Securities registered or to be registered pursuant to Section 12(g) of the Act:
None

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:
None

Indicate the number of outstanding shares of each class of common stock of the close of the period covered by the annual report

(Title of each class)	(Number of outstanding shares)
Ordinary shares, par value €0.56 per share	3,306,843,332

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
 Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.
 Yes No

Note – Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.
 Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of “accelerated filer and large accelerated filer” in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-Accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP
 International Financial Reporting Standards as issued by the International Accounting Standards Board
 Other

If “Other” has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Chairman's Statement

In January 2012, The Royal Bank of Scotland Group plc announced changes to its wholesale banking operations in light of a changed market and regulatory environment. The changes will see the reorganisation of RBS Holdings N.V.'s wholesale businesses into 'Markets' and 'International Banking' and the exit and downsizing of selected activities. The changes will ensure the wholesale businesses continue to deliver against The Royal Bank of Scotland Group plc's strategy. Since the announcement RBS Holdings N.V. has agreed the sale of the cash equities, corporate finance and sector advisory, corporate actions and transaction support services, corporate financing and risk solutions (CFRS), and equity capital markets businesses in the Netherlands to ABN AMRO Bank N.V. The sale is expected to close in the second quarter of 2012, subject to certain conditions, including obtaining approvals from regulators and our social partners.

On 19 April 2011, RBS Holdings N.V. announced its intention to transfer a substantial part of the business activities of The Royal Bank of Scotland N.V. (RBS N.V.) to The Royal Bank of Scotland plc (RBS plc) (the Proposed Transfers), subject, amongst other matters, to regulatory and other approvals, further tax and other analysis in respect of the assets and liabilities to be transferred and employee consultation procedures.

The Proposed Transfers will not result in any change to the current business strategy for any of the transferred RBS N.V. businesses and the way in which The Royal Bank of Scotland Group plc commercially operates will remain unchanged.

The Proposed Transfers are consistent with The Royal Bank of Scotland Group plc's efforts to simplify its structure, thereby reducing risk, cost and complexity. They will streamline the manner in which the businesses of the Group interact with clients with simplified access to the product suites.

It is expected that the Proposed Transfers will be implemented on a phased basis over a period ending 31 December 2013. The successful transfer of eligible business carried out in the UK, including certain securities issued by RBS N.V., was completed in the last quarter of 2011. Largely, as a result, the balance sheet of RBS Holdings N.V. has decreased from total assets of €200.4 billion as at 31 December 2010 to total assets of €146.7 billion as at 31 December 2011.

A large part of the remainder of Proposed Transfers (including the transfers of certain securities issued by RBS N.V.) is expected to have taken place by the end of 2012. As announced on 19 April 2011, The Royal Bank of Scotland Group plc is committed to providing the necessary support to ensure that RBS N.V. continues to meet its commitments during and after the Proposed Transfers.

Results of operations in 2011

2011 saw good progress in terms of risk reduction and financial soundness despite a much tougher market environment in which to achieve these goals. Customer service and support was sustained well.

However, RBS Holdings N.V. recorded a loss for the period of €0.7 billion. The loss resulted from significant non-operating items which occurred in 2011 including a gain of €1.3 billion on movements in the fair value of own debt, as the volatile market conditions led to a significant widening in RBS N.V.'s credit spreads during the second half of the year. This gain was more than offset by the impairment of Greek government bonds with a notional amount of €1.6 billion. For the year ended 31 December 2011, RBS Holdings N.V. recorded an impairment loss of €1.5 billion in respect of these bonds as a result of Greece's continuing fiscal difficulties. This charge wrote the bonds down to their market price as at 31 December 2011. Net Interest income decreased in 2011 principally reflecting the significant changes in the structure of the balance sheet in the Non-Core segment and in Global Banking and Markets (GBM).

The decrease in Non-Core was largely as a result of the divestitures of operations in 2010. The decrease in GBM was largely due to transfers of businesses to RBS plc in 2011 as part of the Proposed Transfers. In addition, RBS Holdings N.V.'s margin was negatively affected by the cost of carrying higher liquidity reserves and central bank balances.

The profit from Non-interest income was due to a gain of €1.3 billion on movements in the fair value of own debt. This was partially offset by lower trading income in 2011 principally reflecting the significant changes in the structure of the balance sheet in Non-Core and GBM as discussed above. In addition lower results in GBM were seen, reflecting depressed primary market volumes and limited opportunities in the secondary market.

Impairments for 2011 amount to €1.8 billion, comprising an impairment charge of €1.5 billion on Greek bonds, as discussed above and commercial loan impairments of €0.3 billion. The loan impairment was largely driven by a single name impairment in 2011.

Total equity as at 31 December 2011 was €3.3 billion, a decrease of €1.6 billion compared to 31 December 2010.

RBS Holdings N.V. continued to be adequately capitalised. At 31 December 2011, the Group's Total capital ratio was 17.5%, the Tier 1 capital ratio was 12.0% and the Core Tier 1 capital ratio was 8.4%.

Outlook

Economic and regulatory challenges have continued into 2012. Growth prospects remain modest, while the eurozone sovereign crisis remains a risk. Against this backdrop, commercial performance is expected to remain broadly stable benefiting modestly from improvement in impairments. In GBM, revenue performance will remain market-dependent. The continuing run-off of Non-Core is expected to crystallise further disposal losses, though overall Non-Core losses are expected to fall. RBS Holdings N.V. expects to continue the further removal of risk through the Proposed Transfers, while maintaining adequate capital ratios.

On behalf of the Managing Board, I would like to thank all our employees and clients for their continued commitment during 2011.

Jan de Ruiter
Chairman of the Managing Board of RBS Holdings N.V.

Amsterdam, 22 March 2012

Presentation of information

Business Review

In the Report and Accounts and unless specified otherwise, the terms 'company' and 'RBS Holdings' mean RBS Holdings N.V. RBS Holdings N.V. is the parent company of The Royal Bank of Scotland N.V. (RBS N.V.) consolidated group of companies and associated companies (RBSH Group). The Royal Bank of Scotland Group plc (RBSG) is the ultimate holding company of RBSH Group. RBSG Group refers to RBSG and its consolidated subsidiaries and associated companies. The terms 'Consortium' and 'Consortium Members' refer to RBSG, the Dutch State (successor to Fortis) and Banco Santander S.A. (Santander) who jointly acquired RBS Holdings on 17 October 2007 through RFS Holdings B.V. (RFS Holdings).

The company publishes its financial statements in 'euro', the European single currency. The abbreviations '€m' and '€bn' represent millions and thousands of millions of euros, respectively. Reference to '\$' is to United States of America (US) dollars. The abbreviations '\$m' and '\$bn' represent millions and thousands of millions of dollars, respectively.

Certain information in this report is presented separately for domestic and foreign activities. Domestic activities consist of transactions within the Netherlands. Geographic analysis has been compiled based on location of office.

The results, assets and liabilities of individual business units are classified as trading or non-trading based on their predominant activity. Although this method may result in some non-trading activity being classified as trading, and vice versa, any resulting misclassification is not material.

All annual averages in this report are based on month-end figures. Management does not believe that these month-end averages present trends materially different from those that would be presented by daily averages.

International Financial Reporting Standards

Unless otherwise indicated, the financial information contained in this Annual Report has been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union (EU) and IFRS as issued by the International Accounting Standard Board (IASB), which vary in certain significant respects from accounting principles generally accepted in the United States of America (USA), or 'US GAAP'.

Glossary

A glossary of terms is detailed on pages 246 to 252.

Forward-looking statements

Business Review

Certain sections in, or incorporated by reference in, this Annual Report and Accounts contain 'forward-looking statements', such as statements that include the words 'expect', 'estimate', 'project', 'anticipate', 'believes', 'should', 'intend', 'plan', 'could', 'probability', 'risk', 'Value-at-Risk (VaR)', 'target', 'goal', 'objective', 'will', 'endeavour', 'outlook', 'optimistic', 'prospects' and similar expressions or variations on such expressions.

In particular, this document includes forward-looking statements relating, but not limited to: RBSH Group's restructuring plans, divestments, capitalisation, portfolios, net interest margin, capital ratios, liquidity, risk weighted assets, return on equity, cost: income ratios, leverage and loan: deposit ratios, funding and risk profile, certain ring-fencing proposals, sustainability targets, RBSH Group's future financial performance, the level and extent of future impairments and write-downs, including sovereign debt impairments, the protection provided by the asset protection scheme back-to-back contracts with The Royal Bank of Scotland plc (RBS plc), and RBSH Group's potential exposures to various types of market risks, such as interest rate risk, foreign exchange rate risk and commodity and equity price risk. These statements are based on current plans, estimates and projections, and are subject to inherent risks, uncertainties and other factors which could cause actual results to differ materially from the future results expressed or implied by such forward-looking statements. For example, certain of the market risk disclosures are dependent on choices about key model characteristics and assumptions and are subject to various limitations. By their nature, certain of the market risk disclosures are only estimates and, as a result, actual future gains and losses could differ materially from those that have been estimated.

Other factors that could cause actual results to differ materially from those estimated by the forward-looking statements contained in this document include, but are not limited to: the financial condition of RBSG Group; the global economic and financial market conditions and other geopolitical risks and their impact on the financial industry in general and on RBSH Group in particular; the ability to access sufficient sources of liquidity and funding; the ability to implement strategic plans on a timely basis, or at all, including the disposal of certain non-core assets and businesses required as part of the State Aid restructuring plan of RBSG Group; organisational restructuring; including any adverse consequences of a failure to transfer, or delay in transferring, certain business assets and liabilities from RBS N.V. to RBS plc; deteriorations in borrower and counterparty credit quality; the extent of future write-downs and impairment charges caused by depressed asset valuations; unanticipated turbulence in interest rates, yield curves, foreign currency exchange rates, credit spreads, bond prices, commodity prices, equity prices and basis, volatility and correlation risks; changes in the credit ratings of RBSH Group; ineffective management of capital or changes to capital adequacy or liquidity requirements; litigation and regulatory investigations; changes to the valuation of financial instruments recorded at fair value; competition and consolidation in the banking sector; the ability of RBSH Group to attract or retain senior management or other key employees; regulatory or legal changes (including those requiring any restructuring of RBSH Group's operations) in the Netherlands, the United States, the United Kingdom, the rest of Europe and other countries in which RBSH Group operates or a change in policy of the government of the Netherlands; changes to regulatory requirements relating to capital and liquidity; changes to the monetary and interest rate policies of the central banks and other governmental and regulatory bodies; changes in Dutch and foreign laws, regulations, accounting standards and taxes, including changes in regulatory capital regulations and liquidity requirements; pension fund shortfalls; general operational risks; reputational risk; general geopolitical and economic conditions in the Netherlands and in other countries in which RBSH Group has significant business activities or investments; the protection provided to RBSH Group pursuant to the asset backed protection scheme back-to-back contracts and their effect on RBSH Group's financial and capital position; the cross liability resulting from the legal demerger of ABN AMRO Bank N.V. and the Dutch Scheme; limitations on, or additional requirements imposed on, RBSH Group's activities as a result of HM Treasury's investment in RBSG Group; and the success of RBSH Group in managing the risks involved in the foregoing.

The forward-looking statements contained in this document speak only as of the date of this announcement, and RBSH Group does not undertake to update any forward-looking statement to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

For a further discussion of certain risks faced by RBSH Group, see Risk factors on pages 236 to 245.

The information, statements and opinions contained in this document do not constitute a public offer under any applicable legislation or an offer to sell or solicitation of any offer to buy any securities or financial instruments or any advice or recommendation with respect to such securities or other financial instruments.

Business review

Business Review

Description of business

Introduction

RBS Holdings N.V. is an international banking group offering a range of banking products and financial services on a global basis.

In 2007, RFS Holdings, which was jointly owned by RBSG, the Dutch State (successor to Fortis) and Santander (together, the 'Consortium Members') completed the acquisition of RBS Holdings.

RBS Holdings has one direct subsidiary, RBS N.V., a fully operational bank within RBSH Group. RBS N.V. is independently rated and regulated by the Dutch Central Bank. Certain assets within RBS N.V. continue to be owned by the Dutch State or shared by the Consortium Members.

As at 31 December 2010, RBSG's shareholding in RFS Holdings was increased to 97.7%. RFS Holdings is controlled by RBSG, which is incorporated in the UK and registered at 36 St. Andrew Square, Edinburgh, Scotland. RBSG is the ultimate parent company of RBSH Group. The consolidated financial statements of RBSH Group are included in the consolidated financial statements of RBSG Group.

RBSH Group had total assets of €146.7 billion and owners' equity of €3.3 billion at 31 December 2011. RBSH Group's capital ratios were a Total capital ratio of 17.5%, a Core Tier 1 capital ratio of 8.4% and a Tier 1 capital ratio of 12.0%, as at 31 December 2011.

Organisational structure and business overview

As at 31 December 2011, RBSH Group comprised four reportable segments, namely Global Banking & Markets (GBM), Global Transaction Services (GTS) and Central Items, together the 'Core' segments, and the Non-Core segment.

Global Banking & Markets (GBM) provides an extensive range of debt and equity financing, risk management and investment services as a leading banking partner to major corporations and financial institutions around the world. The GBM business is organised along four principal business lines: Global Lending, Equities, Short Term Markets & Funding and Local Markets.

Global Transaction Services (GTS) provides global transaction services, offering global trade finance, transaction banking and international cash management.

Central Items includes group and corporate functions, such as treasury, capital management and finance, risk management, legal, communications and human resources.

Non-Core contains a range of separately managed businesses and asset portfolios that RBSH Group intends to run-off or dispose, in line with RBSG Group strategy for Non-Core assets. It also includes the remaining assets and liabilities in RBS N.V. that have not yet been sold, wound down or alternatively transferred to the Consortium Members, referred to as 'Shared Assets', in which each of the consortium shareholders has a joint and indirect interest.

Organisational change

In January 2012, RBSG Group announced changes to its wholesale banking operations in light of a changed market and regulatory environment. The changes will see the reorganisation of RBSG Group's wholesale businesses into 'Markets' and 'International Banking' and the exit and downsizing of selected activities. The changes will ensure the

wholesale businesses continue to deliver against RBSG Group's strategy.

The changes will include an exit from cash equities, corporate brokering, equity capital markets and mergers and acquisitions businesses. Significant reductions in balance sheet, funding requirements and cost base in the remaining wholesale businesses will be implemented.

Existing GBM and GTS divisions will be reorganised as follows:

- The 'Markets' business will maintain its focus on fixed income, with strong positions in debt capital raising, securitisation, risk management, foreign exchange and rates. It will serve the corporate and institutional clients of all RBSG Group businesses.
- GBM's corporate banking business will combine with the international businesses of the Global Transaction Services arm into a new 'International Banking' unit and provide clients with a 'one-stop shop' access to RBSG Group's debt financing, risk management and payments services. This international corporate business will be self-funded through its stable corporate deposit base.

RBSG Group's wholesale business will be retaining its international footprint to ensure that it can serve its customers' needs globally. We believe, that despite current challenges to the sector, wholesale banking services can play a central role in supporting cross border trade and capital flows, financing requirements and risk management and we remain committed to this business.

In consequence, going forward RBSH Group will comprise the following segments:

- International Banking
- Markets
- Central Items
- Non-Core

Proposed transfers of a substantial part of the business activities of RBS N.V. to The Royal Bank of Scotland plc (RBS plc)

On 19 April 2011, the Boards of RBSG Group, RBS plc, RBS Holdings N.V. and RBS N.V. announced their intention to transfer a substantial part of the business activities of RBS N.V. to RBS plc (the Proposed Transfers), subject, amongst other matters, to regulatory and other approvals, further tax and other analysis in respect of the assets and liabilities to be transferred and employee consultation procedures.

The Proposed Transfers will streamline the manner in which the businesses within RBSH Group's Markets & International Banking (MIB) Divisions interact with clients and will provide simplified access to the MIB product suite. The Proposed Transfers will not result in any change to the current business strategy for any of the transferred RBS N.V. businesses and the way in which RBSH Group commercially operates will remain unchanged.

Business review

Business Review

Description of business continued

The Proposed Transfers are consistent with RBSG Group's efforts to simplify its structure, thereby reducing risk, cost and complexity. In addition, the Proposed Transfers are expected to result in a simplified management and reporting framework for the RBSG Group across the multiple jurisdictions in which RBS plc and RBS N.V. operate.

It is expected that the Proposed Transfers will be implemented on a phased basis over a period ending 31 December 2013. Certain unaudited pro forma condensed consolidated financial information relating to RBS Holdings N.V. is set out on pages 227-230.

The transfer of eligible business carried out in the UK, including certain securities issued by RBS N.V. was completed during the last quarter of 2011, the 'UK Transfer'. Much of this business is governed by UK law and as a result a large portion of the transfer was conducted through a banking business transfer scheme under Part VII of the UK Financial Services and Markets Act 2000 on 17 October 2011. This is a court and UK Financial Services Authority approved transfer scheme. Eligible business that could not be included in the scheme was transferred via novations or market mechanisms and UK subsidiaries of RBS N.V. were transferred by share sales.

The UK Transfer moved a large part of the UK Equities & Structured Retail, Markets, Lending and GTS businesses as well as part of the UK Non-Core portfolio. The UK Transfer resulted in the transfer of approximately €22 billion assets and €45 billion in liabilities as at the end of November 2011.

A large part of the remainder of Proposed Transfers (including the transfers of certain securities issued by RBS N.V.) is expected to have taken place by the end of 2012. Included within the Proposed Transfers for 2012 are assets and liabilities that meet the IFRS 5 definition of being Held for Sale as at 31 December 2011. These assets and liabilities, relating largely to businesses in Singapore, Kazakhstan and Australia, have been classified as assets and liabilities of disposal groups as at year end, see Note 19 page 159 for further details.

Competition

RBSH Group faces strong competition in all the markets it serves. Banks' balance sheets have strengthened whilst loan demand has been subdued as many customers have sought to de-lever and the economy has remained weak.

Competition for corporate and institutional customers in the Netherlands is from banks and from large foreign financial institutions who are also active and offer combined investment and commercial banking capabilities. In asset finance, RBSH Group competes with banks and specialised asset finance providers. In other European and Asian corporate and institutional banking markets RBSH Group competes with the large domestic banks active in these markets and with the major international banks. In the small business banking market, RBSH Group competes with other European clearing banks, specialist finance providers and building societies.

Risk factors

Set out below are certain risk factors which could affect RBSH Group's future results and cause them to be materially different from expected results. RBSH Group's results are also affected by competition and other factors. These risk factors, discussed in more detail in Additional information (pages 236 to 245), should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties.

- RBSH Group is reliant on RBSG Group.
- RBSH Group's businesses and performance can be negatively affected by actual or perceived global economic and financial market conditions and by other geopolitical risks.
- RBSH Group's ability to meet its obligations including funding commitments depends on RBSH Group's ability to access sources of liquidity and funding.
- The execution and/or any delay in the execution (or non-completion) of the approved proposed transfers of a substantial part of the business activities of RBS N.V. to RBS plc may have a material adverse effect on RBSH Group and may also negatively impact the value of securities issued by RBS Holdings N.V. and RBS N.V.
- An extensive restructuring and balance sheet reduction programme of the RBSG Group is ongoing and may adversely affect RBSH Group's business, results of operations, financial condition, capital ratios and liquidity and may also negatively impact the value of securities issued by RBS Holdings N.V. and RBS N.V.
- As a condition to the RBSG Group receiving HM Treasury support, RBSH Group is prohibited from making discretionary coupon payments on, and exercising call options in relation to, certain of its existing hybrid capital instruments, which may impair RBSH Group's ability to raise new capital through the issuance of Securities.
- The financial performance of RBSH Group has been, and continues to be, materially affected by deteriorations in borrower and counterparty credit quality and further deteriorations could arise due to prevailing economic and market conditions, and legal and regulatory developments.
- RBSH Group's earnings and financial condition have been, and its future earnings and financial condition may continue to be, materially affected by depressed asset valuations resulting from poor market conditions.
- Changes in interest rates, foreign exchange rates, credit spreads, bond, equity and commodity prices, basis, volatility and correlation risks and other market factors have significantly affected and will continue to affect RBSH Group's business and results of operations.
- RBSH Group's borrowing costs, its access to the debt capital markets and its liquidity depend significantly on its credit ratings.
- RBSH Group's business performance could be adversely affected if its capital is not managed effectively or as a result of changes to capital adequacy and liquidity requirements.
- RBSH Group is and may be subject to litigation and regulatory investigations that may impact its business.

- The value of certain financial instruments recorded at fair value is determined using financial models incorporating assumptions, judgements and estimates that may change over time or may ultimately not turn out to be accurate.
- RBSH Group operates in markets that are highly competitive and its business and results of operations may be adversely affected.
- RBSH Group could fail to attract or retain senior management, which may include members of RBSH Group's Supervisory Board and Managing Board, or other key employees, and it may suffer if it does not maintain good employee relations.
- Each of RBSH Group's businesses is subject to substantial regulation and oversight. Significant regulatory developments, including changes in tax law, could have an adverse effect on how RBSH Group conducts its business and on its results of operations and financial condition.
- RBSH Group may be required to make further contributions to its pension schemes if the value of pension fund assets is not sufficient to cover potential obligations.
- Operational risks are inherent in RBSH Group's businesses.
- RBSH Group's operations have inherent reputational risk.
- The recoverability and regulatory capital treatment of certain deferred tax assets recognised by RBSH Group depends on RBSH Group's ability to generate sufficient future taxable profits and there being no adverse changes to tax legislation, regulatory requirements or accounting standards.
- The extensive governance, asset management and information requirements under the Asset Protection Scheme conditions, which RBSH Group is required to comply with, or to ensure that RBS plc can comply with, pursuant to the APS back-to-back contracts may have an adverse impact on RBSH Group and expected benefits of the APS back-to-back contracts.
- Any changes to the expected regulatory capital treatment of the APS back-to-back contracts may have a material adverse impact on RBSH Group.
- The legal demerger of ABN AMRO Bank N.V. (as it was then named) has resulted in a cross liability that changes the legal recourse available to investors.

2011 compared with 2010

Operating (loss)/profit before tax

Operating loss before tax for the year was €263 million compared with a profit of €425 million in 2010. The decrease largely results from higher impairment losses mainly due to the impairment of Greek sovereign bonds in 2011, which was partially offset by a fair value gain on own debt.

Total income

Total income increased by €57 million to €3,929 million compared with €3,872 million in 2010. This increase is mainly attributable to the fair value gain on own debt resulting in higher other non-interest income. The increase was offset by lower net interest and net fees and commissions' income mainly due to the transfer of businesses to RBS plc and the disposal of Non-Core operations.

Net interest income decreased by €739 million to €688 million compared with €1,427 million in 2010, reflecting further reductions in interest earning assets due to transfers to RBS plc and the disposal of Non-Core operations.

Non-interest income/(loss) increased by €796 million to €3,241 million compared with €2,445 million in 2010, primarily due to the increase in other operating income. This increase in other operating income is mainly attributable to the widening of credit spreads in the second half of 2011 which led to a fair value gain on own debt of €1,290 million compared with a gain of €250 million in 2010. This increase is partially offset by lower trading income in GBM due to the transfer of trading activities to RBS plc and lower trading income in Non-Core as a result of disposal of operations in Asia and the Americas.

Operating expenses

Operating expenses decreased by €953 million to €2,427 million compared with €3,380 million in 2010. This reflects the transfer of businesses to RBS plc and Non-Core disposals, thus reducing the scale of operations and number of

employees within RBSH Group.

Impairment losses

Impairment losses were €1,765 million for the year ended 31 December 2011, compared with €67 million in 2010. The increase in impairment losses in 2011 relates to Greek sovereign available-for-sale bonds and related interest rate hedge adjustments, as a result of Greece's continuing fiscal difficulties. In addition, higher impairment charges on commercial loans were charged in 2011, compared with 2010.

In 2011, RBSH Group made total claims of €148 million under the APS back-to-back agreement with RBS plc. Total recoveries on previously claimed impairments amounted to €90 million, resulting in a net recovery from RBS plc of €58 million.

Tax

The effective tax rate for 2011 was (164.6)% compared with 71.0% in 2010 mainly as a result of losses on Greek sovereign available-for-sale bonds being not recoverable for tax purposes.

Profit/(loss) from discontinued operations

Discontinued operations recorded a €40 million profit after tax compared with a €985 million profit after tax for the prior year. The results from discontinued operations in the prior year are mainly attributable to the gain on the sale by RBSH Group of the Dutch State acquired businesses included in the new ABN AMRO Bank on 1 April 2010.

Business review continued

Business Review

2010 compared with 2009

Operating profit/(loss) before tax

Operating profit before tax for the year was €425 million compared with a loss of €4,847 million in 2009. This increase results from an improvement in operating income following significant fair value losses in 2009, a reduction in operating expenses and lower loan impairments reflecting the gradual improvement in market conditions.

Total income

Total income increased 177% to €3,872 million compared with €1,397 million in 2009. This increase is principally due to the 2009 Non-Core losses on counterparty Credit Valuation Adjustments (CVA) and Collateralised Debt Obligations (CDO).

Net interest income decreased by €407 million, reflecting further reductions in interest earning assets, which were transferred to RBS plc. In addition interest income reduced by €162 million due to reductions in the balance sheet following Non-Core disposals in Asia and Latin America. The GBM business recorded a decrease in interest income of €367 million, as it continues to encounter significant margin pressures and higher liquidity costs than in 2009. The decrease in net interest income was partially offset by an adjustment made to the carrying value of the Tier 1 hybrid capital securities of €273 million. RBSG Group's legal ownership of RFS Holdings was increased to 98% on 31 December 2010 thereby giving RBSG Group majority legal ownership. The RFS restructure, legally bound RBSH Group to comply with the EC Burden Sharing restrictions already applied to RBSG Group. These restrictions result in an adjustment to the carrying value of these amortised cost securities.

Non-interest income/(loss) increased to €2,445 million from a loss of €437 million in 2009, primarily due to the increase in other operating income and income from trading activities. The increase in other operating income is mainly attributable to the non reoccurrence of the fair value losses on a portfolio of credit default swaps, used to hedge the loan book following the tightening of the credit spreads in the first half of 2009. These losses amounted to €2,024 million in 2009. The increase in trading income mainly relates to the non reoccurrence of high losses on counterparty CVAs of €1,279 million in the prior year against monoline insurers. Additionally, write-offs on CDOs in 2010 were €211 million lower. Exposures to monoline insurers and CDOs were substantially risk transferred to RBS plc in the first half of 2009. In addition, fee and commissions payable improved by €697 million largely due to a true-up in the fee calculation for the asset protection scheme (APS) back-to-back agreement between RBS N.V. and RBS plc of €625 million. The APS back-to-back fee charged to the income statement for 2010 was €249 million. For further details on the APS back-to-back agreement see page 92. The increase in non-interest income is partially offset by a decrease in fees and commissions receivable due to reduced business origination and activity following transfers of businesses to RBS plc.

Operating expenses

Operating expenses decreased from €4,621 million in 2009 to €3,380 million. This reflects the transfer of businesses to RBS plc and Non-Core disposals, thus reducing the scale of operations and number of employees within RBSH Group. Additionally the 2009 results included charges related to costs incurred on the sale of businesses in Asia and the related goodwill impairments.

Impairment losses

Impairment losses were €67 million for the year ended 31 December 2010, compared with €1,623 million in 2009. Large specific provisions were made in 2009 including a specific impairment for LyondellBasell Industries. For further details on the LyondellBasell provision please see the discussion within Non-Core on page 24. For 2010 there are lower specific commercial and retail provisions, especially on consumer and card lending in Asia and Middle East.

In 2010, RBSH Group made total claims of €470 million under the APS back-to-back agreement with RBS plc. Total recoveries on previously claimed impairments amounted to €561 million, resulting in a net repayment to RBS plc of €91 million.

Tax

The effective tax rate for 2010 was 71.0% compared with 9.6% in 2009. This was mainly due to the revision of the tax rate in the UK.

Profit/(loss) from discontinued operations

Discontinued operations recorded a €985 million profit after tax compared with a €18 million loss after tax for the prior year. The results from discontinued operations are mainly attributable to the gain on the sale by RBSH Group of the Dutch State acquired businesses included in the new ABN AMRO Bank on 1 April 2010.

	2011	2010	2009
Credit and other market losses (1)	€m	€m	€m
Monoline exposures	(6)	22	(1,279)
CDPCs (2)	-	(98)	95

Notes:

- (1) Included in 'Income from trading activities' within non-interest income
(2) Credit derivative product companies.

2011 compared with 2010

Losses relating to monoline exposures were €6 million in 2011 compared with gains of €22 million in 2010.

Most of the monoline exposures were settled with the counterparties during 2011. The remaining exposures are hedged using an overlay swap transacted with RBS plc which transfers the daily movement in the CVA between RBSH Group and RBS plc for these trades. The mark-to-market of this swap with RBS plc was €4 million in favour of RBS plc at 31 December 2011 (€769 million at 31 December 2010).

Losses relating to CDPC exposures were nil in 2011, compared to a loss of €98 million in 2010. RBSH Group had fully novated its CDPCs exposure to RBS plc in the course of 2010.

The positions in mortgage and other asset backed securities (€17.4 billion at 31 December 2011) have seen a further decrease in 2011. The composition of the remaining AFS portfolio has not changed substantially from 31 December 2010. Included are €6.8 billion residential mortgage-backed securities covered by the Dutch mortgage guarantee scheme and €9.0 billion residential mortgage covered bonds the majority of which originated in Spain.

The net exposure to ABSs backed by assets other than residential mortgages, such as sovereign or public entities debt, amounts to €1.5 billion and is mainly related to European covered bonds held in the treasury portfolios.

2010 compared with 2009

Gains relating to monoline exposures were €22 million in 2010 compared with losses of €1,279 million in 2009.

The net gain through trading income in 2010 amounts to €22 million and relates mainly to release of the CVAs partially netted off by hedges and other movements. Hedges with bank counterparties include the overlay swap transacted with RBS plc which transfers the daily movement in the CVA between RBSH Group and RBS plc for these trades. The mark-to-market of this swap with RBS plc was €769 million in favour of RBS plc at 31 December 2010 (€405 million at 31 December 2009).

Losses relating to CDPC exposures were €98 million in 2010, compared to a gain of €95 million in 2009. RBSH Group fully novated its CDPCs exposure to RBS plc in the course of 2010.

The positions in mortgage and other asset backed securities (€18.4 billion at 31 December 2010) have seen a further decrease in 2010. The held for trading positions have been fully matured or sold off in 2010. The composition of the remaining AFS portfolio has not changed substantially from 31 December 2009. Included are €6.9 billion residential mortgage-backed securities covered by the Dutch mortgage guarantee scheme and €9.1 billion residential mortgage covered bonds, 98% of which originated in Europe, of which 81% in Spain.

83% of residential mortgage covered bonds were AAA rated at 31 December 2010. The net exposure to ABSs backed by assets other than residential mortgages, such as sovereign or public entities debt, amounts to €2.2 billion and is mainly related to AAA European (23% Germany, 21% Spain) covered bonds held in the treasury portfolios. The decrease is mainly due to the maturing of papers.

The CDO and CLO exposure decreased further in 2010 mainly due to the maturing of positions.

Divisional performance

The results of each segment are set out below. Business Services directly attributable costs have been allocated to the operating divisions, based on their service usage. Where services span more than one division an appropriate measure is used to allocate the costs on a basis which management considers reasonable. Business Services costs are fully allocated and there are no residual unallocated costs.

2011 compared with 2010

Operating profit before tax was €1,591 million compared with €856 million for 2010.

Total income increased by €566 million to €2,941 million. The increase is mainly attributable to the increase in non-interest income due to a fair value gain on own debt which is only partially offset by lower net interest income.

Net interest income decreased by €211 million to €240 million compared with €451 million in 2010, reflecting further reductions in interest earning assets due to transfers to RBS plc.

Non-interest income increased by €777 million to €2,701 million in 2011 compared with €1,924 million in 2010. The increase in other operating income is mainly attributable to the widening of credit spreads in the second half of 2011 which led to a fair value gain on own debt of €879 million compared to a gain of €252 million in 2010. This increase is partially offset by lower income from trading activities due to the transfer of trading activities to RBS plc. In addition lower income from trading activities, reflects depressed primary market volumes, characterised by volatile and deteriorating credit markets, especially during the second half of the year when the European sovereign debt crisis drove a sharp widening in credit spreads. The heightened volatility, increased risk aversion amongst clients and limited opportunities for revenue generation in the secondary markets.

Operating expenses have decreased by €350 million to €1,263 million compared with €1,613 million in 2010. This reflects the transfer of businesses to RBS plc, thus reducing the scale of operations in 2011.

Impairments losses were €87 million in 2011 compared with a credit of €94 million in 2010. The impairments in 2011 reflect a small number of single name provisions.

2010 compared with 2009

Operating profit before tax increased by €817 million to €856 million compared with €39 million for 2009.

Total income decreased by €204 million to €2,375 million. The reduction is mainly due to a significantly lower net interest income, partially offset by higher non-interest income. The results reflect continuing transfers of business to RBS plc as well as unfavourable market conditions.

Net interest income decreased by €367 million, as a result of higher liquidity costs in 2010 compared to 2009, when money markets benefited from rapidly falling short term interest rates, as well as ongoing transfer of the interest generating assets to RBS plc.

Non-interest income increased by €163 million to €1,924 million in 2010 compared to €1,761 million in 2009. The improvement reflects reduced losses attributable to movements in credit spreads, compared to the prior year when fair value losses were recognised on a portfolio of credit default swaps used to hedge the loan book following tightening of credit spreads. These losses amounted to €606 million in 2009 as compared to nil in 2010. Additional improvement in the non-interest income is due to a €111 million gain resulting from APS back-to-back fee agreement true-up. These improvements are offset by a decrease in trading income as a result of the absence of favourable market conditions which prevailed in 2009 especially in emerging market currency trading. In addition the reduced business origination and general market activity, have led to lower brokerage fees. Ongoing transfers of significant assets to RBS plc have resulted in lower earnings generating capabilities of the business.

Operating expenses have decreased by €669 million to €1,613 million from €2,282 million in 2009. This reflects the transfer of business to RBS plc, thus reducing the scale of operations in 2010.

Loan impairments in 2010 amounted to a credit of €94 million in comparison to a charge of €258 million in 2009. 2010 impairments reflect a small number of single name provisions, mainly on APS back-to-back covered assets, which are more than offset by several recoveries following the restructuring of impaired exposures.

2011 compared with 2010

Operating loss before tax was €168 million compared with a loss of €64 million in 2010.

Total income increased by €141 million to €752 million with increases in both net interest income and non-interest income.

Net interest income increased by €10 million to €316 million compared with €306 million in 2010, largely due to strong deposit gathering activity.

The increase in non-interest income by €131 million to €436 million compared with €305 million in 2010 is mainly attributable to an increase of transactional exchange rate fees.

Operating expenses have increased by €63 million to €742 million compared with €679 million in 2010, reflecting investment in business improvement initiatives, technology and support infrastructure.

Impairment losses were €178 million compared with a credit of €4 million in 2010. The impairments in 2011 are largely driven by a single name provision.

2010 compared with 2009

Operating loss before tax was €64 million compared with a loss of €4 million in 2009.

Total income decreased by €62 million to €611 million with decreases in both net interest income and non-interest income.

Net interest income decreased by €49 million following transfers of businesses in Japan and Australia to RBS plc during 2009 and lower interest margins from transactions in Asia and Eastern Europe in 2010.

The decrease in non-interest income mainly relates to a decrease in net fee and commission income in the Netherlands as a result of client attrition in the second half of 2009 and lower margins on trade settlement products in Asia as the risk profile of the region improved.

Operating expenses have increased by €29 million from €650 million in 2009 reflecting increased investment in support infrastructure.

2011 compared with 2010

Operating loss before tax was €1,270 million compared with a profit of €40 million in 2010. The loss is largely due to the impairment losses relating to Greek sovereign available-for-sale bonds and related interest rate hedge adjustments.

Total income decreased by €47 million to €297 million compared with €344 million in 2010, mainly reflecting lower net interest income and lower income from trading activities due to discontinuation of the RBSH Group treasury trading book.

Net interest income declined by €153 million mainly due to 2010 interest income having benefited from an adjustment to the carrying value of the Tier 1 hybrid capital securities of €273 million under the EC Burden Sharing restrictions which did not reoccur in 2011.

Non-interest income increased by €106 million to €407 million compared with €301 million in 2010 mainly as a result of a fair value gain on own debt of €411 million compared to a loss of €2 million in 2010.

Operating expenses decreased by €200 million to €104 million compared with 2010 mainly as a result of lower staff expenses due to lower bonus and pension expenses.

Impairment losses were €1,463 million compared with no losses in 2010. The impairment losses in 2011 relate to Greek sovereign available-for-sale bonds and related interest rate hedge adjustments, as a result of Greece's continuing fiscal difficulties.

2010 compared with 2009

Operating profit before tax was €40 million compared with a loss of €385 million in 2009.

Total income increased by €368 million to €344 million. This follows the improvement in both net interest and non-interest income.

Net interest income improved by €170 million. This increase is largely due to an adjustment made to the carrying value of the Tier 1 hybrid capital securities of €273 million. RBSG Group's legal ownership of RFS Holdings was increased to 98% on 31 December 2010 thereby giving RBSG Group majority legal ownership. The RFS restructure legally bound RBSH Group to the EC Burden Sharing restrictions already applied to RBSG Group. These restrictions result in an adjustment to the carrying value of the amortised cost securities.

Non-interest income increased by €198 million to €301 million from €103 million in 2009. The increase relates mainly to the gain on sale of US treasury bonds of €268 million. These instruments were divested as a consequence of a revised hedging strategy. The increase in non-interest income is partially offset by losses on the sales of Spanish, Greek and Portuguese bonds. In addition, following the Basel II implementation several Basel I securitisation programs were discontinued in the course of 2010 resulting in a €120 million reduction in fees and commissions payable.

Operating expenses decreased by €57 million to €304 million for the year ended 2010. The decrease is due mainly from the exceptional items in 2009 expenses including legal provisions and a goodwill impairment in Pakistan.

Third party liabilities	7	16	37

2011 compared with 2010

Operating loss before tax was €416 million compared with a loss of €407 million in the year 2010.

Total income decreased by €603 million to a loss of €61 million. This is mainly due to lower net interest income, net fees and commissions' income and income from trading activities which is partly offset by an increase in other operating income.

Net interest income decreased by €385 million to €242 million compared with €627 million in 2010. This decrease is largely due to the disposal of operations in Asia and the Americas.

