States, foreign governments, central banks or supranational entities, the imposition of currency controls or other national or global political or economic developments. The economies of certain emerging market countries can be significantly affected by currency devaluations. Certain emerging market countries may also have managed currencies which are maintained at artificial levels relative to the U.S. dollar rather than at levels determined by the market. This type of system could lead to sudden and large adjustments in the currency, which in turn, can have a negative effect on the Fund and its investments.

Risk of Investing in Other Investment Companies and ETNs. The Fund may invest in other investment companies, including ETFs, and ETNs. ETNs are senior, unsecured notes linked to an index. Like ETFs, they may be bought and sold on a securities exchange. However, while ETF shares represent an interest in the ETF's underlying assets, ETNs are structured products that are an obligation of the issuing bank, broker-dealer or other intermediary, whereby the intermediary agrees to pay a return based on the target index less any fees. ETNs combine certain aspects of bonds and ETFs. Investors can hold an ETN until maturity. Investments in other investment companies and ETNs will subject the Fund to the additional fees and expenses of the underlying investment company or ETN. At the same time, the Fund would continue to pay its own fees and other expenses. The ETNs in which the Fund invests may include ETPs that invest in equity and debt securities, as well as other asset categories. Additionally, the value of an ETN may be influenced by time to maturity, level of supply and demand, volatility and lack of liquidity in the underlying market (e.g., the commodities market), changes in interest rates or the issuer's credit rating, and other economic, legal, political or geographic events.

Liquidity Risk. The Fund invests in Commodities Instruments, which may be less liquid than other types of investments. The illiquidity of Commodities Instruments could have a negative effect on the Fund's ability to achieve its investment objective and may result in losses to Fund shareholders. In stressed market conditions, the liquidity of the Fund's shares may begin to mirror those of the underlying portfolio holdings, which can be significantly less liquid than the Fund's shares.

Market Price Variance Risk. The Fund's shares will be listed for trading on NASDAQ and can be bought and sold in the secondary market at market prices. The market price of shares will fluctuate in response to changes in the value of the Fund's holdings, supply and demand for shares and other market factors. The Trust cannot predict whether shares will trade above, below or at a price equal to the value of the Fund's holdings. Given the fact that shares can be created and redeemed in Creation Units, as defined below, the Trust believes that large discounts or premiums to the value of the Fund's holdings should not be sustained. The Fund's investment results are measured based upon the daily NAV of the Fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by Authorized Participants creating and redeeming directly with the Fund.

Not Individually Redeemable. Shares are not individually redeemable and may be redeemed by the Fund at its net asset value per share only in large blocks known as "creation units." You may incur brokerage costs purchasing enough shares to constitute a creation unit.

Clearing Broker Risk. The Fund's investments in exchange-traded futures contracts expose it to the risks of a clearing broker (or a futures commission merchant ("FCM")). The failure or bankruptcy of the Fund's and the Subsidiary's clearing broker could result in a substantial loss of Fund assets. Under current CFTC regulations, a clearing broker maintains customers' assets in a bulk segregated account. If a clearing broker fails to do so, or is unable to satisfy a substantial deficit in a customer account, its other customers may be subject to risk of loss of their funds in the event of that clearing broker's bankruptcy. In

12

that event, the clearing broker's customers, such as the Fund and the Subsidiary, are entitled to recover, even in respect of property specifically traceable to them, only a proportional share of all property available for distribution to all of that clearing broker's customers.

Credit Risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely on securities. Fixed income securities are subject to varying degrees of credit risk, depending on the issuer's financial condition and on the terms of the securities, which may be reflected in credit ratings. There is a possibility that the credit rating of a fixed income security may be downgraded after purchase or the perception of an issuer's credit worthiness may decline, which may adversely affect the value of the security.

Interest Rate Risk. Interest rate risk refers to fluctuations in the value of a fixed income security resulting from changes in the general level of interest rates. When the general level of interest rates goes up, the prices of most fixed income securities go down. When the general level of interest rates goes down, the prices of most fixed income securities go up. The historically low interest rate environment increases the risk associated with rising interest rates, including the potential for periods of volatility and increased redemptions. The Fund may face a heightened level of interest rate risk, since the U.S. Federal Reserve Board has ended its quantitative easing program and may begin to raise rates.

Commodity Regulatory Risk. Changes in the laws or regulations of the United States or the Cayman Islands, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund or the Subsidiary. For example, in 2012, the CFTC adopted amendments to its rules that affect the ability of certain investment advisers to registered investment companies and other entities to rely on previously available exclusions or exemptions from registration under the CEA and regulations thereunder. As a result of the amendments and, based on the Fund's and its Subsidiary's current investment strategies, the Fund and the Subsidiary are each a "commodity pool" and the Adviser is considered a CPO with respect to the Fund and the Subsidiary under the CEA. Accordingly, the Fund and the Adviser are subject to dual regulation by the CFTC and the SEC. In August 2013, the CFTC adopted regulations that seek to "harmonize" CFTC regulations with overlapping SEC rules and regulations. Pursuant to the CFTC harmonization regulations, the Fund and the Adviser may elect to meet the requirements of certain CFTC regulations by complying with specific SEC rules and regulations relating to disclosure and reporting requirements. The CFTC could deem the Fund or the Adviser in violation of an applicable CFTC regulation if the Fund or the Adviser failed to comply with a related SEC regulatory requirement under the CFTC harmonization regulations. The Fund and the Adviser will remain subject to certain CFTC-mandated disclosure, reporting and recordkeeping regulations even if they elect substitute compliance under the CFTC harmonization regulations. Compliance with the CFTC regulations could increase the Fund's expenses, adversely affecting the Fund's total return.

Futures Risk. The Fund invests in futures primarily through the Subsidiary. All futures and futures-related products are highly volatile. Futures contracts involve the risk of mispricing or improper valuation and the risk that changes in the value of a futures contract may not correlate perfectly with the underlying indicator. Even a well-conceived futures transaction may be unsuccessful due to market events. Price movements are influenced by, among other things, changing supply and demand relationships; climate; government agricultural, trade, fiscal, monetary and exchange control programs and policies; national and international political and economic events; crop diseases; the purchasing

and marketing programs of different nations; and changes in interest rates. In addition, governments from time to time intervene, directly and by regulation, in certain markets, particularly those in currencies.

Gap Risk. The Fund is subject to the risk that a commodity price will change from one level to another with no trading in between. Usually such movements occur when there are adverse news announcements, which can cause a commodity price to drop substantially from the previous day's closing price.

Volatility Risk. Frequent or significant short-term price movements could adversely impact the performance of the Fund. In addition, the net asset value of the Fund over short-term periods may be more volatile than other investment options because of the Fund's significant use of financial instruments that have a leveraging effect. For example, because of the low margin deposits required, futures trading involves an extremely high degree of leverage and as a result, a relatively small price movement in a Commodities Instrument may result in immediate and substantial losses to the Fund.

