## **Syngenta launches new fungicide to combat severe soybean disease in Brazil**

**Basel, Switzerland, January 22, 2004**

Syngenta announced today the launch of a new fungicide to combat the outbreak of what is becoming a very serious disease in Brazilian soybeans.

Soybean rust migrated from Africa to South America where it has affected several million hectares during the last two years. It can defoliate a crop in ten days and quickly lead to significant yield losses.

PRIORI® Xtra is highly effective in both preventing and curing soybean rust, as well as all other economically important soybean diseases. To further support its customers in controlling this important disease, Syngenta has put in place a comprehensive monitoring and alert system operating through a network of 140 agronomists.

PRIORI® Xtra offers excellent control of an increasingly severe problem faced by our customers. This innovative product, combined with the monitoring system, further strengthens our position in the important soybean fungicide market in Brazil, said Jan Martin Suter, Global Head of Marketing, Syngenta Crop Protection.

PRIORI® Xtra combines AMISTAR®, the broad-spectrum fungicide, with another well-established fungicide, ALTO®. Extensive field trials have shown that PRIORI® Xtra prevents and cures attacks of rust and other soybean diseases and safeguards yield.

Syngenta is a world-leading agribusiness committed to sustainable agriculture through innovative research and technology. The company is a leader in crop protection and ranks third in the high-value commercial seeds market. Sales in 2002 were approximately US \$6.2 billion. Syngenta employs some 20,000 people in over 90 countries. Syngenta is listed on the Swiss stock

exchange (SYNN) and in New York (SYT). Further information is available at [www.syngenta.com](http://www.syngenta.com).