Non-interest income decreased by €218 million to a loss of €303 million compared to a loss of €85 million in 2010. The decrease is mainly due to lower fees and commissions' income and income from trading activities as a result of the disposal of operations in Asia and the Americas. The decrease was partly offset by the increase in other operating income due to lower losses on sale and revaluation of assets compared to 2010, as well as the true up of the APS back-to-back premium of €85 million, see page 92 of this report for further details.

Operating expenses decreased by €466 million to €318 million compared with €784 million for the year 2010. Operating expenses decreased following the disposals during 2010.

Impairment losses in 2011 amounted to €37 million compared with €165 million in 2010.

2010 compared with 2009

Operating loss before tax was €407 million compared with a loss of €4,501 million in the year 2009.

Total income increased by €2,400 million to €542 million. This is due to an increase in non-interest income which is partly offset by a decrease in net interest income.

Net interest income decreased by €161 million. This decrease is largely due to the significant divestitures of the retail and commercial business activities in Asia (Taiwan, Hong Kong, Singapore, Pakistan and Indonesia), Americas (Chile, Colombia and Venezuela) and EMEA (United Arab Emirates and Kazakhstan) in the course of 2010.

The improvement in non-interest income relates to an increase in income from trading activities, which is due to the non-reoccurrence of high losses in the prior year on counterparty CVA adjustments against monoline insurers following transfers of the positions to RBS plc. These losses amounted to €1,279 million in 2009. In addition the result on credit default swaps used to hedge the loan portfolio were €1,418 higher in 2010 compared to the prior year.

Net fees and commissions income for 2010 includes an additional gain of €334 million resulting from a true-up in the fee calculation for the APS back-to-back agreement. The improvement in non-interest income was offset by an overall reduction in business activities as well as losses on sale of mentioned above operations.

Operating expenses decreased by €521 million from €1,305 million for the year 2009. This results mainly from the 2009 charges related to costs incurred on the sale of businesses in Asia and the related goodwill impairments. In addition, operating expenses decreased following Non-Core disposals during 2010.

Impairment losses in 2010 amounted to €165 million, as compared to €1,338 million in 2009. Impairment losses in 2009 included a specific impairment for LyondellBasell Industries (LyondellBasell). LyondellBasell filed Chapter 11 bankruptcy in January 2009. At the time LyondellBasell entered Chapter 11, RBSH Group's exposure was €2.3 billion. During 2009, RBSH Group recorded an impairment provision charge of €548 million in respect of this exposure, the provision balance as at 31 December 2009 was €1,688 million, and the remaining Group's exposure was €591 million. RBSH Group's exposures to LyondellBasell were covered assets under the APS back-to-back financial guarantee contract with RBS plc, effectively transferring the risk of future losses and the right to recoveries.

2010 compared with 2009 continued

Accordingly, in 2010 €197 million recovered from LyondellBasell was passed on to RBS plc.

In April 2010, LyondellBasell announced that it had emerged from Chapter 11 bankruptcy protection following creditor and court approval for its Plan of Reorganisation (PoR). Following the PoR, RBSH Group's retained exposure was €689 million comprising a loan of €173 million (classified as loans and receivables), a 7.2% common equity stake of €501 million (designated as at fair value through profit or loss) and equity warrants of €15 million (classified as derivatives); a reversal of impairment losses of €336 million was recorded and passed on to RBS plc. The loan and common equity stake were sold in December 2010. The carrying value of the remaining LyondellBasell exposure, made up of warrants, was €32 million at 31 December 2010.

Commentary on consolidated balance sheet

2011 compared with 2010

Total assets were €146.7 billion at 31 December 2011, a decrease of €53.7 billion, or 27%, when compared with €200.4 billion at 31 December 2010.

Cash and balances at central banks increased by €4.3 billion or 52% to €12.6 billion at 31 December 2011 compared with €8.3 billion at 31 December 2010 principally due to improvements in RBSH Group's structural liquidity position during 2011.

Loans and advances to banks increased by €0.4 billion, or 1%, to €27.1 billion at 31 December 2011 compared with €26.7 billion at 31 December 2010. Within this, reverse repurchase agreements and stock borrowing (reverse repos) were up €4.8 billion, 112%, to €9.1 billion primarily as a result of the investment of surplus liquidity in short-term assets. Bank placings declined by €4.4 billion, 20%, to €18.0 billion, as a result of lower current accounts and time deposits in Global Banking & Markets.

Loans and advances to customers declined €14.9 billion, 33%, to €29.6 billion. Within this, reverse repurchase agreements were down €3.6 billion, 92%, to €0.3 billion. Customer lending decreased by €11.3 billion, 28%, to €29.3 billion. This reflected the planned reductions in the last quarter of 2011 in relation to the UK transfers, see page 8 for further details, along with declines in the Netherlands GBM and GTS businesses. Provisions as a percentage of gross loans and advances to customers increased from 3.3% to 4.9%. This was largely driven by a single name provision in 2011, refer to pages 69 and 71 for further analysis of provisions.

Debt securities decreased by €12.6 billion to €39.6 billion, reflecting the planned reductions in the last quarter of 2011 in relation to the UK transfers, as well as a reduction in holdings of government and financial institution bonds within GBM and RBSH Group Treasury.

Equity shares decreased by €19.5 billion, to €3.1 billion. This reflected the planned reductions in the last quarter of 2011 in relation to the UK transfers and the closure of positions to reduce RBSH Groups' level of unsecured funding requirements to mitigate the potential impact of unfavourable market conditions.

Derivative assets decreased by €9.2 billion, or 33%, to €19.1 billion at 31 December 2011 compared with €28.3 billion at 31 December 2010. Derivative liabilities decreased by €15.8 billion, or 44%, to €19.9 billion at 31 December 2011 compared to the balance of €35.7 billion at 31 December 2010. This was largely attributable to the planned reductions in the last quarter of 2011 in relation to the UK transfers and the lower volume of over the counter traded derivatives.

The increase in assets and liabilities of disposal groups is due to the inclusion of assets and liabilities relating largely to businesses in Singapore, Australia and Kazakhstan. These businesses are part of the Proposed Transfers for 2012 that meet the IFRS 5 definition of being held for disposal as at 31 December 2011, see Note 19 page 159 for further details.

Total liabilities were €143.3 billion as at 31 December 2011, a decrease of €52.1 billion, or 27% decrease when compared with €195.4 billion at 31 December 2010.

Deposits by banks increased by €14.5 billion, 45%, to €46.5 billion, with higher repurchase agreements and stock lending (repos), up €11.7 billion, 244%, to €16.5 billion. This increase is largely due to increased funding from RBSG Group, see commentary on Debt securities in issue below for further details.

Customer accounts were down €15.3 billion, 28%, to €39.6 billion. Within this, repos decreased €4.2 billion, 84%, to €0.8 billion. Excluding repos, customer deposits were down €11.1 billion, 22%, at €38.8 billion. This reflected the planned reductions in the last quarter of 2011 in relation to the UK transfers (see page 8 for further details), along with the maturing of time deposits in the US and lower demand accounts in GBM businesses.

Debt securities in issue declined €35.7 billion, 67%, to €17.7 billion. This was largely attributable to the planned reductions in the last quarter of 2011 in relation to the UK transfers. A large part of the business carried on in the UK, issued debt in order to fund other parts of RBSH Group. This intra-group funding has, in the short term, been replaced by RBSG Group funding. The funding by RBSG Group will fall in line with the planned reduction of RBSH Group's balance sheet as part of the Proposed Transfers in 2012 and 2013. In addition the decrease in Debt securities in issue was as a result of reduced issuance by GBM and RBSH Group Treasury.

Owner's equity decreased by €1.6 billion, 34%, to €3.3 billion, driven by the attributable loss for the period of €0.7 billion and decreases in foreign exchange reserves of €0.4 billion reflecting gains recycled to profit and loss due to the UK Transfers, and a decrease in available-for-sale reserves of €0.4 billion. The decrease in available-for-sale reserves was due to the derecognition of the related deferred tax assets and fair value movements on available-for-sale securities which was partly offset by the recycling of the cumulative losses on RBSH Groups holding of Greek government bonds, that were recycled to profit and loss in the first half of 2011.

2010 compared with 2009

Total assets were €200.4 billion at 31 December 2010, a decrease of €269.0 billion, or 57%, when compared with €469.4 billion at 31 December 2009. The decrease in the balance sheet categories Loans and advances to customers, Intangible assets, Property, plant and equipment, Prepayments, accrued income and other assets was mostly due to the sale of Dutch State acquired businesses included in the new ABN AMRO Bank on 1 April 2010.

Cash and balances at central banks decreased by €20.1 billion or 71% to €8.3 billion at 31 December 2010 compared with €28.4 billion at 31 December 2009 due to a reduction in surplus cash balances held at central banks and other liquid assets, which had been built up as a prudent measure ahead of the legal separation of the Dutch State acquired businesses. Following successful separation on 1 April 2010, the liquid assets and associated short-term wholesale funding were managed down to business as usual levels.

Loans and advances to banks decreased by €11.0 billion, or 29%, to €26.7 billion at 31 December 2010 compared with €37.7 billion at 31 December 2009. This decrease is predominantly attributable to a decrease in time deposits placed of €7.5 billion due to a dividend settlement with Santander, as well as the sale of Dutch State acquired businesses included in the new ABN AMRO Bank.

Debt securities decreased by €32.5 billion to €52.3 billion, reflecting the sale of Dutch State acquired businesses as well as a decrease in the fair value of government securities, and significant divestments of debt securities. Equity shares increased by €5.4 billion, to €22.6 billion, largely due to a recovery of the equity markets in 2010.

Derivative assets decreased by €29.1 billion, or 51%, to €28.3 billion at 31 December 2010 compared with €57.4 billion at 31 December 2009. Derivative liabilities decreased by €27.3 billion, or 43%, to €35.7 billion at 31 December 2010 compared to the balance of €63.0 billion at 31 December 2009. This was partly attributable to the sale of Dutch State acquired businesses included in the new ABN AMRO Bank, the novation to RBS plc of derivative financial instruments and the lower volume of over the counter traded derivatives.

Total liabilities were €195.4 billion as at 31 December 2010, a decrease of €255.0 billion, or 57% decrease when compared with €450.4 billion at 31 December 2009. The balance sheet categories Deposits by banks, Customer accounts, Debt securities in issue, Subordinated liabilities, and Accruals, deferred income and other liabilities have significantly decreased due to the sale of Dutch State acquired businesses included in the new ABN AMRO Bank N.V. on 1 April 2010.

Total equity at 31 December 2010 was €5.0 billion, a decrease of €14.0 billion compared to 31 December 2009. This was mainly due to a decrease in share premium and retained earnings as a result of the €9.0 billion dividend distributions by RBS Holdings to RFS Holdings for the benefit of Santander, coupled with a €6.5 billion dividend distribution for the benefit of the Dutch State as part of the sale of the new ABN AMRO Bank on 1 April 2010. In addition, during the period, €1.4 billion in unrealized losses were recorded in other comprehensive income predominantly relating to available-for-sale debt securities. Cash flow hedging reserves improved by €1.0 billion due to the realization of reserves following the sale of the new ABN AMRO Bank. In order to capitalize the remaining shared assets and the remaining Dutch State acquired businesses, Santander and the Dutch state injected €0.1 billion and €0.3 billion, respectively in capital. RBSG Group injected €0.5 billion in the second half of 2010 in order to further strengthen RBSH Group's capital position.

Risk and balance sheet
management

Risk and balance sheet management

Risk and balance sheet management are conducted on an overall basis within RBSG Group. Therefore the discussion on risk and balance sheet management on pages 29 to 93 refers principally to policies and procedures in RBSG Group that also apply to RBSH Group.

Introduction

Risk Management plays an integral role in the delivery of RBSG Group's strategic goal to be a safe and secure banking group. Given this central aim, in 2009 RBSG Group's Board set out four key strategic risk objectives, aligned to RBSG Group's strategic plan. These are to:

- maintain capital adequacy
- deliver stable earnings growth
- ensure stable and efficient access to funding and liquidity
- maintain stakeholder confidence

These strategic risk objectives are the bridge between the RBSG Group-level business strategy and the frameworks, limits and tolerances that are used to set risk appetite and manage risk in the business divisions on a day-to-day basis.

More detailed discussions on how RBSH Group strengthened its approach to risk management in 2011 are contained within the following pages.

Risk appetite

RBSH Group's risk appetite identifies and establishes the level and type of risks that it is able and willing to take in executing its chosen business strategy, to protect itself against events that may have an adverse impact on its profitability and/or its capital base. RBSH Group has developed a framework that sets and implements an appropriate risk appetite supported by a regular monitoring and review process.

Stress testing

Stress testing describes the evaluation of a bank's financial position under severe but plausible stress scenarios. Stress testing refers to the application of individual stress tests and the broader framework under which these tests are developed, evaluated and used within RBSH Group's decision-making process in the context of the wider economic environment.

Internal stress tests

RBSH Group's stress testing framework is designed to embed stress testing as a key risk management technique into mainstream risk reporting, capital planning and business processes.

Stress testing forms part of RBSH Group's risk and capital management framework and is a major component of the Basel III requirements. It highlights to senior management potential adverse unexpected outcomes related to a mixture of risks and provides an indication of how much capital might be required to absorb losses should adverse scenarios materialise.

Stress testing was utilised as a key decision making and capital planning tool as part of the planning for the Proposed Transfers (the transfer of a substantial part of the business activities of RBS N.V. to RBS plc).

RBSG Group Policy Framework

The RBSG Group Policy Framework (GPF) has been revised and broadened in 2011. The GPF consolidates a large number of individual policies under a consistent and structured overarching framework for conduct, control and governance. It provides clear guidance and controls on how RBSG Group does business, linked to its risk appetite, its business conduct and compliance responsibilities and its focus on delivering a control environment consistent with best practice against relevant external benchmarks.

The GPF and related initiatives aim to ensure that:

- RBSG Group has clear control standards and ethical principles to cover the risks that it faces to support effective risk management and meet regulatory and legal requirements;
- policies are followed across RBSG Group and compliance can be clearly evidenced, assessed and reported by line management; and
- the control environment is monitored and overseen through good governance.

Communication and training programmes are provided to all relevant staff as the policies are embedded, ensuring that staff are aware of their responsibilities. The GPF is structured to ensure that policy standard owners and sponsors review their policies on a regular basis, with any identified shortfalls against industry best practice documented and addressed within an agreed time frame.

The GPF was introduced in 2009. Enhancements applied in 2011 included the following:

- RBSG Group's policy standards, which comprise the GPF, were rewritten to ensure they clearly express the mandatory controls required to mitigate the key risks RBSG Group faces;
- all of RBSG Group's policy standards were benchmarked against relevant external reference points. Further improvements to the policy standards are now being implemented;
- for each policy standard, appropriate risk-based assurance activity was introduced to ensure compliance with policy can be demonstrated; and
- risk appetite has its own policy standard within the GPF that clearly sets out roles and responsibilities in relation to the implementation of the risk appetite framework and provides assurance that risks are being actively managed within approved levels and tolerances.

The GPF will continue to be improved and embedded. The results of assurance activity, monitoring and analysis of the internal and external environment will be used to reassess the policy standards on a regular basis.

management

Risk governance

Risk and balance sheet management strategies are owned and set by the Managing Board of RBSH Group and are implemented by the executive management. There are a number of committees and executives that support the execution of the business plan and strategy. Two of these committees are dedicated to RBSH Group and report to the RBSH Group Managing Board and the RBSH Group Supervisory Board. These are depicted and described in the graph and table below. Matters not specifically delegated are reserved for the Managing Board.

There are also risk committees that cover RBSH Group and (parts of) RBSG Group reflecting the integrated manner in which the business is managed within RBSG Group. RBSH Group is represented in these committees by members who have delegated authority from RBSH Group to facilitate an integrated and efficient decision process, these specialist risk sub-committees are shown below. The authorities delegated to these variously convened committees are recorded in RBSH Group's High Level Control Report, which is reviewed, updated and approved by the Managing Board on a regular basis.

Notes:

- (1) The RBSG Group Risk Committee and the GALCO report directly to the RBSG Executive Risk Forum.
- (2) The RBSG Capital and Stress Testing Committee is a sub-committee of the GALCO.

During 2011, the role and responsibilities of key risk committees were reviewed and more clearly defined, to meet the future needs of RBSG Group.

The committees that sit below RBSG Group Risk Committee were streamlined significantly, aligned more closely to key risk types and given clearer empowerment and accountability where required.

management

Board/Committee	Risk focus	Membership
Supervisory Board	The Supervisory Board is responsible for supervising RBSH Group's management and RBSH Group's general affairs and the business connected with it and for advising the Managing Board.	Consists of five members. Three members are executives of RBSG Group.
Managing Board	Reports to RBSH Group Supervisory Board and is the principal decision making forum for RBSH Group. It approves the RBSH Group strategy and monitors the performance of the entity. It also reviews acquisitions, disposals and other significant transactions, and is responsible for capital entry management and allocation and determines dividend policy. It ensures that RBSH Group manages risk effectively through approving and monitoring of the risk appetite, considering Group stress scenarios and agreed mitigants and identifying longer-term strategic threats to RBSH Group's business operations.	Five members led by the RBSH Group Chairman, also Head of GBM, RBSH Group Chief Administrative Officer (CAO), RBSH Group Chief Financial Officer (CFO), RBSH Group Chief Risk Officer (CRO) and RBSH Group Head of GTS.
Risk & Audit Committee (R&A Cte)	A sub-committee of the Supervisory Board. The RBSH Group Risk & Audit Committee is responsible for the review of all matters relative to accounting policies, internal control, financial reporting functions, internal audit, external audit, risk assessment and regulatory compliance and it assists on such other matters as may be referred to it by the RBSH Group Supervisory Board and or the RBSG Group Audit Committee.	The members of the RBSH Group R&A Cte are appointed by the Supervisory Board from its own members.
Asset & Liability Committee (ALCO)	A sub-committee of the Managing Board. The objective of the RBSH Group ALCO is to describe the framework within which RBSH Group manages its Balance Sheet and the structural exposures inherent therein. This framework is approved by the RBSH Group Managing Board and is fully aligned with the policies and procedures governing asset and liability management throughout RBSG Group.	Eleven permanent voting members led by the RBSH Group Chairman and Head of GBM, RBSH Group CFO, RBSH Group CAO, RBSH Group CRO, RBSH Group Treasurer, RBSH Group Head of GTS, GBM Treasurer, Head of Treasury Balance Sheet Management, Head of Treasury Capital Management, Head of Short Term Markets & Financing. Four permanent non-voting guests: GTS Treasurer, Non-Core Treasurer, Global Head of Equity Treasury, Europe Treasurer.
Risk and Control	A sub-committee of the Managing Board. The role of the RBSH Group Risk & Control Committee is to advise the RBSH Group Managing	Chaired by the RBSH Group CRO. Members include RBSH Group CFO, RBSH Group CAO, Head of GBM, RBSG Chief Operating

C o m m i t t e e (RCC)	Board on the risk appetite and receive direction from the RBSH Group Managing Board on the risk appetite. It oversees the risk framework and reports directly to the RBSH Group Managing Board on the performance of the framework and on issues arising from it. It monitors the actual risk profile and ensures that this remains within the boundaries of the agreed risk appetite or escalates excesses to the RBSH Group Managing Board.	Officer of GTS, Heads of Credit, Market, and Operational Risk & Regulatory Risk for RBSH Group, CRO EMEA, CROs for Risk for GBM Asia Pacific and Americas.

Risk coverage

The main risk types faced by RBSH Group are presented below, together with a summary of the key areas of focus and how RBSH Group managed these risks in 2010:

Risk type	Definition	Features	How RBSH Group manages risk and the progress in 2011
Capital, funding and liquidity risk	The risk that RBSH Group has insufficient capital or is unable to meet its financial liabilities as they fall due.	<p>Potential to disrupt the business model and stop normal functions of RBSH Group.</p> <p>Potential to cause RBSH Group to fail to meet the supervisory requirements of regulators.</p> <p>Significantly driven by credit risk losses.</p>	<p>RBSH Group plans for and maintains an adequate amount and mix of capital consistent with its risk profile. This ensures that in any foreseeable scenario RBSH Group holds minimum capital to meet the standards and requirements of investors, regulators and depositors. The amount of capital required is determined through risk assessments and stress testing.</p> <p>Maintaining the structural integrity of RBSH Group's balance sheet requires active management of both asset and liability portfolios as necessary. Strong debt issuance and planned reductions in the funding balance sheet enabled RBSH Group to strengthen its funding and liquidity position as market conditions worsened.</p>
Credit risk (including counterparty risk)	The risk that RBSH Group will incur losses owing to the failure of a customer to meet its obligation to settle outstanding amounts.	<p>Loss characteristics vary materially across portfolios.</p> <p>Significant link between losses and the macroeconomic environment.</p> <p>Can include concentration risk - the risk of loss due to the concentration of credit risk to a specific product/asset class, sector or counterparty.</p>	RBSH Group manages credit risk based on a suite of credit approval and risk concentration frameworks and associated risk management systems and tools. It also continues to reduce the risk associated with legacy exposures through further reductions in Non-Core assets.
Country risk	The risk of material losses arising from significant country-specific	Can arise from sovereign events, economic events, political events,	All country exposures are covered by RBSG Group's country risk management framework. This includes active management of portfolios either when these have been identified as exhibiting signs

events.	natural disasters or conflicts.	of stress through RBSG Group's country Watchlist process or when it is otherwise considered appropriate. Portfolio reviews are undertaken to align country risk profiles to RBSG Group's country risk appetite in light of economic and political developments.
	Potential to affect parts of RBSH Group's credit portfolio that are directly or indirectly linked to the country in question.	Sovereign risk increased in 2011, resulting in rating downgrades for a number of countries, including several eurozone members. This resulted in an impairment loss recognised by RBSH Group in 2011 in respect of available-for-sale Greek government bonds. In response RBSG Group further strengthened its country risk appetite setting and risk management systems during the year and brought a number of advanced countries under limit control. This contributed to a reduction in exposure to a range of countries.

Risk type	Definition	Features	How RBSH Group manages risk and the progress in 2011
Market risk	The risk arising from changes in interest rates, foreign currency, credit spreads, equity prices and risk related factors such as market volatilities.	Frequent small losses which are material in aggregate. Infrequent large material losses due to stress events.	<p>A comprehensive structure is in place aimed at ensuring RBSH Group does not exceed its qualitative and quantitative tolerance for market risk.</p> <p>RBSG Group's market risk policy statements set out its qualitative tolerance for market risk. They define the governance, responsibilities and requirements for the identification, measurement, analysis, management and communication of the market risk arising from RBSH Group's trading and non-trading investment activities.</p> <p>The RBSG Group Market Risk limit framework expresses the RBSG Group's quantitative tolerance for market risk. The RBSG Group limit metrics capture, in broad terms, the full range of market risk exposures, ensuring the risk is appropriately defined and communicated.</p>
Operational risk	The risk of loss resulting from inadequate or failed processes, people, systems or from external events.	Frequent small losses. Infrequent material losses.	<p>The objective of operational risk management is to manage it to an acceptable level. Processes to achieve this objective take into account the cost of minimising the risk against the resultant reduction in exposure.</p> <p>During 2011, RBSG Group took steps to enhance its management of operational risks. This is particularly evident in respect of setting risk appetite, the RBSG Group Policy Framework, risk assessment, scenario analysis and statistical modeling for capital requirements.</p> <p>The level of operational risk remains high due to the scale of structural change occurring across RBSH Group, the pace of regulatory change, the economic downturn and other external threats, such as e-crime.</p>
Compliance risk	The risk arising from non-compliance with	Adverse impacts on strategy, capital	Management of compliance risk entails early identification and effective management of changes

national and international laws, rules and regulations.

structure, business models and operational effectiveness.

Financial cost of adapting to changes in laws, rules or regulations or of penalties for non-compliance.

in legislative, regulatory and other requirements that may affect RBSH Group.

It also requires active engagement with regulators, close analysis of emerging regulatory themes, and interaction with rule-makers and legislators.

Within the GPF, compliance risk policies define minimum standards to which all businesses must adhere. GPF policies are supplemented, where appropriate, by divisional policies to meet local product or market requirements.

During 2011, RBSH Group managed the increased levels of scrutiny and legislation by enlarging the capacity of its compliance, anti-money laundering and regulatory affairs teams and taking steps to improve operating models, tools, systems and processes.

management

Risk and balance sheet management

Risk coverage continued

Risk type	Definition	Features	How RBSH Group manages risk and the progress in 2011
Reputational risk	The risk of brand damage arising from financial and non-financial losses due to failure to meet stakeholders' expectations of RBSG Group's performance and behaviour.	Potential to put the entire business at risk. Otherwise, could lead to negative publicity, loss of revenue, costly litigation or a decline in customer base. Can arise from actions taken by RBSG Group or a failure to take action.	The RBSG Group Sustainability Committee (GSC) and risk committees continue to assess reputational risk issues. In 2011, an RBSG Group Environmental, Social and Ethical (ESE) Risk Policy was developed with sector ESE risk appetite positions drawn up to assess RBSG Group's appetite to support customers in sensitive sectors including defence and oil and gas. This also included the establishment of divisional reputational risk committees. Stakeholder engagement was broadened with the implementation of formal sessions between the GSC and relevant advocacy groups and non-governmental organisations.
Business risk	The risk of lower-than-expected revenues and/or higher-than-expected operating costs.	Influenced by many factors such as pricing, sales volume, input costs, regulations and market and economic conditions.	Forecasts of revenues and costs are tested against a range of stress scenarios to identify key risk drivers and the appropriate actions to address and manage them.
Pension risk	The risk that RBSH Group may have to make additional contributions to its defined benefit pension schemes.	Funding position can be volatile due to the uncertainty of future investment returns and the projected value of schemes' liabilities.	RBSH Group manages pension risk from a sponsor perspective using a framework that encompasses risk reporting and monitoring, stress testing, modeling and an associated governance structure that helps ensure RBSH Group is able to fulfill its obligation to support the defined benefit pension schemes to which it has exposure. In 2011, RBSH Group focused on improved stress testing and risk governance mechanisms. The schemes are invested in diversified portfolios of equities, government and corporate fixed-interest and index-linked bonds, and other assets including property. Interest and inflation risks are mitigated partially by investment in suitable physical assets and appropriate derivative contracts.

Each of these risk types maps into RBSH Group's risk appetite framework and contributes to the overall achievement of its strategic objectives with underlying frameworks and limits. The key frameworks and developments over the past year are described in the relevant sections of the following pages.

Business review continued

Business Review
Risk and balance sheet
management

Balance sheet management

Two of RBSG Group's four key strategic risk objectives relate to the maintenance of capital adequacy and ensuring stable and efficient access to funding and liquidity. This section on balance sheet management explains how RBSH Group is performing on achieving these objectives.

Capital management

RBSH Group aims to maintain an appropriate level of capital to meet its business needs and regulatory requirements as capital adequacy and risk management are closely aligned. RBSH Group operates within the agreed risk appetite whilst optimising the use of shareholders' funds to deliver sustainable returns.

The appropriate level of capital is determined based on the dual aims of: (i) meeting minimum regulatory capital requirements; and (ii) ensuring RBSH Group maintains sufficient capital to uphold investor and rating agency confidence in the organisation, thereby supporting the business franchise and funding capacity.

Governance

RBSH Group Asset and Liability Management Committee (ALCO) is responsible for ensuring RBSH Group maintains adequate capital at all times. The newly established RBSG Group Capital and Stress Testing Committee (CAST) is a cross-functional body driving and directing integrated risk capital activities including stress testing economic capital and capital allocation. These activities have linkages to capital planning, risk appetite and regulatory change. CAST reports through ALCO and comprises senior representatives from RBSH Group Risk, RBSH Group Finance and RBSH Group Treasury.

Determining appropriate capital

The minimum regulatory capital requirements are identified by RBSH Group through the Internal Capital Adequacy Assessment Process and then agreed between Managing Board and the appropriate supervisory authority.

RBSH Group's own determination of how much capital is sufficient is derived from the desired credit rating level, risk appetite and the application of both internally and externally defined stress tests that identify potential changes in capital ratios over time.

Monitoring and maintenance

Based on these determinations, which are continually reassessed, RBSH Group aims to maintain capital adequacy.

RBSH Group operates a rigorous capital planning process aimed at ensuring the capital position is controlled within the agreed parameters. This incorporates regular re-forecasts of the capital position of RBSH Group. In the event that the projected position deteriorates beyond acceptable levels, RBSH Group would revise business plans accordingly.

Stress testing approaches are used to continually determine the level of capital required to ensure RBSH Group remains adequately capitalised (see page 29).

Capital allocation

Capital resources are allocated to RBSH Group's businesses based on key performance parameters agreed by the Managing Board in the annual strategic planning process. Principal among these is a profitability metric, which assesses the effective use of the capital allocated to the business. Projected and actual return on equity is assessed

against the target returns set by the Managing Board. The allocations also reflect strategic priorities and balance sheet and funding metrics.

Economic profit is also planned and measured for each division during the annual planning process. It is calculated by deducting the cost of equity utilised in the particular business from its operating profit and measures the value added over and above the cost of equity.

RBSH Group aims to deliver sustainable returns across the portfolio of businesses with projected business returns stressed to test key vulnerabilities.

RBSH Group has regard to the supervisory requirements of De Nederlandsche Bank (DNB). The DNB uses the capital ratio as a measure of capital adequacy in the Netherlands banking sector, comparing a bank's capital resources with its risk-weighted assets (RWAs) (the assets and off-balance sheet exposures are weighted to reflect the inherent credit and other risks); by international agreement, the Total Capital Ratio should be not less than 8% with a Tier 1 Capital Ratio of not less than 4%.

Capital adequacy

RBSH Group's RWAs and capital ratios are set out below.

	2011	2010	2009 (2)
	€m	€m	€m
Risk-weighted assets			
Credit risk	50,195	64,200	115,953
Market risk (1)	5,353	1,272	1,582
Operational risk	3,163	4,324	-
	58,711	69,796	117,535
Capital ratios	%	%	%
Core Tier 1	8.4	8.7	16.9
Tier 1	12.0	11.0	19.9
Total	17.5	15.8	25.5

Notes:

(1) Market risk RWAs were largely impacted by the new CRD III rules.

(2) The data for 2009 is on a Basel I basis.

With effect from 30 June 2010, RBSH Group migrated to Basel II status. For the majority of credit risk, RBSH Group uses the advanced internal ratings based approach for calculating RWAs. For operational risk, RBSH Group uses the standardised approach, which calculates operational RWAs based on gross income.

The risk-weighted assets for 2011 reduced due to changes in the structure of the balance sheet following reductions in Non-Core and the UK Transfers. The risk-weighted assets and capital ratios published for 2009 were calculated on a Basel I basis and reflect the inclusion of the Dutch State and Santander acquired businesses existing in the period prior to the legal separation of ABN AMRO Bank on 1 April 2010.

RBSH Group is consolidated for regulatory reporting within RBSG Group. Pillar 3 information for RBSH Group is included within RBSG Group Pillar 3 disclosures. RBSG Group publishes its Pillar 3 Disclosures on its website, providing a range of additional information relating to Basel II and risk and capital management across RBSG Group. The disclosures focus on capital resources and adequacy and discuss a range of credit risk measures and management methods (such as credit risk mitigation, counterparty credit risk and provisions) and their associated RWAs under various Basel II approaches. Detailed disclosures are also made on equity exposures, securitisations, operational risk, market risk and interest rate risk in the banking book.

Regulatory developments

Basel III

The rules used by the Basel Committee on Banking Supervision (BCBS), commonly referred to as Basel III, are a comprehensive set of reforms designed to strengthen the regulation, supervision, risk and liquidity management of the banking sector. In the EU they will be enacted through a revised Capital Requirements Directive referred to as CRD IV.

In December 2010, the BCBS issued the final text of the Basel III rules providing details of the global standards agreed by the Group of Governors and Heads of Supervision, the oversight body of the BCBS and endorsed by the G20 leaders at their November 2010 Seoul summit. There are transition arrangements proposed for implementing these new standards are as follows:

- National implementation of increased capital requirements will begin on 1 January 2013;
- There will be a phased five-year implementation of new deductions and regulatory adjustments to common equity Tier 1 capital commencing 1 January 2014;
- The de-recognition of non-qualifying non-common Tier 1 and Tier 2 capital instruments will be phased in over 10 years from 1 January 2013; and
- Requirements for changes to minimum capital ratios, including conservation and countercyclical buffers, as well as additional requirements for Global Systemically Important Banks, will be phased in from 2013 to 2019.

Other regulatory capital change

RBSH Group is managing the changes to capital requirements from new regulation and model changes and the resulting impact on the common equity Tier 1 ratio, focusing on risk reduction and deleveraging. This is principally being achieved through the Proposed Transfers, the continued run-down and disposal of Non-Core assets and deleveraging in GBM where the business will focus on the most productive returns on capital.

The major categories of new deductions and regulatory adjustments which are being phased in over a five year period from 1 January 2014 include:

- Expected loss net of provisions;
- Deferred tax assets not relating to timing differences;
- Unrealised losses on available-for-sale securities; and
- Significant investments in non-consolidated financial institutions.

The net impact of these changes is expected to be manageable as the aggregation of these drivers is projected to be lower by 2014 and declining during the phase-in period.

Risk and balance sheet
management

Balance sheet management: Liquidity and funding risk

Liquidity risk

Liquidity risk is the risk that RBSH Group is unable to meet its obligations, including financing maturities as they fall due. Liquidity risk is heavily influenced by the maturity profile and mix of RBSH Group's funding base, as well as the quality and liquidity value of its liquidity portfolio.

Liquidity risk is dynamic, being influenced by movements in markets and perceptions that are driven by firm specific or external factors. Managing liquidity risk effectively is a key component of RBSH Group's risk reduction strategy.

Funding issuance

RBSH Group has access to a variety of funding sources across the globe, including short-term money markets, repurchase agreement markets and term debt investors through its secured and unsecured funding programmes. Diversity in funding is provided by its active role in the money markets, along with access to global capital flows through GBM's international client base. RBSH Group's wholesale funding is well diversified by currency, geography, maturity and type.

Balance sheet composition

RBSH Group's balance sheet composition is a function of the product offerings and markets served by its Core divisions. The structural composition of the balance sheet is augmented as needed through active management of both asset and liability portfolios. The objective of these activities is to optimise liquidity transformation in normal business environments while ensuring adequate coverage of all cash requirements under extreme stress conditions.

RBSH Group accesses professional markets funding by way of debt issuances on an unsecured and secured basis in numerous geographies, currencies and maturities.

Stress testing

The strength of a bank's liquidity risk management can only be evaluated based on its ability to survive under stress. RBSH Group evaluates the survivability of the major legal entities and legal entity groups when subjected to simulated stress conditions.

Simulated liquidity stress testing is periodically performed for each business. A variety of firm-specific and market-related scenarios are used at the consolidated level and in individual countries. These scenarios include assumptions about significant changes in key funding sources, credit ratings, contingent uses of funding, and political and economic conditions in certain countries.

RBSH Group's actual experiences from the 2008 and 2009 period, factor heavily into the liquidity analysis. This systemic and name-specific crisis provides important data points in estimating stress severity.

Stress scenarios are applied to both on-balance sheet and off-balance sheet commitments, to provide a comprehensive view of potential cash flows.

Contingency planning

RBSH Group has a Contingency Funding Plan (CFP) which is maintained and updated as the balance sheet evolves. The CFP is linked to stress test results and forms the foundation for liquidity risk limits. Limits in the

business-as-usual environment are bounded by capacity to satisfy RBSH Group's liquidity needs in the stress environments. The RBSH Group's CFP is fully integrated with the CFP of RBSG Group.

Liquidity reserves

RBSH Group maintains liquidity reserves sufficient to satisfy cash requirements in the event of a severe disruption in its access to funding sources. The reserves consist of cash held on deposit at central banks, high quality unencumbered government securities and other unencumbered collateral. Government securities vary by type and jurisdiction based on local regulatory considerations. The currency mix of the reserves reflects the underlying balance sheet composition.

Regulatory oversight

RBSH Group operates in multiple jurisdictions and is subject to a number of regulatory regimes. RBSH Group's lead regulator in the Netherlands is De Nederlandsche Bank (DNB). RBSH Group is a subsidiary of the RBSG Group whose lead regulator in the UK is the Financial Services Authority (FSA).

Regulatory developments

There have been a number of significant developments in the regulation of liquidity risk.

In December 2010, the Basel Committee on Banking Supervision (BCBS) issued the 'International framework for liquidity risk measurement, standards and monitoring' which confirmed the introduction of two liquidity ratios, the liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR).

The introduction of both of these ratios will be subject to an observation period, which includes review clauses to identify and address any unintended consequences.

After an observation period beginning in 2011, the LCR, including any revisions, will be introduced on 1 January 2015. The NSFR, including any revisions, will move to a minimum standard by 1 January 2018.

management

Balance sheet management: Liquidity and funding risk continued

Short-term borrowings

The table below shows details of RBSH Group's short-term borrowings.

Short-term borrowings comprise repurchase agreements, commercial paper and certificates of deposit.

	Repurchase agreements	Commercial paper	Certificates of deposit	Total 2011	Total 2010	Total 2009
At year end						
- balance (€bn)	17	2	2	21	21	27
- weighted average interest rate	0.7%	0.9%	1.5%	0.8%	0.6%	1.7%
During the year						
- maximum balance (€bn)	35	3	8	46	44	66
- average balance (€bn)	11	2	5	18	28	40
- weighted average interest rate	0.7%	0.8%	1.2%	0.9%	0.6%	1.8%

Balances are generally based on monthly data. Average interest rates during the year are computed by dividing total interest expense by the average amount borrowed. Average interest rates at year end are average rates for a single day and as such may reflect one-day market distortions, which may not be indicative of generally prevailing rates.

Liquidity management

Liquidity risk management requires ongoing assessment and calibration of: how the various sources of RBSH Group's liquidity risk interact with each other; market dynamics; and regulatory developments to determine the overall size of RBSH Group's liquid asset buffer. In addition to the size determination, the composition of the buffer is also important. The composition is reviewed on a continuous basis in order to ensure that RBSH Group holds an appropriate portfolio of high quality assets that can provide a cushion against market disruption and dislocation, even in the most extreme stress circumstances.

Liquidity portfolio

The table below shows the composition of RBSH Group's liquidity portfolio (at estimated liquidity value). All assets within the liquidity portfolio are unencumbered.