Derivatives Risk. The use of derivatives, including Commodities Instruments, presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying security, commodity, asset, index or reference rate. Derivative strategies often involve leverage, which may exaggerate a loss, potentially causing the Fund to lose more money than it would have lost had it invested in the underlying security. Also, a liquid secondary market may not always exist for the Fund's derivative positions at times when the Fund might wish to terminate or sell such positions. Over the counter instruments may be illiquid, and transactions in derivatives traded in the over-the-counter market are subject to counterparty risk.

Additionally, in December 2015, the SEC proposed new regulations applicable to an ETF's use of derivatives and related instruments. If adopted as proposed, these regulations could significantly limit or impact the Fund's ability to invest in derivatives and other instruments and adversely affect the Fund's performance and ability to pursue their investment objectives.

Margin Call Risk. Margin requirements are computed intra-day by a commodity broker, and may be computed after-hours or when the futures exchanges on which each of the Commodities Instruments typically trade is closed. When the market value of a particular open futures contract position changes to a point where the margin on deposit does not satisfy maintenance margin requirements, a margin call is made by the commodity broker. The Fund will attempt to meet a margin call with available cash or cash equivalents. If the Fund does not have a sufficient amount of cash or cash equivalents to satisfy the margin call, the Fund will be required to liquidate its holdings of Commodities Instruments or Other Commodity Instruments (if any). If the margin call is not met within a reasonable time, or if the Fund is not provided sufficient notice of the margin call, the broker may close out all or a portion of the Fund's positions at any time. Margin calls may be accompanied by periods of pronounced market volatility and low liquidity which may exacerbate losses to the Fund.

Subsidiary Investment Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary are organized, respectively, could result in the inability of the Fund to operate as intended and could negatively affect the Fund and its shareholders. The Subsidiary is not registered under the 1940 Act and is not subject to all the investor protections of the 1940 Act. Thus, the Fund, as an investor in the Subsidiary, will not have all the protections offered to investors in registered investment companies.

Tax Risk. The Fund must derive at least 90% of its gross income from certain qualifying sources of income in order to qualify as a regulated investment company (“RIC”) under the Code. The Internal Revenue Service (the “IRS”) issued a revenue ruling in December 2005 which concluded that income and gains from certain commodity-linked derivatives is not qualifying income under Subchapter M of the Code. As a result, the Fund’s ability to invest directly in commodity-linked futures contracts or swaps as

part of its investment strategy is limited by the requirement that it receive no more than ten percent (10%) of its gross income from such investments.

However, in Revenue Ruling 2006-31, the IRS indicated that income from alternative investment instruments (such as certain structured notes) that create commodity exposure may be considered qualifying income under the Code. The IRS subsequently issued private letter rulings to other taxpayers in which the IRS specifically concluded that that income derived from a fund's investment in certain commodity index-linked structured notes and a controlled foreign corporation ("CFC") also will constitute qualifying income to the fund, even if the CFC itself owns commodity-linked futures contracts or swaps. The IRS has currently suspended the issuance of private letter rulings relating to the tax treatment of income and gains generated by investments in commodity index-linked notes and income generated by investments in a subsidiary.

A private letter ruling cannot be used or cited as precedent and is binding on the IRS only for the taxpayer that receives it. The Fund has not obtained a ruling from the IRS with respect to its investments or its structure. Based on the principles underlying private letter rulings previously issued to other taxpayers, the Fund intends to treat its income from commodity index-linked structured notes and the Subsidiary as qualifying income without any such ruling from the IRS. There can be no assurance that the IRS will not change its position with respect to some or all of these issues or if the IRS did so, that a court would not sustain the IRS's position. Furthermore, the tax treatment of the Fund's investments in commodity index-linked structured notes or the Subsidiary may be adversely affected by future legislation, court decisions, future IRS guidance or Treasury regulations.

If the IRS were to change its position or otherwise determine that income derived from the Fund's investment in commodity index-linked structured notes and the Subsidiary does not constitute qualifying income and if such positions were upheld, or if future legislation, court decisions, future IRS guidance or Treasury regulations were to adversely affect the tax treatment of such investments, the Fund might cease to qualify as a RIC and would be required to reduce its exposure to such investments which could result in difficulty in implementing its investment strategy. If the Fund did not qualify as a RIC for any taxable year, the Fund's taxable income would be subject to tax at the Fund level at regular corporate tax rates (without reduction for distributions to shareholders) and to a further tax at the shareholder level when such income is distributed. In such event, in order to re-qualify for taxation as a RIC, the Fund may be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions. The Fund may invest a portion of its assets in equity repurchase agreements. Recent changes in the law have the potential of changing the character and source of such instruments potentially subjecting them to unexpected U.S. taxation. Depending upon the terms of the contracts, the Fund may be required to indemnify the counterparty for such increased tax.

Portfolio Turnover Risk. In pursuing its investment strategy, particularly when "rolling" futures contracts, the Fund may engage in frequent trading of its portfolio securities, resulting in a high portfolio turnover rate. A high portfolio turnover rate (such as 100% or more) could result in high brokerage costs for the Fund and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example thereunder, may affect the Fund's performance.

Management Risk. The Fund is subject to management risk because it is an actively-managed ETF. In managing the Fund's portfolio, the Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results.

Risk of Cash Transactions. Unlike most other ETFs, the Fund expects to effect its creations and redemptions principally for cash. As a result, an investment in the Fund may be less tax-efficient than an investment in a more conventional ETF. Other ETFs generally are able to make in-kind redemptions and avoid realizing gains in connection with transactions designed to raise cash to meet redemption requests. Because the Fund currently intends to effect its redemptions principally for cash, rather than in-kind distributions, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds, which involves transaction costs (e.g., brokerage costs). If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized if it were to distribute portfolio securities in-kind, or to recognize such gain sooner than would otherwise be required. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on these gains at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. In addition, as a result of the Fund's investment strategies, it is expected that distributions by the Fund will generally be taxable as ordinary income.

Issuer-Specific Changes Risk. The value of an individual securities or instruments or particular types of securities or instruments in the Fund's portfolio can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than that of larger issuers.

Repurchase Agreements Risk. Repurchase agreements are subject to risks associated with the possibility of default by the seller at a time when the collateral has declined in value, or insolvency of the seller, which may affect the Portfolio's right to control the collateral and result in certain costs and delays. Repurchase agreements may involve a greater degree of credit risk than investments in U.S. government securities.

Non-Diversified Risk. The Fund is a separate investment portfolio of VanEck Vectors ETF Trust (the "Trust"), which is an open-end investment company registered under the 1940 Act. The Fund is classified as a "non-diversified" investment company under the 1940 Act. As a result, the Fund is subject to the risk that it will be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Authorized Participant Concentration Risk. The Fund may have a limited number of financial institutions that act as APs, none of which are obligated to engage in creation or redemption transactions. To the extent that those APs exit the business, or are unable to or choose not to process creation and/or redemption orders, and no other AP is able to step forward to create and redeem, Shares may trade like closed-end funds at a discount to NAV and possibly face trading halts and/or de-listing. The AP concentration risk may be heightened because APs may be required to post collateral, which only certain APs may be able to do. To the extent that APs exit the business or are unable to process creations or redemptions or similar activities, there may be a significantly diminished trading market for Shares.