	2011		2010
	Average €m	Period end €m	€m
Cash and cash equivalents	10,132	14,346	8,323
Central and local government bonds			
- AAA rated governments and US agencies	4,367	-	4,949
- AA- to AA+ rated governments	1,594	-	1,554
- governments rated below AA	1,059	1,142	1,193
- local government	5,469	5,143	6,576
	12,489	6,285	14,272

Unencumbered collateral			
- AAA rated	4,704	3,907	7,759
- below AAA rated and other high quality assets	2,780	3,536	3,680
	7,484	7,443	11,439
Total liquidity portfolio	30,105	28,074	34,034

Key points

- RBSH Group's central liquidity reserves reduced by €6 billion to €28 billion as at year end.
- RBSH Group manages the composition of its liquidity reserves based on a number of considerations. These include market opportunities, internal and external liquidity metrics and potential near term cash requirements. In response to the challenging economic conditions, RBSH Group has altered the composition of the portfolio resulting in a higher proportion of cash and cash equivalents, 51% at December 2011 compared with 24% at December 2010.
- The composition of the liquidity portfolio will vary over time based on changing regulatory requirements and internal evaluation of liquidity needs under stress.
 - There are no restrictions over the disposition of the portfolio by RBSG Group management subject to meeting liquidity requirements imposed by the DNB.

Commitments (3)	22,378	37,995	51,520
	42,279	62,453	85,088

Notes:

- (1) Held -for-trading derivative assets and liabilities amounting to €18.7 billion (assets) and €17.6 billion (liabilities) (2010 - €27.6 billion assets and €32.8 billion liabilities; 2009 - €56.3 billion assets and €59.1 billion liabilities) have been excluded from the table in view of their short-term nature.
- (2) RBSH Group is only called upon to satisfy a guarantee when the guaranteed party fails to meet its obligations. RBSH Group expects most guarantees it provides to expire unused.
- (3) RBSH Group has given commitments to provide funds to customers under undrawn formal facilities, credit lines and other commitments to lend subject to certain conditions being met by the counterparty. RBSH Group does not expect all facilities to be drawn, and some may lapse before drawdown.

The tables above have been prepared on the following basis:

The contractual maturity of on-balance sheet assets and liabilities above highlights the maturity transformation which underpins the role of banks to lend long-term, but to fund themselves predominantly by short-term liabilities such as customer deposits. In practice, the behavioural profiles of many assets and liabilities exhibit greater stability and longer maturity than the contractual maturity.

Financial assets have been reflected in the time band of the latest date on which they could be repaid, unless earlier repayment can be demanded by RBSH Group. Financial liabilities are included at the earliest date on which the counterparty can require repayment, regardless of whether or not such early repayment results in a penalty. If the repayment of a financial instrument is triggered by, or is subject to, specific criteria such as market price hurdles being reached, the asset is included in the time band that contains the latest date on which it can be repaid regardless of early repayment. The liability is included in the time band that contains the earliest possible date on which the conditions could be fulfilled, without considering the probability of the conditions being met.

For example, if a structured note is automatically prepaid when an equity index exceeds a certain level, the cash outflow will be included in the less than three months period, whatever the level of the index at the year end. The settlement date of debt securities in issue, issued by certain securitisation vehicles consolidated by RBSH Group, depends on when cash flows are received from the securitised assets. Where these assets are prepayable, the timing of the cash outflow relating to securities assumes that each asset will be prepaid at the earliest possible date. As the repayments of assets and liabilities are linked, the repayment of assets in securitisations is shown on the earliest date that the asset can be prepaid, as this is the basis used for liabilities.

The principal amounts of financial assets and liabilities that are repayable after twenty years or where the counterparty has no right to repayment of the principal are excluded from the table, as are interest payments after twenty years.

Risk and balance sheet
management

Balance sheet management: Interest rate risk

The banking book consists of interest bearing assets, liabilities and derivative instruments used to mitigate risks which are primarily accounted for on an accrual basis, as well as non interest bearing balance sheet items which are not subjected to fair value accounting.

RBSH Group provides financial products to satisfy a variety of customer requirements. Loans and deposits are designed to meet customer objectives with regard to repricing frequency, tenor, index, prepayment, optionality and other features. When aggregated, they form portfolios of assets and liabilities with varying degrees of sensitivity to changes in market rates. However, mismatches in these sensitivities give rise to interest rate risk as the level of interest rates rise and fall.

RBSH Group assesses interest rate risk in the banking book (IRRBB) using a set of standards to define, measure and report the market risk.

It is RBSH Group's policy to minimise interest rate sensitivity in banking book portfolios and where interest rate risk is retained to ensure that appropriate measures and limits are applied. Key measures used to evaluate IRRBB are subjected to approval granted by the RBSH Group Asset and Liability Committee (ALCO.) Limits on IRRBB are set according to the Non-Trading Interest Rate and Foreign Currency Risk Policy Statement and are subject to RBSH Group ALCO approval.

IRRBB is measured using a version of the same Value at Risk (VaR) methodology that is used by RBSG Group, that is, on the basis of historical simulation using two years of unweighted data. The holding period is one day and the confidence level 99%.

RBSH Group is required to manage IRRBB through transactions with RBS plc to the greatest extent possible.

Group Treasury aggregates exposures arising from its own external activities and positions transferred to it from the Regional Treasuries. Where appropriate, Group Treasury nets offsetting risk exposures to determine a residual exposure to interest rate movements. Hedging transactions using cash and derivative instruments are executed to manage the net positions according to the Non-Trading Interest Rate and Foreign Currency Risk Policy Statement and to maintain them within the RBSH Group ALCO approved VaR limits.

Residual risk positions are routinely reported to RBSH Group ALCO, RBSH Group Managing and Supervisory Board and RBSH Group RCC.

IRRBB one-day VaR at 99% confidence level for RBSH Group's retail and commercial banking activities was as follows. The figures exclude the banking books of Short Term Markets and Finance (STMF) which are reported within the Market Risk section.

	Period			
	Average	end	Maximum	Minimum
	€m	€m	€m	€m
2011	10.0	8.3	15.2	7.4
2010	30.1	16.2	69.9	16.2
2009	50.4	39.0	75.2	32.5

Key points

- During 2011, the Greek bonds held in the RBSH Group Liquidity Portfolio were impaired and the related interest rate swaps hedging them unwound, as they were no longer in an effective hedge accounting relationship.
- VaR reduced in 2010 following the legal separation of the Dutch State acquired businesses.

Balance sheet management: Structural foreign currency exposures

Structural foreign exchange exposures represent net investment in subsidiaries, associates and branches, the functional currencies of which are currencies other than euro. RBSH Group hedges structural foreign currency exposures only in limited circumstances. RBSH Group's objective is to ensure, where practical, that its consolidated capital ratios are largely protected from the effect of changes in exchange rates.

RBSH Group seeks to limit the sensitivity to its Core Tier 1 ratio to 15 basis points in a 10% rate shock scenario. Throughout 2011, RBSH Group has met this target.

The structural foreign currency position is monitored on an ongoing basis and, if necessary, hedges are adjusted accordingly in order to ensure compliance with the Non Trading Interest Rate and Foreign Currency Risk Policy Statement and with the RBSH Group ALCO approved limits. RBSH Group's structural foreign currency position is reviewed by RBSH Group ALCO regularly.

The tables below set out RBSH Group structural foreign currency exposures.

	Net investments in foreign operations (1) €m	Net investment hedges €m	Structural foreign currency exposures €m
2011			
US dollar	1,334	(1,129)	205
Pound sterling	721	(715)	6
Other non-euro	3,749	(2,310)	1,439
	5,804	(4,154)	1,650
2010			
US dollar	1,271	(730)	541
Pound sterling	1,358	(1,238)	120
Other non-euro	3,779	(2,298)	1,481
	6,408	(4,266)	2,142
2009			
US dollar	768	(543)	225
Pound sterling	(873)	(72)	(945)
Other non-euro	4,064	(2,876)	1,188
	3,959	(3,491)	468

Notes:

(1) Includes minority participations.

Key points

- The GBP denominated net investments in foreign operations decreased during 2011 as a result of the transfer of eligible business carried out in the UK during 2011 as part of the UK Transfers.

Sensitivity of equity to exchange rates

Changes in foreign currency exchange rates will affect equity in proportion to the structural foreign currency exposure.

The table shows the sensitivity of RBSH Group's equity capital to a 10% appreciation and 10% depreciation in the euro against all foreign currencies.

2011 (1)		2010 (1)		2009	
Euro appreciates	Euro depreciates	Euro appreciates	Euro depreciates	Euro appreciates	Euro depreciates
10%	10%	10%	10%	10%	10%
€m	€m	€m	€m	€m	€m
(162)	165	(367)	435	(259)	259

Notes:

- (1) The basis used to calculate the sensitivity to a percentage change in the euro against all foreign currencies was revised in line with RBSG Group methodology.

Risk management

Introduction

Risk management is conducted on an overall basis within RBSG Group. Therefore the discussion on pages 47 to 91 refer principally to policies and procedures in the RBSG Group that also apply to RBSH Group. This section focuses on each of the key types of risk that RBSH Group faces - explaining how RBSH Group manages these risks and highlighting the enhancements made as a result of progress under RBSH Group's ongoing initiatives to strengthen its approach to risk management.

Credit risk

Credit risk is the risk of financial loss due to the failure of a customer to meet its obligation to settle outstanding amounts. The quantum and nature of credit risk assumed across RBSG Group's different businesses vary considerably, while the overall credit risk outcome usually exhibits a high degree of correlation with the macroeconomic environment.

Organisation

The existence of a strong credit risk management function is vital to support the ongoing profitability of RBSG Group. The potential for loss through economic cycles is mitigated through the embedding of a robust credit risk culture within the business units and through a focus on the importance of sustainable lending practices. The role of the credit risk management function is to own the credit approval, concentration and credit risk control frameworks and to act as the ultimate authority for the approval of credit. This, together with strong independent oversight and challenge, enables the business to maintain a sound lending environment within risk appetite.

Responsibility for development of RBSG Group-wide policies, credit risk frameworks, RBSG Group-wide portfolio management and assessment of provision adequacy sits within the RBSG Group Credit Risk (GCR) function under the management of the RBSG Group Chief Credit Officer. Execution of these policies and frameworks is the responsibility of the risk management functions, located within the RBSG Group's business divisions. These divisional credit risk functions work together with GCR to ensure that RBSG Groups Board's expressed risk appetite is met, within a clearly defined and managed control environment. The credit risk function within each division is managed by a Chief Credit Officer, who reports jointly to a divisional Chief Risk Officer and to the RBSG Group Chief Credit Officer. Divisional activities within credit risk include credit approval, transaction and portfolio analysis, early problem recognition and ongoing credit risk stewardship. GCR is additionally responsible for verifying compliance by RBSH Group with all RBSG Group credit policies.

Risk appetite

RBSH Group's credit concentration risk is managed and controlled through a series of frameworks designed to limit concentration by product/asset class, sector, counterparty or country. These are supported by a suite of RBSG Group-wide and divisional policies setting out the risk parameters within which business units may operate. Information on RBSH Group's credit portfolios is reported to the RBSH Group Managing Board via the RBSH Group Risk and Control Committee on a regular basis.

In the two years since the new concentration framework was rolled out across the RBSG Group, the RBSG Group Executive Risk Forum (ERF) has reviewed all material industry and product portfolios and agreed a risk appetite commensurate with the franchises represented in these reviews. The product/asset class, single name, sector and country limits are now firmly embedded in the risk management processes of RBSH Group's risk appetite framework,

which is regularly reviewed to ensure limits and measurement triggers remain adequate for monitoring purposes.

Product/asset class concentration framework

- Retail - a formal framework establishes RBSG Group-level statements and thresholds that are cascaded through all retail franchises in RBSG Group and to granular business lines. These include measures that relate both to aggregate portfolios and to asset quality at origination, which are tracked frequently to ensure consistency with RBSG Group standards and appetite. This appetite setting and tracking then inform the processes and parameters employed in origination activities, which require a large volume of small-scale credit decisions, particularly those involving an application for a new product or a change in facilities on an existing product. The majority of these decisions are based upon automated strategies utilising credit and behaviour scoring techniques. Scores and strategies are typically segmented by product, brand and other significant drivers of credit risk. These data driven strategies utilise a wide range of credit information relating to a customer, including where appropriate, information across customer holdings. A small number of credit decisions are subject to additional manual underwriting by authorised approvers in specialist units. These include higher-value, more complex, small business and personal unsecured transactions and some residential mortgage applications.
- Wholesale - formal policies, specialised tools and expertise, tailored monitoring and reporting and, in certain cases, specific limits and thresholds are deployed, to address certain lines of business across RBSG Group, where the nature of credit risk incurred could represent a concentration or a specific/heightened risk in some other form. Those portfolios identified as potentially representing a concentration or heightened risk are subject to formal governance, including periodic review, at either RBSG Group or at RBSH Group level, depending on materiality.

Risk management: Credit risk continued

Sector concentration framework

Across wholesale portfolios, exposures are assigned to, and reviewed in the context of, a defined set of industry sectors. Through this sector framework, appetite and portfolio strategies are agreed and set at aggregate and more granular levels where exposures have the potential to represent excessive concentration or where trends in both external factors and internal portfolio performance give cause for concern. Formal reviews are undertaken at RBSG Group or at RBSH Group level depending on materiality.

These may include an assessment of RBSG Group's franchise in a particular sector, an analysis of the outlook (including downside outcomes), identification of key vulnerabilities and stress/scenario tests. Specific reporting on trends in RBSH Group's sector risk exposure is provided to senior management and the RBSH Group Managing Board.

The impact of the eurozone crisis has been felt most significantly in the financial institutions sector, where widening credit spreads and regulatory demand for increases in Tier 1 capital have exacerbated the risk management challenges already posed by the sector's continued weakness, as provisions and write-downs remain elevated. A material percentage of global banking activity in risk mitigation now passes through the balance sheets of the top global players, increasing the systemic risks to the sector. RBSH Group's exposures to these banks continue to be closely managed. The increased use of central clearing houses to reduce settlement risk among the larger banks is a welcome move but one that will bring its own challenges. The weaker banks in the eurozone have also been the subject of heightened scrutiny and RBSH Group's risk appetite for these banks was adjusted continuously throughout 2011.

Single name concentration framework

Within wholesale portfolios, much of the activity undertaken by the credit risk function is organised around the assessment, approval and management of the credit risk associated with a borrower or group of related borrowers.

A formal single name concentration framework addresses the risk of outsized exposure to a borrower or borrower group. The framework includes specific and elevated approval requirements, additional reporting and monitoring, and the requirement to develop plans to address and reduce excess exposures over an appropriate timeframe.

Credit approval authority is discharged by way of a framework of individual delegated authorities which requires at least two individuals to approve each credit decision, one from the business and one from the credit risk management function. Both parties must hold sufficient delegated authority under the RBSG Group-wide authority grid. Whilst both parties are accountable for the quality of each decision taken, the credit risk management approver holds ultimate sanctioning authority. The level of authority granted to individuals is dependent on their experience and expertise with only a small number of senior executives holding the highest authority provided under the framework. Daily monitoring of individual counterparty limits is undertaken.

At a minimum, credit relationships are reviewed and re-approved annually. The renewal process addresses: borrower performance, including reconfirmation or adjustment of risk parameter estimates; the adequacy of security; and compliance with terms and conditions. For certain counterparties, early warning indicators are also in place to detect deteriorating trends of concern in limit utilisation or account performance, and to prompt additional oversight.

Since 2009, RBSH Group has been managing its corporate exposures to reduce concentrations and align its appetite for business to RBSG Group's broader strategies for its large corporate franchises. In the last quarter of 2011, RBSG

Group announced further refinements to the single name exposure management controls already in place, which brings them more closely in line with market best practice and which allows RBSG Group to differentiate more consistently, between the different risk types. These changes will be implemented during the first quarter of 2012. RBSG Group is continually reviewing its single name concentration framework to ensure that it remains appropriate for current economic conditions and in line with improvements in the RBSG Group's risk measurement models.

Reducing the risk arising from concentrations to single names remains a key focus of management attention. Continued progress was made in 2011. The challenges posed by continued market illiquidity and the impact of negative credit migration caused by the current economic environment are expected to continue throughout 2012.

Country

For information on how RBSH Group manages credit risk by country, refer to the Country risk section on page 74.

Controls and assurance

A strong independent assurance function is an important element of a sound control environment. During 2011, RBSG Group took the decision to strengthen its credit quality assurance (CQA) activities and moved all divisional CQA resources under the centralised management of RBSG Group Credit Risk. The benefits of this action are already visible in greater consistency of standards and cross utilisation of resources. Reviews planned for 2012 will benefit from the availability of subject matter experts across all material products and classes and an improved ability to track control breaches and strengthen processes.

Work began in the second half of 2011 on a major revision of RBSG Group's key credit policies. This will ensure that RBSG Group's control environment is appropriately aligned to the risk appetite statements that the RBSG Board and the Managing Board has approved and provide a sound basis for RBSG Group's independent audit and assurance activities across the credit risk function. The work is expected to be concluded by the end of the second quarter of 2012.

The RBSG Group Credit Risk function launched an assurance process to provide the RBSG Group Chief Credit Officer with additional evidence on the effectiveness of the controls in place across RBSG Group to manage risk. The results of these reviews will be provided to the RBSG Group Executive Risk Forum and to the RBSG Board Risk Committee on a regular basis in support of the self-certification that RBSG Group Credit Risk is obliged to complete under the RBSG Group Policy Framework (refer to Operational risk on pages 86-87).

Risk management: Credit risk continued

Problem debt management

RBSG Group's procedures for managing problem and potential problem debts for wholesale customers are discussed below.

Wholesale customers

The controls and processes for managing wholesale problem debts are embedded within the divisions' credit approval frameworks and form an essential part of the ongoing credit assessment of customers. Any necessary approvals will be required in accordance with the delegated authority grid governing the extension of credit.

Early problem recognition

Each division has established Early Warning Indicators (EWIs) designed to identify those performing exposures that require close attention due to financial stress or heightened operational issues. Such identification may also take place as part of the annual review cycle. EWIs vary from division to division and comprise both internal parameters (e.g., account level information) and external parameters (e.g., the share price of publicly listed customers).

Customers identified through either the EWIs or annual review are reviewed by portfolio management and/or credit officers within the division, who determine whether or not the weaknesses flagged warrant placing the customers on Watchlist (see below).

Watchlist process

There are three Watchlist ratings - amber, red and black - reflecting progressively deteriorating conditions. Watchlist Amber loans are performing loans where the counterparty or sector shows early signs of potential stress or has other characteristics such that they warrant closer monitoring. Watchlist Red loans are performing loans where indications of the borrower's declining creditworthiness are such that the exposure requires active management, usually by the Global Restructuring Group (GRG). Watchlist Black loans comprise risk elements in lending and potential problem loans.

Once on the Watchlist process, customers come under heightened scrutiny. The relationship strategy is reassessed by a forum of experienced credit, portfolio management and remedial management professionals within the division. In accordance with RBSG Group-wide policies, a number of mandatory actions will be taken, including a review of the customer's credit grade and facility security documentation. Other appropriate corrective action is taken when circumstances emerge that may affect the customer's ability to service its debt. Such circumstances include deteriorating trading performance, an imminent breach of covenant, challenging macroeconomic conditions, a late payment or the expectation of a missed payment.

For all Watchlist Red cases, the division is required to consult with the GRG on whether the relationship should be transferred to the GRG (see more on the GRG below). Relationships managed by the divisions tend to be with companies operating in niche sectors such as airlines or products such as securitisation special purpose vehicles. The divisions may also manage those exposures when subject matter expertise is available in the divisions rather than within the GRG.

As at 31 December 2011, exposures to customers reported as Watchlist Red and managed within RBSH Group's divisions totalled €1.1 billion.

Strategies that are available within divisions include granting the customer various types of concessions. Any decision to approve a concession will be a function of the division's specific country and sector appetite, the key credit metrics of the customer, the market environment and the loan structure/security.

Other potential outcomes of the review of the relationship are to: take the customer off Watchlist and return it to the mainstream loan book; offer further lending and maintain ongoing review; transfer the relationship to the GRG for those customers requiring such stewardship; or exit the relationship altogether.

RBSG Global Restructuring Group

In cases where RBSH Group's exposure to the customer exceeds €1million, the relationship may be transferred to the RBSG Global Restructuring Group (GRG), following consultation with the originating division. The GRG's primary function is to actively manage the exposures to minimise loss for RBSG Group and, where feasible, return the exposure to RBSG Group's mainstream loan book following an assessment by the GRG that no further losses are expected.

As at 31 December 2011, credit risk assets relating to exposures under GRG management (excluding those placed under GRG stewardship for operational reasons rather than concerns over credit quality and those in the AQ10 internal asset quality band) totalled €1.3 billion across property, transport and other sectors. The internal asset quality bands are defined on page 58.

Types of wholesale restructurings

A number of options are available to RBSH Group when corrective action is deemed necessary. RBSH Group may offer a temporary covenant waiver, a recalibration of covenants and/or an amendment of restrictive covenants to mitigate a potential or actual covenant breach. Such relief is usually granted in exchange for fees, increased margin, additional security, or a reduction in maturity profile of the original loan.

management

Risk management: Credit risk continued

Problem debt management continued

RBSG Global Restructuring Group continued

Restructurings comprise the following types of concessions:

- Variation in margin - the contractual margin may be amended to bolster the customer's day-to-day liquidity, with the aim of helping to sustain the customer's business as a going concern. This would normally be seen as a short-term solution and is typically accompanied by RBSH Group receiving an exit payment, a payment in kind or a deferred fee.
- Payment holidays and loan rescheduling - payment holidays or changes to the contracted amortisation profile including extensions in contracted maturity or roll-overs may be granted to improve customer liquidity. Such concessions often depend on the expectation that liquidity will recover when market conditions improve or when a capital raising is completed, providing access to alternative sources of liquidity. Recently, these types of concessions have become more common in commercial real estate transactions, particularly in situations when a shortage of market liquidity rules out immediate refinancing and makes short-term forced collateral sales unattractive.
- Forgiveness of all or part of the outstanding debt - debt may be forgiven or exchanged for equity in cases where a fundamental shift in the customer's business or economic environment means that other forms of restructuring strategies are unlikely to succeed in isolation and the customer is incapable of servicing current debt obligations. Debt forgiveness is often an element in leveraged finance transactions which are typically structured on the basis of projected cash flows from operational activities, rather than underlying tangible asset values. Maintaining the business as a going concern with a sustainable level of debt is the preferred option rather than realising the value of the underlying assets, provided that the underlying business model and strategy are considered viable.

The vast majority of the restructurings reported by RBSH Group take place within the GRG. Forgiveness of debt and exchange for equity is only available to customers in the GRG.

Provisioning for impaired loans

Any type of restructuring may result in the value of the outstanding debt exceeding the present value of the estimated future cash flows from the restructured loan resulting in the recognition of an impairment loss. Restructurings that include forgiveness of all or part of the outstanding debt account for the majority of such cases.

The customer's financial position, anticipated prospects and the likely effect of the restructuring, including any concessions granted, are considered in order to establish whether an impairment provision is required.

Provisions on exposures greater than €1 million are individually assessed by the GRG. Exposures smaller than €1 million are deemed not to be individually significant and are assessed collectively by the originating divisions.

In the case of non-performing loans that are restructured, the loan impairment provision assessment (based on management's best estimate of the incurred loss) almost invariably takes place prior to the restructuring. The quantum of the loan impairment provision may change once the terms of the restructuring are known, resulting in an additional provision charge or a release of the provision in the period the restructuring takes place.

For more information on provisions for impairment charges, refer to page 70.

Recoveries and active insolvency management

The ultimate outcome of a restructuring strategy is unknown at the time of execution. It is highly dependent on the cooperation of the borrower and the continued existence of a viable business. The following are generally considered to be options of last resort:

- Enforcement of security or otherwise taking controls of assets - where RBSH Group holds underlying collateral or other security interest and is entitled to enforce its rights, it may take ownership or control of the assets. RBSH Group's preferred strategy is to consider other possible options prior to exercising these rights.
- Insolvency - where there is no suitable restructuring option or the business is no longer regarded as sustainable, insolvency will be considered. Insolvency may be the only option that ensures that the assets of the business are properly and efficiently distributed to relevant creditors.

Credit risk mitigation

RBSH Group employs a number of structures and techniques to mitigate credit risk. Netting of debtor and creditor balances is undertaken in accordance with relevant regulatory and internal policies; Exposure on over-the-counter derivative and secured financing transactions is further mitigated by the exchange of financial collateral and the use of market standard documentation. Further mitigation may be undertaken in a range of transactions, from retail mortgage lending to large wholesale financing. This can include: structuring a security interest in a physical or financial asset; use of credit derivatives, including credit default swaps, credit-linked debt instruments and securitisation structures; and use of guarantees and similar instruments (for example, credit insurance) from related and third parties. Such techniques are used in the management of credit portfolios, typically to mitigate credit concentrations in relation to an individual obligor, a borrower group or a collection of related borrowers.

management

Risk management: Credit risk continued

Credit risk mitigation continued

The use and approach to credit risk mitigation varies by product type, customer and business strategy. Minimum standards applied across RBSG Group cover:

- the suitability of qualifying credit risk mitigation types and any conditions or restrictions applicable to those mitigants;
- the means by which legal certainty is to be established, including required documentation and all necessary steps required to establish legal rights;
- acceptable methodologies for initial and any subsequent valuations of collateral and the frequency with which collateral is to be revalued (e.g. use of collateral haircuts);
- actions to be taken in the event that the value of mitigation falls below required levels;
- Management of the risk of correlation between changes in the credit risk of the customer and the value of credit risk mitigation;
- Management of concentration risks, for example, by setting thresholds and controls on the acceptability of credit risk mitigants and on lines of business that are characterised by a specific collateral type or structure; and
- collateral management to ensure that credit risk mitigation remains legally effective and enforceable.

Collateral and other credit enhancements received

Within its secured portfolios, RBSH Group has recourse to various types of collateral and other credit enhancements to mitigate credit risk and reduce the loss to RBSH Group arising from the failure of a customer to meet its obligations. These include: cash deposits; charges over residential and commercial property, debt securities and equity shares; and third-party guarantees. The existence of collateral may affect the pricing of a facility and its regulatory capital requirement. When a collateralised financial asset becomes impaired, the impairment charge directly reflects the realisable value of collateral and any other credit enhancements.

Corporate exposures

The type of collateral taken by RBSH Group's commercial and corporate businesses and the manner in which it is taken will vary according to the activity and assets of the customer.

- Physical assets - these include business assets such as stock, plant and machinery, vehicles, ships and aircraft. In general, physical assets qualify as collateral only if they can be unambiguously identified, located or traced, and segregated from uncharged assets. Assets are valued on a number of bases according to the type of security that is granted.
- Real estate - RBSH Group takes collateral in the form of real estate, which includes residential and commercial properties. The loan amount will typically exceed the market value of the collateral at origination date. The market value is defined as the estimated amount for which the asset could be sold in an arms length transaction by a willing seller to a willing buyer.

- Receivables - when taking a charge over receivables, RBSH Group assesses their nature and quality and the borrower's management and collection processes. The value of the receivables offered as collateral will typically be adjusted to exclude receivables that are past their due dates.

The security charges may be floating or fixed, with the type of security likely to impact (i) the credit decision; and (ii) the potential loss upon default. In the case of a general charge such as a mortgage debenture, balance sheet information may be used as a proxy for market value if the information is deemed reliable.

RBSH Group does not recognise certain asset classes as collateral: for example, short leasehold property and equity shares of the borrowing company. Collateral whose value is correlated to that of the obligor is assessed on a case-by-case basis and, where necessary, over-collateralisation may be required.

RBSH Group uses industry-standard loan and security documentation wherever possible. Non standard documentation is typically prepared by external lawyers on a case-by-case basis. RBSH Group's business and credit teams are supported by in-house specialist documentation teams.

The existence of collateral has an impact on provisioning. Where RBSH Group no longer expects to recover the principal and interest due on a loan in full or in accordance with the original terms and conditions, it is assessed for impairment. If exposures are secured, the current net realisable value of the collateral will be taken into account when assessing the need for a provision. No impairment provision is recognised in cases where all amounts due are expected to be settled in full on realisation of the security.

management

Risk management: Credit risk continued

Credit risk mitigation continued

Wholesale markets exposures

RBSH Group receives collateral for reverse repurchase transactions and for derivatives, typically in the form of cash, quoted debt securities or equities. The risks inherent in both types of transaction are further mitigated through master bilateral netting arrangements. Industry standard documentation such as master repurchase agreements and credit support annexes supported by legal opinions are used for financial collateral taken as part of trading activities.

	2011 (1)	2010 (1)	2009 (1)
	€bn	€bn	€bn
Reverse repurchase agreements	9.4	8.2	15.6
Securities received as collateral	9.4	8.1	7.3
Derivative assets gross exposure (2)	19.1	28.3	57.4
Counterparty netting	(0.8)	(2.9)	(7.2)

Notes:

- (1) Measured on a loans and advances basis.
 (2) Cash collateral held against derivative exposures in 2011 was €1.0 billion (2010 - €1.8 billion).

Credit risk measurement

Credit risk models are used throughout RBSH Group to support the quantitative risk assessment element of the credit approval process, ongoing credit risk management, monitoring and reporting and portfolio analytics. Credit risk models used by RBSH Group may be divided into three categories, as follows.

Probability of default/customer credit grade (PD)

These models assess the probability that a customer will fail to make full and timely repayment of its obligations. The probability of a customer failing to do so is measured over a one year period through the economic cycle, although certain retail scorecards use longer periods for business management purposes.

Wholesale businesses - as part of the credit assessment process, each counterparty is assigned an internal credit grade derived from a default probability. There are a number of different credit grading models in use across the RBSG Group, each of which considers risk characteristics particular to that type of customer. The credit grading models score a combination of quantitative inputs (for example, recent financial performance) and qualitative inputs (for example, management performance or sector outlook).

Retail businesses - each customer account is separately scored using models based on the most material drivers of default. In general, scorecards are statistically derived using customer data. Customers are assigned a score, which in turn is mapped to a probability of default. The probabilities of default are used to support automated credit decision making and to group customers into risk pools for regulatory capital calculations.

Exposure at default

Facility usage models estimate the expected level of utilisation of a credit facility at the time of a borrower's default. For revolving and variable draw down type products which are not fully drawn, the exposure at default (EAD) will typically be higher than the current utilisation. The methodologies used in EAD modelling provide an estimate of potential exposure and recognise that customers may make more use of their existing credit facilities as they approach

default.

Counterparty credit risk exposure measurement models are used for derivatives and other traded instruments where the amount of credit risk exposure may be dependent upon one or more underlying market variables such as interest or foreign exchange rates. These models drive internal credit risk management activities such as limit and excess management.

Loss given default

These models estimate the economic loss that may be experienced (the amount that cannot be recovered) by RBSH Group, on a credit facility in the event of default. RBSH Group's loss given default models take into account both borrower and facility characteristics for unsecured or partially unsecured facilities, as well as the quality of any risk mitigation that may be in place for secured facilities, plus the cost of collections and a time discount factor for the delay in cash recovery.

Notes:

- (1) Includes settlement balances.
- (2) This shows the amount by which RBSH Group's credit risk exposure is reduced through arrangements, such as master netting agreements, which give RBSH Group a legal right to set off the financial asset against a financial liability due to the same counterparty. In addition, RBSH Group holds collateral in respect of individual loans and advances to banks and customers. This collateral includes mortgages over property (both personal and commercial); charges over business assets such as plant, inventories and trade debtors; and guarantees of lending from parties other than the borrower. RBSH Group obtains collateral in the form of securities in reverse repurchase agreements. Cash and securities are received as collateral in respect of derivative transactions.
- (3) Includes reverse repurchase agreements of €9.4 billion (2010 - €8.2 billion; 2009 - €15.6 billion)

Asset quality

The asset quality analysis presented below is based on RBSG Group's internal asset quality ratings which have ranges for the probability of default, as set out below. Customers are assigned credit grades, based on various credit grading models that reflect the key drivers of default for the customer type. All credit grades across RBSG Group map to both a RBSG Group level asset quality scale, used for external financial reporting, and a master grading scale for wholesale exposures used for internal management reporting across portfolios. Debt securities are analysed by external ratings agencies and are therefore excluded from the table below and set out on page 59.

Asset quality band	Probability of default range
AQ1	0.034% - 0.034%
AQ2	0.048% - 0.048%
AQ3	0.095% - 0.095%

Asset-backed securities (ABS)

RBSH Group structures, originates, distributes and trades debt in the form of loan, bond and derivative instruments in all major currencies and debt capital markets in North America, Western Europe, Asia and major emerging markets.

The table below analyses the carrying value of RBSH Group's debt securities.

	2011	2010	2009
	€bn	€bn	€bn
Securities issued by central and local governments	19.1	27.2	49.7
Securities issued by corporates	0.7	2.6	3.5
Securities issued by banks and other financial institutions	19.8	22.5	31.6
	39.6	52.3	84.8
Asset-backed securities	17.4	18.4	24.4

RBSH Group's credit market activities gave rise to risk concentrations in ABS. RBSH Group has exposures to ABS which are predominantly debt securities but can also be held in derivative form. ABS have an interest in an underlying pool of referenced assets. The risks and rewards of the referenced pool are passed onto investors by the issue of securities with varying seniority, by a special purpose entity.

ABS include residential mortgage backed securities (RMBS), commercial mortgage backed securities (CMBS), collateralised debt obligations (CDOs), collateralised loan obligations (CLOs) and other ABS. In many cases the risk on these assets is hedged by way of credit derivative protection purchased over the specific asset or relevant ABS indices. The counterparties to some of these hedge transactions are monoline insurers.

The following tables summarise RBSH Group's net exposures and carrying values of these securities by geography of the underlying assets at 31 December 2011, 2010 and 2009. Gross exposures represent the principal amounts relating to ABS. Government sponsored or similar RMBS comprises securities that are: (a) guaranteed or effectively guaranteed by the US government, by way of its support for US federal agencies and government sponsored enterprises, or (b) guaranteed by the Dutch government. Net exposures represent the carrying value after taking account of the hedge protection purchased from monoline insurers and other counterparties, but exclude the effect of counterparty credit valuation adjustments. The hedge provides credit protection of both principal and interest cash flows in the event of default by the counterparty. The value of this protection is based on the underlying instrument being protected.

Key points

- Carrying values of asset-backed securities decreased by €1 billion during 2011 due to the maturity and sale of positions.
- The RMBS held for trading positions fully matured or were sold off in 2010. The composition of the remaining AFS portfolio has not changed substantially since 31 December 2010. The available-for-sale RMBS government sponsored or similar positions are backed by mortgages covered by the Dutch mortgage guarantee scheme.
- The available-for-sale MBS covered bond positions originated largely in Europe and relate mostly to Spanish securities.

Credit derivatives

RBSH Group trades credit derivatives as part of its client led business and to mitigate credit risk. RBSH Group's credit derivative exposures relating to proprietary trading are minimal. The table below analyses RBSH Group's bought and sold protection by purpose. Credit derivatives with RBSG Group are excluded from the table below.

	2011				2010			
	Notional Bought €bn	Sold €bn	Fair value Bought €bn	Sold €bn	Notional Bought €bn	Sold €bn	Fair value Bought €bn	Sold €bn

Monoline insurers

The table below summarises RBSH Group's exposure to monolines; all of which are in Non-Core.

	2011	2010	2009
	€m	€m	€m
Gross exposure to monolines	265	2,600	2,913
Hedges with financial institutions (including an overlay swap with RBSG Group)	(43)	(695)	(806)
Credit valuation adjustment	(222)	(1,905)	(2,107)
Net exposure to monolines	-	-	-
Credit valuation adjustment as a % of gross exposure	84%	73%	72%
Credit risk RWAs	50,195	64,200	115,953

- The exposure to monolines reduced primarily due to the restructuring of some exposures, partially offset by lower prices of underlying reference instruments. The credit valuation adjustments decreased due to the reduction in exposure partially offset by wider credit spreads.
- The €43 million hedges with financial institutions include the overlay swap transacted with RBSG Group which transfers the daily movement in the CVA between RBSH Group and RBSG Group for these trades.

The net income statement effect relating to monoline exposures is shown below.

	2011	2010	2009
	€m	€m	€m
Credit valuation adjustment at 1 January	(1,905)	(2,107)	(2,822)
Credit valuation adjustment at 31 December	(222)	(1,905)	(2,107)
Decrease/(increase) in credit valuation adjustment	1,683	202	715
Net (debit) relating to realisation, hedges, foreign exchange and other movements	(1,689)	(180)	(1,994)
Net (debit)/credit to income statement	(6)	22	(1,279)

Cross border exposures

Cross border exposures are loans and advances including finance leases and instalment credit receivables and other monetary assets, such as debt securities and net derivatives, including non-local currency claims of overseas offices on local residents.

RBSH Group monitors the geographical breakdown of these exposures based on the country of domicile of the borrower or guarantor of ultimate risk. Cross border exposures exclude exposures to local residents in local currencies.

The table below sets out RBSH Group's cross border exposures greater than 0.5% of RBSH Group's total assets.

	2011				2010	2009

Risk management: Credit risk continued

Risk elements in lending, loans and reserves

Risk elements in lending (REIL) comprises impaired loans and accruing loans past due 90 days or more as to principal or interest.

Impaired loans comprise all loans for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans.

Loans are classified as accruing loans past due 90 days or more where they are past due 90 days but where no impairment provision is recognised. This category is used for fully collateralised non revolving credit facilities.

	2011			2010			2009
	Core €m	Non-Core €m	Total €m	Core €m	Non-Core €m	Total €m	Total €m
Impaired loans							
- Domestic	92	247	339	133	312	445	5,398
- Foreign	766	825	1,591	541	1,178	1,719	2,691
	858	1,072	1,930	674	1,490	2,164	8,089
Accruing loans past due 90 days or more							
- Domestic	78	-	78	48	3	51	92
- Foreign	83	6	89	5	4	9	61
	161	6	167	53	7	60	153
Total REIL	1,019	1,078	2,097	727	1,497	2,224	8,242

REIL as a % of
gross loans and
advances

6.8 % 4.8 % 3.7 %

Potential problem loans

Potential problem loans (PPL) are loans for which an impairment event has taken place but no impairment provision is required. This category is used for fully collateralised advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

	2011 €m	2010 €m	2009 €m
Potential problem loans	220	133	532

Both REIL and PPL are reported gross and take no account of the value of any security held which could reduce the eventual loss should it occur, nor of any provision marked. Therefore impaired assets which are highly collateralised,

such as mortgages, will have a low coverage ratio of provisions held against the reported impaired balance.

Impairment loss provision methodology

A financial asset or portfolio of financial assets is impaired and an impairment loss incurred if there is objective evidence that an event or events since initial recognition of the asset have adversely affected the amount or timing of future cash flows from the asset.

For retail loans, which are segmented into collective, homogenous portfolios, time-based measures, such as days past due, are typically used as evidence of impairment. For these portfolios, RBSH Group recognises an impairment at 90 days past due.