Absence of Prior Active Market. The Fund is a newly organized series of an investment company and thus has no operating history. While the Fund's Shares are expected to be listed on NASDAQ, there can be no assurance that active

trading markets for the Shares will develop or be maintained especially for recently organized funds. Further, secondary markets may be subject to irregular trading activity, market dislocations, wide bid/ask spreads and extended trade settlement periods in times of market stress because market makers and APs may step away from making a market in the Shares and in executing creation and redemption orders, which could cause a material decline in the Fund's NAV. Van Eck Securities Corporation, the distributor of the Shares (the "Distributor"), does not maintain a secondary market in the Shares. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming directly with the Fund.

Trading Issues. Trading in Shares on NASDAQ may be halted due to market conditions or for reasons that, in the view of NASDAQ, make trading in Shares inadvisable. In addition, trading in Shares on NASDAQ is subject to trading halts caused by extraordinary market volatility pursuant to NASDAQ's "circuit breaker" rules. There can be no assurance that the requirements of NASDAQ necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Fund Shares Trading, Premium/Discount Risk and Liquidity Risk of Fund Shares. The market prices of the Shares may fluctuate in response to the Fund's NAV, the intraday value of the Fund's holdings and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below, or at their most recent NAV. Disruptions to creations and redemptions, the existence of market volatility or potential lack of an active trading market for Shares (including through a trading halt), as well as other factors, may result in Shares trading at a significant premium or discount to NAV or to the intraday value of the Fund's holdings. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The securities held by the Fund may be traded in markets that close at a different time than NASDAQ. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NASDAQ is open but after the applicable market closing, fixing or settlement times, bid-ask spreads on NASDAQ and the resulting premium or discount to the Shares' NAV may widen. Additionally, in stressed market conditions, the market for the Fund's shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings.

Additional Risks

Leverage Risk. To the extent that the Fund borrows money or utilizes certain derivatives, it may be leveraged. Leveraging generally exaggerates the effect on NAV of any increase or decrease in the market value of the Fund's portfolio securities. Leverage may result from ordinary borrowings, or may be inherent in the structure of certain Fund investments such as derivatives. If the prices of those investments decrease, or if the cost of borrowing exceeds any increase in the prices of those investments, the NAV of the Fund's Shares will decrease faster than if the Fund had not used leverage. To repay borrowings, the Fund may have to sell investments at a time and at a price that is unfavorable to the Fund. Interest on borrowings is an expense the Fund would not otherwise incur. Leverage magnifies the potential for gain and the risk of loss. If the Fund uses leverage, there can be no assurance that the Fund's leverage strategy will be successful.

Trading Issues. Trading in Shares on NASDAQ may be halted due to market conditions or for reasons that, in the view of NASDAQ, make trading in Shares inadvisable. In addition, trading in Shares on NASDAQ is subject to trading halts caused by extraordinary market volatility pursuant to NASDAQ's "circuit breaker" rules. There can be no assurance that the requirements of NASDAQ necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Temporary Defensive Strategy. When the Fund utilizes a temporary defensive strategy, it may not achieve its investment objective.

Portfolio Holdings

A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI.

Management of the Fund

Board of Trustees. The Board of Trustees of the Trust has responsibility for the general oversight of the management of the Fund, including general supervision of the Adviser and other service providers, but is

not involved in the day-to-day management of the Trust. A list of the Trustees and the Trust officers, and their present positions and principal occupations, is provided in the Fund's SAI.

Investment Adviser. Under the terms of an investment management agreement between the Trust and Van Eck Absolute Return Advisers Corporation with respect to the Fund (the "Investment Management Agreement"), Van Eck Absolute Return Advisers Corporation will serve as the adviser to the Fund and, subject to the supervision of the Board of Trustees, will be responsible for the day-to-day investment management of the Fund. The Adviser is a wholly-owned subsidiary of Van Eck Associates Corporation ("VEAC"). As of July 31, 2016, VEAC managed approximately \$38.75 billion in assets. VEAC has been an investment adviser since 1955 and also acts as adviser or sub-adviser to mutual funds, other ETFs, other pooled investment vehicles and separate accounts. The Adviser's principal business address is 666 Third Avenue, 9th Floor, New York, New York 10017.

A discussion regarding the Board of Trustees' approval of the Investment Management Agreement is available in the Trust's semi-annual report for the period ended June 30, 2016.

For the services provided to the Fund under the Investment Management Agreement, the Fund will pay the Adviser monthly fees based on a percentage of the Fund's average daily net assets at the annual rate of 0.50%. For purposes of calculating the fees for the Fund, the net assets of the Fund include the value of the Fund's interest in the Subsidiary. Pursuant to a management agreement between the Adviser and the Subsidiary (the "Subsidiary Investment Management Agreement"), the Adviser will receive certain fees for managing the Subsidiary's assets and the Adviser will waive or credit such amounts against the fees payable to the Adviser by the Fund. The Subsidiary Investment Management Agreement continues in effect only if approved annually by the Board of Directors of the Subsidiary. From time to time, the Adviser may waive all or a portion of its fee. Until at least May 1, 2018, the Adviser has agreed to waive fees and/or pay Fund or Subsidiary expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses of the Fund and the Subsidiary) from exceeding 0.65% of its average daily net assets per year. Offering costs excluded from the expense caps are: (a) legal fees pertaining to the Fund's Shares offered for sale; (b) SEC and state registration fees; and (c) initial fees paid for Shares of the Fund to be listed on an exchange.

The Fund is responsible for all of its expenses, including the investment advisory fees, costs of transfer agency, custody, legal, audit and other services, interest, taxes, any distribution fees or expenses, offering fees or expenses and extraordinary expenses.

Manager of Managers Structure. The Adviser and the Trust may rely on an exemptive order (the "Order") from the SEC that permits the Adviser to enter into investment sub-advisory agreements with unaffiliated sub-advisers without obtaining shareholder approval. The Adviser, subject to the review and approval of the Board of Trustees, may select one or more sub-advisers for the Fund and supervise, monitor and evaluate the performance of each sub-adviser.

The Order also permits the Adviser, subject to the approval of the Board of Trustees, to replace sub-advisers and amend investment sub-advisory agreements, including applicable fee arrangements, without shareholder approval whenever the Adviser and the Board of Trustees believe such action will benefit the Fund and its shareholders. The Adviser thus would have the responsibility (subject to the oversight of the Board of Trustees) to recommend the hiring and replacement of sub-advisers as well as the discretion to terminate any sub-adviser and reallocate the Fund's assets for management among any other sub-adviser(s) and itself. This means that the Adviser would be able to reduce the sub-advisory fees and retain a larger portion of the management fee, or increase the sub-advisory fees and retain a smaller portion of the management fee. The Adviser would compensate each sub-adviser out of its management fee.

Administrator, Custodian and Transfer Agent. Van Eck Absolute Return Advisers Corporation is the administrator for the Fund (the “Administrator”), and The Bank of New York Mellon is the custodian of the Fund’s assets and provides transfer agency and fund accounting services to the Fund. The Administrator is responsible for certain clerical, recordkeeping and/or bookkeeping services which are provided pursuant to the Investment Management Agreement.

Distributor. Van Eck Securities Corporation is the distributor of the Shares. The Distributor will not distribute Shares in less than Creation Units, and does not maintain a secondary market in the Shares. The Shares are traded in the secondary market.

Portfolio Managers

The portfolio managers who currently share joint responsibility for the day-to-day management of the Fund’s portfolio are Roland Morris, Jr. and Gregory F. Krenzer, CFA. Mr. Morris has been with the Adviser since 2012 and has 35 years of experience in the international and financial markets. Prior to joining the Adviser, Mr. Morris worked as a macro/commodities trading specialist and as manager of futures clearing and execution services. Mr. Krenzer has been with the Adviser since 1994 and has over 20 years of experience in the international and financial markets. See the Fund’s SAI for additional information about the portfolio managers’ compensation, other accounts managed by the portfolio managers and their respective ownership of Shares.

Shareholder Information

Determination of NAV

The NAV per Share for the Fund is computed by dividing the value of the net assets of the Fund (i.e., the value of its total assets less total liabilities) by the total number of Shares outstanding. Expenses and fees, including the management fee, are accrued daily and taken into account for purposes of determining NAV. The NAV of the Fund is determined each business day as of the close of trading (ordinarily 4:00 p.m. Eastern time) on the NASDAQ. Any assets or liabilities denominated in currencies other than the U.S. dollar are converted into U.S. dollars at the current market rates on the date of valuation as quoted by one or more sources.

The values of the Fund's portfolio securities are based on the securities' closing prices on local markets on which the securities trade when available. Due to the time differences between the United States and certain countries in which the Fund invests, securities on these exchanges may not trade at times when Shares of the Fund will trade. In the absence of a last reported sales price, or if no sales were reported, and for other assets for which market quotes are not readily available, values may be based on quotes obtained from a quotation reporting system, established market makers or by an outside independent pricing service. Fixed income securities are normally valued on the basis of quotes from brokers or dealers, established market makers or an outside independent pricing service using data reflecting the earlier closing of the principal markets for those securities. Short-term investments having a maturity of 60 days or less are valued at amortized cost. Futures contracts, which are traded on exchanges, are valued at the current settle price for like contracts acquired on the day on which the futures contract is being valued as of the close of such exchanges. Other derivative instruments are generally valued daily based upon quotations from market makers or by a pricing service and in accordance with the Trust's valuation policies and procedures. Prices obtained by an outside independent pricing service may use information provided by market makers or estimates of market values obtained from yield data related to investments or securities with similar characteristics and may use a computerized grid matrix of securities and its evaluations in determining what it believes is the fair value of the portfolio securities. If a market quotation for a security is not readily available or the Adviser believes it does not otherwise accurately reflect the market value of the security at the time the Fund calculates its NAV, the security will be fair valued by the Adviser in accordance with the Trust's valuation policies and procedures approved by the Board of Trustees. The Fund may also use fair value pricing in a variety of circumstances, including but not limited to, situations when the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. In addition, the Fund currently expects that it will fair value certain of the foreign equity securities held by the Fund each day it calculates its NAV, except those securities principally traded on exchanges that close at the same time the Fund calculates its NAV. Accordingly, the Fund's NAV may reflect certain portfolio securities' fair values rather than their market prices at the time the exchanges on which they principally trade close. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. With respect to securities that are principally traded on foreign exchanges, the value of the Fund's portfolio securities may change on days when you will not be able to purchase or sell your Shares.

Intraday Value

The trading prices of the Fund's Shares in the secondary market generally differ from the Fund's daily NAV and are affected by market forces such as the supply of and demand for ETF shares and underlying securities held by the Fund, economic conditions and other factors. Information regarding the intraday value of the Fund's Shares ("IIV") is disseminated every 15 seconds throughout each trading day by the Exchange or by market data vendors or other information providers. The IIV is based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. The IIV does not necessarily reflect the precise composition of the current portfolio of securities held by the Fund at a particular point in time or the best possible valuation of the current portfolio. Therefore, the IIV should not be viewed as a "real-time" update of the Fund's NAV, which is computed only once a day. The IIV is generally determined by using current market quotations and/or price quotations obtained from broker-dealers and other market intermediaries that may trade in the portfolio securities held by the Fund and valuations based on current market rates. The quotations and/or valuations of certain Fund holdings may not be updated during U.S. trading hours if such holdings do not trade in the United States. The Fund is not involved in, or responsible for, the calculation or dissemination of the IIV and makes no warranty as to its accuracy.

Rule 144A Restriction and Other Unregistered Securities

An AP (i.e., a person eligible to place orders with the Distributor to create or redeem Creation Units of the Fund) that is not a “qualified institutional buyer,” as such term is defined under Rule 144A of the Securities Act of 1933, as amended (“Securities Act”), will not be able to receive, as part of a redemption, restricted securities eligible for resale under Rule 144A or other unregistered securities.

Buying and Selling Exchange-Traded Shares

The Shares of the Fund are expected to be approved for listing on NASDAQ, subject to notice of issuance. If you buy or sell Shares in the secondary market, you will incur customary brokerage commissions and charges and may pay some or all of the “spread,” which is any difference between the bid price and the ask price. The spread varies over time for the Fund’s Shares based on the Fund’s trading volume and market liquidity, and is generally lower if the Fund has high trading volume and market liquidity, and generally higher if the Fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). In times of severe market disruption or low trading volume in the Fund’s Shares, this spread can increase significantly. It is anticipated that the Shares will trade in the secondary market at prices that may differ to varying degrees from the NAV of the Shares. During periods of disruptions to creations and redemptions or the existence of extreme market volatility, the market prices of Shares are more likely to differ significantly from the Shares’ NAV.

The Depository Trust Company (“DTC”) serves as securities depository for the Shares. (The Shares may be held only in book-entry form; stock certificates will not be issued.) DTC, or its nominee, is the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or its participants (described below). Beneficial owners of Shares are not entitled to have Shares registered in their names, will not receive or be entitled to receive physical delivery of certificates in definitive form and are not considered the registered holder thereof. Accordingly, to exercise any rights of a holder of Shares, each beneficial owner must rely on the procedures of: (i) DTC; (ii) “DTC Participants,” i.e., securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of whom (and/or their representatives) own DTC; and (iii) “Indirect Participants,” i.e., brokers, dealers, banks and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly, through which such beneficial owner holds its interests. The Trust understands that under existing industry practice, in the event the Trust requests any action of holders of Shares, or a beneficial owner desires to take any action that DTC, as the record owner of all outstanding Shares, is entitled to take, DTC would authorize the DTC Participants to take such action and that the DTC Participants would authorize the Indirect Participants and beneficial owners acting through such DTC Participants to take such action and would otherwise act upon the instructions of beneficial owners owning through them. As described above, the Trust recognizes DTC or its nominee as the owner of all Shares for all purposes. For more information, see the section entitled “Book Entry Only System” in the Fund’s SAI.