For corporate portfolios, given their complexity and nature, RBSH Group relies not only on time-based measures but also on management judgement to identify evidence of impairment. Other factors considered may include: significant financial difficulty of the borrower; a breach of contract; a loan restructuring; a probable bankruptcy; and any

observable data indicating a measurable decrease in estimated future cash flows.

Depending on various factors as explained below, RBSH Group uses one of the following three different methods to assess the amount of provision required: individual; collective; and latent.

- Individually assessed provisions: provisions required for individually significant impaired assets are assessed on a case-by-case basis. If there is objective evidence that an impairment loss has been incurred, the amount of the loss is measured as the difference between the assets carrying amount and the present values of the estimated cash flows discounted at the financial asset's original effective interest rate. Future cash flows are estimated through a case-by-case analysis of individually assessed assets. This assessment takes into account the benefit of any guarantee or other collateral held. The value and timing of cash flow receipts are based on available estimates in conjunction with facts available at that time. Timings and amounts of cash flows are reviewed on subsequent assessment dates, as new information becomes available. The asset continues to be assessed on an individual basis until it is repaid in full, transferred to the performing portfolio or written-off.
- Collectively assessed provisions: provisions on impaired credits below an agreed threshold are assessed on a portfolio basis to reflect the homogeneous nature of the assets. RBSH Group segments impaired credits in its collectively assessed portfolios according to asset type, such as credit cards, personal loans, mortgages and smaller homogenous wholesale portfolios, such as business or commercial banking. A further distinction is made between those impaired assets in collections and those in recoveries (refer to 'Problem debt management' on pages 193 to 196). The provision is determined based on a quantitative review of the relevant portfolio, taking account of the level of arrears, the value of any security, historical and projected cash recovery trends over the recovery period. The provision also incorporates any adjustments that may be deemed appropriate given current economic and credit conditions. Such adjustments may be determined based on: a review of the current cash collections profile performance against historical trends; updates to metric inputs - including model recalibrations; and monitoring of operational processes used in managing exposures - including the time taken to process non-performing exposures.

management

Risk management: Credit risk continued

Balance sheet analysis continued

Impairment loss provision methodology continued

- Latent loss provisions: a separate approach is taken for provisions held against impairments in the performing portfolio that have been incurred as a result of events occurring before the balance sheet date but which have not been identified at the balance sheet date.

RBSH Group's methodologies to estimate latent loss provisions reflect:

- the probability that the performing customer will default;
- historical loss experience, adjusted, where appropriate, given current economic and credit conditions; and
- the emergence period, defined as the period between an impairment event occurring and a loan being identified and reported as impaired.

Emergence periods are estimated at a portfolio level and reflect the portfolio product characteristics such as the repayment terms and the duration of the loss mitigation and recovery processes. They are based on internal systems and processes within the particular portfolio and are reviewed regularly.

As with collectively assessed impaired portfolios, RBSH Group segments its performing portfolio according to asset type.

Provision and AFS reserves

RBSH Group's consumer portfolios, which consist of high volume, small value credits, have highly efficient largely automated processes for identifying problem credits and very short timescales, typically three months, before resolution or adoption of various recovery methods. Corporate portfolios consist of higher value, lower volume credits, which tend to be structured to meet individual customer requirements.

Provisions are assessed on a case-by-case basis by experienced specialists with input from professional valuers and accountants. RBSH Group operates a transparent provisions governance framework, setting thresholds to trigger enhanced oversight and challenge.

Analysis of provisions is set out on page 69 and below.

Available-for-sale financial assets are initially recognised at fair value plus directly related transaction costs and are subsequently measured at fair value with changes in fair value reported in shareholders' equity until disposal, at which stage the cumulative gain or loss is recognised in profit or loss. When there is objective evidence that an available-for-sale financial asset is impaired, any decline in its fair value below original cost is removed from equity and recognised in profit or loss.

RBSH Group reviews its portfolios of available-for-sale financial assets for evidence of impairment which includes: default or delinquency in interest or principal payments; significant financial difficulty of the issuer or obligor; and it becoming probable that the issuer will enter bankruptcy or other financial reorganisation. However, the disappearance of an active market because an entity's financial instruments are no longer publicly traded is not evidence of impairment. Furthermore, a downgrade of an entity's credit rating is not, of itself, evidence of impairment, although it may be evidence of impairment when considered with other available information. A decline in the fair value of a financial asset below its cost or amortised cost is not necessarily evidence of impairment. Determining whether

objective evidence of impairment exists requires the exercise of management judgment.

Analyses of AFS debt securities and related AFS reserves are set out on page 73.

Movement in loan impairment provisions

Key points

- RBS Holdings N.V. holds €34.4 billion of debt securities classified as available-for-sale, the majority of which forms part of the Treasury liquidity buffer. Of the portfolio, €11.2 billion is OECD government issued debt, comprising mainly (€10.9 billion) exposures to European issuers.
- In 2011, RBSH Group recorded an impairment loss of €1.5 billion in respect of Greek government bonds, thereby reducing the carrying value to the market price as at 31 December 2011.
- Further positions in financial instruments comprise €17.4 billion of mortgage and other asset-backed securities. The composition of this portfolio has not changed substantially from 31 December 2010. Included are €6.8 billion residential mortgage-backed securities covered by the Dutch mortgage guarantee scheme and €9.0 billion residential mortgage covered bonds the majority of which originated in Spain.

Country risk

Country risk is the risk of material losses arising from significant country-specific events such as sovereign events (default or restructuring); economic events (contagion of sovereign default to other parts of the economy, cyclical economic shock); political events (transfer or convertibility restrictions and expropriation or nationalisation); and natural disaster or conflict. Such events have the potential to affect elements of RBSH Group's credit portfolio that are directly or indirectly linked to the country in question and can also give rise to market, liquidity, operational and franchise risk related losses.

External risk environment

2011 was another year of heightened country risks. However, trends were divergent, with conditions deteriorating among vulnerable eurozone countries facing growth impediments and higher public debt burdens, while many emerging markets continued to enjoy relative stability, seeing net inflows of capital for the full year and lower spreads despite some risk aversion in the second half. In the US, notwithstanding a more challenging political environment and a sovereign downgrade from a rating agency, a deal was secured to increase the sovereign debt ceiling, and yields on government debt remain low.

Eurozone risks

Europe was at the centre of rising global risks, owing to a combination of slower growth among some of its major economies and a further deepening of the ongoing sovereign crisis, which in turn harmed financial sector health. Risks in Greece rose as a deeper than expected contraction in GDP impacted the fiscal adjustment programme and hit debt sustainability. Negotiations on a voluntary restructuring of public debt held by the private sector commenced in the first half and a deal was finalised in March 2012, resulting in a contained default event. This in turn led to an agreement by eurozone leaders on a further borrowing programme for the Greek government.

In May 2011, Portugal's new government agreed a borrowing programme with the European Union - International Monetary Fund (EU-IMF) after a sharp deterioration in sovereign liquidity. Ireland's performance under its EU-IMF programme was good and the announcement of a bank restructuring deal without defaults on senior debt obligations helped improve market confidence. This was reflected in a compression in bond spreads in the second half of the year.

Despite the announcement of significant new support proposals by eurozone leaders in July 2011, investor worries over risks to their implementation rose and market conditions worsened markedly as a result. Risk aversion towards Spanish and Italian assets picked up and despite a policy response by both countries, yields remained elevated, prompting the ECB to intervene to support their bonds in secondary markets for the first time. Contagion affected bank stocks and asset prices. Eurozone leaders responded by stepping up anti-crisis efforts, focusing largely on agreeing fiscal reform, bolstering bank capital and strengthening capacity to offer financing support to sovereigns losing market access. The ECB continued to buy sovereign debt in the secondary market and increased liquidity support to banks with the introduction of an emergency three-year long-term refinancing operation in December. This helped ease interbank funding tensions somewhat and may have contributed to some relief in sovereign debt markets late in the year, as yields on new issuance by Spain and Italy dropped.

Emerging markets

Emerging markets continued to perform relatively well. In Asia, despite slowing growth, China and India continued to post strong overall expansion, while generally large external savings levels reinforced balance of payments stability. In China specifically, measures to curb house price growth began to have a more noticeable impact, with real estate prices falling in many cities. Efforts are underway to address some bank asset quality concerns linked to rapid lending growth in 2009.

In Emerging Europe, Russia experienced some contagion into asset markets from weaker commodity prospects and a challenging investment climate, but the sovereign balance sheet remained quite robust. Foreign exchange debts remained a risk factor in a number of Eastern European economies. Elsewhere, Turkey's economy cooled in the second half of 2011, helping to narrow the current account deficit sharply, though external vulnerabilities persisted.

The Middle East and North Africa witnessed political instability in a number of the relatively lower-income countries. The path of any transition has yet to become fully clear in most cases. Excluding Bahrain, pressures for change were more contained in the Gulf Co-Operation Council countries.

Latin America remained characterised by relative stability owing to balance sheet repair by a number of countries following crises in previous decades. Capital inflows contributed to currency appreciation, but overheating pressures have so far proven contained, including in Brazil where credit growth slowed from high levels.

Outlook

Overall, the outlook for 2012 remains challenging with risks likely to remain elevated but divergent. Much will depend on the success of EU efforts to contain contagion from the sovereign crisis (where downside risks are high) and whether growth headwinds in larger advanced economies persist. Emerging market balance sheet risks remain lower, despite ongoing structural and political constraints, but these economies will continue to be affected by events elsewhere through financial markets and trade channels.

Governance

All country exposures in RBSH Group are covered by RBSG Group's country risk framework. In this framework, a limited number of advanced countries are under risk-based monitoring only, with all other countries placed under limit control using RBSG Group's country risk watch list process either when these have been identified as exhibiting signs of stress, or when it is considered appropriate. Detailed portfolio reviews are undertaken to align country risk profiles to RBSG Group's country risk appetite in light of evolving economic and political developments.

Country risk limits are set within the country risk appetite framework of RBSG Group and under consideration of the capital size of the RBSH Group and the country risk grade. Authority is delegated to RBSG Group Country Risk Committee to manage exposures within this framework, with escalation to the RBSH RCC in case of country risk appetite excesses.

Business review continued

Business Review
Risk and balance sheet
management

Risk management: Country risk continued

RBSG Group appetite is set for individual countries based on a risk assessment taking into account the country's economic situation and outlook as well as RBSG Group's franchise and business mix in that country. Additional limitations (for example, on foreign-currency exposure and product types with higher potential for loss in case of country events) may be established to address specific vulnerabilities in the context of a country's outlook and/or RBSG Group's business strategy in a particular country

Monitoring, management and mitigation

A country watchlist framework is in place to proactively monitor emerging issues and facilitate the development of mitigation strategies.

Management of country risk was further strengthened in 2011 with intensified stress testing, portfolio actions on a number of countries and enhancements to risk appetite setting and management systems, contributing inter alia to a reduction in exposures to a range of countries.

During 2011, RBSG Group conducted an analysis of its country risk profile. The outcome of this analysis was used to define more specific scenarios to be used as trigger events in stress testing - on an ongoing basis - at both Group and divisional levels. Such risk scenarios include a major balance sheet deleveraging across Europe, a default of an eurozone sovereign, or one or more stressed member states exiting the eurozone and undergoing currency redenomination, with subsequent contagion effects.

The situation remains very uncertain and the results of stress tests are sensitive to input assumptions. As a result, estimates of the potential impact on RBSH Group of various developments are wide-ranging. If a single country exits the eurozone, the impact could be limited. If several do, the impact is likely to be significant. Depending on the circumstances, the generally negative effect on RBSH Group of devaluations could be offset by the impact of revaluations. Nonetheless, the extent of market disruption is very difficult to predict and could be substantial.

From mid-2011, RBSG Group intensified its risk-mitigating actions at divisional level aimed at preparing RBSG Group for a wide variety of potential eurozone stress scenarios, with a particular focus on counterparty credit risk, settlement risk and funding risk. It also carried out a detailed assessment of the potential impact of such scenarios on Group systems to ensure broad readiness.

In a few specific cases, management of RBSH Group's exposure was temporarily handed over to a cross-divisional country crisis team. Risk mitigation actions typically included taking guarantees or insurance, updating collateral agreements, credit documentation reviews and specified credit referral processes.

Risk appetite setting was strengthened by various measures. In addition to Greece, Ireland and Portugal, RBSH Group brought Italy and Spain under country limit control. Belgium and Japan followed in January 2012, with other advanced countries scheduled for review in this process throughout 2012. Benchmark ratios systematically guide the setting of medium-term country exposure limits.

RBSH Group's regular, comprehensive and detailed country exposure reviews were further enhanced by intensified counterparty monitoring.

All of this, in combination with customers' own efforts to reduce their debt levels, contributed to reductions in exposure to a range of countries including the vulnerable eurozone countries, Japan and countries in political transition in North Africa and the Middle East. Exposure reductions were implemented selectively, often retaining some credit lines for strategic clients and in cases of sufficient risk mitigation. Due to their nature, medium-term exposures cannot be adjusted as rapidly as short-term exposure.

Further strategic enhancements to portfolio management systems included the introduction of a comprehensive country risk management and reporting application, comprising banking and trading book exposures across RBSH Group on a consistent basis, and taking account of country risk transfers given guarantees, insurance and collateral taken. This system supports analysing and managing the exposures to countries in the eurozone and elsewhere, by tenor bucket, currency type, sector and product type, as well as by individual counterparty names and facilities. In addition, developments in trading book management systems played a role in actual exposure reductions in trading on a number of countries.

Internal rating systems were also further developed, contributing to more accurate calculations of country-specific default probabilities and expected loss-given-default rates which are determinants in the calculation of risk-weighted assets and economic capital.

Other developments in country risk management in 2011 included the development of the regional and country risk view in RBSH Group's economic capital model and in integrated stress testing.

Going forward, RBSH Group continues to extend country limit control to other countries within and outside the eurozone and will continue to manage medium-term exposure closer to its medium-term benchmark ratios. In addition, work is continuing on the determination of actual appetite per country, on the country risk reporting systems and their integration with credit, treasury and finance systems, on the representation of country risk aspects in rating models, economic capital models and integrated stress testing, and on the combination with actual and expected returns. All of this should help RBSH Group determine and steer its risk profile and further optimise RBSH Group's global portfolio management.

Credit default swap (CDS) contracts are used for a number of purposes such as hedging of the credit trading portfolio, management of counterparty credit exposure and the mitigation of wrong-way risk. The RBSH Group generally uses CDS contracts to manage exposure on a portfolio rather than specific exposures. This may give rise to maturity mismatches between the underlying exposure and the CDS contract as well as between bought and sold CDS contracts on the same reference entity.

The terms of RBSH Group's CDS contracts are covered by standard ISDA documentation, which determines if a contract is triggered due to a credit event. Such events may include bankruptcy or restructuring of the reference entity or a failure of the reference entity to repay its debt or interest. Under the terms of a CDS contract, one of the regional ISDA Credit Derivatives Determinations Committees is empowered to decide whether or not a credit event has occurred.

Country risk analysis

The following tables show RBSH Group's exposure at 31 December 2011 by country of incorporation of the counterparty. Countries shown are those where RBSH Group's balance sheet exposure to counterparties incorporated in the country exceeded £0.5 billion (approximately €0.6 billion) and the country had an external rating of A+ or below from S&P, Moody's or Fitch at 31 December 2011, as well as selected eurozone countries. The numbers exclude balances with RBSG Group and are stated before taking into account the impact of mitigating actions, such as collateral, insurance or guarantees, which may have been taken to reduce or eliminate exposure to country risk events. Exposures relating to ocean-going vessels are not included due to their multinational nature. For further details of exposures relating to available-for-sale debt securities by country, refer to page 73.

The following definitions apply to the tables on pages 77 to 81:

Lending comprises gross loans and advances, to: central and local governments; central banks, including cash balances; other banks and financial institutions, incorporating overdraft and other short-term credit lines; corporations, in large part loans and leases; and individuals, comprising mortgages and personal loans. Includes impaired loans and loans where an impairment event has taken place, but the impairment provision is recognised.

Debt securities comprise securities classified as available-for-sale (AFS), loans and receivables (LAR), held-for-trading (HFT) and designated as at fair value through profit or loss (DFV). All debt securities other than LAR securities are carried at fair value; LAR debt securities are carried at amortised cost less impairment. HFT debt securities are presented as gross long positions (including DFV securities) and short positions per country. Impairment losses and exchange differences relating to AFS debt securities, together with interest are recognised in the income statement; other changes in the fair value of AFS securities are reported within AFS reserves, which are presented gross of tax.

Derivatives comprise the mark-to-market (mtm) value of such contracts after the effect of enforceable netting agreements, but gross of collateral. Reverse repurchase agreements comprise the mtm value of counterparty exposure arising from repo transactions net of collateral.

Balance sheet exposures comprise lending exposures, debt securities and derivatives and repo exposures.

Contingent liabilities and commitments comprise contingent liabilities, including guarantees, and committed undrawn facilities.

Credit default swaps (CDSs) under a CDS contract, the credit risk on the reference entity is transferred from the buyer to the seller. The fair value, or mtm, represents the balance sheet carrying value. The mtm value of CDSs is included within derivatives against the counterparty of the trade, as opposed to the reference entity. The notional is the par amount of the credit protection bought or sold and is included against the reference entity of the CDS contract.

The column CDS notional less fair value represents the notional less fair value amounts arising from sold positions netted against those arising from bought positions, and represents the net change in exposure for a given reference entity should the CDS contract be triggered by a credit event, assuming there is a zero recovery rate. However, in most cases, RBSH Group expects the recovery rate to be greater than zero and the exposure change to be less than this amount.

RBSH Group primarily transacts CDS contracts with investment-grade global financial institutions who are active participants in the CDS market. These transactions are subject to regular margining. For European peripheral sovereigns, credit protection has been purchased from a number of major European banks, predominantly outside the country of the reference entity. In a few cases where protection was bought from banks in the country of the reference entity, giving rise to wrong-way risk, this risk is mitigated through specific collateralisation.

‘Other eurozone’ refers to Austria, Cyprus, Estonia, Finland, Malta, Slovakia and Slovenia. The Netherlands, while being a eurozone country, has been excluded in these country risk tables as RBS N.V. is based in the Netherlands.

Risk and balance sheet
management

Risk management: Country risk continued

Key points

- Reported exposures are affected by currency movements. During 2011, the euro fell 3.3% against the US dollar and 3.1% against the British pound.
- Exposure to most countries shown in the table declined over 2011 as RBSH Group maintained a cautious stance and many bank clients reduced debt levels. Decreases were seen in balance sheet and off-balance sheet exposures in many countries. Increases in derivatives and repos in a few countries were in line with RBSH Group's strategy, driven partly by customer demand for hedging solutions and partly by market movements; risks are generally mitigated by active collateralisation.
- India - despite strong economic growth in 2011, exposure was reduced across most product types, particularly in the fourth quarter, driven by a GTS exercise in the region to manage down risk-weighted assets, natural run-offs/maturities and a sharp rupee depreciation. Year-on-year increases in lending to corporate clients (€0.2 billion) and the central bank (€0.3 billion) were offset by reductions in lending to banks (€1.0 billion) and other financial institutions (€0.3 billion).
- China - lending to Chinese banks increased in the first three quarters of the year, supporting trade finance activities and on-shore regulatory needs, but by the end of 2011 exposure had decreased to close to December 2010 levels. RBSH Group reduced lending in the interbank money markets over the final quarter.
- Republic of Korea - exposure decreased by €1.5 billion during 2011. This was due to reductions in lending and off-balance sheet exposures as well as in debt securities as RBSH Group managed its wrong-way risk exposure. RBSH Group maintained a cautious stance given the current global economic downturn.
- Turkey - exposures were managed down in most categories, with the non-strategic (mid-market) portfolio significantly reduced in 2011. Nonetheless, Turkey continues to be one of RBSH Group's key emerging markets. The strategy remains client-centric, with the product offering tailored to selected client segments across large Turkish international corporate clients and financial institutions as well as Turkish subsidiaries of global clients.
- Mexico - asset sales and a number of early repayments in the corporate portfolio led to exposure falling €1.0 billion in the year. This decline also reflects RBSH Group's cautious approach to new business during the fourth quarter following its decision to close its onshore operation in Mexico.
- Eurozone periphery (Spain, Italy, Greece, Ireland and Portugal) - Exposure decreased across most of the periphery, with derivatives (gross of collateral) and repos being the only component that still saw some increases year on year (partly an effect of market movements on existing positions). Much of RBSH Group's country risk exposure to the eurozone periphery countries arises from the activities of GBM. RBSH Group has some large holdings of Spanish bank and financial institutions MBS bonds and smaller quantities of Italian bonds and Greek sovereign debt. GTS provides trade finance facilities to clients across Europe including the eurozone periphery. Please see detailed commentary on RBSH Group's exposure to eurozone countries on page 81.
- RBSH Group primarily transacts CDS contracts with investment-grade global financial institutions that are active participants in the CDS market. These transactions are subject to regular margining. For European peripheral

sovereigns, credit protection has been purchased from a number of major European banks, predominantly outside the country of the reference entity. In a few cases where protection was bought from banks in the country of the reference entity, giving rise to wrong-way risk, this risk is mitigated through specific collateralisation.

- RBSH Group used CDS contracts throughout 2011 to manage both eurozone country and counterparty exposures. Gross notional bought and sold eurozone CDS contracts fell across the board during 2011, caused by migrations or novations to RBS plc. The magnitude of the fair value of bought and sold CDS contracts decreased for the same reason, and despite a widening of eurozone CDS spreads.

Risk management: Country risk continued

Eurozone continued

Key points

- During 2011, in anticipation of widening credit spreads and for reasons of general risk management, RBSH Group saw a number of maturities and sales in German and French sovereign debt securities, combining with a natural run down in the portfolio.
- Derivatives and repos, and off-balance sheet exposure were significantly reduced in 2011, particularly in Germany and France.

Eurozone periphery (Spain, Italy, Greece, Ireland and Portugal)

- Spain - exposure fell in 2011 in contingent liabilities and commitments, debt securities and corporate lending, as a result of steps to de-risk the portfolio. RBSH Group had some small AFS debt securities exposure to the government and some very small lending exposure to the central bank. A sizeable covered bond portfolio of €7.6 billion, see page 73 for further details, is RBSH Group's largest exposure to the Spanish financial sector. The portfolio continued to perform satisfactorily in 2011. Stress analysis conducted to date on these available-for-sale debt securities indicated that this exposure is unlikely to suffer material credit losses. However, RBSH Group continues to monitor the situation closely. Exposure to Spanish corporate clients declined during 2011, with reductions in off-balance sheet items and lending to a broad range of sectors, and some increase in lending only to the energy and telecom sectors.
- Italy - Since the start of 2011, RBSH Group has taken steps to reduce its risks through strategic exits where appropriate, or to mitigate these risks through increased collateral requirements, in line with RBSH Group's evolving appetite for Italian risk. Exposure to Italian counterparties decreased by €0.7 billion over 2011, driven by reductions in contingent liabilities and commitments and in debt securities. Over 2011, exposure to the Italian government declined by €0.3 billion, due largely to a reduced AFS debt securities position. RBSH Group's product offering consists largely of collateralised trading products and, to a lesser extent, short-term uncommitted lending lines for liquidity purposes. During the fourth quarter of the year, gross mtm derivatives exposure increased due to market movements but the risk was mitigated since most facilities are fully collateralised. Overall, exposure to banks and other financial institutions declined as a result of reductions in lending, AFS debt securities and off-balance sheet items. Lending exposure increased by €0.7 billion during 2011, driven by new exposure to subsidiaries of major international companies, partially offset by reductions in lending to the property industry and a few other sectors.
- Greece - RBSH Group has reduced its effective exposure to Greece and continues to actively manage its exposure to the country, in line with the de-risking strategy that has been in place since early 2010. Much of the remaining exposure is collateralised or guaranteed. As a result of the continued deterioration in Greece's fiscal position, coupled with the potential for the restructuring of Greek sovereign debt, RBSH Group recognised an impairment charge in respect of AFS Greek government bonds. At the start of 2011, RBSH Group reclassified the domicile of exposures to a number of defaulted clients, resulting in an increase in reported exposure to Greek corporate clients as well as increases in REIL and impairment provisions. RBSH Group's corporate exposure is steadily declining. The focus is now on short-term trade facilities to the domestic subsidiaries of international clients, increasingly supported by parental guarantees.
- Ireland - RBSH Group's exposure to Ireland of approximately €1.0 billion comprises AFS debt securities issued by banks and the government, contingent liabilities and commitments, and lending to corporate clients. Part of the

exposure is to financial institutions and large international clients with funding units based in Ireland. Exposure to counterparties in Ireland more than halved in 2011, with notable reductions in contingent liabilities and commitments of €0.8 billion, in derivatives and repos of €0.3 billion and in lending of €0.1, as a result of de-risking in the portfolio and portfolio migrations and novations from RBS N.V. to RBS plc.

- Portugal - In early 2011, RBSH Group closed its local operations in Portugal, leaving RBSH Group with modest overall exposure of €0.4 billion by year-end, now managed out of Spain. Medium-term activity has ceased with the exception of that carried out under a Credit Support Annex. RBSH Group's exposure to the Portuguese government comprises only some modest AFS debt securities exposure, which declined to less than €0.1 billion driven by falling market prices.

Risk and balance sheet
management

Market risk

Market risk arises from changes in interest rates, foreign currency, credit spreads, equity prices and risk related factors such as market volatilities. RBSH Group manages market risk centrally within its trading and non-trading portfolios through a comprehensive market risk management framework. This control framework includes qualitative guidance in the form of comprehensive policy statements, dealing authorities, limits based on, but not limited to, value-at-risk (VaR), stress testing, positions and sensitivity analyses.

RBSG Group provides services to RBSH Group to enable appropriate market risk management within RBSH Group.

Governance

Business structure

The primary focus of RBSH Group's trading activities is to provide an extensive range of debt and equity financing, risk management and investment services to its customers, including major corporations and financial institutions around the world. RBSH Group undertakes these activities organised within the principal business lines: money markets, rates flow trading, currencies and commodities, equities, credit markets and portfolio management and origination.

Financial instruments held in RBSH Group's trading portfolios include, but are not limited to: debt securities, loans, deposits, equities, securities sale and repurchase agreements and derivative financial instruments.

RBSH Group undertakes transactions in financial instruments that are traded or cleared on an exchange, including interest rate swaps, futures and options. Holders of exchange traded instruments provide margin on a daily basis with cash or other security at the exchange.

RBSH Group also undertakes transactions in financial instruments that are traded over-the-counter (OTC), rather than on a recognised exchange. These instruments range from commoditised transactions in derivative markets, to trades where the specific terms are tailored to meet customer requirements.

Assets and liabilities in the trading book are measured at their fair value. Fair value is the amount at which the instrument could be exchanged in a current transaction between willing parties. The fair values are determined following IAS 39 guidance which requires banks to use quoted market prices or, where this is not possible, valuation techniques (models) that make appropriate use of available observable inputs. When marking to market using a model, the valuation methodologies are approved by all stakeholders (trading, finance, market risk, model development and model review) prior to use for profit and loss and risk management purposes. Any profits or losses on the revaluation of positions are recognised in the daily profit and loss.

Organisation structure

Independent oversight and support is provided to the business by the Global Head of Market & Insurance Risk, assisted by RBSH Group and business Market Risk teams. The head of each business, assisted by the business risk management team, is accountable for all market risks associated with its activities.

The Global Market Risk Committee reviews and makes recommendations concerning the market risk profile across RBSH Group, including risk appetite, risk policy, models, methodology and market risk development issues. The

Committee meets monthly and is chaired by the Global Head of Market & Insurance Risk. Attendees include respective divisional Risk Managers and RBSG Group Market Risk.

Risk management

Key principles

RBSG Group's qualitative market risk appetite is set out in policy statements, which outline the governance, responsibilities and requirements surrounding the identification, measurement, analysis, management and communication of market risk arising from the trading and non-trading investment activities of RBSG Group. All teams involved in the management and control of market risk are required to fully comply with the policy statements to ensure RBSG Group is not exposed to market risk beyond the qualitative and quantitative risk appetite. The control framework covers the following principles:

- Clearly defined responsibilities and authorities for the primary groups involved in market risk management in RBSG Group;
- An independent market risk management process;
- A market risk measurement methodology that captures correlation effects and allows aggregation of market risk across risk types, markets and business lines;
- Daily monitoring, analysis and reporting of market risk exposures against market risk limits;
- Clearly defined limit structure and escalation process in the event of a market risk limit excess;
- Use of 'Value-at-Risk' (VaR) as a measure of the one-day market risk exposure of all trading positions
- Use of non-VaR based limits and other controls;
- Use of stress testing and scenario analysis to support the market risk measurement and risk management process by assessing how portfolios and global business lines perform under extreme market conditions;
- Use of backtesting as a diagnostic tool to assess the accuracy of the VaR model and other risk management techniques;
- Adherence to the risks not in VaR (RNIV) framework to identify and quantify risks not captured within the VaR model;
- A new product approval process that requires market risk teams to assess and quantify market risk associated with proposed new products.

Risk management: Market risk continued

Risk management continued

Quantitative risk appetite

The RBSG Group Executive Risk Forum (ERF) approves quantitative market risk appetite for trading and non-trading activities. The Global Head of Market & Insurance Risk, under delegated authority from the ERF, sets and populates a limit framework, which is cascaded down through legal entity, division, business and desk level market risk limits.

At RBSH Group level, the risk appetite is expressed in the form of a combination of VaR, sensitivity and stress testing limits.

A daily report summarises RBSG Group's market risk exposures. This daily report is sent to the RBSG Group Head of Restructuring & Risk, RBSG Group Global Head of Market & Insurance Risk, business RBSG Group Chief Risk Officers and appropriate business Market Risk Managers. In addition a daily report summarising RBSH Group's market risk exposures against the agreed limits is produced and sent to the Head of Market Risk RBS N.V.

Legal entities, divisions, and lower levels in the business have an appropriate market risk framework of controls and limits in place to cover all material market risk exposures.

The specific market risk metrics that are appropriate for controlling the positions of a desk will be more granular than the RBSG Group level limit and tailored to the particular business.

The majority of RBSH Group's market risk exposure is in the GBM and Non-Core divisions and Group Treasury. RBSH Group is also exposed to market risk through interest rate risk on its non-trading activities. There are additional non-trading market risks in the retail and commercial businesses of RBSH Group, principally interest rate risk and foreign exchange risk. These aspects are discussed in more detail in Balance sheet management – Interest rate risk on page 45 and structural foreign currency exposures on page 46.

Risk models

VaR is a technique that produces estimates of the potential change in the market value of a portfolio over a specified time horizon at given confidence level. For internal risk management purposes, RBSG Group's VaR assumes a time horizon of one trading day and a confidence level of 99%. RBSG Group's VaR model is based on a historical simulation model, utilising data from the previous two years.

At RBSH Group level a different VaR model is employed. It remains based on a historical simulation model and assumes a time horizon of one trading day and a confidence level of 99%. However, it uses 401 observations of historic market data exponentially weighted with a weighted average history of six months. The VaR has been approved by DNB to calculate regulatory capital for the trading book. The approval covers general market risk in interest rate, currency, equity and commodity products and specific risk in interest rate and equity products.

As the VaR model is an important market risk measurement and control tool and is used for determining a significant component of the market risk capital, it is regularly assessed. The main approach employed is the technique known as back-testing which counts the number of days when a loss exceeds the corresponding daily VaR estimate, measured at a 99% confidence level. The VaR is categorised as green, amber or red. A green model is consistent with a good working model and is achieved for models that have four or less back-testing exceptions in a 12 month period. For

RBSH Group's trading book, a green model status was maintained throughout 2011.

RBSH Group's VaR should be interpreted in light of the limitations of the methodology used, as follows:

- Historical simulation VaR may not provide the best estimate of future market movements. It can only provide a prediction of the future based on events that occurred in the historical time series used. Therefore, events that are more severe than those in the historical data series cannot be predicted.
- The use of a 99% confidence level does not reflect the extent of potential losses beyond that percentile.
- The use of a one-day time horizon will not fully capture the profit and loss implications of positions that cannot be liquidated or hedged within one day.
- RBSH Group computes the VaR of trading portfolios at the close of business. Positions may change substantially during the course of the trading day and, if so, intra-day profit and losses will be incurred.

These limitations mean that RBSH Group cannot guarantee that losses will not exceed the VaR.

The RNIV framework has been developed to quantify those market risks not adequately captured by the market standard VaR methodology. Where risks are not included in the model, various non-VaR controls (for example, portfolio size limits, sensitivity limits, triggers or stress limits) are in place.

Risk models are developed both within business units and by Group functions. Risk models are also subject to independent review and sign-off to the same standard as pricing models. Meetings are held with the DNB every quarter to discuss the traded market risk, including changes in models, management, back-testing results, risks not included in the VaR framework and other model performance statistics.

A number of VaR model and methodology enhancements were introduced during 2011. The quality of the market data time series used in the ABS Mortgage trading business was improved, moving from interpolated weekly data to daily observed time series. This change has improved the accuracy of the correlation between the different time series in the daily data. Additionally, the basis modelling between the cash and derivatives has been refined by introducing additional time series for the subprime and subordinated residential bonds, reducing the over-reliance on the commercial mortgage basis which was used as a conservative proxy.

Risk management: Market risk continued

Risk management continued

Risk models continued

A more appropriate time series for the Dutch RMBS portfolio was adopted to better reflect the risk in the portfolio as more granular market data became available. In addition, collateralised based discounting has been implemented for the vast majority of the collateralised positions in place of the previous LIBOR-based discounting approach.

Following the implementation of CRDIII, two new models, for stressed VaR (SVaR) and incremental risk charge (IRC) have been successfully approved by the DNB and form part of the capital and risk management framework from 31 December 2011 onwards. All the other aspects of the CRDIII rule changes have also been implemented.

Basel 2.5 (CRDIII)

The aim of CRDIII is to improve the financial strength of institutions by increasing the financial resources required against certain risks in the trading book.

RBSH Group is required to calculate an additional capital charge based on a stressed calibration of the VaR model - stressed VaR (SVaR) and an incremental risk charge (IRC) to capture the default and migration risk for credit risk positions in the trading book.

Pricing models

Pricing models are developed and owned by the front office. Where pricing models are used as the basis of books and records valuations, they are subject to oversight and approval by RBSG Group asset level modelled product review committees (ALMPRCs). These committees prioritise models for independent validation by Group Risk Analytics (GRA) taking into consideration both the materiality of risk booked against the model and an assessment of the degree of model risk (i.e. valuation uncertainty arising from choice of modelling assumptions). The GRA review aims to quantify model risk by comparing model outputs against those of alternative independently developed models, the results of which are used by Market Risk to inform risk limits and by Finance to inform model reserves.

In 2011, a new set of RBSG Group Standards were agreed and implemented for the development, testing and validation of derivative pricing models. Revisions to the model validation framework ensure that all new models and model changes are reviewed by Market Risk and Finance and, subject to materiality, independently validated by GRA. Model governance is through the ALMPRCs, which are newly established subcommittees of the overall GBM Modelled Product Review Committee (previously called the Group Model Product Review Committee).

Stress testing

RBSH Group undertakes daily stress testing to identify the potential losses in excess of VaR. Stress testing is used to calculate a range of trading book exposures which result from extreme market events. Stress testing measures the impact of exceptional changes in market rates and prices on the fair value of RBSH Group's trading portfolios. RBSH Group calculates sensitivity analysis, historical stress tests and bottom-up stress testing.

Sensitivity analysis measures the current portfolio of positions sensitivity to defined market risk factor movements. These stresses are of a smaller magnitude compared to historical or bottom-up stress testing and are subject to the RBSG Group Market Risk limit framework.

Historical stress tests calculate the changes in the portfolio valuations that would be generated if the market movements that occurred during historical market events were repeated.

Bottom-up stress testing is based on analysing the market risk exposures by risk factors and stressing each risk factor based on consultation with risk managers, economists and front office. The tests may be based on an economic scenario that is translated into risk factor shocks by an economist or by risk managers and front office as a means of assessing the vulnerabilities of their book.

The RBSG Global Market Risk Stress Testing Committee reviews and discusses all matters relating to Market Risk Stress Testing. Stress test exposures are discussed with senior management and relevant information is reported to the RBSH Group Risk Committee (GRC), ERF, RBSG Group Board and the Managing Board. Breaches in RBSH Group's market risk stress testing limits are monitored and reported.

In 2011, the Market Risk Stress Testing framework was further developed and enhanced.

In addition to VaR and stress testing, RBSH Group calculates a wide range of sensitivity and position risk measures, for example interest rate ladders or option revaluation matrices. These measures provide valuable additional controls, often at individual desk or strategy level.

Risk management: Market risk continued

The VaR for the trading portfolios segregated by type of market risk exposure, including idiosyncratic risk, is presented in the table below.

Trading VaR summary	2011				2010			
	Average	Period	Maximum	Minimum	Average	Period	Maximum	Minimum
	€m	end	€m	€m	€m	end	€m	€m
Interest rate	4.5	4.0	9.6	3.0	5.6	4.1	10.1	2.8
Credit spread	2.4	1.7	4.3	1.1	6.3	4.0	9.6	1.7
Currency	3.1	1.4	15.3	1.1	1.6	2.0	4.7	0.6
Equity	6.5	2.5	15.8	1.8	7.6	7.0	14.8	2.0
Commodity	0.8	1.1	6.7	-	0.8	1.1	4.1	0.1
Diversification (1)		(6.2)			-	(8.7)	-	-
	8.5	4.5	18.3	4.0	11.5	9.5	19.0	3.4

Trading VaR summary	2009			
	Average	Period	Maximum	Minimum
	€m	end	€m	€m
Interest rate	25.8	14.1	74.6	9.0
Credit spread	-	-	-	-
Currency	5.1	1.7	16.4	0.4
Equity	11.2	12.0	21.0	2.6
Commodity	0.8	0.6	2.5	0.3
Diversification	-	(14.3)	-	-
	24.4	14.1	70.7	7.0

Notes:

(1) RBSH Group benefits from diversification, which reflects the risk reduction achieved by allocating investments across various financial instrument types, industry counterparties, currencies and regions. The extent of diversification benefit depends on the correlation between the assets and risk factors in the portfolio at a particular time. Diversification has an inverse relationship with correlation. The diversification factor is the sum of the VaR on individual risk types less the total portfolio VaR.