The NASDAQ is open for trading Monday through Friday and is closed on weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. Because non-U.S. exchanges may be open on days when the Fund does

not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Market Timing and Related Matters. The Fund imposes no restrictions on the frequency of purchases and redemptions. Frequent purchases and redemptions of Fund Shares may attempt to take advantage of a potential arbitrage opportunity presented by a lag between a change in the value of the Fund's portfolio securities after the close of the primary markets for the Fund's portfolio securities and the reflection of that change in the Fund's NAV ("market timing"). The Board of Trustees considered the nature of the Fund (i.e., a fund whose shares are expected to trade intraday), that the Adviser monitors the trading activity of APs for patterns of abusive trading, that the Fund reserves the right to reject orders that may be disruptive to the management of or otherwise not in the Fund's best interests, and that the Fund may fair value certain of

its securities. Given this structure, the Board of Trustees determined that it is not necessary to impose restrictions on the frequency of purchases and redemptions for the Fund at the present time.

Distributions

Net Investment Income and Capital Gains. As a shareholder of the Fund, you are entitled to your share of the Fund's distributions of net investment income and net realized capital gains on its investments. The Fund pays out substantially all of its net earnings to its shareholders as "distributions."

The Fund typically earns income dividends from stocks and interest from debt securities. These amounts, net of expenses, are typically passed along to Fund shareholders as dividends from net investment income. The Fund generally realizes capital gains from writing options and capital gains or losses whenever it sells securities. Any net realized long-term capital gains they are anticipated, are distributed to shareholders as "capital gain distributions." Distributions from the Fund's net investment income, including any net short-term capital gains, if any, are taxable to you as ordinary income. Any long-term capital gains distributions you receive from the Fund are taxable as long-term capital gains.

Net investment income, if any, is expected to be distributed to shareholders at least annually, and net realized capital gains, if any, are expected to be distributed to shareholders at least annually. Dividends may be declared and paid more frequently to comply with the distribution requirements of the Internal Revenue Code. In addition, in situations where the Fund acquires investment securities after the beginning of a dividend period, the Fund may elect to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period. If the Fund so elects, some portion of each distribution may result in a return of capital, which, for tax purposes, is treated as a return on your investment in Shares. Record shareholders will be notified regarding the portion of the distribution which represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of the Fund only if the broker through which you purchased Shares makes such option available.

Tax Information

As with any investment, you should consider how your Fund investment will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in the Fund, including the possible application of foreign, state and local taxes. Unless your investment in the Fund is through a tax-exempt entity or tax-deferred retirement account, such as a 401(k) plan, you need to be aware of the possible tax consequences when: (i) the Fund makes distributions, (ii) you sell Shares in

the secondary market or (iii) you create or redeem Creation Units.

Taxes on Distributions. As noted above, the Fund expects to distribute net investment income, if any, at least annually, and any net realized long-term or short-term capital gains, if any, annually. As a result of the Fund's investment strategies, it is expected that any distributions by the Fund will be taxable as ordinary income and capital gains. The Fund may also pay a special distribution at any time to comply with U.S. federal tax requirements.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund. Distributions from the Fund's net investment income, including any net short-term capital gains, if any, are taxable to you as ordinary income. Whether distributions of capital gains represent long-term or short-term capital gains is determined by how long the Fund owned the investments that generated them, rather than how long you have owned your Shares. Distributions of net short-term capital gains in excess of net long-term capital losses, if any, are generally taxable as ordinary

income. Distributions of net long-term capital gains in excess of net short-term capital losses, if any, that are properly reported as capital gain dividends are generally taxable as long-term capital gains. Long-term capital gains of a non-corporate shareholder are generally taxable at a maximum rate of 15% or 20%, depending on whether the shareholder's income exceeds certain threshold amounts.

The Fund may receive dividends, the distribution of which the Fund may report as qualified dividends. In the event that the Fund receives such a dividend and reports the distribution of such dividend as a qualified dividend, the dividend may be taxed at the maximum capital gains rates, provided holding period and other requirements are met at both the shareholder and the Fund level. Given the investment strategies of the Fund, it is not anticipated that a significant portion of the Fund's distributions will be eligible to designated as qualified dividends.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in Shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of Shares. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

Dividends, interest and gains from non-U.S. investments of the Fund may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may, in some cases, reduce or eliminate such taxes.

If more than 50% of the Fund's total assets at the end of its taxable year consist of foreign securities, the Fund may elect to "pass through" to its investors certain foreign income taxes paid by the Fund, with the result that each investor will (i) include in gross income, as an additional dividend, even though not actually received, the investor's pro rata share of the Fund's foreign income taxes, and (ii) either deduct (in calculating U.S. taxable income) or credit (in calculating U.S. federal income), subject to certain holding period and other limitations, the investor's pro rata share of the Fund's foreign income taxes. It is not anticipated that the Fund will be eligible to make this election.

Backup Withholding. The Fund may be required to withhold a percentage of your distributions and proceeds if you have not provided a taxpayer identification number or social security number or otherwise established a basis for exemption from backup withholding. The backup withholding rate for individuals is currently 28%. This is not an additional tax and may be refunded, or credited against your U.S. federal income tax liability, provided certain required information is furnished to the Internal Revenue Service.

Taxes on the Sale or Cash Redemption of Exchange Listed Shares. Currently, any capital gain or loss realized upon a sale of Shares is generally treated as long term capital gain or loss if the Shares have been held for more than one year and as a short-term capital gain or loss if held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with

respect to such Shares. The ability to deduct capital losses may be limited. To the extent that a shareholder's Shares are redeemed for cash, this is normally treated as a sale for tax purposes.

Taxes on Creations and Redemptions of Creation Units. A person who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the

securities received. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons exchanging securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction. Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

If you create or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you created or sold and at what price.

Investment in the Subsidiary and commodity index-linked structured notes. The Fund must derive at least 90% of its gross income from certain qualifying sources of income in order to qualify as a regulated investment company (“RIC”) under the Code. The Internal Revenue Service (the “IRS”) issued a revenue ruling in December 2005 which concluded that income and gains from certain commodity-linked derivatives is not qualifying income under Subchapter M of the Code. As a result, the Fund’s ability to invest directly in commodity-linked futures contracts or swaps as part of its investment strategy is limited by the requirement that it receive no more than ten percent (10%) of its gross income from such investments.

However, in Revenue Ruling 2006-31, the IRS indicated that income from alternative investment instruments (such as certain structured notes) that create commodity exposure may be considered qualifying income under the Code. The IRS subsequently issued private letter rulings to other taxpayers in which the IRS specifically concluded that that income derived from a fund’s investment in certain commodity index-linked structured notes and a controlled foreign corporation (“CFC”) also will constitute qualifying income to the fund, even if the CFC itself owns commodity-linked futures contracts or swaps. The IRS has currently suspended the issuance of private letter rulings relating to the tax treatment of income and gains generated by investments in commodity index-linked notes and income generated by investments in a subsidiary.

A private letter ruling cannot be used or cited as precedent and is binding on the IRS only for the taxpayer that receives it. The Fund has not obtained a ruling from the IRS with respect to its investments or its structure. Based on the principles underlying private letter rulings previously issued to other taxpayers, the Fund intends to treat its income from commodity index-linked structured notes and the Subsidiary as qualifying income without any such ruling from the IRS. There can be no assurance that the IRS will not change its position with respect to some or all of these issues or if the IRS did so, that a court would not sustain the IRS’s position. Furthermore, the tax treatment of the Fund’s investments in commodity index-linked structured notes or the Subsidiary may be adversely affected by future legislation, court decisions, future IRS guidance or Treasury regulations.

If the IRS were to change its position or otherwise determine that income derived from the Fund’s investment in commodity index-linked structured notes and the Subsidiary does not constitute qualifying income and if such

positions were upheld, or if future legislation, court decisions, future IRS guidance or Treasury regulations were to adversely affect the tax treatment of such investments, the Fund might cease to qualify as a RIC and would be required to reduce its exposure to such investments which could result in difficulty in implementing its investment strategy. If the Fund did not qualify as a RIC for any taxable year, the Fund's taxable income would be subject to tax at the Fund level at regular corporate tax rates (without reduction for distributions to shareholders) and to a further tax at the shareholder level when

such income is distributed. In such event, in order to re-qualify for taxation as a RIC, the Fund may be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

Non-U.S. Shareholders. If you are not a citizen or resident alien of the United States or if you are a non-U.S. entity, the Fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business.

As part of the Foreign Account Tax Compliance Act, ("FATCA"), the Fund may be required to withhold 30% on certain types of U.S. sourced income (e.g., dividends, interest, and other types of passive income), and after January 1, 2019 proceeds from the sale or other disposition of property producing U.S. sourced income and certain capital gain dividends to (i) foreign financial institutions ("FFIs"), including non-U.S. investment funds, unless they agree to collect and disclose to the Internal Revenue Service ("IRS") information regarding their direct and indirect U.S. account holders and (ii) certain nonfinancial foreign entities ("NFFEs"), unless they certify certain information regarding their direct and indirect U.S. owners. To avoid possible withholding, FFIs will need to enter into agreements with the IRS which state that they will provide the IRS information, including the names, account numbers and balances, addresses and taxpayer identification numbers of U.S. account holders and comply with due diligence procedures with respect to the identification of U.S. accounts as well as agree to withhold tax on certain types of withholdable payments made to non-compliant foreign financial institutions or to applicable foreign account holders who fail to provide the required information to the IRS, or similar account information and required documentation to a local revenue authority, should an applicable intergovernmental agreement be implemented. NFFEs will need to provide certain information regarding each substantial U.S. owner or certifications of no substantial U.S. ownership, unless certain exceptions apply, or agree to provide certain information to the IRS.

While some parts of the FATCA rules have not been finalized, the Fund may be subject to the FATCA withholding obligation, and also will be required to perform due diligence reviews to classify foreign entity investors for FATCA purposes. Investors are required to agree to provide information necessary to allow the Fund to comply with the FATCA rules. If the Fund is required to withhold amounts from payments pursuant to FATCA, investors will receive distributions that are reduced by such withholding amounts.

Non-U.S. shareholders are advised to consult their tax advisors with respect to the particular tax consequences to them of an investment in the Fund, including the possible applicability of the U.S. estate tax.

The foregoing discussion summarizes some of the consequences under current U.S. federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your own tax advisor about the potential tax consequences of an investment in the Fund under all applicable tax laws.

Financial Highlights

The Fund has not yet commenced operations as of the date of this Prospectus and therefore it does not have a financial history.

26

Premium/Discount Information

The Fund has not yet commenced operations and, therefore, does not have information about the differences between the Fund's daily market price on NASDAQ and its NAV. Information regarding how often the Shares of the Fund traded on NASDAQ at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of the Fund during the past four calendar quarters, as applicable, can be found at www.vaneck.com.

General Information

Continuous Offering

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Trust on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NASDAQ is satisfied by the fact that the prospectus is available at NASDAQ upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

In addition, certain affiliates of the Fund and the Adviser may purchase and resell Fund shares pursuant to this Prospectus.

Other Information

The Trust was organized as a Delaware statutory trust on March 15, 2001. Its Declaration of Trust currently permits the Trust to issue an unlimited number of Shares of beneficial interest. If shareholders are required to vote on any matters, each Share outstanding would be entitled to one vote. Annual meetings of shareholders will not be held except as required by the 1940 Act and other applicable law. See the Fund's SAI for more information concerning the Trust's form of organization. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Fund. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Fund.

Edgar Filing: VanEck Vectors ETF Trust - Form 497

The Prospectus, SAI and any other Fund communication do not create any contractual obligations between the Fund's shareholders and the Trust, the Fund, the Adviser and/or the Trustees. Further, shareholders are not intended third-party beneficiaries of any contracts entered into by (or on behalf of) the Fund, including contracts with the Adviser or other parties who provide services to the Fund.

Dechert LLP serves as counsel to the Trust, including the Fund. Ernst & Young LLP serves as the Trust's independent registered public accounting firm and will audit the Fund's financial statements annually.

Additional Information

This Prospectus does not contain all the information included in the Registration Statement filed with the SEC with respect to the Fund's Shares. Information about the Fund can be reviewed and copied at the SEC's Public Reference Room and information on the operation of the Public Reference Room may be obtained by calling the SEC at 1.202.551.8090. The Fund's Registration Statement, including this Prospectus, the Fund's SAI and the exhibits may be examined at the offices of the SEC (100 F Street, NE, Washington, DC 20549) or on the EDGAR database at the SEC's website (<http://www.sec.gov>), and copies may be obtained, after paying a duplicating fee, by electronic request at the following email address: publicinfo@sec.gov, or by writing the SEC's Public Reference Section, Washington, DC 20549-1520. These documents and other information concerning the Trust also may be inspected at the offices of NASDAQ (One Liberty Plaza, 165 Broadway, New York, New York 10006).

The SAI for the Fund, which has been filed with the SEC, provides more information about the Fund. The SAI for the Fund is incorporated herein by reference and is legally part of this Prospectus. Additional information about the Fund's investments will be available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, when available, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. The SAI and the Fund's annual and semi-annual reports may be obtained without charge by writing to the Fund at Van Eck Securities Corporation, the Fund's distributor, at 666 Third Avenue, 9th Floor, New York, New York 10017 or by calling the distributor at the following number: Investor Information: 800.826.2333.

Shareholder inquiries may be directed to the Fund in writing to 666 Third Avenue, 9th Floor, New York, New York 10017 or by calling 800.826.2333.

The Fund's SAI is available at www.vaneck.com.

GENERAL DESCRIPTION OF THE TRUST

The Trust is an open-end management investment company. The Trust currently consists of 60 investment portfolios. This SAI relates to one investment portfolio, VanEck Vectors Long/Flat Commodity ETF (the “Fund”). The Fund is classified as a non-diversified management investment company under the Investment Company Act of 1940, as amended (“1940 Act”), and, as a result, is not required to meet certain diversification requirements under the 1940 Act. The Trust was organized as a Delaware statutory trust on March 15, 2001. The shares of the Fund are referred to herein as “Shares.”