Key points

- The average total VaR utilisation fell in 2011 compared with 2010 as a result of a reduction in trading book exposure due to transfers of businesses to RBS plc.
- The average total VaR utilisation fell in 2010 compared with 2009 largely as a result of a reduction in trading book exposure due to transfers of businesses to RBS plc and reduced market volatility experienced throughout the period.
-

2009 VaR figures reflect the inclusion of the Dutch State and Santander acquired businesses existing in the period prior to the legal separation of ABN AMRO Bank on 1 April 2010.

Risk and balance sheet
management

Operational risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. It is an integral and unavoidable part of RBSH Group's business as it is inherent in the processes it operates to provide services to customers and meet strategic objectives.

Operational risk management

The objective of operational risk management is not to remove operational risk altogether, but to manage it to an acceptable level, taking into account the cost of minimising the risk against the resultant reduction in exposure. Strategies to manage operational risk include avoidance, transfer, acceptance and mitigation by controls.

RBSH Group made significant improvements in its operational risk framework during 2011, enhancing its management of operational risks. This is particularly evident in respect of RBSH Group's Policy Framework, risk assessment, scenario analysis and statistical modelling for capital requirements. Further development will continue in 2012.

Details are set out below along with the key processes through which RBSH Group manages operational risk.

Governance, structure and risk appetite

Governance and structure

RBSG Group Operational Risk (GOR) is an independent function responsible for the operational risk policy standards (ORPS), which are incorporated in RBSG Group Policy Framework (GPF). It provides the direction for delivering effective operational risk management and is designed to allow the consistent identification, assessment, management, monitoring and reporting of operational risk across RBSH Group.

Identification and assessment

Risk and control assessments

Controls that are effective without being excessive ensure RBSH Group retains its reputation for efficient customer service and security. Risk and control assessments are used to identify and assess material operational risks and key controls across all business areas. The process is designed to ensure that risks are effectively managed in line with stated risk appetite, prioritised and documented. Controls are tested frequently with a view to ensuring they remain fit for purpose and operate effectively. RBSH Group's risk assessment methodology was enhanced during 2011 to ensure a more consistent approach to identifying risks and their associated controls and measuring expected loss. Risk assessments consider the new firm-wide taxonomy and will soon be captured in the RBSH Group-wide repository for operational risk.

Risk assessments are often conducted in a workshop environment, bringing together subject matter experts from across the division and key functions. By sharing expertise, they can identify improvements to risk identification, measurement and control. Risk governance is reviewed regularly ensuring that there is clarity and ownership of key risk areas. Through coming together and sharing knowledge, participants gain a broader understanding of how their work fits together.

RBSG Group new product approval process

RBSG Group new product approval process (GNPAP) ensures there is a consistent process to identify, assess and approve the risks associated with new products.

Following the conclusion of reviews conducted during 2011, enhancements will be made during 2012 to the product governance forums, to provide earlier engagement between the business, Group and divisional risk teams and subject matter experts when assessing whether the risks associated with new products are in line with appetite. The forums will be supported by an upgrade to RBSH Group's key tools used to manage and report on new product approval.

Scenario analysis

Scenario analysis is used to assess the possible impact of extreme but plausible operational risk loss events. It provides a forward-looking basis for managing exposures beyond RBSH Group's risk appetite. The methodology provides a structured and consistent approach to scenario scoping and measurement. A portfolio of scenarios was developed in 2011 across divisions, covering material risks to which RBSH Group is exposed. RBSG Group-wide scenarios are centrally scoped and workshops are facilitated by GOR in conjunction with functions and policy owners, before being assessed by divisions to derive specific impact estimates. This also allows RBSH Group to review operational risk impacts as they arise from macroeconomic stresses (e.g. eurozone distress) in a time-efficient and effective manner.

By assessing extreme but plausible events, scenario analysis is an important component in the operational risk framework, providing senior management with valuable insight into systemic risk that could significantly impact its financial performance if these events were to occur. Using its forward-looking nature, senior management cross-examines various risk topics against a range of circumstances and assumptions.

Similar to risk assessments, scenarios are run in a workshop environment, bringing business, risk and control experts together and thereby ensuring that risk management is approached holistically.

Management, monitoring and reporting

Issues management

The objective of the operational risk issues management framework is the adoption of a consistent approach to the identification, capture, classification, monitoring, closure and acceptance of operational risk issues and associated actions across RBSH Group, in accordance with RBSH Group's three lines of defence model.

Significant enhancements were made to the issues management process during 2010 including rollout of a single repository for capturing issues and actions; mapping issues to the GPF; and a tightening of governance over issue management. These improvements were further embedded during 2011, through training and assurance reviews.

The enhancements have improved risk management by allowing Group-wide analyses of all operational risk issues. In certain cases, this has resulted in global assurance reviews focused on specific areas, helping to identify operational risks to be mitigated.

Business review continued

Business Review
Risk and balance sheet
management

Risk management: Operational risk continued

Event and loss data management

Event and loss data management (ELDM) covers the discovery, escalation, capture, investigation, approval and closure, and reporting and analysis of operational risk events and loss data. It also provides for the clear, simple, quick and consistent communication of operational risk events that meet defined threshold criteria to those members of RBSH Group's senior management and Executives who need to know of these events.

During 2011, an enhanced ELDM process was launched to promote consistency in the management of operational risk events and the collection of loss data across RBSH Group. It included the introduction of a single repository to capture all events and loss data in RBSH Group and the establishment of thresholds above which operational risk events will trigger a risk assessment.

The improvements in approach, and use of a single Group-wide database, have enhanced the completeness and accuracy of RBSH Group's internal loss data, and therefore better inform RBSH Group's operational risk profile.

At the start of 2012, the robustness of the historic data migrated into the new repository will be reviewed to confirm its suitability as an input to capital modelling. In addition, the process will be further enhanced to ensure continued compliance with changing regulatory and industry standards regarding the collection of internal loss data.

Insurance

RBSH Group purchases insurance to provide the business with financial protection against specific losses and to comply with statutory or contractual requirements. Insurance is used as a risk mitigation tool in controlling RBSH Group's exposures, providing protection against financial loss once a risk has crystallised.

Reporting and monitoring

Reporting and monitoring forms an integral part of all of RBSH Group's operational risk management processes, which are designed to ensure that risks and issues are identified, escalated and managed on a timely basis. Exposures for each division are reported through monthly risk and control reports, which provide detail on the risk exposures and action plans. Enhancements made to reporting and monitoring during the year include analysing operational risk events, losses and issues against the GPF components; this has led to better identification of areas requiring management focus and remediation.

Control environment certification

Control environment certification (CEC) is used by RBSH Group's Managing Board to review and assess its internal control framework, and provide a self-certification of its current state. It demonstrates that RBSH Group is operating a robust control framework, with mechanisms in place to understand and manage its risks, and to drive action to resolve areas of weakness or concern.

CEC provides a twice-yearly assessment of the robustness of RBSH Group's internal control environment including:

- compliance with the GPF and key divisional/functional policy standards; and
- effectiveness of the risk frameworks, culture and governance structures for each division or function.

CEC was enhanced during 2011 to improve the quality and depth of certification, and to implement a risk-based approach to the analysis of policy compliance. The enhancements have delivered a greater degree of analysis of the key risk areas for each business and Group policy standard owner.

Improved alignment with RBSH Group Internal Audit has been delivered through the implementation of a common rating system for the assessment of the control environment, and CEC outcomes are reported at both the divisional risk and audit committees and RBSH Group Audit Committee.

Compliance risk

Compliance risk arises from non-compliance with national and international laws and regulations. RBSH Group believes that being a compliant organisation is fundamental to protecting sustainable growth, rebuilding its reputation and maintaining stakeholder confidence.

The regulatory environment remained highly challenging during 2011, as policymakers and regulators continued to strengthen regulation and supervision in response to the events of 2007-08 and subsequent economic and financial stress.

The regulatory agenda - largely framed by the G20 but with many instances of EU and national initiatives - constitutes the most sweeping set of changes seen in many decades. In addition to these changes, many supervisory authorities also continued to intensify their ongoing level of scrutiny and intervention.

These trends have posed multiple challenges for banking groups, including RBSG Group, namely:

- tracking, analysing and engaging with policymakers on proposed changes;
- implementing change programmes to ensure compliance with new requirements;
- revisiting strategy, business and operating models in response to the new environment; and
- driving through cultural and other changes to minimise compliance and enforcement risks.

Below is an outline of some of the key developments in the regulatory environment that took place during 2011. An explanation of how RBSG Group manages compliance risk begins on page 89.

Global regulatory developments

The global agenda continues to be guided by the G20, drawing on the original action plan for strengthening financial stability agreed by G20 leaders at the November 2008 Washington Summit. During 2011, G20 countries continued to implement various elements of this action plan, culminating in the G20 leaders' summit held in Cannes in November 2011.

Business review continued

Business Review
Risk and balance sheet
management

Risk management: Compliance risk continued

Global regulatory developments continued

A progress report on the action plan was issued at the Cannes summit. Key developments during 2011 included the following:

Basel III

Following publication by the Basel Committee on Banking Supervision in December 2010 of rules text for the new Basel III capital and liquidity framework, work during 2011 focused on finalising the remaining elements of policy and preparing for implementation. Highlights were:

- the issuance of minimum requirements regarding the loss absorbency of capital instruments at the point of non-viability (January 2011);
 - the finalisation of rules for the capital treatment of counterparty credit risk in bilateral trades (June 2011);
 - technical changes to Basel III relating to the treatment of trade finance, aimed at helping promote trade with low-income countries (October 2011); and
 - further work on the capitalisation of bank exposures to central counterparties (November 2011).
- a Basel Committee paper proposing that debt valuation adjustments for over-the-counter derivatives and securities financing transactions should be fully deducted from Common Equity Tier 1 capital (December 2011). RBSH Group is evaluating the potential impact of this proposal.

Other

During 2011, the authorities started to pay more attention to the consistent implementation of G20 and FSB financial reforms, with plans developed to focus more on monitoring and the public reporting of implementation progress. Although a priority, little progress was made during 2011 on developing a global policy framework for over-the-counter derivative reform, so as to help align ongoing activity in this space, particularly in the US and the EU (see below).

EU regulatory developments

The EU regulatory agenda in 2011 continued to focus mainly on prudential and market structure measures; retail issues also started receiving more attention and are likely to come under increased focus in 2012. Key highlights were as follows:

New regulatory architecture

2011 saw the implementation of a new EU regulatory architecture, with the start of operations of the European Systemic Risk Board (ESRB) and three supervisory authorities: the European Banking Authority (EBA), the European Securities and Markets Authority, and the European Insurance and Occupational Pensions Authority.

The new framework marks a significant transfer of power to the three supervisory authorities, particularly with respect to detailed rule-making, where over time they will be issuing 'binding technical standards' across a range of policy areas that will replace national rules.

However, an early preoccupation of the new regulatory authorities was the eurozone crisis. In particular, the EBA was heavily engaged in overseeing the stress testing of EU banks, including UK groups.

Prudential and related reforms

A key focus during 2011 was work on amending the EU's Capital Requirements Directive (CRD): a key step in that process was the publication of draft legislative text in September 2011, the CRD IV package, which is expected to be finalised during 2012 and will implement Basel III in the EU.

Another key area of work was the EU's 'crisis management' legislative package, aimed at dealing with issues similar to those addressed by the FSB work on G-SIFIs. An early 2011 EU Commission consultation included proposals on enhanced supervision and early powers of intervention; recovery and resolution planning; resolution frameworks; resolution funds and debt write down (but not capital surcharges). Draft legislation to implement these measures was at the time of writing expected to be issued in 2012, after several postponements.

Other initiatives in the prudential space have included, notably, continued work on developing the Solvency II framework for insurers; the development of legislative proposals on corporate governance in financial institutions; and the further development and UK implementation of the EU's common reporting framework (COREP) for banks.

Market and structural reforms

Key developments in this space included:

- European Markets Infrastructure Regulation (EMIR): negotiations continued during 2011 on this draft Regulation on OTC derivatives, central counterparties and trade repositories, which represents a major element of the financial crisis regulatory response agenda.
- Markets in Financial Instruments Directive Review (MiFID2): the EU review of this directive, which sets the framework for investment markets, culminated in the publication of draft legislative text in October 2011.
- Financial Transaction Tax (FTT): the EU Commission published proposals for an FTT, which would see trades in bonds and shares taxed at 0.1% and complex derivatives taxed at 0.01%. However, the proposal requires approval from all 27 EU members, but is opposed by some, including notably the UK, which reduces the likelihood of it being imposed.
- Other initiatives: these have included changes to the market abuse regime and prospectus requirements, initiatives on short-selling, further legislative developments impacting credit rating agencies and changes to depositor and investor protection.

Business review continued

Business Review
Risk and balance sheet
management

Risk management: Compliance risk continued

Other developments

In the US, activity was dominated by rulemaking following the 2010 Dodd-Frank Act. Although there was some slippage on, for example, derivatives rules, output from the authorities has still been considerable.

Key final rules were issued on a range of issues, including living wills, the Collins Amendment (which floors capital requirements at the level of Basel II advanced approaches), rights for shareholders to have an advisory ‘say on pay’, and limits on debit card interchange fees. Meanwhile the new Consumer Financial Protection Bureau was established on the Act’s first anniversary on 21 July 2011.

High-profile draft rules that were published included the Volcker Rule (limiting proprietary trading and investments in private equity or hedge funds), the securitisation risk retention rule and rules applicable to Nationally Recognized Statistical Rating Organizations (credit rating agencies).

Compliance risk management

RBSG Group manages its compliance risk through a compliance risk and compliance framework that seeks to ensure it complies with all banking, securities, insurance and anti-money laundering regulations, defined by over 120 different regulatory bodies and central banks, wherever the Group operates. This framework, managed by RBSG Group Regulatory Affairs and Compliance (GRA&C), includes: the tracking and management of regulatory developments; regulatory relationship management; the implementation of global compliance risk policies; assurance and monitoring; training and awareness; and mitigation activity.

Against the backdrop of intensified regulatory pressure, RBSG Group Regulatory Affairs has managed the increased levels of scrutiny and legislation by increasing the capacity of its team, as well as improving and refining its operating model, tools, systems and processes. Simultaneously, in response to enforcement actions against RBSG Group in 2010 and 2011, RBSG Group Compliance initiated and led material large-scale remediation and infrastructure changes, driving both the definition and the proactive management of conduct risk.

Management of regulatory change

The early identification and effective management of changes in legislative, regulatory and other requirements that may impact RBSH Group is critical to the successful mitigation of compliance risk.

RBSG Group Regulatory Affairs maintains a well-established policy and supporting processes for the identification and management of such changes across RBSH Group. Group Board and Executive Committee oversight is supported by a Prudential Regulatory Developments Executive Steering Group, which was formed in early 2010 to provide a specific focus on a range of key regulatory changes. Communication and coordination were strengthened in 2011 with the formalisation of two Group-wide forums, one focusing on prudential and wholesale market issues, the other on retail conduct issues. In addition, a divisional Heads of Regulatory Developments forum was established, and RBS Americas’ regional governance strengthened.

Global compliance risk and compliance policies

Within RBSG Group Policy Framework, compliance risk and compliance policies define minimum standards to which all businesses must adhere. The policies are primarily driven by the rules and regulations set by the FSA, RBSG Group’s lead regulator. However, these global minimum standards are supplemented, where appropriate, by divisional

policies to meet local product or market requirements.

In compliance risk management, the term ‘conduct risk’ is used to refer to the risk of breaches of: (a) regulation or law; or (b) regulatory expectation. This is distinguished from ‘prudential risk’, i.e. compliance risks related to capital management, liquidity, credit risk, operational risk and market risk. A significantly enhanced compliance / conduct policy structure was outlined during 2011.

It is aligned to a new Conduct Risk Appetite statement as well as the expected direction of the new Financial Conduct Authority (FCA), which will be one of the successors of the FSA. As a result, in future, it will be possible to assess the pan-Group risk profile for conduct risk against its risk appetite. In addition, it will be possible to provide more detailed policy direction to divisions on key areas of conduct risk.

Assurance and monitoring

Assurance and monitoring activities are essential to ensure that RBSH Group can demonstrate compliance with existing rules and regulations.

During 2011, a ‘heatmap’ of the key inherent conduct risks across all RBSH Group’s global businesses, reflecting both internal and external change and divisional priorities, was developed. This, in turn, was supported by a comprehensive programme of assurance reviews across RBSG Group. These reviews introduced a global, end-to-end thematic approach, looking at customer outcomes as well as process adherence. In addition to immediate issues, for which action plans were developed, the reviews identified a number of wider themes that required a more strategic approach.

Training and awareness

Maintaining compliance with existing rules and regulations requires continued investment in professional training, as well as maintaining risk awareness. During 2011, RBSG Group focused on strengthening the capabilities of its compliance risk functions, at both Group and divisional level. RBSG Group facilitates extensive compliance training through computer-based Group Policy Learning modules, with each one designed to promote the relevant regulatory Group Policy Standard.

To support the professional development of RBSG Group’s compliance teams, it also has a comprehensive and progressive training programme that is deployed globally. All of RBSG Group’s regulatory staff are actively engaged in Compliance eLearning, which incorporates a mandatory ‘essentials’ course, and the RBSG Group Risk Academy, through which all staff are required to complete foundation courses in other risk disciplines, such as operational risk, market risk and retail credit risk. Formal training is supplemented by more informal regulatory familiarisation; this is designed to share knowledge, and support both personal development and technical training across the wider risk community.

management

Risk management: Compliance risk continued

Compliance risk management continued

Anti-Money Laundering

During 2011, RBSG Group continued to enhance its Anti-Money Laundering (AML) Change Programme across RBSG Group. Key developments include:

- A new cohesive target operating model to support the capability required and reviewed divisional AML capabilities against the target operating model to identify and analyse gaps;
- A framework for understanding and managing compliance and conduct risk, including the introduction of a clear Group-level conduct risk appetite statement and the design of a new conduct risk policy framework; and
- An enhanced global whistle-blowing service 'Right Call' that allows all employees, irrespective of location, to escalate any concerns outside of their normal line management. Whistle-blowing call volumes have increased since the launch and the new framework is a further positive step to help RBSG Group identify and manage risk.

Reputational risk

Reputational risk is the risk of brand damage arising from financial and non-financial events due to a failure to meet stakeholders' expectations of RBSG Group's performance and behaviour.

Such loss in reputation has the potential to put the entire business at risk. It could also lead to negative publicity, loss of revenue, costly litigation or a decline in the customer base.

Reputational risk can arise from actions taken by RBSG Group or a failure to take action, such as failing to assess the environmental, social or ethical impacts of clients or projects to which RBSG Group has provided products or services.

RBSG Group seeks to safeguard its reputation by considering the impact on the value of its franchise from how it conducts business, its choice of customers and the way stakeholders view RBSG Group. Managing RBSH Group's reputation is the joint responsibility of all employees, and reputational considerations should, as part of standard practice, be integrated into RBSH Group's day-to-day decision making structures.

Currently RBSG Group manages reputational risk through a number of functions, such as divisions, RBSG Group Communications, RBSG Group Sustainability and an Environmental, Social and Ethical (ESE) risk management function. The latter function is responsible for assessing ESE risks associated with business engagements and business divisions.

The Managing Board has ultimate responsibility for managing any impact on the reputation of RBSH Group arising from its operations. RBSG Group Sustainability Committee (established at the beginning of 2010) sets the overall strategy and approach for the management of Group sustainability. However, all parts of RBSH Group take responsibility for reputation management.

The risk is viewed as material given the central nature of RBSG Group's market reputation in the strategic risk objectives.

Business risk

Business risk is the potential risk of revenues being lower than expected and/or operating costs being higher than expected. It is influenced by a variety of factors, including pricing, sales volumes, input costs, regulations and the prevailing market and economic environment.

Business risk is identified, measured and managed through RBSG Group's bi-annual strategic planning cycles. Expected profiles for revenues and costs are determined, on a bottom-up basis, through strategic plans and expectations of the external environment. These profiles are tested against a range of stress scenarios and factors to identify the key risk drivers behind any potential volatility, along with management actions to address and manage them.

The Managing Board has ultimate responsibility for the impact of any volatility in revenues and costs on RBSH Group's performance.

Business review continued

Business Review
Risk and balance sheet
management

Pension risk

RBSH Group is exposed to risk from its defined benefit pension schemes to the extent that the assets of the schemes do not fully match the timing and amount of the schemes' liabilities. Pension scheme liabilities vary with changes to long-term interest rates, inflation, pensionable salaries and the longevity of scheme members as well as changes in legislation. Ultimate responsibility for RBSH Group's pension schemes is separate from RBSH Group management. RBSH Group is exposed to the risk that the market value of the schemes' assets, together with future returns and any additional future contributions could be considered insufficient to meet the liabilities as they fall due. In such circumstances, RBSH Group could be obliged, or may choose, to make additional contributions to the schemes.

The Stichting Pensioenfond RBS Nederland in the Netherlands is the largest of the schemes and the main source of pension risk. The Trustee or Pension Boards of this scheme are solely responsible for the investment of the schemes' assets which are held separately from the assets of RBSH Group.

Risk appetite and investment policy are agreed by the Trustee or Pension RBSH Board with quantitative and qualitative input from the scheme actuaries and investment advisers. The trustee also consults with RBSH Group to obtain its view on the appropriate level of risk within the pension fund. The schemes are invested in diversified portfolios of equities, government and corporate fixed-interest and index-linked bonds, and other assets including property. Interest and inflation risks are mitigated partially by investment in suitable physical assets and appropriate derivative contracts.

management

Asset Protection Scheme

In 2009, RBS plc entered into an agreement (the Asset Protection Scheme (APS)) with HM Treasury (HMT), acting on behalf of the UK Government, under which it purchased credit protection over a portfolio of specified assets and exposures (covered assets) from HMT. Although the portfolio of covered assets includes assets recorded on RBSH Group's balance sheet, RBSH Group is not entitled to benefit under this contract.

However, RBSH Group entered into credit protection agreements in 2009 in the form of a financial guarantee contract and a credit derivative contract with RBS plc that provides full principal protection over those covered assets attributable to RBSH Group for their remaining life.

Under the terms of these contracts on impairment of a covered asset RBSH Group is entitled to receive from RBS plc the present value of the difference between contractual and expected cash flows from the asset; subsequent reductions in the estimated lost cash flows are paid by the Group to RBS plc and increases paid by RBS plc to RBSH Group.

The credit derivative which protects a portfolio of financial assets, principally derivative financial assets, measured at fair value with changes in fair value taken to profit or loss, meets the definition of a derivative in IAS 39 and is carried at fair value with changes in fair value reflected in profit or loss.

The financial guarantee contract protects a portfolio of assets classified as loans and receivables. It meets the definition of a financial guarantee contract in IAS 39 and was recorded initially at its transaction value. It is being amortised to profit or loss over the expected remaining life of the assets in the portfolio it guarantees.

No adjustments are made to the measurement of the covered assets to reflect the protection provided by the financial guarantee contract and the credit derivative. Impairment provisions on covered assets classified as loans and receivables are assessed and charged in accordance with RBSH Group's accounting policy; covered assets that are held-for-trading, designated at fair value or classified as available-for-sale continue to be measured at fair value with no adjustments to reflect the protection received. There is no change in how gains and losses on the covered assets are recognised in the income statement or in other comprehensive income. As a result RBSH Group's credit quality ratios are unaffected.

At the time an impairment loss is recognised on a covered asset classified as loans and receivables, a reimbursement asset representing the amount receivable from RBS plc is recognized in the balance sheet with a corresponding entry to profit or loss offsetting the impairment charge.

The APS back-to-back covered portfolio for the year ended 31 December 2011 was €10.9 billion (2010 - €17.5 billion), with an average remaining maturity of four years. At 31 December 2011 the carrying value of the prepaid fee for the financial guarantee contract was €323 million (2010 - €617 million). At 31 December 2011 the net carrying value of the credit derivative was €8 million (liability), (2010 - €15 million (liability), which consists of the fair value of the credit derivative of €213 million against collateral of €221 million placed by RBS plc (2010 - €206 million against €221 million respectively).

Assets are being transferred from RBS N.V. to RBS plc as a part of the Proposed Transfers. Unamortised fees on the APS back-to-back agreement covered assets, which are transferred, will be reimbursed by RBS plc to RBS N.V.; consequently there will be no accelerated amortisation or future profit or loss impact of the APS back-to-back

agreement fees paid on transferred assets. The total unamortised fees on related covered assets included in the UK Transfers during the last quarter of 2011 amounted to approximately €99 million.

Corporate Governance

Introduction

RBSH Group continues to maintain high corporate governance standards. This is critical in order to realise its strategic goal of creating sustainable long-term value for all RBSH Group's stakeholders – including its shareholders, clients, employees and society at large.

RBSH Group's operations are guided by its code of conduct.

In order to achieve good corporate governance RBSH Group organises the business in a way that promotes first-class stewardship by the Managing Board and effective supervision by the Supervisory Board. Integrity, transparency and accountability are key elements of RBSH Group's corporate governance, as they are embedded in RBSH Group's business as a whole. These key elements ensure that the controls and oversight necessary for effective risk management, compliance with regulations, and accurate and complete disclosure of information to the market are effective.

Corporate governance in the Netherlands

Dutch Corporate Governance Code (Code Frijns)

As a result of the delisting in 2008, the Company is no longer required to adhere to Code Frijns. RBSH Group ensures proper corporate governance by focusing on the Dutch Banking Code which caters for specific corporate governance rules for banks. However as the Code Frijns is of great standing within the Netherlands, RBSH Group adheres where possible.

The Dutch Banking Code (Code Banken)

The Code Banken came into force on 1 January 2010 and is applicable to RBS N.V. as it has a banking license issued under the Dutch Financial Supervision Act. A further explanation of the compliance with the Code Banken is provided on page 103 of this report.

Capital Requirement Directive III (CRD III)

CRD III contains certain provisions on capital requirements for trading portfolios and securitisations. It also contains principles on sound compensation policies. Each member state of the European Union has the requirement to implement the directive in their national legislation.

RBSH Group adheres fully to the principles of CRD III that were implemented in the Netherlands.

DNB Principles on Sound Remuneration

The principles of sound compensation policies were implemented by the publication of the Regulation by the Dutch Central Bank on Sound Compensation Policies for Financial Institutions, which came into effect on 1 January 2011. RBSH Group adheres fully to these principles on Sound Remuneration that were implemented in the Netherlands.

Further details of RBSG's remuneration policy can be found in the RBSG Annual Report & Accounts and the Remuneration Report both available on www.rbs.com.

Corporate governance in the United States

As a SEC-registered company, RBSH Group is subject to US securities laws, including the Sarbanes-Oxley Act, as well as certain corporate governance rules in connection with RBSH Group's listing of NYSE Alternext debt. To meet the requirements of the Sarbanes-Oxley Act, RBSH Group established a Disclosure Committee that formalised the roles, tasks and disciplines that were already in place for ensuring the accuracy and completeness of information disclosed to the market.

RBSH Group's report on internal control over financial reporting under Section 404 of the US Sarbanes-Oxley Act is included in the 2011 Form 20-F on page 106 as filed with the SEC.

Approval of Annual Report

The Managing Board has approved the Annual Report in its meeting on 20 March 2012. The Supervisory Board has approved the Annual Report during its meeting on 22 March 2012. RBSH Group has proposed to its Shareholders that it adopts the 2011 financial statements, as included in this Annual Report, and discharge the Managing Board and Supervisory Board in respect of their management and supervision respectively.

Boards and Committees

RBS Holdings and RBS N.V. are both companies with limited liability incorporated under the laws of the Netherlands. Both companies have a two-tier system of corporate governance; consisting of a Supervisory Board and a Managing Board. The day to day management of the companies vests with the Managing Board. The Supervisory Board provides oversight and advice to the Managing Board.

There is a personal union in place between the Managing Boards of RBS Holdings and RBS N.V. and between the Supervisory Boards of RBS Holdings and RBS N.V. This entails that the members of the Managing Board and Supervisory Board of RBS Holdings and RBS N.V. are the same.

The report of the Supervisory Board

The Supervisory Board supervises the Managing Board, as well as the general affairs of RBS Holdings and the enterprises connected to it. Furthermore, it assists and advises management and supervises the corporate governance structure of RBS Holdings.

In performing their duties, the members of the Supervisory Board are guided by the interests of RBSH Group and the businesses connected to it and shall take into account the relevant interests of RBSH Group's stakeholders. Certain powers vest in the Supervisory Board, including the approval of certain resolutions by the Managing Board. A complete overview of the powers vested with the Supervisory Board can be found in the Rules governing the Supervisory Board's Principles and best Practices, which are published on the RBSH Group's website at www.rbs.nl. These rules are also applicable to the Supervisory Board of RBS N.V. and include the Terms of Reference of the Risk & Audit Committee.

The Supervisory Board is an independent corporate body. Members of the Supervisory Board are appointed at the General Meeting of Shareholders. For each vacant seat the Supervisory Board nominates one or more candidates. Under the Code Frijns, which is mandatory for listed companies, all members of the Supervisory Board must be independent with the exception of not more than one person. RBSH Group is not compliant with that standard. RBSH Group has four Supervisory Board members who can not be considered as independent within the scope of the Code Frijns.

Corporate Governance [continued](#)

Corporate Governance

Boards and Committees continued

The report of the Supervisory Board continued

Supervisory Board members are appointed for a term of four years and may be re-appointed after that term, with a maximum term of 12 years from the date of their first appointment. In addition, each member is required to resign at the first General Meeting of Shareholders after reaching the age of 70.

Candidates recommended for appointment or re-appointment to the Supervisory Board must meet the criteria of the membership profile, which are set out in the Rules Governing the Supervisory Board's Principles and Best Practices of RBSH Group, which are also applicable to the Supervisory Board of RBS N.V.

Newly appointed Supervisory Board members undertake an induction programme. The new Supervisory Board members receive relevant documentation necessary for their role in RBSH Group and undertake a series of meetings with the management of RBSH Group to gain insight and understanding of RBSH Group and its enterprises.

In addition, meetings are set up with management of RBSG Group to provide for an introduction to RBSG Group and its businesses. The programme is tailor-made and is adjusted to the specific needs of the new Supervisory Board member.

In case of a (potential) conflict of interest of material significance between a member of the Supervisory Board and RBS Holdings, the Chairman of the Supervisory Board shall be notified. If the Chairman of the Supervisory Board has a (potential) conflict of interest of material significance, the Vice-Chairman is notified. The Supervisory Board member concerned will not take part in the assessment by the Supervisory Board where a conflict of interest exists.

Details of the Supervisory Board's remuneration can be found on page 201.

The Chairman and Vice-Chairman of the Supervisory Board are appointed by the Supervisory Board from among its members. The Supervisory Board also appoints from its own members, the members of the Risk & Audit Committee. Currently, all members of the Supervisory Board are a member of the Risk & Audit committee.

Composition of the Supervisory Board

The members of the Supervisory Board, and their respective Supervisory Board committee membership, as at 22 March 2012 are as follow:

		Date of first appointment	Date for re-election

On 1 May 2011, Mr. Miller McLean retired from the Supervisory Board and was replaced by Mr. Christopher Campbell on 23 June 2011.

Corporate Governance [continued](#)

Corporate Governance

Boards and Committees continued

The report of the Supervisory Board continued

Bruce Van Saun - Chairman of the Supervisory Board

Mr. Van Saun was appointed to the Supervisory Board on 1 April 2010. Appointed to the Board of RBSG in October 2009 as Group Finance Director, Mr. Van Saun has over 25 years of financial services experience. From 1997 to 2008 he held a number of senior positions with Bank of New York and later with Bank of New York Mellon, most recently as vice chairman and chief financial officer, and before that responsible for Asset Management and Market Related businesses. Prior to that he held senior positions with Deutsche Bank, Wasserstein, Perella Group and Kidder Peabody & Co. He has served on several corporate boards as a non-executive director and has been active in numerous community organisations.

Christopher Campbell

Mr. Campbell was appointed as a member of the Supervisory Board on 23 June 2011. Mr. Campbell joined RBS in August 2005 as Deputy General Counsel and Director, Group Legal and became Group General Counsel in May 2010. Prior to joining RBS, Mr. Campbell was a partner for 18 years in Scotland's largest law firm, Dundas & Wilson, and was Managing Partner from 1996 until he joined RBS in 2005. In his role as Group General Counsel, Mr. Campbell has overall responsibility for advising the RBS Group Board and Executive Committee and for the provision of legal support to all of RBS's businesses globally. His responsibilities also include the Group Secretariat and Regulatory Affairs functions.

Ron Teerlink - Vice-Chairman of the Supervisory Board

Mr. Teerlink was appointed to the Supervisory Board on 1 April 2010. In April 2008 Mr. Teerlink joined RBSG Group as Chief Executive of Business Services, becoming RBSH Group Chief Administrative Officer in February 2009. At the same time he was re-appointed to the Managing Board of RBSH Group to oversee the integration programme. Mr. Teerlink started his career with ABN Bank in 1986 as an IT/Systems analyst and held various functional positions before becoming Chief Operating Officer of the Wholesale Clients Business in 2002. He was appointed Chief Executive Officer of Group Shared Services in 2004 and joined ABN AMRO Holding N.V.'s Managing Board in January 2006, where he was responsible for Services and Market Infrastructure. Mr. Teerlink holds a Masters degree in Economics from Amsterdam's Vrije Universiteit.

Henk Rottinghuis

Mr. Rottinghuis was appointed to the Supervisory Board on 1 September 2010. Mr. Rottinghuis has been a Member of the Executive Board of Pon Holdings B.V. since 1999 and was appointed CEO in 2001, a position he held for nearly ten years. Before joining the Board, he worked as the Managing Director of Pon's Automobielenhandel, the importer of Volkswagen, Audi and Porsche in The Netherlands and Poland, and was responsible for all import activities in the automotive arm of Pon Holdings. Mr. Rottinghuis started his career in 1982 at the Royal Nedlloyd Group, a shipping and transport group, where he held various management positions for a period of ten years. He holds a Master of Laws from the Rijksuniversiteit Groningen, and has followed an executive programme at Harvard Business School. He holds several Board positions with larger family companies.

Sietze Hepkema

Mr. Hepkema was appointed as a member of the Supervisory Board on 1 September 2010. Mr. Hepkema is a corporate and M&A lawyer at Allen & Overy LLP. He was Senior Partner of the Amsterdam office from 1999 to 2009 and a member of the firm's Board from 2000 to 2010. Before joining Allen & Overy, Mr. Hepkema was Partner at Loeff Claey's Verbeke for 12 years, where he was appointed to the Managing Board in 1989. Between 1981 and 1987 he worked at Graham & James in San Francisco and Singapore. Over the past ten years, Mr. Hepkema has advised on many major transactions in The Netherlands, including the merger of KLM and Air France, the merger of

NYSE and Euronext, and the acquisition of Organon by ScheringPlough. He holds a Master of Laws from the Erasmus University Rotterdam and an LLM from Harvard Law School.

Activities of the Supervisory Board

The Supervisory Board met on twenty one occasions during 2011. The meetings took place in person, via conference call by telephone and on a few occasions the members were also asked to give their approval on a few matters via email procedure.

The assessment of the functioning of the Managing Board members and Supervisory Board, their members and the committee of the Supervisory Board has taken place in the first quarter of 2011.

The Chairman of the Supervisory Board and the Company Secretary prepared the agenda for the meetings of the Supervisory Board in close co-operation with the Chairman of the Managing Board.

The Supervisory Board reviewed and adopted the full year 2010 results at its meeting on 23 March 2011 and reviewed and adopted the half-year financial report 2011 on 26 August 2011. The Board reviewed in these meetings regulatory, control and audit issues, including Sarbanes-Oxley Act 404 compliance.

During the second and third quarter of 2011, the Supervisory Board received regular updates on the proposed transfers of assets and liabilities to RBS plc. During the third quarter, the FSMA Part VII scheme, as part of the proposed transfers, was approved. The financial performance of RBSH Group was extensively discussed during a number of Supervisory Board meetings, which were attended by a number of Managing Board members who gave an explanation of the results. Also, relevant members discussed findings of internal and external auditors.

On five occasions in 2011, the meeting of the Supervisory Board was preceded by a meeting of the Risk & Audit Committee, which advised the Supervisory Board, amongst others, on the adoption of the financial results. Comprehensive information provided by the Managing Board and reviewed by the Risk & Audit Committee gave the Supervisory Board a clear picture of RBSH Group's risks, results, capital and liquidity position. The Risk & Audit committee continued to report their deliberations and findings to the Supervisory Board for further discussion and, where appropriate, decision.

Corporate Governance [continued](#)

Corporate Governance

Boards and Committees continued

The report of the Supervisory Board continued

The strategy of RBSH Group was determined in conjunction with the divisional strategy of RBSG Group and was adopted by the Supervisory Board during its meeting on 9 April 2010.

The Supervisory Board nominated a new Managing Board member during 2011. The Shareholder adopted the nomination of Mr. Richard Hemsley on 9 September 2011, which became effective on 13 October 2011.

The Shareholder reappointed Deloitte Accountants B.V. as the external auditors of RBS Holdings N.V. for the 2011 financial year.

All members of the Supervisory Board have complied with the requirement to attend meetings on a frequent basis.

Supervisory Board committee

The Supervisory Board has one sub-committee, the Risk & Audit Committee. This Committee is responsible for all matters relating to Accounting policies, internal control, financial reporting functions, internal audit, risk assessment and regulatory compliance of RBSH Group.

Bruce Van Saun

Chairman of the Supervisory Board

Risk & Audit Committee

The members of the Risk & Audit Committee are appointed by the Supervisory Board from its own members. The Committee derives its authority from the Supervisory Board, the RBSG Group Board Risk Committee and the RBSG Group Audit Committee. Its Terms of Reference are set out in annex C of the Rules Governing the Supervisory Board's Principles and Best Practices, which are published on www.rbs.nl. In line with good corporate governance, the Terms of Reference governing the Risk & Audit Committee have been reviewed to ensure that objectives are, where possible, fully aligned and consistent with the Terms of Reference of both the RBSG Group Audit Committee and the RBSG Group Board Risk Committee and adequate and appropriate oversight and escalation mechanisms are implemented. Also, the Terms of Reference have been reviewed and adjusted in light of the requirements as stated in the Banking Code.

The external auditor is appointed by the General Meeting of Shareholders for a period of one year on the advice of the Supervisory Board. The Risk & Audit Committee has the delegated responsibility for the engagement of the external auditor. For this purpose it evaluates and reports the independence of the external auditor, the measures used to control the quality of the external auditor's work, and the annual audit budget. The Risk & Audit Committee's policy on auditor independence governs the appointment, compensation, and oversight of the external auditor. To ensure the external auditor's independence, the Auditor Independence Policy prohibits the external auditor from providing certain non-audit services to RBSH Group.

The Risk & Audit Committee has delegated responsibility for pre-approving audit, audit-related and permitted non-audit services provided by the external auditor, to the Chief Financial Officer (CFO). In exercising its pre-approval authority, the CFO considers whether the proposed services are consistent with the continued independence of the external auditor. During each meeting of the Risk & Audit Committee, an overview is presented of the non-audit services that were initiated during the period under review.

Composition of the Risk & Audit Committee

In 2011, the Risk & Audit Committee was chaired by Bruce Van Saun. Other members included Miller McLean (up to and including 30 April), Christopher Campbell (as of 1 August 2011), Ron Teerlink, Sietze Hepkema and Henk Rottinghuis.

The members of the Risk & Audit Committee collectively have sufficient accounting and financial management expertise to understand RBSH Group's business, financial statements and risk profile. Furthermore, the Supervisory Board has determined that Bruce Van Saun possesses the necessary relevant expertise in financial administration and accounting for listed companies and other large companies and therefore qualifies as a financial expert within the meaning of the Code Frijns. It has also been determined that Bruce Van Saun qualifies as an audit committee financial expert in accordance with Section 407 of the Sarbanes-Oxley Act.

Activities of the Risk & Audit Committee

The Risk & Audit Committee convened five times during the course of 2011. All of the meetings were scheduled meetings. The Risk & Audit Committee reviewed, discussed and advised the Supervisory Board with regard to the interim financial statements, the Annual Report, the external auditor's report, the external auditor's management letter including the Managing Board's related comments, the evaluation of the design and operating effectiveness of the internal risk management and control systems, the Capital Adequacy Framework and the application of the US Sarbanes-Oxley Act, in particular as to RBSH Group's compliance with the requirements of Section 404 of this Act. Deloitte Accountants B.V. (Deloitte) reported on its independence to the Risk & Audit Committee. None of these processes have identified findings that call into question the independence of Deloitte.

The Risk & Audit Committee reviewed its pre-approval policy for audit and non-audit services provided by the external auditor. Following this review the Risk & Audit Committee pre-approved the nature and the budget for audit, audit-related and non-audit services, in line with this policy.

Throughout the period, representatives of RBSH Group's Managing Board, Finance Officers, the Committee Secretary, representatives from Group Internal Audit, Risk Management and the external auditor have been in attendance by standing invitation and were provided with copies of the agendas, papers and minutes.

The Risk & Audit Committee, in the presence of senior representatives from Risk Management, also reviewed and discussed RBSH Group's overall risk profile, the quality of the loan portfolio and RBSH Group's large exposures and provisioning for loan losses. In addition, the Committee reviewed various risk reports, produced both internally and by third parties. The Risk & Audit Committee reviewed, discussed and approved the 2011 Audit Plan prepared by RBSG Group Internal Audit, as well as staff matters including training and recruitment. In addition, the Risk & Audit Committee discussed the operational and internal control aspects covered by RBSG Group Internal Audit in its audit reviews presented to the committee.

Corporate Governance

Boards and Committees continued

Managing Board

The members of the Managing Board of RBS Holdings collectively manage RBS Holdings and are responsible for the general affairs of RBS Holdings business and general affairs of all its subsidiaries. The members are appointed by the General Meeting of Shareholders.

The Supervisory Board of RBS Holdings nominates one or more candidates for each vacant seat. If the Supervisory Board nominates two or more candidates for a vacant seat in the Managing Board, the nomination list is binding. The members of the Managing Board are accountable both collectively and individually for all decisions taken by the Managing Board.

The Chairman of the Managing Board leads the Managing Board in its overall management of RBSH Group to achieve its performance goals and ambitions. The Chairman of the Managing Board is the main point of liaison with the Supervisory Board. The Chief Financial Officer is responsible for the financial affairs of RBSH Group, and the Chief Risk Officer is responsible for RBSH Group's risk management and operational risk control. Alongside their overall corporate responsibilities, the members of the Managing Board are responsible for the management of the divisions and control and support functions. The Managing Board has delegated certain tasks to a number of Managing Board committees which are described on page 101 of this report.

The members of the Managing Board as at 22 March 2012 are as follow:

		Date of first appointment	Date for re-election
Jan de Ruiter (Chairman)	(50, Dutch, m)	1 April 2010	1 April 2014
Pieter van der Harst	(52, Dutch, m)	27 July 2010	27 July 2014
Jeroen Kremers (Vice-Chairman)	(53, Dutch, m)	1 July 2009	1 July 2013
Michael Geslak	(48, American, m)	1 April 2010	1 April 2014
Richard Hemsley	(47, British, m)	13 October 2011	13 October 2015

On 20 April 2011, Mr. Marco Mazzucchelli stepped down as a member of the Managing Board. His tasks were reallocated to Mr. Jan de Ruiter.

On 1 October 2011, Mr. Brian Stevenson retired as a member of the Managing Board and was replaced by Mr. Richard Hemsley.

Corporate Governance [continued](#)

Corporate Governance

Boards and Committees continued

Managing Board continued

Jan de Ruiter – Chairman & Head of Global Banking & Markets (GBM)

Mr. de Ruiter started his career at the Dutch Credit Insurance (NCM) in 1984 and moved to ABN Bank in 1987. During his 21 years with ABN AMRO, he held various positions in the wholesale division of the bank. From 1987 until 1993 he was a team member of the Institutional Equity Sales team in Amsterdam and from 1993 until 1998 Head of the European Equity sales team, based in London. In 1998 he became the Head of Equity Capital Markets for the Netherlands (Managing Director ABN AMRO Rothschild). Mr. de Ruiter was appointed Corporate Managing Director of ABN AMRO in 2000. In 2003 he became one of the two joint CEO's of ABN AMRO Rothschild. In 2004 he also became responsible for the global Merger & Acquisitions franchise of ABN AMRO. He held both positions until the end of 2007. At the beginning of 2008, following the successful consortium bid for ABN AMRO, he became the country executive of RBS in the Netherlands and was appointed Chairman of the Managing Board of RBS Holdings and RBS N.V. on 1 April 2010. Mr. de Ruiter graduated from the HEAO in Utrecht in 1983 (Economics/Law) and also holds an MBA degree from Webster University.

Pieter van der Harst - Chief Financial Officer (CFO)

Mr. van der Harst obtained a Degree in Economics in 1985 at the Erasmus University in Rotterdam. He started his career at the Dutch subsidiary of Banque Indosuez, where, after several functions in risk management and operations, he became Director of Financial Markets in 1993. After the sale of this entity to Dutch savings bank SNS Bank in 1997, he served as Managing Director of SNS Financial Markets, leading the treasury, funding and trading activities of the bank. Mr. van der Harst joined ABN AMRO in 2000 as Finance Director at Bouwfonds, a subsidiary active in residential mortgages and real estate development, finance and asset management. Following the sale of Bouwfonds in 2006, he joined ABN AMRO's corporate development team.

From June 2007 to September 2007 he was acting CFO at ABN AMRO Asset Management. From September 2007 through May 2008 he served as CFO for ABN AMRO's business unit North America. From June 2008 to the legal separation date of 1 April, 2010, he fulfilled the role of R share CFO in addition to his role of CFO for RBS in the Netherlands. Currently, he continues to serve as CFO for RBS Netherlands.

Jeroen Kremers - Chief Risk Officer (CRO) & Vice-Chairman

Mr. Kremers is Vice-Chairman of the Managing Board and has been Chief Risk Officer of RBS N.V. since April 2010. He is also Head of Global Country Risk for RBSG Group. Mr. Kremers began his career in 1986 as an Economist for the International Monetary Fund in Washington D.C. In 1989 he became Senior Economist at the Netherlands Ministry of Finance, and subsequently deputy Director for Financial and Economic Policy. He became Director for Financial Markets in 1997 and was appointed deputy Treasurer General. He also was a visiting Professor of Economics at Erasmus University Rotterdam in 1991-2003. In 2003, Mr. Kremers was elected Executive Director of the International Monetary Fund, representing a constituency of 12 European countries. He remained there until 2007, when he moved to ABN AMRO to become Head of Group Public Affairs. He served on its Managing Board in 2009-2010 after joining RBS. He earned a DPhil at Nuffield College Oxford in 1985, following degrees in Quantitative Economics at Bristol University and in Econometrics at Tilburg University. Mr. Kremers is a member of the Senior Advisory Board of Oliver Wyman Financial Services, the Supervisory Board of Maastricht University, and the Supervisory Board of NV Nederlandse Spoorwegen.

Michael Geslak - Chief Administrative Officer (CAO)

Mr. Geslak joined ABN AMRO in New York in 1988 as an accountant and held various positions in Investment Banking financial reporting and control. In 1992 he formed the Market Risk function in New York, and after moving to Chicago in 1993 became Head of Market Risk for North America. In 1995 he became Head of Investment Banking

Operations and Product Control in Chicago, which was later expanded to cover all Investment Banking Operations for North America. In 2000 he was promoted to Chief Administrative Officer for Wholesale Banking in the Americas. During this time he led the integration of businesses acquired from ING Barings into Wholesale Banking within ABN AMRO. Mr. Geslak then moved to London as Global Chief Information Officer for ABN AMRO Wholesale Banking and managed the provision of all technology to the Global Markets and Global Transaction Services businesses. In 2006 he became Head of Services for Global Markets and BU Europe. Mr. Geslak's current roles are Chief Administration Officer for RBS N.V. and he has the additional responsibility of Programme Director of RBS N.V. Integration, running the integration programme for RBS to fully segregate from the Dutch State acquired businesses.

Richard Hemsley - Head of Global Transaction Services (GTS)

Mr. Hemsley joined the RBS Group in 1983 to work for NatWest where he held a wide variety of roles in retail banking, corporate banking and head office functions. In 2000 he became Head of Lending Operations in Group Manufacturing and was appointed to Director, Group Security & Fraud four years later. In 2005 Mr. Hemsley was appointed Managing Director in Manufacturing Operations with key responsibilities for customer service improvement. In 2008 he became Chief Operating Officer of Business Services and his current role is Chief Operating Officer of Global Transaction Banking in RBS Group.

Mr. Hemsley is a Fellow of the Chartered Institute of Bankers in Scotland and has also completed the Advanced Management Programme at Harvard Business School.

Information, induction and professional development

As part of the Code Banken, both the Managing Board and the Supervisory Board participate in a programme of Life Long Learning. The programme consists of a modular approach, addressing matters that are mentioned in the Code Banken, including relevant developments in the financial sector in general and the banking sector in specific, corporate governance in general the duty of care towards clients, integrity, risk management, financial reporting and audits. Subject matter experts are invited, both from within RBSH Group and from outside RBSH Group, to deliver education modules on the above mentioned matters.

Corporate Governance [continued](#)

Corporate Governance

Boards and Committees continued

Performance evaluation

The members of the Managing Board participate in the annual performance management process of RBSG Group.

Managing Board committees

In order to provide effective oversight and leadership, the Managing Board has established four sub-committees, the Risk & Control Committee, the Asset & Liability Management Committee (ALCO), the Disclosure Committee and the Power of Attorney Committee (PoA).

Risk & Control Committee (RCC)

The Risk & Control Committee (RCC) oversees the risk framework within RBSH Group, monitors the actual risk profile and advises the Managing Board on these matters. Its scope is, amongst others, credit, market, operational and regulatory risk within RBSH Group.

Asset & Liability Management Committee (ALCO)

The Managing Board has delegated to the ALCO the responsibility for the management of capital, liquidity, interest rate risk and foreign exchange risk. This includes responsibility for reviewing, approving and allocating balance sheet, capital, liquidity and funding limits.

Disclosure Committee

The Disclosure Committee advises and assists the Managing Board in fulfilling its responsibilities for overseeing the accuracy and timeliness of public disclosures made by RBSH Group. This inter alia includes advising the Managing Board on the disclosure of financial information.

Power of Attorney Committee

The PoA Committee has the authority to appoint holders of a Senior or a Divisional Power of Attorney (in relation to GBM, GTS, Business Services, Global Restructuring Group and NCD) on behalf of RBS N.V.

Code of conduct

RBSH Group's Code of conduct set out the standards of ethical conduct that RBSH Group expects from its employees.

The 'How we do Business' principles are applicable to all our employees, including the Managing Board and other senior financial officers. All employees are accountable for their adherence to the code. RBSH Group has established a whistle blowing policy that provides employees with clear and accessible channels, for reporting suspect violations of the Business Principles and malpractice.

The 'How we do Business' principles address the standards necessary to comprise a code of ethics for the purposes of section 406 of the Sarbanes-Oxley Act.

Sustainability

Sustainability is central to the way RBSH Group is managed. Sustainability is not just about the many responsibilities and obligations that RBSH Group has in a legal sense, but about specific issues that need to be addressed to ensure that RBSH Group is a healthy and respected business operating on a sustainable basis.

There is a clear governance structure for RBSG Group Sustainability that oversees and aligns RBSH Group's approach to the range of social, ethical and environmental issues which confront the business on a daily basis.

RBSG Group continues to do significant work and address challenges across five key themes: Fair banking, Supporting enterprise, Employee engagement, Safety and security, and Citizenship and environmental sustainability.

RBSG Group Sustainability Committee

The RBSG Group Sustainability Committee (GSC) was established in 2009 and is chaired by the RBSG Group Senior Independent Director and meets quarterly. The GSC is responsible for reviewing RBSG Group's overall sustainability strategy, values and policies and aligning RBSG Group's approach to social, environmental and ethical issues.

All key business areas are represented on the GSC and it is attended by the RBSG Group Chairman. Further details of RBSG Group's sustainability policies are available on www.rbs.com/sustainability and in the Annual Sustainability Report.

Relations with shareholders

Rights of shareholders

Any resolution to amend the Articles of Association of RBS Holdings may only be passed by the General Meeting of Shareholders following a proposal by the Managing Board which has been approved by the Supervisory Board. A copy of the proposal containing the literal text of the proposed amendments shall be made available for inspection by the holders of shares of RBS Holdings at the offices of RBS Holdings and at the offices stated in the convocation to the meeting, from the day of convocation to the end of the Meeting. Each Shareholder may obtain a full copy of the proposal free of charge.

Meetings of shareholders and convocation

The general meetings of shareholders shall be held in Amsterdam, or in The Hague, Rotterdam, Utrecht or Haarlemmermeer (Schiphol). Annual General Meeting of Shareholders must be held within six months of the end of each financial year. In addition, general meetings of shareholders shall be held as frequently as deemed necessary by the Managing Board or the Supervisory Board and when required by law or by the Articles of Association. General meetings of shareholders shall be convened by the Managing Board or the Supervisory Board, without prejudice to the provisions of Sections 110, 111 and 112 of Book 2 of the Netherlands Civil Code. Convocation shall take place not later than on the fifteenth day prior to the day of the meeting. Convocation shall state the items to be discussed or alternatively notice shall be given that such items may be inspected at the company's offices. Proposals to amend the Articles of Association or proposals relating to a reduction of the company's capital shall always be included in the actual convocation.

Corporate Governance [continued](#)

Corporate Governance

Employees

As at 31 December 2011, RBSH Group employed over 17.7 thousand employees (full-time equivalent basis) throughout the world. Details of employee related costs are included in Note 3 on the accounts.

Employee learning and development

RBSH Group maintains a strong commitment to creating and providing learning opportunities for all its employees through a variety of personal development, training programmes, learning networks and targeted leadership programmes. Employees are also encouraged to do voluntary work with community partners.

Employee communication

Employee engagement is encouraged through a range of communication channels, at RBSH Group and RBSG Group level. These channels provide access to news and information in a number of ways, including the intranet, magazines, videos, team meetings led by line managers, briefings held by senior managers and regular dialogue with employees and employee representatives.

Employee consultation

Each year, all employees are invited to complete the global employee opinion survey. The survey is confidential and independently managed by Towers Watson. The survey provides a channel for employees to express their views and opinions about RBSG Group on a range of key issues.

The 2011 survey took place in September 2011 and the final response rate was 81% RBSG Group wide.

RBSH Group recognises employee representative organisations such as trade unions and work councils in a number of businesses and countries.

RBSG Group has two European employee forums that provide elected representatives with an opportunity to understand better its European operations. Engagement with its employees and such bodies remains important to RBSG Group.

Diversity and inclusion

RBSH Group recognises that the diversity of its workforce is a significant and necessary asset to the business. During 2011, the RBSG Group executive renewed its commitment to ensuring a working environment that is inclusive to all and one that will enable all employees to develop to their full potential.

RBSG Group has a range of policies and processes that extend through the employee life-cycle including recruitment, flexible working and support for ill-health and disability-related absence. Diversity performance is monitored and reviewed at RBSH Group and RBSG Group level. This commitment extends beyond RBSG Group including support of external charitable networks and forums and as part of the community engagement and supplier relationships. Internally, RBSH Group supports initiatives such as the Women in Business network.

Safety, health and wellbeing

Ensuring the safety, health and wellbeing of employees and customers is core to RBSH Group's business, and a fundamental social responsibility for RBSH Group.

During 2011, RBSH Group continued to focus on compliance, governance and managing risk across all jurisdictions. Enhanced services and supporting communication were implemented to support the health and wellbeing of employees, particularly given the impact of the economic environment.

Pre-employment screening

RBSH Group has a comprehensive pre-employment screening process to guard against possible infiltration and employee-related fraud for all direct and non-direct staff engaged on RBSH Group business.

102

The Dutch Banking Code (Code Banken)

Introduction

The Code Banken was drawn up by the Netherlands Bankers' Association (NVB) in response to the report entitled 'Restoring Trust' ('Naar herstel van vertrouwen'), which was published by the Advisory Committee on the Future of Banks (Adviescommissie Toekomst Banken) on 7 April 2009. The recommendations of the Advisory Committee's report have been used as the basis for this Banking Code. The Code Banken is mandatory for RBSH Group as stated in Book 2 of the Civil Code as from 1 January 2010.

The Code Banken offers specific provisions, but underlying these provisions, its aim is to instil learning in the banking sector following the financial crisis. Drawing lessons and implementing change with the aim to restore trust among all our stakeholders, clients, staff, investors and society at large. RBSG Group, including RBSH Group has undergone and continues to undergo profound change following the crisis and is committed to high standards of corporate governance, business integrity and professionalism in all its activities.

Corporate Governance codes and the global footprint of RBSG Group

RBSH Group is ultimately owned by RBSG Group. When implementing the Code Banken, the Managing Board and Supervisory Board of RBSH Group will take into account the effects of similar codes of conduct implemented in the RBSG Group with the aim to align all businesses with RBSG Group.

Clients First

RBSH Group is aware of the fact that its long term success fully depends on how successful RBSH Group is in servicing its clients. To that extent, RBSH Group has taken additional measures to further embed 'a client led culture' in the organization. Over the past few years certain themes in this area have been fleshed out in detail, resulting in the 'Customer Charter' and the 'Treating Customers Fairly Policy'. The Customer Charter describes 14 'customer commitments' divided into the following four categories:

- - Make banking easy
 - Help when you need us
 - Support the communities in which we work
 - Listen to you

More information about the Customer Charter can be found on the website: www.rbs.com.

The policy towards customers takes into account the 'Treating Customers Fairly Policy' as defined by the UK Financial Services Authority. These outcomes provide an indication of whether customers are genuinely receiving fair treatment. Six outcomes have been defined:

- Customers can be confident that they are dealing with firms where the fair treatment of customers is central to their corporate culture;
- Products and services marketed and sold in the retail market are designed to meet the needs of identified consumer groups and are targeted accordingly;
- Customers are provided with clear information and are kept appropriately informed before, during and after the point of sale;
- Where customers receive advice, the advice is suitable and takes account of their circumstances;

- Customers are provided with products that perform as forms have led them to expect, and the associated service is both of an acceptable standard and as they have been led to expect; and
- Customers do not face unreasonable post-sale barriers imposed by firms to change product, switch provider, submit a claim or make a complaint. The products and services which RBSG Group provides to its customers are designed to meet the needs of the various client groups.

In the Netherlands, RBSH Group primarily serves wholesale customers. The products and services which RBSH Group provides to these customers have been tailored accordingly and the mentioned Treating Customers Fairly Policy is applicable, where appropriate. With respect to the products and services offered to retail investors through intermediaries we use methods including market research to gauge the requirements and opinions of (potential) customers.

Compliance with the Code Banken

RBSH Group considers the Code Banken as an important yardstick for the way banks draw lessons from the crisis. RBSH Group takes account of all relevant remuneration regulatory regimes, including the Code Banken in designing and implementing its remuneration policy as well as RBSH Group's corporate governance structure.

Supervisory Board

The required expertise and experience are well embedded in the Supervisory Board providing for an independent board with a diverse composition. The board consists of executives of RBSG Group with broad banking experience, and external, independent members with extensive legal (corporate governance) and international business experience. A clearly defined process for the engagement and recruitment of a Supervisory Board member has been established. If a vacancy for a new member exists, a new member is sought based on an established supervisory board profile to ensure that the knowledge and expertise obtained when filling the vacancy is fully complementing the composition of the board.

If the position of Chairman of the Supervisory Board became vacant, a separate individual profile would be drawn up based on an established Chairman's profile to ensure alignment with the specific socio-economic and political culture and the social environment of the bank's main markets.

All Supervisory Board members have committed themselves to fulfil their responsibilities as board members to the best of their ability. Their attendance at meetings is recorded. The board furthermore operates according to a set of rules governing the Supervisory Board's principles and best practices. These have been agreed by all board members and are published on the internet site of the bank, www.rbs.nl. The remuneration received as Supervisory Board members is not dependent on RBSH Group's results.

Corporate Governance [continued](#)

Corporate Governance

The Dutch Banking Code continued

Compliance with the Code Banken continued

Since 1 January 2011, one new Supervisory Board member joined the board. A thorough and extensive induction programme introducing RBSH Group was prepared. A programme covering aspects as stated in the Code Banken has been set up to accommodate for life long learning of Supervisory Board members and such programme is assessed on an annual basis. A similar assessment will be performed by an external party at least once every three years.

Managing Board

The composition of the Managing Board of RBSH Group ensures that all business areas and all control and support functions are well represented in the board. The board comprises a Chairman, a Chief Risk Officer (CRO), a Chief Financial Officer (CFO), a Chief Administrative Officer (CAO), a member responsible for Global Banking & Markets (GBM) and a member responsible for Global Transaction Services (GTS). To further clarify the specifics of each role on the board and to ensure adherence to agreements made on procedure and governance, a set of rules governing the Managing Board's principles and best practices has been agreed.

A programme covering aspects as stated in the Code Banken has been set up to accommodate for life long learning of Managing Board members and such programme has been assessed on an annual basis. A similar assessment will be performed by an external party at least once every three years.

The Managing Board will continuously ensure a prudent risk appetite, based on the risk appetite framework approved by the Supervisory Board. The Risk appetite framework shall be approved by the Supervisory Board at least once a year. Any material changes in the interim shall also require the Supervisory Board's approval. The Managing Board takes the interests of all stakeholders (e.g. employees, clients, shareholders) into account in their decision making. The Managing Board recognises that duty of care for clients is an important component in doing business.

In line with the requirement of the Code Banken, Managing Board members sign a moral and ethical declaration. Each Board member of RBS N.V. has signed such declaration.

The principles in the moral and ethical declaration are incorporated into the RBSG Group's code of conduct which is issued to all new employees joining RBSH Group.

Risk Management

The Managing Board has arranged Risk Management in an adequate manner in order to ensure the Managing Board is aware in good time of any material risks run by the bank and to enable the Managing Board to manage these risks properly.

The Managing Board, through its sub committees, the Risk & Control Committee (RCC) and the Asset & Liability Management Committee (ALCO) takes any decision that is of material significance to the risk profile, the capital position or the liquidity impact. As from legal separation on 1 April 2010, the Supervisory Board decided to create a combined Risk and Audit Committee, ensuring that the risk component in the bank is thoroughly reviewed and assessed on a regular basis.

The Risk & Audit Committee ensures by means of a regular high level assessment whether capital allocation and liquidity impact are in line with the approved risk appetite. The Risk & Audit Committee shall, following such assessment, advise the Supervisory Board on the matter. An assessment at strategic level by the Supervisory Board on whether the commercial activities are in line with agreed risk appetite takes place regularly to enable the board to form a sound opinion.

The members of the Supervisory Board, who are part of the Risk & Audit Committee, have been selected based on specific requirements as regards to competency and experience. The members of the Committee have a broad knowledge of the financial aspects of risk management and are able to make a thorough assessment of risks. Similarly, they have appropriate knowledge of financial reporting and internal control systems and audits.

Audit

RBSH Group has a New Product Approval Process in place to ensure that all products are launched only after careful consideration of the risks and any other relevant factor applicable to such product. Group Internal Audit checks RBSH Group New Product Approval Process on design and effectiveness at least once per annum and reports its findings to both the Managing Board and Risk & Audit Committee.

To ensure the function's independence, the Head of Group Internal Audit reports into the Chairman of the Managing Board and the Chairman of the Risk & Audit Committee. Group Internal Audit also reports its opinion and findings on the quality of the control framework, the system of governance and the risk management of the bank to the Risk & Audit Committee on a quarterly basis. Group Internal Audit furthermore presents their annual audit plan to the Risk & Audit committee. The Managing Board shall ensure that a systemic audit is conducted of the risks managed in relation to the business activities of the bank.

The external auditors are invited to share their findings and opinion concerning the quality and effectiveness of the system of governance, risk management and the banks' control procedures with the Risk & Audit committee on a quarterly basis. The external auditors present the annual audit plan to the Risk & Audit committee and both Group Internal Audit and the external auditors take part in a tri-partite meeting with DNB to share their audit plans, analysis and findings at least once per annum. There is a clear escalation process by which the external auditors can raise, with management, any significant concerns.

Corporate Governance [continued](#)

Corporate Governance

The Dutch Banking Code continued

Compliance with the Code Banken continued

Remuneration Policy

The remuneration policy for RBSG Group in 2011, which is also applicable to RBSH Group supports the RBSG Group's business strategy and is designed to:

- attract, retain, motivate and reward high calibre employees to deliver superior long-term business performance; and
- ensure that RBSH Group's metrics, reward structures and governance processes as a whole provide coverage of the key risks in an appropriate way.

The Supervisory Board is responsible for the implementation and evaluation of the remuneration policy adopted.

RBSG Group has had claw back provisions in place since 2009. This allows the Remuneration Committee to retrospectively limit any compensation at the time of vesting if it considers that the performance factors on which reward decisions were based have later turned out not to reflect the corresponding performance in the longer term.

The intention is to allow RBSG Group to adjust historic remuneration for unforeseen issues arising during the deferral period, particularly those that do not easily lend themselves to quantitative measurement.

Summary Dutch Banking Code

All of the principles in the Dutch Banking Code are adhered to by RBSH Group, except for one item. This is the requirement (under 6.3.4) for shares granted to Managing Board members without financial consideration to be retained for at least five years or to the end of employment, whichever is sooner. Shares are released after a period of three years, which follows the RBSG Remuneration policy.

Under the RBSG Group-wide deferral arrangements a significant proportion of annual incentive awards for the more senior employees are deferred over a three year period. In line with the requirements of the FSA remuneration Code, a proportion of deferred remuneration is subject to an appropriate retention period.

RBSH Group is part of RBSG Group and therefore adheres to the global RBSG Group remuneration framework and policy which is compliant with the UK Financial Services Authority (FSA) remuneration code and the Capital Requirements Directive III (CRD III) as implemented in both the United Kingdom and the Netherlands.

RBSG Group also provides long-term incentives which are designed to link reward with the long-term success of RBSH Group and recognise the responsibility participants have in driving its future success and delivering value for shareholders. Long-term incentive awards are structured as performance-vesting shares. For the most senior roles, vesting will be based partly on divisional or functional performance and partly on performance across the Group

For details of remuneration of the Managing Board and Supervisory Board see note 34 to the Financial Statements.

Note from the Supervisory Board on the Dutch Banking Code

The Supervisory Board works alongside RBSG Group Remuneration Committee to ensure the implementation of a restrained and long-term remuneration policy which is aligned with the organisation's strategy and risk appetite whilst also catering for an evermore globalizing industry. The Supervisory Board extensively discussed remuneration at a number of its meetings during 2011, highlighting the focus that this topic continues to receive in the organisation.

Corporate Governance [continued](#)

Corporate Governance

Management's report on internal control over financial reporting

Internal Control

The Managing Board is responsible for RBSH Group's system of internal control that is designed to facilitate effective and efficient operations and to ensure the quality of internal and external reporting and compliance with applicable laws and regulations. In devising internal controls, RBSH Group has regard to the nature and extent of the risk, the likelihood of it crystallising and the cost of controls. A system of internal control is designed to manage, but not eliminate, the risk of failure to achieve business objectives and can only provide reasonable, and not absolute, assurance against the risk of material misstatement, fraud or losses.

Management's Report on Internal Control over Financial Reporting

The Managing Board is responsible for establishing and maintaining adequate internal control over financial reporting for RBSH Group.

RBSH Group's internal control over financial reporting is a component of an overall system of internal control. RBSH Group's internal control over financial reporting is a process designed to provide reasonable assurance regarding the preparation, reliability and fair presentation of financial statements for external purposes in accordance with International Financial Reporting Standards ('IFRS') as adopted by the EU-members and issued by the International Accounting Standards Board ('IASB') and it includes:

- Policies and procedures that relate to the maintenance of records that, in reasonable detail, fairly and accurately reflect the transactions and disposition of assets.
- Controls providing reasonable assurance that transactions are recorded as necessary to permit the preparation of financial statements in accordance with IFRS, and that receipts and expenditures are being made only as authorised by management.
- Controls providing reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. In addition, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with policies or procedures may deteriorate.

Management assessed the effectiveness of RBSH Group's internal control over financial reporting as of 31 December 2011 based on the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in 'Internal Control – Integrated Framework'.

Based on its assessment, management believes that, as of 31 December 2011, RBSH Group's internal control over financial reporting is effective.

Changes in Internal Controls

There was no change in RBSH Group's internal control over financial reporting that occurred during the period covered by this report that has materially affected, or is reasonably likely to materially affect, RBSH Group's internal control over financial reporting.

Independent verification

External auditors are not required to provide an opinion on the effectiveness of internal control over financial reporting for RBSH Group. This is because the company qualifies as a 'non-accelerated filer' as defined by the US Securities & Exchange Commission. Following a change to US legislation during 2010, such companies are permanently exempted from an independent verification by the external auditor.

Accounting policies

Financial Statements

1. Corporate information

RBS Holdings N.V. (the Company) is a public limited liability company, incorporated under Dutch law on 30 May 1990 and registered at Gustav Mahlerlaan 350, 1082 ME Amsterdam, the Netherlands. RBSH Group is an international banking group offering a wide range of banking products and financial services on a global basis.

In 2007, RFS Holdings B.V., which was jointly owned by RBSG Group, the Dutch State (successor to Fortis) and Santander, together (the Consortium Members), completed the acquisition of RBS Holdings N.V.

As at 31 December 2010 RBSG Group's legal ownership of RFS Holdings B.V. is 97.7%. RBSG Group is incorporated in the UK and registered at 36 St. Andrew Square, Edinburgh, Scotland. RBSG Group is the ultimate parent company of RBS Holdings N.V. The consolidated financial statements of RBS Holdings N.V. are included in the consolidated financial statements of RBSG Group.

As debt securities issued by RBSH Group are listed on the New York Stock Exchange, the rules of the Securities and Exchange Commission (SEC) are applicable. This annual report complies with the SEC rules for foreign registrants and a cross reference table to the sections of the Form 20-F is included on pages 2 to 3 of this report.

The consolidated financial statements of RBSH Group for the year ended 31 December 2011 incorporate financial information of RBS Holdings, its controlled entities and interests in associates and joint ventures. The consolidated financial statements were signed and authorised for issue by the Managing Board on 22 March 2012 and Supervisory Board on 22 March 2012. The right to request an amendment of the financial statements is embedded in the Netherlands Civil Code. Interested parties have the right to ask the Enterprise Chamber of the Amsterdam Court of Appeal for a revision of the financial statements.

2. Presentation of accounts

The Managing Board, having made such enquiries as they considered appropriate, including a review of RBSH Group's forecasts, projections and other relevant evidence regarding the continuing availability of sufficient resources from the RBSG Group, have prepared the financial statements on a going concern basis. They considered the preliminary announcement of the annual results of The Royal Bank of Scotland Group plc for the year ended 31 December 2011, approved on 22 February 2012, which were prepared on a going concern basis.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board (IASB) and interpretations as issued by the IFRS Interpretations Committee (IFRIC) of the IASB and IFRS as adopted by the European Union (EU) (together IFRS). The EU has not adopted the complete text of IAS 39 'Financial Instruments: Recognition and Measurement', it has relaxed some of the standard's hedging requirements. RBSH Group has not taken advantage of this relaxation and has adopted IAS 39 as issued by the IASB: RBSH Group's financial statements are prepared in accordance with IFRS as issued by the IASB.

The accounts are prepared on the historical cost basis except that the following assets and liabilities are stated at their fair value: derivative financial instruments, held-for-trading financial assets and financial liabilities, financial assets and financial liabilities that are designated as at fair value through profit or loss, available-for-sale financial assets and investment property. Recognised financial assets and financial liabilities in fair value hedges are adjusted for changes in fair value in respect of the risk that is hedged. The company's financial statements and RBSH Group's consolidated financial statements are presented in euro which is the functional currency of the company.

There are a number of changes to IFRS that were effective from 1 January 2011. They have had no material effect on the financial statements of RBSH Group:

IFRIC 19 'Extinguishing Financial Liabilities with Equity Instruments' provides guidance on the accounting treatment when financial liabilities are settled with equity instruments.

Amendment to IAS 32 'Financial Instruments: Presentation' - 'Classification of Rights Issues' amends IAS 32 so that rights, options or warrants that are fixed for fixed (i.e. a fixed amount of cash for a fixed number of instruments) offered pro rata to all owners of a class of instrument are classified as equity instruments regardless of the currency denomination of the exercise price.

Amendment to IFRIC 14 'IAS 19 'The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction' - 'Prepayments of a Minimum Funding Requirement' applies in the limited circumstances where an entity is subject to minimum funding requirements and makes an early payment of contributions to cover those requirements. The amendment permits the benefit of such an early payment to be treated as an asset.

May 2010 'Annual Improvements to IFRS' makes non-urgent but necessary amendments to standards, primarily to remove inconsistencies and to clarify wording.

Revised IAS 24 'Related Party Disclosures' simplifies the disclosure requirements for government-related entities and clarifies the definition of a related party.

3. Basis of consolidation

The consolidated financial statements incorporate the financial statements of the company and entities (including certain special purpose entities) that are controlled by RBSH Group. Control exists where RBSH Group has the power to govern the financial and operating policies of the entity; generally conferred by holding a majority of voting rights. On acquisition of a subsidiary, its identifiable assets, liabilities and contingent liabilities are included in the consolidated accounts at their fair value. A subsidiary acquired is included in the consolidated financial statements from the date it is controlled by RBSH Group up until the date RBSH Group ceases to control it through a sale or a significant change in circumstances. Changes in interest that do not result in a loss of control are accounted for as equity transactions. All intra-group balances, transactions, income and expenses are eliminated on consolidation. The consolidated accounts are prepared using uniform accounting policies.

4. Revenue recognition

Interest income on financial assets that are classified as loans and receivables, available-for-sale or held-to-maturity and interest expense on financial liabilities other than those measured at fair value are determined using the effective interest method. The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable, that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Financial assets and financial liabilities held for trading or designated as at fair value through profit or loss are recorded at fair value. Changes in fair value are recognised in profit or loss.

Commitment and utilisation fees are determined as a percentage of the outstanding facility. If it is unlikely that a specific lending arrangement will be entered into, such fees are taken to profit or loss over the life of the facility otherwise they are deferred and included in the effective interest rate on the advance.

Fees in respect of services are recognised as the right to consideration accrues through the provision of the service to the customer. The arrangements are generally contractual and the cost of providing the service is incurred as the service is rendered. The price is usually fixed and always determinable. The application of this policy to a significant fee type is outlined below.

Investment management fees - fees charged for managing investments are recognised as revenue as the services are provided. Incremental costs that are directly attributable to securing an investment management contract are deferred and charged as expense as the related revenue is recognised.

5. Assets held for sale and discontinued operations

A non-current asset (or disposal group) is classified as held for sale if RBSH Group will recover the carrying amount principally through a sale transaction rather than through continuing use. A non-current asset (or disposal group) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. If the asset (or disposal group) is acquired as part of a business combination, it is initially measured at fair value less costs to sell. Assets and liabilities of disposal groups classified as held for sale and non-current assets classified as held for sale are shown separately on the face of the balance sheet.

The results of discontinued operations – comprising the post-tax profit or loss of discontinued operations and the post-tax gain or loss recognised either on measurement to fair value less costs to sell or on the disposal of the discontinued operation - are shown as a single amount on the face of the income statement. A discontinued operation is a cash generating unit or a group of cash-generating units that either has been disposed of, or is classified as held for sale, and (a) represents a separate major line of business or geographical area of operations, (b) is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations or (c) is a subsidiary acquired exclusively with a view to resale.

6. Pensions and other post-retirement benefits

RBSH Group provides post-retirement benefits in the form of pensions and healthcare plans to eligible employees. Separate pension funds or third parties administer most of these plans. The plans include both defined contribution

plans and defined benefit plans.

In the case of defined contribution plans, contributions are charged directly to the income statement in the year to which they relate.

The net obligations under defined benefit plans are regarded as RBSH Group's own commitments regardless of whether these are administered by a pension fund or in some other manner. The net obligation of each plan is determined as the difference between the benefit obligations and the plan assets. Defined benefit plan pension commitments are calculated in accordance with the projected unit credit method of actuarial cost allocation. Under this method, the present value of pension commitments is determined on the basis of the number of active years of service up to the balance sheet date and the estimated employee salary at the time of the expected retirement date, and is discounted using the market rate of interest on high-quality corporate bonds. The plan assets are measured at fair value.

Pension costs for the year are established at the beginning of the year based on the expected service and interest costs and the expected return on the plan assets, plus the impact of any current period curtailments or plan changes. Differences between the expected and the actual return on plan assets, as well as actuarial gains and losses, are only recognised as income or expense when the net cumulative unrecognised actuarial gains and losses at the end of the previous reporting year exceed 10% of the greater of the commitments under the plan and the fair value of the related plan assets. The part in excess of 10% is recognised in income over the expected remaining years of service of the employees participating in the plans. Differences between the pension costs determined in this way and the contributions payable are accounted for as provisions or prepayments. Commitments relating to early retirement of employees are treated as pension commitments.

When the benefits of a plan are improved, the portion of the increased benefit relating to past service by employees is recognised as an expense in the income statement on a straight-line basis over the average period until the benefits become vested. To the extent that the benefits vest immediately, the past service cost is recognised immediately in the income statement.