The Fund will offer and issue Shares at its net asset value (“NAV”) only in aggregations of a specified number of Shares (each, a “Creation Unit”). Similarly, Shares will be redeemable by the Fund only in Creation Units. Creation Units will be issued and redeemed principally for cash. The Shares of the Fund are expected to be approved for listing, subject to notice of issuance, on The NASDAQ Stock Market, Inc. (“NASDAQ” or the “Exchange”), and will trade in the secondary market at market prices that may differ from the Shares’ NAV. A Creation Unit consists of 50,000 Shares.

INVESTMENT POLICIES AND RESTRICTIONS

Repurchase Agreements

The Fund may invest in repurchase agreements with commercial banks, brokers or dealers to generate income from its excess cash balances and to invest securities lending cash collateral. A repurchase agreement is an agreement under which the Fund acquires a money market instrument (generally a security issued by the U.S. Government or an agency thereof, a banker's acceptance or a certificate of deposit) from a seller, subject to resale to the seller at an agreed upon price and date (normally, the next business day). A repurchase agreement may be considered a loan collateralized by securities. The resale price reflects an agreed upon interest rate effective for the period the instrument is held by the Fund and is unrelated to the interest rate on the underlying instrument.

In these repurchase agreement transactions, the securities acquired by the Fund (including accrued interest earned thereon) must have a total value at least equal to the value of the repurchase agreement and are held by the Trust's custodian bank until repurchased. In addition, the Trust's Board of Trustees ("Board" or "Trustees") has established guidelines and standards for review of the creditworthiness of any bank, broker or dealer counterparty to a repurchase agreement with the Fund. No more than an aggregate of 15% of the Fund's net assets will be invested in repurchase agreements having maturities longer than seven days.

The use of repurchase agreements involves certain risks. For example, if the other party to the agreement defaults on its obligation to repurchase the underlying security at a time when the value of the security has declined, the Fund may incur a loss upon disposition of the security. If the other party to the agreement becomes insolvent and subject to liquidation or reorganization under the Bankruptcy Code or other laws, a court may determine that the underlying security is collateral not within the control of the Fund and, therefore, the Fund may incur delays in disposing of the security and/or may not be able to substantiate its interest in the underlying security and may be deemed an unsecured creditor of the other party to the agreement.

Futures Contracts and Options

Futures contracts generally provide for the future purchase or sale of a specified instrument, index or commodity at a specified future time and at a specified price. Stock index futures contracts and other types of futures contracts are settled daily with a payment by one party to the other of a cash amount based on the difference between the level of the stock index or other underlying instrument specified in the contract from one day to the next. Futures contracts are standardized as to maturity date and underlying instrument and are traded on futures exchanges. The Fund may use futures contracts and options on futures contracts based on other indexes or combinations of indexes that Van Eck Absolute Return Advisers Corporation (the "Adviser") believes to be appropriate.

An option is a contract that provides the holder of the option the right to buy or sell shares or other assets at a fixed price, within a specified period of time. An American call option gives the option holder the right to buy the underlying security from the option writer at the option exercise price at any time prior to the expiration of the option. A European call option gives the option holder the right to buy the underlying security from the option writer only on the option expiration date. An American put option gives the option holder the right to sell the underlying security to the option writer at the option exercise price at any time prior to the expiration of the option. A European put option gives the option holder the right to sell the underlying security to the option writer at the option exercise price only on the option expiration date.

Although futures contracts (other than cash-settled futures contracts including most stock index futures contracts) by their terms call for actual delivery or acceptance of the underlying instrument or commodity, in most cases the contracts are closed out before the maturity date without the making or taking of delivery. Closing out an open futures position is done by taking an opposite position (buying the same contract which was previously sold or selling the same contract previously purchased) in an identical contract to terminate the position. Brokerage commissions are incurred when a futures contract position is opened or closed.

Futures traders are required to make a margin deposit (typically in cash or government securities) with a broker or custodian to initiate and maintain open positions in futures contracts. A margin deposit is intended to assure completion of the contract (delivery or acceptance of the underlying instrument or commodity or payment of the cash settlement amount) if it is not terminated prior to the specified delivery date. Brokers may establish deposit requirements that are higher than the exchange minimums. Futures contracts are customarily purchased and sold on margin deposits which may range upward from less than 5% of the value of the contract being traded.

After a futures contract position is opened, the value of the contract is marked-to-market daily. If the futures contract price changes to the extent that the margin on deposit does not satisfy margin requirements, payment of additional "variation" margin will be required.

Conversely, a change in the contract value may reduce the required margin, resulting in a repayment of excess margin to the contract holder. Variation margin payments are made to and from the futures broker for as long as the contract remains open. In such case, the Fund would expect to earn interest income on its margin deposits in the form of cash.

The Fund may use futures contracts and options thereon, together with positions in cash and money market instruments.

Positions in futures contracts and options may be closed out only on an exchange that provides a secondary market therefor. However, there can be no assurance that a liquid secondary market will exist for any particular futures contract or option at any specific time. Thus, it may not be possible to close a futures or options position. In the event of adverse price movements, the Fund would continue to be required to make daily cash payments to maintain its required margin. In such situations, if the Fund has insufficient cash, it may have to sell portfolio securities to meet daily margin requirements at a time when it may be disadvantageous to do so. In addition, the Fund may be required to make delivery of the instruments underlying futures contracts it has sold.

The Fund will seek to minimize the risk that it will be unable to close out a futures or options contract by only entering into futures and options for which there appears to be a liquid secondary market.

The risk of loss in trading futures contracts or uncovered call options in some strategies (*e.g.*, selling uncovered stock index futures contracts) is potentially unlimited. The Fund does not plan to use futures and options contracts in this way. The risk of a futures position may still be large as traditionally measured due to the low margin deposits required. In many cases, a relatively small price movement in a futures contract may result in immediate and substantial loss or gain to the investor relative to the size of a required margin deposit.

Utilization of futures transactions by the Fund involves the risk of loss by the Fund of margin deposits in the event of the bankruptcy or other similar insolvency with respect to a broker with whom the Fund has an open position in the futures contract or option.

Certain financial futures exchanges limit the amount of fluctuation permitted in futures contract prices during a single trading day. The daily limit establishes the maximum amount that the price of a futures contract may vary either up or down from the previous day's settlement price at the end of a trading session. Once the daily limit has been reached in a particular type of contract, no trades may be made on that day at a price beyond that limit. The daily limit governs only price movements during a particular trading day and therefore does not limit potential losses, because the limit may prevent the liquidation of unfavorable positions. Futures contract prices have occasionally moved to the daily limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of future positions and subjecting some futures traders to substantial losses.