RBSH Group's net obligation with respect to long-term service benefits and post-retirement healthcare is the amount of future benefit that employees have earned in return for their service in current and prior periods. The obligation is calculated using the projected unit credit method. It is then discounted to its present value and the fair value of any related assets is deducted.

7. Intangible assets and goodwill

Intangible assets acquired by RBSH Group are stated at cost less accumulated amortisation and impairment losses. Amortisation is charged to profit or loss over the assets' estimated economic lives using methods that best reflect the pattern of economic benefits and included in Depreciation and amortisation. The estimated useful economic lives are as follows:

Core deposit intangibles	6 to 10 years
Other acquired intangibles	5 to 10 years
Computer software	3 to 5 years

Expenditure on internally generated goodwill and brands is written-off as incurred. Direct costs relating to the development of internal-use computer software are capitalised once technical feasibility and economic viability have been established. These costs include payroll, the costs of materials and services, and directly attributable overheads. Capitalisation of costs ceases when the software is capable of operating as intended. During and after development, accumulated costs are reviewed for impairment against the benefits that the software is expected to generate. Costs incurred prior to the establishment of technical feasibility and economic viability are expensed as incurred as are all training costs and general overheads. The costs of licences to use computer software that are expected to generate economic benefits beyond one year are also capitalised.

Intangible assets include goodwill arising on the acquisition of subsidiaries and joint ventures. Goodwill on the acquisition of a subsidiary is the excess of the fair value of the consideration transferred, the fair value of any existing interest in the subsidiary and the amount of any non-controlling interest measured either at fair value or at its share of the subsidiary's net assets over RBSH Group's interest in the net fair value of the subsidiary's identifiable assets, liabilities and contingent liabilities. Goodwill arises on the acquisition of a joint venture when the cost of investment exceeds RBSH Group's share of the net fair value of the joint venture's identifiable assets and liabilities. Goodwill is measured at initial cost less any subsequent impairment losses. Goodwill arising on the acquisition of associates is included within their carrying amounts. The gain or loss on the disposal of a subsidiary, associate or joint venture includes the carrying value of any related goodwill.

8. Property, plant and equipment

Items of property, plant and equipment (except investment property – see Accounting policy 10) are stated at cost less accumulated depreciation and impairment losses. Where an item of property, plant and equipment comprises major components having different useful lives, they are accounted for separately.

Depreciation is charged to profit or loss on a straight-line basis so as to write-off the depreciable amount of property, plant and equipment (including assets owned and let on operating leases) over their estimated useful lives.

The depreciable amount is the cost of an asset less its residual value. Land is not depreciated. Estimated useful lives are as follows:

Freehold and long leasehold buildings	50 years
Short leaseholds	unexpired period of the lease
Property adaptation costs	10 to 15 years
Computer equipment	up to 5 years
Other equipment	4 to 15 years

The residual value and useful life of property, plant and equipment are reviewed at each balance sheet date and updated for any changes to previous estimates.

9. Impairment of intangible assets and property, plant and equipment

At each reporting date, RBSH Group assesses whether there is any indication that its intangible assets, or property, plant and equipment are impaired. If any such indication exists, RBSH Group estimates the recoverable amount of the asset and the impairment loss if any. Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that it might be impaired.

If an asset does not generate cash flows that are independent from those of other assets or groups of assets, the recoverable amount is determined for the cash-generating unit to which the asset belongs. A cash-generating unit is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. For the purposes of impairment testing, goodwill acquired in a business combination is allocated to each of RBSH Group's cash-generating units or groups of cash-generating units expected to benefit from the combination. The recoverable amount of an asset or cash-generating unit is the higher of its fair value less cost to sell and its value in use. Value in use is the present value of future cash flows from the asset or cash-generating unit discounted at a rate that reflects market interest rates adjusted for risks specific to the asset or cash-generating unit that have not been taken into account in estimating future cash flows. If the recoverable amount of an intangible or tangible asset is less than its carrying value, an impairment loss is recognised immediately in profit or loss and the carrying value of the asset reduced by the amount of the loss. A reversal of an impairment loss on intangible assets (excluding goodwill) or property, plant and equipment is recognised as it arises provided the increased carrying value is not greater than it would have been had no impairment loss been recognised. Impairment losses on goodwill are not reversed.

10. Investment property

Investment property comprises freehold and leasehold properties that are held to earn rentals or for capital appreciation or both. Investment property is not depreciated but is stated at fair value based on valuations by independent registered valuers. Fair value is based on current prices for similar properties in the same location and condition. Any gain or loss arising from a change in fair value is recognised in profit or loss. Rental income from investment property is recognised on a straight-line basis over the term of the lease in 'Other operating income'. Lease incentives granted are recognised as an integral part of the total rental income.

11. Foreign currencies

RBSH Group's consolidated financial statements are presented in the euro which is the functional currency of the Company.

Group entities record transactions in foreign currencies in the currency of the primary economic environment in which they operate (their functional currency) at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the relevant functional currency at the foreign exchange rates ruling at the balance sheet date. Foreign exchange differences arising on the settlement of foreign currency transactions and from the translation of monetary assets and liabilities are reported in income from trading activities except for differences arising on cash flow hedges and hedges of net investments in foreign operations (see Accounting policy 24).

Non-monetary items denominated in foreign currencies that are stated at fair value are translated into the relevant functional currency at the foreign exchange rates ruling at the dates the values are determined. Translation differences arising on non-monetary items measured at fair value are recognised in profit or loss except for differences arising on available-for-sale non-monetary financial assets, for example equity shares, which are recognised in other comprehensive income unless the asset is the hedged item in a fair value hedge.

Assets and liabilities of foreign operations, including goodwill and fair value adjustments arising on acquisition, are translated into euro at foreign exchange rates ruling at the balance sheet date. Income and expenses of foreign operations are translated into euro at average exchange rates unless these do not approximate to the foreign exchange rates ruling at the dates of the transactions. Foreign exchange differences arising on the translation of a foreign operation are recognised in other comprehensive income. The amount accumulated in equity is reclassified from equity to profit or loss on disposal or partial disposal of a foreign operation.

12. Leases

As lessor

Contracts with customers to lease assets are classified as finance leases if they transfer substantially all the risks and rewards of ownership of the asset to the customer; all other contracts with customers to lease assets are classified as operating leases.

Finance lease receivables are included in the balance sheet, within Loans and advances to banks and Loans and advances to customers, at the amount of the net investment in the lease being the minimum lease payments and any unguaranteed residual value discounted at the interest rate implicit in the lease. Finance lease income is allocated to accounting periods so as to give a constant periodic rate of return before tax on the net investment and included in Interest receivable. Unguaranteed residual values are subject to regular review; if there is a reduction in their value, income allocation is revised and any reduction in respect of amounts accrued is recognised immediately.

Rental income from operating leases is recognised in income on a straight-line basis over the lease term unless another systematic basis better represents the time pattern of the asset's use. Operating lease assets are included within Property, plant and equipment and depreciated over their useful lives (see Accounting policy 8). Operating lease rentals receivable are included in Other operating income.

As lessee

RBSH Group's contracts to lease assets are principally operating leases. Operating lease rental expense is included in Premises and equipment costs and recognised as an expense on a straight-line basis over the lease term unless another

systematic basis better represents the benefit to RBSH Group.

13. Provisions

RBSH Group recognises a provision for a present obligation resulting from a past event when it is more likely than not that it will be required to transfer economic benefits to settle the obligation and the amount of the obligation can be estimated reliably.

Provision is made for restructuring costs, including the costs of redundancy, when RBSH Group has a constructive obligation to restructure. An obligation exists when RBSH Group has a detailed formal plan for the restructuring and has raised a valid expectation in those affected by starting to implement the plan or announcing its main features.

If RBSH Group has a contract that is onerous, it recognises the present obligation under the contract as a provision. An onerous contract is one where the unavoidable costs of meeting RBSH Group's contractual obligations exceed the expected economic benefits. When RBSH Group vacates a leasehold property, a provision is recognised for the costs under the lease less any expected economic benefits (such as rental income).

Contingent liabilities are possible obligations arising from past events whose existence will be confirmed only by uncertain future events or present obligations arising from past events that are not recognised because either an outflow of economic benefits is not probable or the amount of the obligation cannot be reliably measured. Contingent liabilities are not recognised but information about them is disclosed unless the possibility of any outflow of economic benefits in settlement is remote.

14. Tax

Income tax expense or income, comprising current tax and deferred tax, is recorded in the income statement except income tax on items recognised outside profit or loss which is credited or charged to other comprehensive income or to equity as appropriate.

Current tax is income tax payable or recoverable in respect of the taxable profit or loss for the year arising in income or in equity. Provision is made for current tax at rates enacted or substantively enacted at the balance sheet date.

Deferred tax is the tax expected to be payable or recoverable in respect of temporary differences between the carrying amount of an asset or liability for accounting purposes and its carrying amount for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that they will be recovered.

Deferred tax is not recognised on temporary differences that arise from initial recognition of an asset or a liability in a transaction (other than a business combination) that at the time of the transaction affects neither accounting nor taxable profit or loss. Deferred tax is calculated using tax rates expected to apply in the periods when the assets will be realised or the liabilities settled, based on tax rates and laws enacted, or substantively enacted, at the balance sheet date.

Deferred tax assets and liabilities are offset where RBSH Group has a legally enforceable right to offset and where they relate to income taxes levied by the same taxation authority either on an individual RBSH Group company or on RBSH Group companies in the same tax group that intend, in future periods, to settle current tax liabilities and assets on a net basis or on a gross basis simultaneously.

15. Financial assets

On initial recognition, financial assets are classified into held-to-maturity investments; held-for-trading; designated as at fair value through profit or loss; loans and receivables; or available-for-sale financial assets. Regular way purchases of financial assets classified as loans and receivables are recognised on settlement date; all other regular way transactions in financial assets are recognised on trade date.

Held-to-maturity investments - a financial asset may be classified as a held-to-maturity investment only if it has fixed or determinable payments, a fixed maturity and RBSH Group has the positive intention and ability to hold to maturity. Held-to-maturity investments are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Held-for-trading - a financial asset is classified as held-for-trading if it is acquired principally for sale in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial assets are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses on held-for-trading financial assets are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial assets may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both, that RBSH Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract.

Financial assets that RBSH Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial assets that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

Loans and receivables - non-derivative financial assets with fixed or determinable repayments that are not quoted in an active market are classified as loans and receivables, except those that are classified as available-for-sale or as held-for-trading, or designated as at fair value through profit or loss. Loans and receivables are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Available-for-sale financial assets - financial assets that are not classified as held-to-maturity; held-for-trading; designated as at fair value through profit or loss; or loans and receivables are classified as available-for-sale. Financial assets can be designated as available-for-sale on initial recognition. Available-for-sale financial assets are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at fair value. Unquoted equity investments whose fair value cannot be measured reliably are carried at cost and classified as available-for-sale financial assets. Impairment losses and exchange differences resulting from retranslating the amortised cost of foreign currency monetary available-for-sale financial assets are recognised in profit or loss together with interest calculated using the effective interest method (see Accounting policy 4), as are gains and losses attributable to the hedged risk on available-for-sale financial assets that are hedged items in fair value hedges (see Accounting policy 24). Other changes in the fair value of available-for-sale financial assets and any related tax are reported in other comprehensive income until disposal, when the cumulative gain or loss is reclassified from equity to profit or loss.

Reclassifications - held-for-trading and available-for-sale financial assets that meet the definition of loans and receivables (non-derivative financial assets with fixed or determinable payments that are not quoted in an active market) may be reclassified to loans and receivables if RBSH Group has the intention and ability to hold the financial asset for the foreseeable future or until maturity. RBSH Group typically regards the foreseeable future as twelve months from the date of reclassification. Additionally, held-for-trading financial assets that do not meet the definition of loans and receivables may, in rare circumstances, be transferred to available-for-sale financial assets or to held-to-maturity investments. Reclassifications are made at fair value. This fair value becomes the asset's new cost or amortised cost as appropriate. Gains and losses recognised up to the date of reclassification are not reversed.

Fair value for a net open position in a financial asset that is quoted in an active market is the current bid price times the number of units of the instrument held. Fair values for financial assets not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial assets.

16. Impairment of financial assets

RBSH Group assesses at each balance sheet date whether there is any objective evidence that a financial asset or group of financial assets classified as held-to-maturity, available-for-sale or loans and receivables is impaired. A financial asset or portfolio of financial assets is impaired and an impairment loss incurred if there is objective evidence that an event or events since initial recognition of the asset have adversely affected the amount or timing of future cash flows from the asset.

Financial assets carried at amortised cost - if there is objective evidence that an impairment loss on a financial asset or group of financial assets classified as loans and receivables or as held-to-maturity investments has been incurred, RBSH Group measures the amount of the loss as the difference between the carrying amount of the asset or group of assets and the present value of estimated future cash flows from the asset or group of assets discounted at the effective interest rate of the instrument at initial recognition.

For collateralised loans and receivables, estimated future cash flows include cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable.

Where, in the course of the orderly realisation of a loan, it is exchanged for equity shares or property, the exchange is accounted for as the sale of the loan and the acquisition of equity securities or investment property. Where RBSH Group's interest in equity shares following the exchange is such that RBSH Group controls an entity, that entity is consolidated.

Impairment losses are assessed individually for financial assets that are individually significant and individually or collectively for assets that are not individually significant. In making collective assessment of impairment, financial assets are grouped into portfolios on the basis of similar risk characteristics. Future cash flows from these portfolios are estimated on the basis of the contractual cash flows and historical loss experience for assets with similar credit risk characteristics. Historical loss experience is adjusted, on the basis of observable data, to reflect current conditions not affecting the period of historical experience.

Impairment losses are recognised in profit or loss and the carrying amount of the financial asset or group of financial assets reduced by establishing an allowance for impairment losses. If, in a subsequent period, the amount of the impairment loss reduces and the reduction can be ascribed to an event after the impairment was recognised, the previously recognised loss is reversed by adjusting the allowance. Once an impairment loss has been recognised on a financial asset or group of financial assets, interest income is recognised on the carrying amount using the rate of interest at which estimated future cash flows were discounted in measuring impairment.

Impaired loans and receivables are written off, i.e. the impairment provision is applied in writing down the loan's carrying value partially or in full, when RBSH Group concludes that there is no longer any realistic prospect of recovery of part or all of the loan. For portfolios that are collectively assessed for impairment, the timing of write-off principally reflects historic recovery experience for each portfolio. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs will be prompted by bankruptcy, insolvency, restructuring and similar events. Most debt is written off within five years of the recognition of the initial impairment. It is not RBSG Group's usual practice to write-off all or part of the asset at the time an impairment loss is recognised; it may however, take place in rare circumstances. Amounts recovered after a loan has been written off are credited to the loan impairment charge for the period in which they are received.

Financial assets carried at fair value - when a decline in the fair value of a financial asset classified as available-for-sale has been recognised directly in other comprehensive income and there is objective evidence that it is impaired, the cumulative loss is reclassified from equity to profit or loss. The loss is measured as the difference between the amortised cost of the financial asset and its current fair value. Impairment losses on available-for-sale equity instruments are not reversed through profit or loss, but those on available-for-sale debt instruments are reversed, if there is an increase in fair value that is objectively related to a subsequent event.

17. Financial liabilities

On initial recognition, financial liabilities are classified into held-for-trading; designated as at fair value through profit or loss; or amortised cost. Issues of financial liabilities measured at amortised cost are recognised on settlement date; all other regular way transactions in financial liabilities are recognised on trade date.

Held for trading - a financial liability is classified as held-for-trading if it is incurred principally for repurchase in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial liabilities are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial liabilities may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both that RBSH Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract.

Financial liabilities that RBSH Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial liabilities that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

The principal category of financial liabilities designated as at fair value through profit or loss is structured liabilities issued by RBSH Group: designation significantly reduces the measurement inconsistency between these liabilities and the related derivatives carried at fair value.

Amortised cost - all other financial liabilities are measured at amortised cost using the effective interest method (see Accounting policy 4).

Fair value for a net open position in a financial liability that is quoted in an active market is the current offer price times the number of units of the instrument issued. Fair values for financial liabilities not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial liabilities.

18. Financial guarantee contracts

Under a financial guarantee contract, RBSH Group, in return for a fee, undertakes to meet a customer's obligations under the terms of a debt instrument if the customer fails to do so. A financial guarantee is recognised as a liability; initially at fair value and, if not designated as at fair value through profit or loss, subsequently at the higher of its initial value less cumulative amortisation and any provision under the contract measured in accordance with Accounting policy 13. Amortisation is calculated so as to recognise fees receivable in profit or loss over the period of the guarantee.

19. Loan commitments

Provision is made for loan commitments, other than those classified as held-for-trading, if it is probable that the facility will be drawn and the resulting loan will be recognised at a value less than the cash advanced. Syndicated loan commitments in excess of the level of lending under the commitment approved for retention by RBSH Group are classified as held-for-trading and measured at fair value.

20. Derecognition

A financial asset is derecognised when the contractual right to receive cash flows from the asset has expired or when it has been transferred and the transfer qualifies for derecognition. A transfer requires that RBSH Group either (a) transfers the contractual rights to receive the asset's cash flows; or (b) retains the right to the asset's cash flows but assumes a contractual obligation to pay those cash flows to a third party. After a transfer, RBSH Group assesses the extent to which it has retained the risks and rewards of ownership of the transferred asset. The asset remains on the balance sheet if substantially all the risks and rewards have been retained. It is derecognised if substantially all the risks and rewards have been transferred. If substantially all the risks and rewards have been neither retained nor transferred, RBSH Group assesses whether or not it has retained control of the asset. If it has not retained control, the asset is derecognised. Where RBSH Group has retained control of the asset, it continues to recognise the asset to the extent of its continuing involvement.

A financial liability is removed from the balance sheet when the obligation is discharged, or cancelled, or expires. On the redemption or settlement of debt securities (including subordinated liabilities) issued by RBSH Group, RBSH Group derecognises the debt instrument and records a gain or loss being the difference between the debt's carrying amount and the cost of redemption or settlement. The same treatment applies where the debt is exchanged for a new debt issue that has terms substantially different from those of the existing debt. The assessment of whether the terms of the new debt instrument are substantially different takes into account qualitative and quantitative characteristics including a comparison of the present value of the cash flows under the new terms with present value of the remaining cash flows of the original debt issue discounted at the effective interest rate of the original debt issue.

21. Sale and repurchase transactions

Securities subject to a sale and repurchase agreement under which substantially all the risks and rewards of ownership are retained by RBSH Group continue to be shown on the balance sheet and the sale proceeds recorded as a financial liability. Securities acquired in a reverse sale and repurchase transaction under which RBSH Group is not exposed to substantially all the risks and rewards of ownership are not recognised on the balance sheet and the consideration paid is recorded as a financial asset.

Securities borrowing and lending transactions are usually secured by cash or securities advanced by the borrower. Borrowed securities are not recognised on the balance sheet or lent securities derecognised. Cash collateral given or received is treated as a loan or deposit; collateral in the form of securities is not recognised. However, where securities borrowed are transferred to third parties, a liability for the obligation to return the securities to the stock lending

counterparty is recorded.

22. Netting

Financial assets and financial liabilities are offset and the net amount presented in the balance sheet when, and only when, RBSH Group currently has a legally enforceable right to set off the recognised amounts and it intends either to settle on a net basis or to realise the asset and settle the liability simultaneously. RBSH Group is party to a number of arrangements, including master netting agreements, that give it the right to offset financial assets and financial liabilities but where it does not intend to settle the amounts net or simultaneously and therefore the assets and liabilities concerned are presented gross.

23. Capital instruments

RBSH Group classifies a financial instrument that it issues as a liability if it is a contractual obligation to deliver cash or another financial asset, or to exchange financial assets or financial liabilities on potentially unfavourable terms and as equity if it evidences a residual interest in the assets of RBSH Group after the deduction of liabilities. The components of a compound financial instrument issued by RBSH Group are classified and accounted for separately as financial assets, financial liabilities or equity as appropriate.

Incremental costs that are directly attributable to an equity transaction are deducted from equity net of any related tax.

The consideration for any ordinary shares of the company purchased by RBSH Group (treasury shares) is deducted from equity. On the cancellation of treasury shares their nominal value is removed from equity and any excess of consideration over nominal value is added to shareholders' equity. On the sale or reissue of treasury shares the consideration received is credited to equity, net of any directly attributable incremental costs and related tax.

24. Derivatives and hedging

Derivative financial instruments are initially recognised, and subsequently measured, at fair value. Derivative fair values are determined from quoted prices in active markets where available.

Where there is no active market for an instrument, fair value is derived from prices for the derivative's components using appropriate pricing or valuation models.

A derivative embedded in a contract is accounted for as a stand-alone derivative if its economic characteristics are not closely related to the economic characteristics of the host contract; unless the entire contract is measured at fair value with changes in fair value recognised in profit or loss.

Gains and losses arising from changes in the fair value of derivatives that are not the hedging instrument in a qualifying hedge are recognised as they arise in profit or loss. Gains and losses are recorded in Income from trading activities except for gains and losses on those derivatives that are managed together with financial instruments designated at fair value; these gains and losses are included in Other operating income.

RBSH Group enters into three types of hedge relationship: hedges of changes in the fair value of a recognised asset or liability or firm commitment (fair value hedges); hedges of the variability in cash flows from a recognised asset or liability or a highly probable forecast transaction (cash flow hedges); and hedges of the net investment in a foreign operation.

Hedge relationships are formally designated and documented at inception. The documentation identifies the hedged item and the hedging instrument and details the risk that is being hedged and the way in which effectiveness will be assessed at inception and during the period of the hedge. If the hedge is not highly effective in offsetting changes in fair values or cash flows attributable to the hedged risk, consistent with the documented risk management strategy, hedge accounting is discontinued. Hedge accounting is also discontinued if RBSH Group revokes the designation of a hedge relationship.

Fair value hedge - in a fair value hedge, the gain or loss on the hedging instrument is recognised in profit or loss. The gain or loss on the hedged item attributable to the hedged risk is recognised in profit or loss and, where the hedged item is measured at amortised cost, adjusts the carrying amount of the hedged item. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; or if the hedging instrument expires or is sold, terminated or exercised; or if hedge designation is revoked. If the hedged item is one for which the effective interest rate method is used, any cumulative adjustment is amortised to profit or loss over the life of the hedged item using a recalculated effective interest rate.

Cash flow hedge - in a cash flow hedge, the effective portion of the gain or loss on the hedging instrument is recognised in other comprehensive income and the ineffective portion in profit or loss. When the forecast transaction results in the recognition of a financial asset or financial liability, the cumulative gain or loss is reclassified from equity to profit or loss in the same periods in which the hedged forecast cash flows affect profit or loss. Otherwise the cumulative gain or loss is removed from equity and recognised in profit or loss at the same time as the hedged transaction. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; if the hedging instrument expires or is sold, terminated or exercised; if the forecast transaction is no longer expected to occur; or if hedge designation is revoked. On the discontinuance of hedge accounting (except where a forecast transaction is no longer expected to occur), the cumulative unrealised gain or loss in equity is recognised in profit or loss when the hedged cash flows occur or, if the forecast transaction results in the recognition of a financial asset or financial liability, when the hedged forecast cash flows affect profit or loss. Where a forecast transaction is no longer expected to occur, the cumulative unrealised gain or loss in equity is recognised in profit or loss immediately.

Hedge of net investment in a foreign operation - in the hedge of a net investment in a foreign operation, the portion of foreign exchange differences arising on the hedging instrument determined to be an effective hedge is recognised in other comprehensive income. Any ineffective portion is recognised in profit or loss. Non-derivative financial liabilities as well as derivatives may be the hedging instrument in a net investment hedge. On disposal or partial disposal of a foreign operation, the amount accumulated in equity is reclassified from equity to profit or loss.

25. Cash and cash equivalents

Cash and cash equivalents for the purpose of the statement of cash flows include cash in hand, deposits available on demand with central banks and net credit balances on current accounts with other banks.

The statement of cash flows, based on the indirect method of calculation, gives details of the source of cash and cash equivalents which became available during the year and the application of these cash and cash equivalents over the course of the year. The cash flows are analysed into cash flows from operations, investment activities and financing activities. Movements in loans and receivables and inter-bank deposits are included in the cash flow from operating activities. Investment activities are comprised of acquisitions, sales and redemptions in respect of financial investments, as well as investments in and sales of subsidiaries and associates, property and equipment. The issuing of shares and the borrowing and repayment of long-term funds are treated as financing activities.

Movements due to currency translation differences as well as the effects of the consolidating acquisitions, where of material significance, are eliminated from the cash flow figures. The cash flows of discontinued operations are separately reported in the period in which the operation qualifies as a disposal group.

26. Share-based payments

Employees of RBSH Group receive remuneration in the form of share-based payment transactions, whereby employees render services as consideration for equity instruments of The Royal Bank of Scotland Group plc (equity-settled transactions) granted by the RBSG Group. Such awards are generally subject to vesting conditions: conditions that vary the amount of shares to which an employee is entitled. Vesting conditions include service conditions (requiring the employee to complete a specified period of service) and performance conditions (requiring the employee to complete a specified period of service and specified performance targets to be met). Other conditions to which an award is subject are non-vesting conditions (such as a requirement to save throughout the vesting period).

The cost of employee services received in exchange for an award of shares or share options granted is measured by reference to the fair value of the shares or share options on the date the award is granted and takes into account non-vesting conditions and market performance conditions (conditions related to the market price of The Royal Bank of Scotland Group plc shares): an award is treated as vesting irrespective of whether any market performance condition or non-vesting condition is met. The fair value of options granted is estimated using valuation techniques which incorporate exercise price, term, risk-free interest rates, the current share price and its expected volatility.

The cost is expensed on a straight-line basis over the vesting period (the period during which all the specified vesting conditions must be satisfied) with a corresponding increase in equity in an equity-settled award, or a corresponding liability in a cash-settled award. The cost is adjusted for vesting conditions (other than market performance conditions) so as to reflect the number of shares or share options that actually vest.

If an award is modified the original cost continues to be recognised as if there had been no modification. Where modification increases the fair value of the award, this increase is recognised as an expense over the modified vesting period. A new award of shares or share options is treated as the modification of a cancelled award if, on the date the new award is granted, RBSH Group identifies them as replacing the cancelled award. The cancellation of an award through failure to meet non-vesting conditions triggers an immediate expense for any unrecognised element of the cost of an award.

Critical accounting policies and key sources of estimation uncertainty

The reported results of RBSH Group are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. Dutch company law and IFRS require the management, in preparing RBSH Group's financial statements, to select suitable accounting policies, apply them consistently and make judgements and estimates that are reasonable and prudent. In the absence of an applicable standard or interpretation, IAS 8 'Accounting Policies, Changes in Accounting Estimates and Errors', requires management to develop and apply an accounting policy that results in relevant and reliable information in the light of the requirements and guidance in IFRS dealing with similar and related issues and the IASB's 'Framework for the Preparation and Presentation of Financial Statements'. The judgements and assumptions involved in RBSH Group's accounting policies that are considered by management to be the most important to the portrayal of its financial condition are discussed below. The use of estimates, assumptions or models that differ from those adopted by RBSH Group would affect its reported results.

Loan impairment provisions

RBSH Group's loan impairment provisions are established to recognise incurred impairment losses in its portfolio of loans classified as loans and receivables and carried at amortised cost. A loan is impaired when there is objective evidence that events since the loan was granted have affected expected cash flows from the loan. Such objective evidence, indicative that a borrower's financial condition has deteriorated can include for loans that are individually assessed: the non-payment of interest or principal; debt restructuring; probable bankruptcy or liquidation; significant reduction in the value of any security; breach of limits or covenants; and deteriorating trading performance and, for collectively assessed portfolios: the borrowers' payment status and observable data about relevant macroeconomic measures.

The impairment loss is the difference between the carrying value of the loan and the present value of estimated future cash flows at the loan's original effective interest rate.

At 31 December 2011, loans and advances to customers classified as financial instruments (amortised cost) totalled €28,612 million (2010 - €44,201 million; 2009 - €217,520 million) and customer loan impairment provisions amounted to €1,527 million (2010 - €1,527 million; 2009 - €5,636 million).

There are two components to RBSH Group's loan impairment provisions: individual and collective.

Individual component - all impaired loans that exceed specific thresholds are individually assessed for impairment. Individually assessed loans principally comprise RBSH Group's portfolio of commercial loans to medium and large businesses. Impairment losses are recognised as the difference between the carrying value of the loan and the

discounted value of management's best estimate of future cash repayments and proceeds from any security held. These estimates take into account the customer's debt capacity and financial flexibility; the level and quality of its earnings; the amount and sources of cash flows; the industry in which the counterparty operates; and the realisable value of any security held. Estimating the quantum and timing of future recoveries involves significant judgement. The size of receipts will depend on the future performance of the borrower and the value of security, both of which will be affected by future economic conditions; additionally, collateral may not be readily marketable. The actual amount of future cash flows and the date they are received may differ from these estimates and consequently actual losses incurred may differ from those recognised in these financial statements.

Collective component - this is made up of two elements: loan impairment provisions for impaired loans that are below individual assessment thresholds (collectively assessed provisions) and for loan losses that have been incurred but have not been separately identified at the balance sheet date (latent loss provisions). Collectively assessed provisions are established on a portfolio basis using a present value methodology taking into account the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends. The most significant factors in establishing these provisions are the expected loss rates and the related average life. These portfolios include credit card receivables and other personal advances including mortgages.

The future credit quality of these portfolios is subject to uncertainties that could cause actual credit losses to differ materially from reported loan impairment provisions. These uncertainties include the economic environment, notably interest rates and their effect on customer spending, the unemployment level, payment behaviour and bankruptcy trends. Latent loss provisions are held against estimated impairment losses in the performing portfolio that have yet to be identified as at the balance sheet date. To assess the latent loss within its portfolios, RBSH Group has developed methodologies to estimate the time that an asset can remain impaired within a performing portfolio before it is identified and reported as such.

Pensions

RBSH Group operates a number of defined benefit pension schemes as described in Note 4 on the accounts. The net obligations under defined benefit plans are regarded as RBSH Group's own commitments regardless of whether these are administered by a pension fund or in some other manner.

The net obligation of each plan is determined as the difference between the benefit obligations and the plan assets.

Defined benefit plan pension commitments are calculated in accordance with the projected unit credit method of actuarial cost allocation. Under this method, the present value of pension commitments is determined on the basis of the number of active years of service up to the balance sheet date and the estimated employee salary at the time of the expected retirement date, and is discounted using the market rate of interest on high-quality corporate bonds. The plan assets are measured at fair value.

Pension costs for the year are established at the beginning of the year based on the expected service and interest costs and the expected return on the plan assets, plus the impact of any current period curtailments or plan changes.

Differences between the expected and the actual return on plan assets, as well as actuarial gains and losses, are only recognised as income or expense when the net cumulative unrecognised actuarial gains and losses at the end of the previous reporting year exceed 10% of the greater of the commitments under the plan and the fair value of the related plan assets. The part in excess of 10% is recognised in income over the expected remaining years of service of the employees participating in the plans. Differences between the pension costs determined in this way and the contributions payable are accounted for as provisions or prepayments. Commitments relating to early retirement of employees are treated as pension commitments.

When the benefits of a plan are improved, the portion of the increased benefit relating to past service by employees is recognised as an expense in the income statement on a straight-line basis over the average period until the benefits become vested. To the extent that the benefits vest immediately, the past service cost is recognised immediately in the income statement.

RBSH Group's net obligation with respect to long-term service benefits and post-retirement healthcare is the amount of future benefit that employees have earned in return for their service in current and prior periods. The obligation is calculated using the projected unit credit method. It is then discounted to its present value and the fair value of any related assets is deducted.

Fair value – financial instruments

Financial instruments classified as held-for-trading or designated as at fair value through profit or loss and financial assets classified as available-for-sale are recognised in the financial statements at fair value. All derivatives are measured at fair value. Gains or losses arising from changes in the fair value of financial instruments classified as held-for trading or designated as at fair value through profit or loss are included in the income statement. Unrealised gains and losses on available-for sale financial assets are recognised directly in equity unless an impairment loss is recognised.

Financial instruments measured at fair value include:

Loans and advances (held-for-trading and designated as at fair value through profit or loss) - principally comprise reverse repurchase agreements (reverse repos) and cash collateral.

Debt securities (held-for-trading, designated as at fair value through profit or loss and available-for-sale) - debt securities include those issued by governments, municipal bodies, mortgage agencies and financial institutions as well as corporate bonds, debentures and residual interests in securitisations.

Equity securities (held-for-trading, designated as at fair value through profit or loss and available-for-sale) - comprise equity shares of companies or corporations both listed and unlisted.

Deposits by banks and customer accounts (held-for-trading and designated as at fair value through profit or loss) - deposits measured at fair value principally include repurchase agreements (repos), cash collateral and investment contracts issued by RBSH Group's life assurance businesses.

Debt securities in issue (held-for-trading and designated as at fair value through profit or loss) - principally comprise medium term notes.

Short positions (held-for-trading) - arise in dealing and market making activities where debt securities and equity shares are sold which RBSH Group does not currently possess.

Derivatives - these include swaps (currency swaps, interest rate swaps, credit default swaps, total return swaps and equity and equity index swaps), forward foreign exchange contracts, forward rate agreements, futures (currency, interest rate and equity) and options (exchange-traded options on currencies, interest rates and equities and equity indices and OTC currency and equity options, interest rate caps and floors and swaptions).

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction. Fair values are determined from quoted prices in active markets for identical financial assets or financial liabilities where these are available.

Fair value for a net open position in a financial instrument in an active market is the number of units of the instrument held times the current bid price (for financial assets) or offer price (for financial liabilities). In determining the fair value of derivative financial instruments, gross long and short positions measured at current mid market prices are adjusted by bid-offer reserves calculated on a portfolio basis. Credit valuation adjustments are made when valuing derivative financial assets to incorporate counterparty credit risk. Adjustments are also made when valuing financial liabilities to reflect RBSH Group's own credit standing. Where the market for a financial instrument is not active, fair value is established using a valuation technique. These valuation techniques involve a degree of estimation, the extent of which depends on the instrument's complexity and the availability of market-based data. More details about RBSH Group's valuation methodologies and the sensitivity to reasonably possible alternative assumptions of the fair value of financial instruments valued using techniques where at least one significant input is unobservable are given in Note 9 to the Financial Statements.

Deferred tax

RBSH Group makes provision for deferred tax on temporary differences where tax recognition occurs at a different time from accounting recognition.

RBSH Group has recognised deferred tax assets in respect of losses and short-term timing differences. Deferred tax assets are recognised in respect of unused tax losses to the extent that it is probable that there will be future taxable profits against which the losses can be utilised. Business projections prepared for impairment reviews (see Note 11) indicate that sufficient future taxable income will be available against which to offset these recognised deferred tax assets. The number of years into the future for which forecast profits should be considered when assessing the recoverability of a deferred tax asset is a matter of judgment. Tax losses in the Netherlands can be carried forward for up to nine years. A period of six years is underpinned by RBSH Group's business projections, its history of profitable operation and the continuing strength of its core business franchises. RBSH Group's cumulative losses are principally attributable to the recent unparalleled market conditions.

Accounting developments

International Financial Reporting Standards

The IASB issued IFRS 9 'Financial Instruments' in November 2009 simplifying the classification and measurement requirements in IAS 39 in respect of financial assets. The standard reduces the measurement categories for financial assets to two: fair value and amortised cost. A financial asset is classified on the basis of the entity's business model for managing the financial asset and the contractual cash flow characteristics of the financial asset. Only assets with contractual terms that give rise to cash flows on specified dates that are solely payments of principal and interest on principal and which are held within a business model whose objective is to hold assets in order to collect contractual cash flows are classified as amortised cost. All other financial assets are measured at fair value. Changes in the value of financial assets measured at fair value are generally taken to profit or loss.

In October 2010, IFRS 9 was updated to include requirements in respect of the classification and measurement of liabilities. These do not differ markedly from those in IAS 39 except for the treatment of changes in the fair value of financial liabilities that are designated as at fair value through profit or loss attributable to own credit; these must be presented in other comprehensive income.

In December 2010, the IASB issued amendments to IFRS 9 and to IFRS 7 'Financial Instruments: Disclosures' delaying the effective date of IFRS 9 to annual periods beginning on or after 1 January 2015 and introducing revised transitional arrangements including additional transition disclosures. If an entity implements IFRS 9 in 2012 the amendments permit it either to restate comparative periods or to provide the additional disclosures. The additional transition disclosures must be given if implementation takes place after 2012.

IFRS 9 makes major changes to the framework for the classification and measurement of financial instruments and will have a significant effect on RBSH Group's financial statements. RBSH Group is assessing the effect of IFRS 9 which will depend on the outcome of the other phases of the IASB's IAS 39 replacement project and on the outcome the IASB's tentative decision at its December 2011 meeting to reconsider the following topics:

- additional application guidance to clarify how the instrument characteristics test was intended to be applied.
- bifurcation of financial assets, after considering any additional guidance for the instrument characteristics test.
 - expanded use of other comprehensive income or a third business model for some debt instruments.

'Disclosures - Transfers of Financial Assets (Amendments to IFRS 7)' was published by the IASB in October 2010. This replaces IFRS 7's existing derecognition disclosure requirements with disclosures about (a) transferred assets that are not derecognised in their entirety and (b) transferred assets that are derecognised in their entirety but where an entity has continuing involvement in the transferred asset. The amendments are effective for annual periods beginning on or after 1 July 2011.

The IASB issued an amendment to IAS 12 'Income Taxes' in December 2010 to clarify that recognition of deferred tax should have regard to the expected manner of recovery or settlement of the asset or liability. The amendment and consequential withdrawal of SIC 21 'Deferred Tax: Recovery of Underlying Assets', effective for annual periods beginning on or after 1 January 2012, is not expected to have a material effect on RBSH Group or the company.

In May 2011, the IASB issued six new or revised standards:

IFRS 10 'Consolidated Financial Statements' which replaces SIC-12 'Consolidation - Special Purpose Entities' and the consolidation elements of the existing IAS 27 'Consolidated and Separate Financial Statements'. The new standard adopts a single definition of control: a reporting entity controls another entity when the reporting entity has the power to direct the activities of that other entity to generate returns for the reporting entity.

IAS 27 'Separate Financial Statements' which comprises those parts of the existing IAS 27 that dealt with separate financial statements.

IFRS 11 'Joint Arrangements', which supersedes IAS 31 'Interests in Joint Ventures', distinguishes between joint operations and joint ventures. Joint operations are accounted for by the investor recognising its assets and liabilities including its share of any assets held and liabilities incurred jointly and its share of revenues and costs. Joint ventures are accounted for in the investor's consolidated accounts using the equity method.