Except as otherwise specified in the Fund's Prospectus or this SAI, there are no limitations on the extent to which the Fund may engage in transactions involving futures and options thereon. The Fund will take steps to prevent its futures positions from "leveraging" its securities holdings. When the Fund has a long futures position requiring physical settlement, it will maintain with its custodian bank, cash or liquid securities having a value equal to the notional value of the contract (less any margin deposited in connection with the position). When the Fund has a short futures position requiring physical settlement, the Fund will maintain with its custodian bank assets substantially identical to those underlying the contract or cash and liquid securities (or a combination of the foregoing) having a value equal to the net obligation of the Fund under the contract (less the value of any margin deposits in connection with the position).

Swaps

Over-the-counter ("OTC") swap agreements are contracts between parties in which one party agrees to make payments to the other party based on the change in market value or level of a specified index or asset. In return, the other party agrees to make payments to the first party based on the return of a different specified index or asset, usually an interest rate. Although OTC swap agreements entail the risk that a party will default on its payment obligations thereunder, the Fund seeks to reduce this risk generally by receiving (or paying) collateral daily and entering into agreements that involve payments no less frequently than quarterly. The net amount of the excess, if any, of the Fund's obligations over its entitlements with respect to each swap is accrued on a daily basis and an amount of cash or highly liquid securities having an aggregate value at least equal to the accrued excess is maintained in an account at the Trust's custodian bank.

The Fund may enter into interest rate swaps and credit default swaps. Interest rate swaps are typically exchange-traded contracts in which a party agrees to make periodic payments on certain referenced interest rates (e.g., a fixed rate or a floating rate) applied to a specified notional amount. A credit default swap on a security is a bilateral contract that enables an investor to buy or sell protection against a defined-issuer credit event. Credit default swaps referencing fixed income indices are generally traded on exchanges. The Fund may enter into credit default swap agreements either as a buyer or a seller. The Fund may buy protection to attempt to mitigate the risk of default or credit quality deterioration in one or more of its individual holdings or in a segment of the fixed income securities market to which it has exposure, or to take a "short" position in individual bonds or market segments which it does not own. The Fund may sell protection in an attempt to gain exposure to the credit quality characteristics of particular bonds or market segments without investing directly in those bonds or market segments. As the protection seller in a credit default swap, the Fund effectively adds economic leverage to its portfolio because, in addition to being subject to investment exposure on its total net assets, the Fund is subject to investment exposure on the notional amount of the swap.

The use of such swap agreements involves certain risks. For example, if the counterparty, under an OTC swap agreement, defaults on its obligation to make payments due from it as a result of its

4

bankruptcy or otherwise, the Fund may lose such payments altogether or collect only a portion thereof, which collection could involve costs or delays.

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) and related regulatory developments require the clearing and exchange-trading of certain standardized OTC derivative instruments that the Commodity Futures Trading Commission (“CFTC”) and Securities and Exchange Commission (“SEC”) defined as “swaps” and “security-based swaps,” respectively. Mandatory exchange-trading and clearing is occurring on a phased-in basis based on the type of market participant and CFTC approval of contracts for central clearing and exchange trading. In a cleared swap, the Fund’s ultimate counterparty is a central clearinghouse rather than a swap dealer, bank or other financial institution. The Fund enters into cleared swaps through an executing broker. Such transactions are then submitted for clearing and, if cleared, will be held at regulated futures commission merchants (“FCMs”) that are members of the clearinghouse that serves as the central counterparty. When the Fund enters into a cleared swap, it must deliver to the central counterparty (via an FCM) an amount referred to as “initial margin.” Initial margin requirements are determined by the central counterparty, but an FCM may require additional initial margin above the amount required by the central counterparty. During the term of the swap agreement, a “variation margin” amount may also be required to be paid by the Fund or may be received by the Fund in accordance with margin controls set for such accounts, depending upon changes in the price of the underlying reference asset subject to the swap agreement. At the conclusion of the term of the swap agreement, if the Fund has a loss equal to or greater than the margin amount, the margin amount is paid to the FCM along with any loss in excess of the margin amount. If the Fund has a loss of less than the margin amount, the excess margin is returned to the Fund. If the Fund has a gain, the full margin amount and the amount of the gain is paid to the Fund.

Central clearing is designed to reduce counterparty credit risk compared to uncleared swaps because central clearing interposes the central clearinghouse as the counterparty to each participant’s swap, but it does not eliminate those risks completely. There is also a risk of loss by the Fund of the initial and variation margin deposits in the event of bankruptcy of the FCM with which the Fund has an open position in a swap contract. The assets of the Fund may not be fully protected in the event of the bankruptcy of the FCM or central counterparty because the Fund might be limited to recovering only a pro rata share of all available funds and margin segregated on behalf of an FCM’s customers or central counterparty’s clearing members. If the FCM does not provide accurate reporting, the Fund is also subject to the risk that the FCM could use the Fund’s assets, which are held in an omnibus account with assets belonging to the FCM’s other customers, to satisfy its own financial obligations or the payment obligations of another customer to the central counterparty. Certain swaps have begun trading on exchanges called swap execution facilities. Exchange-trading is expected to, but may not necessarily, increase the liquidity of swaps trading.

In addition, with respect to cleared swaps, the Fund may not be able to obtain as favorable terms as it would be able to negotiate for an uncleared swap. In addition, an FCM may unilaterally impose position limits or additional margin requirements for certain types of swaps in which the Fund may invest. Central counterparties and FCMs generally can require termination of existing cleared swap transactions at any time, and can also require increases in margin above the margin that is required at the initiation of the swap agreement. Margin requirements for cleared swaps vary on a number of factors, and the margin required under the rules of the clearinghouse and FCM may be in excess of the collateral required to be posted by the Fund to support its obligations under a similar uncleared swap. However, regulators recently adopted rules imposing certain margin requirements, including minimums, on uncleared swaps.

The Fund is also subject to the risk that, after entering into a cleared swap with an executing broker, no FCM or central counterparty is willing or able to clear the transaction. In such an event, the

5

central counterparty would void the trade. Before the Fund can enter into a new trade, market conditions may become less favorable to the Fund.

The Adviser will continue to monitor developments regarding trading and execution of cleared swaps on exchanges, particularly to the extent regulatory changes affect the Fund's ability to enter into swap agreements and the costs and risks associated with such investments.

Warrants and Subscription Rights

Warrants are equity securities in the form of options issued by a corporation which give the holder the right, but not the obligation, to purchase stock, usually at a price that is higher than the market price at the time the warrant is issued. A purchaser takes the risk that the warrant may expire worthless because the market price of the common stock fails to rise above the price set by the warrant.

Currency Forwards

A currency forward transaction is a contract to buy or sell a specified quantity of currency at a specified date in the future at a specified price which may be any fixed number of days from the date of the contract agreed upon by the parties. Currency forward contracts may be used to increase or reduce exposure to currency price movements.

The use of currency forward transactions involves certain risks. For example, if the counterparty under the contract defaults on its obligation to make payments due from it as a result of its bankruptcy or otherwise, the Fund may lose such payments altogether or collect only a portion thereof, which collection could involve costs or delays.

Convertible Securities

A convertible security is a bond, debenture, note, preferred stock, right, warra