IAS 28 'Investments in Associates and Joint Ventures' covers joint ventures as well as associates; both must be accounted for using the equity method. The mechanics of the equity method are unchanged.

IFRS 12 'Disclosure of Interests in Other Entities' covers disclosures for entities reporting under IFRS 10 and IFRS 11 replacing those in IAS 28 and IAS 27.

Entities are required to disclose information that helps financial statement readers evaluate the nature, risks and financial effects associated with an entity's interests in subsidiaries, in associates and joint arrangements and in unconsolidated structured entities.

IFRS 13 'Fair Value Measurement' which sets out a single IFRS framework for defining and measuring fair value and requiring disclosures about fair value measurements.

The standards are effective for annual periods beginning on or after 1 January 2013. Earlier application is permitted. RBSH Group is reviewing the standards to determine their effect on RBSH Group's financial reporting.

In June 2011, the IASB issued amendments to two standards:

Amendments to IAS 1 'Presentation of Items of Other Comprehensive Income' require items that will never be recognised in profit or loss to be presented separately in other comprehensive income from those that are subject to subsequent reclassification. The amendments are effective for annual periods beginning on or after 1 July 2012. Earlier application is permitted.

Amendments IAS 19 'Employee Benefits' require the immediate recognition of all actuarial gains and losses eliminating the 'corridor approach'; interest cost to be calculated on the net pension liability or asset at the appropriate corporate bond rate; and all past service costs to be recognised immediately when a scheme is curtailed or amended. These amendments are effective for annual periods beginning on or after 1 January 2013. Earlier application is permitted. RBSH Group is reviewing the amendments to determine their effect on RBSH Group's financial reporting.

In December 2011, the IASB issued 'Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32)' and 'Disclosures-Offsetting Financial Assets and Financial Liabilities (Amendments to IFRS 7)'. The amendment to IAS 32 adds application guidance on the meaning of 'a legally enforceable right to set off' and on simultaneous settlement. IFRS 7 is amended to require disclosures facilitating comparisons between those entities reporting under IFRS and those reporting under US GAAP. The amendments are effective for annual periods beginning on or after 1 January 2013 and are required to be applied retrospectively. RBSH Group is reviewing the amendments to determine their effect on RBSH Group's financial reporting.

Non-interest income/(loss)	3,241	2,445 (437)	

Notes:

(1) The analysis of income/(loss) from trading activities is based on how the business is organised and the underlying risks managed. Income/(loss) from trading activities comprises gains and losses on financial instruments held for trading, both realised and unrealised, interest income and dividends and the related funding costs.

The types of instruments include:

- Foreign exchange: spot foreign exchange contracts, currency swaps and options, emerging markets and related hedges and funding.
 - Interest rate: interest rate swaps, forward foreign exchange contracts, forward rate agreements, interest rate options, interest rate futures and related hedges and funding.
 - Credit: asset-backed securities, corporate bonds, credit derivatives and related hedges and funding.
 - Equities and commodities: equities, equity derivatives and related hedges and funding, commodities, commodity contracts and related hedges and funding.
- (2) Measured as the change in fair value from movements in the year in the credit risk premium payable by RBSH Group.

3 Operating expenses

	2011	2010	2009

Intangible assets (see Note 16)	75	85	132
Depreciation and amortisation	139	179	275
Write-down of goodwill and other intangible assets	29	2	380
	2,427	3,380	4,621

Restructuring costs included in operating expenses comprise:

	2011	2010	2009
	€m	€m	€m
Staff costs	50	53	38
Premises and equipment	21	19	9
Other administrative expenses	33	-	2
	104	72	49

The average number of persons employed, rounded to the nearest hundred, in the continuing operations of RBSH Group during the year, was 17,700 (2010 – 19,300; 2009 – 27,600); on the same basis no persons were employed in discontinued operations at 31 December 2011 (2010 – nil; 2009 – 24,500).

	2011	2010	2009
Global Banking & Markets	6,300	6,700	8,300
Global Transaction Services	6,600	5,500	5,400
Central items	600	700	900
Core	13,500	12,900	14,600
Non-Core	4,200	6,400	13,000
Total	17,700	19,300	27,600

4 Pensions

RBSH Group sponsors a number of pension schemes in the Netherlands, UK and overseas. These schemes include both defined contribution and defined benefit plans, whose assets are independent of RBSH Group's finances. RBSH Group's defined benefit schemes generally provide pensions that are based on average or final salary with annual price evaluation of vested rights. In general, employees do not make contributions for basic pensions but may make voluntary contributions to secure additional benefits.

RBSH Group has no material post-retirement benefit obligations other than pensions.

Interim valuations of RBSH Group's schemes under IAS 19 'Employee Benefits' were prepared to 31 December with the support of independent actuaries, using the following assumptions:

Principal actuarial assumptions at 31 December	All schemes		
	2011	2010	2009
Principal actuarial assumptions at 31 December	%	%	%
	Weighted average		
Discount rate	5.8%	5.6%	5.2%
Expected return on plan assets (weighted average)	4.7%	5.9%	4.8%
Rate of increase in salaries	3.0%	2.1%	2.4%
Inflation assumption	2.0%	2.8%	2.0%

Major classes of plan assets as a percentage of total plan assets	All schemes		
	2011	2010	2009
	%	%	%
Equity interests	24.9%	28.5%	28.5%
Index-linked bonds	-	28.2%	1.8%
Government fixed interest bonds	43.1%	12.0%	58.8%
Corporate and other bonds	18.0%	12.0%	4.1%
Property	0.7%	3.6%	3.5%
Cash and other assets	13.3%	15.7%	3.3%

As at 31 December 2011 the schemes hold €6 million (2010 and 2009 - nil) in financial instruments issued by RBSH Group.

The expected return on plan assets at 31 December is based upon the weighted average of the following assumed returns on the major classes of plan assets:

	All schemes		
	2011	2010	2009
Equities	7.7%	7.7%	7.1%
Index-linked bonds	-	4.2%	-
Government fixed interest bonds	3.1%	3.8%	4.0%
Corporate and other bonds	4.6%	5.5%	4.7%
Property	4.0%	6.7%	5.9%

Edgar Filing: RBS Holdings N.V. - Form 20-F

Cash and other assets	2.9%	7.7%	1.5%
	2011	2010	2009
Reconciliation to balance sheet:	€m	€m	€m
Present value of defined benefit obligations	353	1,240	10,566
Fair value of plan assets	(371)	(1,247)	(10,211)
Present value of net (assets)/obligations	(18)	(7)	355
Unrecognised past service cost	-	7	(18)
Unrecognised actuarial gains/(losses)	17	(35)	(397)
Net (asset)/liability for defined benefit obligations	(1)	(35)	(60)
Pension assets (included in Prepayments, accrued income and other assets, Note 18)	(61)	(110)	(214)
Provision for pension commitments	60	75	154
	(1)	(35)	(60)

Defined contribution plans and healthcare contributions	21	32	36
Total costs	4	145	324

RBSH Group expects to contribute €44 million to its defined benefit pension schemes in 2012. Of the net assets of schemes in deficit, €53 million (2010 – €64 million; 2009 – €65 million) relates to unfunded schemes.

The most recent funding valuation of the main Netherlands scheme, at 31 December 2011, showed a surplus of assets over liabilities of €80 million. The next valuation is due as at 31 December 2012.

Longevity increase of 1 year	1	2	28	5	19	283

5 Auditor's remuneration

Amounts paid to RBSH Group's auditors for statutory audit and other services are set out below. All audit related and other services are approved by RBSH Group Audit & Risk Committee and are subject to strict controls to ensure external auditor's independence is unaffected by the provision of other services. The Committee recognises that for certain assignments the auditors are best placed to perform the work economically. For other work RBSH Group selects the supplier best placed to meet its requirements. RBSH Group's auditors are free to tender for such work in competition with other firms.

	2011	2010	2009
	€m	€m	€m
Fees for the audit of RBSH Group's annual accounts (1)	11.1	13.2	24.0
Audit related services (2)	0.6	0.9	1.6
Total audit and audit related services	11.7	14.1	25.6
Fees to the auditors and their associates for other services			
– Services relating to taxation (3)	0.6	0.6	0.8

– All other services (4)	0.1	1.6	3.0
Total other services	0.7	2.2	3.8
Total	12.4	16.3	29.4

Deloitte Accountants B.V. provided audit services to the amount of €4.8 million in 2011 (2010 – €6.4 million; 2009 – €12.2 million). The remaining amounts relate to services provided by other Deloitte Member Firms.

Notes:

- (1) Includes fees of €3.0 million in relation to statutory audits and €1.1 million in respect of regulatory audits.
- (2) Includes fees of €0.2 million in relation to reviews of interim financial information, €0.4 million in relation to other assurance services.
- (3) Includes fees of €0.3 million in relation to tax compliance, €0.3 million in relation to tax advisory services.
- (4) 2010 fees include €1.2 million relating to a consultancy project in relation to discontinued operations, which is non-recurring.

6 Tax

	2011	2010	2009
	€m	€m	€m
Current tax			
(Charge)/credit for the year	(96)	27	(123)
(Under)/over provision in respect of prior periods	-	(23)	(5)
	(96)	4	(128)
Deferred tax			
(Charge)/ credit for the year	(325)	(482)	595
Over/(under) provision in respect of prior periods	(12)	176	(2)
Tax (charge)/credit for the year	(433)	(302)	465

The actual tax (charge)/credit differs from the expected tax (charge)/credit computed by applying the statutory tax rate of the Netherlands of 25% (2010 – 25.5%; 2009 – 25.5%) as follows:

	2011	2010	2009
	€m	€m	€m
Expected tax credit/(charge)	65	(108)	1,236
Sovereign debt impairment where no deferred tax asset recognised	(365)	-	-
Non-deductible items	(34)	(48)	63
Non-taxable items (including recycling of foreign exchange reserve)	105	(55)	(43)
Foreign profits taxed at other rates	(36)	(14)	43
Reduction in deferred tax asset following change in the rate of UK corporation tax (1)	(22)	(147)	-
Losses in year not recognised	(145)	(47)	(737)
Losses brought forward and utilised	11	22	-
Adjustments in respect of prior years (2)	(12)	153	(7)
Other	-	(58)	(90)
Actual tax (charge)/credit	(433)	(302)	465

Notes

- (1) In the Budget on 22 June 2010, the UK Government proposed, amongst other things, to reduce Corporation Tax rates in four annual decrements of 1% with effect from 1 April 2011. An additional 1% decrement was announced by the UK Government in the Budget on 23 March 2011. The first decrement was enacted on 27 July 2010, the second on 29 March 2011 and the third on 5 July 2011. Existing temporary differences may therefore unwind in periods subject to these reduced tax rates. Accordingly, the closing deferred tax assets and liabilities have been calculated at the rate of 25%. The impact of this change on the tax charge for the year is set out in the table above.
- (2) Prior period tax adjustments principally relate to the release of tax provisions on investment disposals and adjustments to reflect submitted tax computations in the Netherlands and overseas

The effective tax rate for the year was (164.6)% (2010 – 71.0%; 2009 – 9.6%).

7 Dividends

RBS Holdings N.V. made no dividend distributions during the year ended 31 December 2011. Dividends in the prior period of €15,534 million were distributed to RFS Holdings reducing the share premium account and other reserves by €10,671 million and €4,863 million respectively. On 5 February 2010 RBS Holdings N.V. made a dividend distribution

of €7.5 billion to RFS Holdings, for the benefit of Banco Santander S.A. Immediately before legal separation on 1 April 2010 RBS Holdings N.V. made a further dividend distribution of €1.5 billion for the benefit of Banco Santander S.A., and then again for the benefit of Banco Santander S.A., on 30 June 2010 a dividend of €15 million was paid. As part of the sale of the new ABN AMRO Bank N.V. on 1 April 2010, RBS Holdings N.V. made a €6.5 billion dividend distribution to RFS Holdings, for the benefit of the Dutch State. After these distributions, the indirect interest of Banco Santander S.A. decreased to its share in the remaining Shared Assets. The Dutch State interest in RBS Holdings N.V. comprises its share in the remaining Shared Assets as well as some assets and liabilities which could not be transferred to the new ABN AMRO Bank before legal separation.

	2011	2010	2009
	€m	€m	€m
Gains/(losses) on financial assets/liabilities designated as at fair value through profit or loss	1,259	(349)	(18)
Gains/(losses) on disposal or settlement of loans and receivables	10	206	(610)

Notes:

- (1) Includes reverse repurchase agreements of €9,100 million (2010 – €4,272 million; 2009 – €6,376 million).
- (2) Includes reverse repurchase agreements of €283 million (2010 – €3,888 million; 2009 – €9,246 million).
- (3) Includes treasury bills, similar securities and other eligible bills of €3,147 million (2010 – €3,377 million; 2009 – €46,734 million).
- (4) Includes repurchase agreements of €16,532 million (2010 – €4,807 million; 2009 – €4,220 million).
- (5) Includes repurchase agreements of €759 million (2010 – €5,019 million; 2009 – €2,710 million).
- (6) Comprises bonds and medium term notes of €13,826 million (2010 – €44,686 million; 2009 – €75,112 million) and certificates of deposit and other commercial paper of €3,888 million (2010 – €8,725 million; 2009 – €21,179 million).
- (7) €1,290 million (2010 – €250 million; 2009 – €174 million) has been recognised in profit or loss for changes in credit risk associated with debt securities in issue designated as at fair value through profit or loss measured as the change in fair value from movements in the period in the credit risk premium payable by RBSH Group.

9 Financial instruments - valuation

Valuation of financial instruments carried at fair value

Control environment

RBSH Group's control environment for the determination of the fair value of financial instruments includes formalised protocols for the review and validation of fair values independent from the businesses entering into the transactions. There are specific controls to ensure consistent pricing policies and procedures, incorporating disciplined price verification. RBSH Group ensures that appropriate attention is given to bespoke transactions, structured products, illiquid products and other instruments which are difficult to price.

A key element of the control environment is the independent price verification (IPV) process. Valuations are first performed by the business which entered into the transaction. Such valuations may be directly from available prices, or may be derived using a model and variable model inputs. These valuations are reviewed, and if necessary amended, by a team, independent of those trading the financial instruments, in light of available pricing evidence.

IPV variances are classified as either hard, soft or indicative. A variance is hard where the independent information represents tradable or liquid prices and soft where it does not. Variances are classed as indicative where the independent evidence is so subjective or sparse that conclusions cannot be formed with a sufficient degree of confidence. Adjustments are required for all hard variances and for aggressive soft variances, and with conservative and indicative variances not requiring automatic adjustment.

IPV is performed at a frequency to match the availability of independent data. For liquid instruments, the standard is to perform IPV daily. The minimum frequency of review in RBSH Group is monthly for exposures in the regulatory trading book and six monthly for exposures in the regulatory banking book. Monthly meetings are held between the business and the support functions to discuss the results of the IPV and reserves process in detail. The IPV control

includes formalised reporting and escalation of any valuation differences in breach of established thresholds. The Global Pricing Unit (GPU) of RBSG Group determines IPV policy, monitors adherence to that policy and performs additional independent reviews on highly subjective valuation issues for GBM and Non-Core.

Valuation models are subject to a review process which requires different levels of model documentation, testing and review, depending on the complexity of the model and the size of RBSH Group's exposure. A key element of the control environment over model use is a Modelled Product Review Committee, made up of valuations experts from several functions within RBSG Group. This committee sets the policy for model documentation, testing and review, and prioritises models with significant exposure for review by RBSG Group's Quantitative Research Centre (QuaRC). Potential valuation uncertainty is a key input in determining model review priorities at these meetings. The QuaRC team within RBSG Group Risk, which is independent of the trading businesses, assesses the appropriateness of the application of the model to the product, the mathematical robustness of the model, and where appropriate, considers alternative modelling approaches.

Senior management valuation control committees meet formally on a monthly basis to discuss independent pricing, reserving and valuation issues relating to both GBM and Non-Core exposures. All material methodology changes require review and ratification by this committee. The committee includes valuation specialists representing several independent review functions including market risk, the quantitative research centre and finance.

The Group Executive Valuation Committee of RBSG Group discusses the issues escalated by the Modelled Product Review Committee, GBM and Non-Core senior management Valuations Control Committee and other relevant issues, including the APS credit derivative valuation. The committee covers key material and subjective valuation issues within the trading business and provides a ratification to the appropriateness of areas with high levels of residual valuation uncertainty. Committee members include the following functions from within RBSG Group, RBSG Group Finance Director, RBSG Group Chief Accountant, Global Head of Market and Insurance Risk, GBM Chief Financial Officer and Non-Core Chief Financial Officer, and representation from front office trading and finance.

Valuation issues, adjustments and reserves are reported to the Risk and Audit Committee of RBSH Group. Key judgmental issues are described in reports submitted to the Audit Committee. The Audit Committee also consider reports from external agents on subjective issues.

9 Financial instruments - valuation continued

New Products

RBSH Group has formal review procedures owned by Group operational Risk within RBSG Group to ensure that new products, asset classes and risk types are appropriately reviewed to ensure, amongst other things that valuation is appropriate. The scope of this process includes new business, markets, models, risks and structures.

Valuation hierarchy

There is a process to review and control the classification of financial instruments into the three level hierarchy established by IFRS 7. Some instruments may not easily fall into a level of the fair value hierarchy per IFRS 7 (see pages 139 to 146) and judgement may be required as to which level the instrument is classified.

Initial classification of a financial instrument is carried out by the Business Unit Control team following the principles in IFRS. The Business Unit Control team base their judgment on information gathered during IPV process for instruments which include the sourcing of independent prices and model inputs. The quality and completeness of the information gathered in the IPV process gives an indication as to the liquidity and valuation uncertainty of an instrument.

These initial classifications are challenged by GPU and are subject to further review by local CFO, and RBSH Group CFO. Particular attention is paid during the review processes upon instruments crossing from one level to another, new instrument classes or products, instruments that are generating significant profit and loss and instruments where valuation uncertainty is high.

Valuation techniques

RBSH Group derives fair valuation of its instruments differently depending on whether the instrument is a modelled or non-modelled product.

Non-modelled products

Non-modelled products are valued directly from a price input and are typically valued on a position by position basis and include cash, equities and most debt securities.

Modelled products

Modelled products are those that are valued using a pricing model and range in complexity from comparatively vanilla products such as interest rate swaps and options (e.g. interest rate caps and floors) through to more complex derivatives. The valuation of modelled products requires an appropriate model and inputs into this model. Sometimes models are also used to derive inputs (e.g. to construct volatility surfaces). RBSH Group uses a number of modelling methodologies.

Inputs to valuation models

Values between and beyond available data points are obtained by interpolation and extrapolation. When utilising valuation techniques, the fair value can be significantly affected by the choice of valuation model and by underlying assumptions concerning factors such as the amounts and timing of cash flows, discount rates and credit risk. The principal inputs to these valuation techniques are as follows:

- Bond prices - quoted prices are generally available for government bonds, certain corporate securities and some mortgage-related products.

- Credit spreads - where available, these are derived from prices of credit default swaps or other credit based instruments, such as debt securities. For others, credit spreads are obtained from pricing services.
- Interest rates - these are principally benchmark interest rates such as the London Interbank Offered Rate (LIBOR) and quoted interest rates in the swap, bond and futures markets.
- Foreign currency exchange rates - there are observable markets both for spot and forward contracts and futures in the world's major currencies.
- Equity and equity index prices - quoted prices are generally readily available for equity shares listed on the world's major stock exchanges and for major indices on such shares.
- Commodity prices - many commodities are actively traded in spot and forward contracts and futures on exchanges in London, New York and other commercial centres.
- Price volatilities and correlations - volatility is a measure of the tendency of a price to change with time. Correlation measures the degree which two or more prices or other variables are observed to move together. If they move in the same direction there is positive correlation; if they move in opposite directions there is negative correlation. Volatility is a key input in valuing options and the valuation of certain products such as derivatives with more than one underlying variable that are correlation-dependent. Volatility and correlation values are obtained from broker quotations, pricing services or derived from option prices.
- Prepayment rates - the fair value of a financial instrument that can be prepaid by the issuer or borrower differs from that of an instrument that cannot be prepaid. In valuing prepayable instruments that are not quoted in active markets, RBSH Group considers the value of the prepayment option.
- Counterparty credit spreads - adjustments are made to market prices (or parameters) when the creditworthiness of the counterparty differs from that of the assumed counterparty in the market price (or parameters).
- Recovery rates/loss given default - these are used as an input to valuation models and reserves for ABS and other credit products as an indicator of severity of losses on default. Recovery rates are primarily sourced from market data providers or inferred from observable credit spreads.

Notes on the accounts continued

Financial Statements

9 Financial instruments - valuation continued

RBSH Group may use consensus prices for the source of pricing for some assets. The consensus service encompasses the equity, interest rate, currency, commodity, credit, property, fund and bond markets, providing comprehensive matrices of vanilla prices and a wide selection of exotic products. GBM and Non-Core contributes to consensus pricing services where there is a significant interest either from a positional point of view or to test models for future business use. Data sourced from consensus pricing services is used for a combination of control processes including direct price testing, evidence of observability and model testing. In practice this means that RBSH Group submits prices for all material positions for which a service is available.

In order to determine a reliable fair value, where appropriate, management applies valuation adjustments to the pricing information gathered from the above sources. These adjustments reflect RBSH Group's assessment of factors that market participants would consider in setting a price, to the extent that these factors are not reflected in that pricing information. Furthermore, on an ongoing basis, RBSH Group assesses the appropriateness of any model used. To the extent that the price provided by internal models does not represent the fair value of the instrument, for instance in highly stressed market conditions, RBSH Group makes adjustments to the model valuation to calibrate to other available pricing sources. Where unobservable inputs are used, RBSH Group may determine a range of possible valuations derived from differing stress scenarios to determine the sensitivity associated with the valuation. When establishing the fair value of a financial instrument using a valuation technique, RBSH Group considers certain adjustments to the modelled price which market participants would make when pricing that instrument. Such adjustments include the credit quality of the counterparty and adjustments to compensate for any known model limitation.

Valuation reserves

When valuing financial instruments in the trading book, adjustments are made to mid-market valuations to cover bid-offer spread, liquidity and credit risk. The following table shows the valuation reserves and adjustments.

	2011	2010	2009
	€m	€m	€m
Credit valuation adjustments (CVA):			
Monoline insurers	222	1,905	2,107
Credit derivative product companies	-	-	4
Other counterparties	221	122	211
	443	2,027	2,322
Bid-offer and liquidity reserves	61	221	318
	504	2,248	2,640

Credit valuation adjustments

Credit valuation adjustments represent an estimate of the adjustment to fair value that a market participant would make to incorporate the credit risk inherent in counterparty derivative exposures.

Monoline insurers

RBSH Group has purchased protection from monoline insurers (monolines), mainly against specific Asset-backed securities. Monolines specialise in providing credit protection against the principal and interest cash flows due to the holders of debt instruments in the event of default by the debt instrument counterparty. This protection is typically held in the form of derivatives such as credit default swaps (CDSs) referencing underlying exposures held directly or synthetically by RBSH Group.

The gross mark-to-market of the monoline protection depends on the value of the instruments against which protection has been bought. A positive fair value, or a valuation gain, in the protection is recognised if the fair value of the instrument it references decreases. For the majority of trades the gross mark-to-market of the monoline protection is determined directly from the fair value price of the underlying reference instrument however, for the remainder of the trades the gross mark-to-market is determined using industry standard models.

The methodology employed to calculate the monoline CVA uses market implied probability of defaults and internally assessed recovery levels to determine the level of expected loss on monoline exposures of different maturities. The probability of default is calculated with reference to market observable credit spreads and recovery levels. CVA is calculated at a trade level by applying the expected loss corresponding to each trade's expected maturity, to the gross mark-to-market of the monoline protection. The expected maturity of each trade reflects the scheduled notional amortisation of the underlying reference instruments and whether payments due from the monoline are received at the point of default or over the life of the underlying reference instruments.

Credit derivative product companies

A credit derivative product company (CDPC) is a company that sells protection on credit derivatives. CDPCs are similar to monoline insurers however, they are not regulated as insurers. RBSH Group has fully novated its exposure to CDPCs to RBS plc in the course of 2010 and 2009.

Other counterparties

The CVA for all other counterparties is calculated on a portfolio basis reflecting an estimate of the amount a third party would charge to assume the credit risk.

Expected losses are applied to estimated potential future exposures which are modelled to reflect the volatility of the market factors which drive the exposures and the correlation between those factors. Potential future exposures arising from vanilla products (including interest rate and foreign exchange derivatives) are modelled jointly using RBSH Group's core counterparty risk systems.

Notes on the accounts continued

Financial Statements

9 Financial instruments - valuation continued

Valuation reserves continued

The majority of RBSH Group's CVA held in relation to other counterparties arises on these vanilla products. The exposures arising from all other product types are modelled and assessed individually. The potential future exposure to each counterparty is the aggregate of the exposures arising on the underlying product types.

The correlation between exposure and counterparty risk is also incorporated within the CVA calculation where this risk is considered significant. The risk primarily arises on trades with emerging market counterparties where the gross mark-to-market value of the trade, and therefore the counterparty exposure, increases as the strength of the local currency declines.

Collateral held under a credit support agreement is factored into the CVA calculation. In such cases where RBSH Group holds collateral against counterparty exposures, CVA is held to the extent that residual risk remains.

Bid-offer, liquidity and other reserves

Fair value positions are adjusted to bid or offer levels, by marking individual cash based positions directly to bid or offer or by taking bid-offer reserves calculated on a portfolio basis for derivatives exposures. The bid-offer approach is based on current market spreads and standard market bucketing of risk.

Risk data are used as the primary sources of information within bid-offer calculations and are aggregated when they are more granular than market standard buckets. Bid-offer adjustments for each risk factor (including delta (the degree to which the price of an instrument changes in response to a change in the price of the underlying), vega (the degree to which the price of an instrument changes in response to the volatility in the price of the underlying), correlation (the degree to which prices of different instruments move together) and others) are determined by aggregating similar risk exposures arising on different products. Additional basis bid-offer reserves are taken where these are charged in the market. Risk associated with non-identical underlying exposures is not netted down unless there is evidence that the cost of closing the combined risk exposure is less than the cost of closing on an individual basis.

Bid-offer spreads vary by maturity and risk type to reflect different spreads in the market. For positions where there is no observable quote, the bid-offer spreads are widened in comparison to proxies to reflect reduced liquidity or observability. Bid-offer methodologies also incorporate liquidity triggers whereby wider spreads are applied to risks above pre-defined thresholds.

Netting is applied on a portfolio basis to reflect the level at which RBSH Group believes it could exit the portfolio, rather than the sum of exit costs for each of the portfolio's individual trades. For example, netting is applied where long and short risk in two different maturity buckets can be closed out in a single market transaction at less cost than by way of two separate transactions (calendar netting). This reflects the fact that to close down the portfolio, the net risk can be settled rather than each long and short trade individually.

Vanilla risk on exotic products is typically reserved as part of the overall portfolio based calculation e.g. delta and vega risk on exotic products are included within the delta and vega bid-offer calculations. Aggregation of risk arising from different models is in line with RBSH Group's risk management practices; the model review control process considers the appropriateness of model selection in this respect.

Product related risks such as correlation risk, attract specific bid-offer reserves. Additional reserves are provided for exotic products to ensure overall reserves match market close-out costs. These market close-out costs inherently

incorporate risk decay and cross-effects (taking into account how moves in one risk factor may affect other inputs rather than treating all risk factors independently) that are unlikely to be adequately reflected in a static hedge based on vanilla instruments. Where there is limited bid-offer information for a product, the pricing approach and risk management strategy are taken into account when assessing the reserve.

Amounts deferred on initial recognition

On initial recognition of financial assets and liabilities valued using valuation techniques incorporating information other than observable market data, any difference between the transaction price and that derived from the valuation technique is deferred. Such amounts are recognised in profit or loss over the life of the transaction; when market data becomes observable; or when the transaction matures or is closed out as appropriate. At 31 December 2011, net gains of €2 million (2010 – €10 million; 2009 – €49 million) were carried forward in the balance sheet. There were no material gains deferred during the year (2010 – nil; 2009 – €18 million) and €(8) million (2010 – €39 million; 2009 – €93 million) was recognised in the income statement.

Notes on the accounts continued

Financial Statements

9 Financial instruments - valuation continued**Own credit**

RBSH Group takes into account the effect of its own credit standing when valuing financial liabilities recorded at fair value, in accordance with IFRS. Own credit spread adjustments are made to issued debt held at fair value, including issued structured notes, and derivatives. An own credit adjustment is applied to positions where it is believed that counterparties would consider RBSH Group's creditworthiness when pricing trades.

For issued debt and structured notes this adjustment is based on debt issuance spreads above average inter-bank rates (at a range of tenors). At the beginning of the year the spreads were based on levels which the market would demand when purchasing new senior or sub-debt issuances from RBSH Group. During the year, primary debt issuance activity in the market reduced whilst liquidity remained in the secondary trading of RBSH Group senior debt. These secondary senior debt issuance spreads were considered to provide a more accurate reflection of fair value and these levels are therefore now used in the calculation of the own credit adjustment applied to senior debt. Where necessary, these quotes are interpolated using a curve shape derived from credit default swap prices.

The fair value of RBSH Group's derivative financial liabilities has also been adjusted to reflect RBSH Group's own credit risk. The adjustment takes into account collateral posted by RBSH Group and the effects of master netting agreements.

The own credit adjustment for fair value does not alter cash flows, is not used for performance management, is disregarded for regulatory capital reporting processes and will reverse over time as the liabilities mature.

The reserve movement between periods will not equate to the reported profit or loss for own credit. The balance sheet reserves are stated by conversion of underlying currency balances at spot rates for each period whereas the income statement includes intra-period foreign exchange sell-offs.

The effect of change in credit spreads could be reversed in future periods provided the liability is not repaid at a premium or a discount.

The following table shows own credit adjustments on own liabilities.

	Subordinated liabilities (1)	Debt securities in issue (1)	Total Derivatives	Total
	€m	€m	€m	€m
Cumulative own credit adjustment				
2011	(524)	(779)	(1,303)	(70)

For notes relating to this table refer to page 141.

Key points

- Level 1 assets represented 23.4% (2010 - €38.3 billion and 37.0%) of total assets carried at fair value. Level 2 assets represented 74.1% (2010 - €62.6 billion and 60.6%) of total assets carried at fair value.
- There were no significant transfers between level 1 and level 2. The decrease in assets in level 1 and level 2 reflects the maturity of positions during the year and the UK Transfers to RBS plc during the last quarter of 2011. The decrease in liabilities in level 2 relates mainly to a decrease in derivatives and debt securities in issue as a result of the UK Transfers to RBS plc during the last quarter of 2011.
- Level 3 assets of €1.6 billion representing 2.5% (2010 – €2.4 billion and 2.4%) of total assets carried at fair value show a decrease of €0.8 billion largely due to the sale of debt securities and the UK Transfers to RBS plc during the last quarter of 2011. Level 3 liabilities decreased to €1.2 billion, mainly reflecting the maturity of positions during the year and the UK Transfers to RBS plc during the last quarter of 2011.

Notes:

(1) Level 1: valued using unadjusted quoted prices in active markets.

Level 2: valued using techniques based significantly on observable market data. Instruments in this category are valued using:

- (a) quoted prices for similar instruments or identical instruments in markets which are not considered to be active; or
- (b) valuation techniques where all the inputs that have a significant effect on the valuations are directly or indirectly based on observable market data.

The type of instruments that trade in markets that are not considered to be active, but are based on quoted market prices, banker dealer quotations, or alternative pricing sources with reasonable levels of price transparency and those instruments valued using techniques include most government agency securities, investment-grade corporate bonds, certain mortgage products, most bank and bridge loans, repos and reverse repos, less liquid listed equities, state and municipal obligations, most physical commodities and certain money market securities and loan commitments and most OTC derivatives.

Level 3: instruments in this category have been valued using a valuation technique where at least one input which could have a significant effect on the instrument's valuation, is not based on observable market data. Where inputs can be observed from market data without undue cost and effort, the observed input is used. Otherwise, RBSH Group determines a reasonable level for the input. Financial instruments primarily include cash instruments which trade infrequently, certain syndicated and commercial mortgage loans, unlisted equity shares, certain residual interests in securitisations, super senior tranches of high grade and mezzanine CDOs, other mortgage-based products and less liquid debt securities, certain structured debt securities in issue, and OTC derivatives where valuation depends upon unobservable inputs such as certain credit and exotic derivatives. No gain or loss is recognised on the initial recognition of a financial instrument valued using a technique incorporating significant unobservable data.

(2) Sensitivity represents the reasonably possible favourable and unfavourable effect respectively on the income statement or the statement of comprehensive income due to reasonably possible changes to valuations using reasonably possible alternative inputs to RBSH Group's valuation techniques or models. Totals for sensitivities are not indicative of the total potential effect on the income statement or the statement of comprehensive income. The level 3 sensitivities above are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely overall potential uncertainty on the whole portfolio. The figures are aggregated and do not reflect the correlated nature of some of the sensitivities.

(3) Primarily includes debt securities issued by banks and building societies.

9 Financial instruments - valuation continued

Judgmental issues

The diverse range of products traded by RBSH Group results in a wide range of instruments that are classified into the three level hierarchy. Whilst the majority of these instruments naturally fall into a particular level, for some products an element of judgement is required. The majority of RBSH Group's financial instruments carried at fair value are classified as level 2: inputs are observable either directly (i.e. as a price) or indirectly (i.e. derived from prices).

Active and inactive markets

A key input in the decision making process for the allocation of assets to a particular level is liquidity. In general, the degree of valuation uncertainty depends on the degree of liquidity of an input. For example, a derivative can be placed into level 2 or level 3 dependent upon its liquidity.

Where markets are liquid or very liquid, little judgement is required. However, when the information regarding the liquidity in a particular market is not clear, a judgement may need to be made.

This can be made more difficult as assessing the liquidity of a market may not always be straightforward. For an equity traded on an exchange, daily volumes of trading can be seen, but for an-over-the counter (OTC) derivative assessing the liquidity of the market with no central exchange can be more difficult.

A key related issue is where a market moves from liquid to illiquid or vice versa. Where this change is considered to be temporary, the classification is not changed. For example, if there is little market trading in a product on a reporting date but at the previous reporting date and during the intervening period the market has been considered to be liquid, the instrument will continue to be classified in the same level in the hierarchy. This is to provide consistency so that transfers between levels are driven by genuine changes in market liquidity and do not reflect short term or seasonal effects.

Interaction with the IPV process

The determination of an instrument's level cannot be made at a global product level as a single product type can be in more than one level. For example, a single name corporate credit default swap could be in level 2 or level 3 depending on whether the reference counterparty is liquid or illiquid.

As part of RBSH Group's IPV process, data is gathered at a trade level from market trading activity, trading systems, pricing services, consensus pricing providers, brokers and research material amongst other sources.

The breadth and detail of this data allows a good assessment to be made of liquidity and pricing uncertainty, which assists with the process of allocation to an appropriate level. Where suitable independent pricing information is not readily available the instrument will be considered to be level 3.

Modelled products

For modelled products the market convention is to quote these trades through the model inputs or parameters as opposed to a cash price equivalent. A mark-to-market is derived from the use of the independent market inputs calculated using RBSH Group's model.

The decision to classify a modelled asset as level 2 or 3 will be dependent upon the product/model combination, the currency, the maturity, the observability of input parameters and other factors. All these need to be assessed to classify the asset.

An assessment is made of each input into a model. There may be multiple inputs into a model and each is assessed in turn for observability and quality. If an input fails the observability or quality tests then the instrument is considered to be in level 3 unless the input can be shown to have an insignificant effect on the overall valuation of the product.

The majority of derivative instruments are classified as level 2 as they are vanilla products valued using observable inputs. The valuation uncertainty on these is considered to be low and both input and output testing may be available. Examples of these products would be vanilla interest rate swaps, foreign exchange swaps and liquid single name credit derivatives.

Non-modelled products

Non-modelled products are generally quoted on a price basis and can therefore be considered for each of the 3 levels. This is determined by the liquidity and valuation uncertainty of the instruments which is in turn measured from the availability of independent data used by the IPV process.

The availability and quality of independent pricing information is considered during the classification process. An assessment is made regarding the quality of the independent information. For example where consensus prices are used for non-modelled products, a key assessment of the quality of a price is the depth of the number of prices used to provide the consensus price.

If the depth of contributors falls below a set hurdle rate, the instrument is considered to be level 3. This hurdle rate is consistent with the rate used in the IPV process to determine whether or not the data is of sufficient quality to adjust the instrument's valuations. However where an instrument is generally considered to be illiquid, but regular quotes from market participants exist, these instruments may be classified as level 2 depending on frequency of quotes, other available pricing and whether the quotes are used as part of the IPV process or not.

For some instruments with a wide number of available price sources, there may be differing quality of available information and there may be a wide range of prices from different sources. In these situations an assessment is made as to which source is the highest quality and this will be used to determine the classification of the asset. For example, a tradable quote would be considered a better source than a consensus price.

9 Financial instruments - valuation continued

Judgmental issues continue

Instruments that cross levels

Some instruments will predominantly be in one level or the other, but others may cross between levels. For example, a cross currency swap may be between very liquid currency pairs where pricing is readily observed in the market and will therefore be classified as level 2. The cross currency swap may also be between two illiquid currency pairs in which case the swap would be placed into level 3. Defining the difference between liquid and illiquid may be based upon the number of consensus providers the consensus price is made up from and whether the consensus price can be supplemented by other sources.

Level 3 portfolio's and sensitivity methodologies

For each of the portfolio categories shown in the above table, set out below is a description of the types of products that comprise the portfolio and the valuation techniques that are applied in determining fair value, including a description of valuation techniques used for levels 2 and 3 and inputs to those models and techniques. Where reasonably possible alternative assumptions of unobservable inputs used in models would change the fair value of the portfolio significantly, the alternative inputs are indicated. Where there have been significant changes to valuation techniques during the year a discussion of the reasons for this are also included.

Debt securities

Collateralised debt obligations (CDOs)

CDOs purchased from third parties are valued using independent, third party quotes or independent lead manager indicative prices.

For super senior CDOs which have been originated by RBSH Group no specific third party information is available. The valuation of these super senior CDOs therefore takes into consideration outputs from a proprietary model, market data and appropriate valuation adjustments.

A collateral net asset value methodology using dealer buy side marks is used to determine an upper bound for super senior CDO valuations. An ABS index implied collateral valuation, is also used which provides a market calibrated valuation data point. Both the ABS index implied valuation and the collateral net asset value methodology apply an assumed immediate liquidation approach.

Other asset-backed and corporate debt securities

Where observable market prices for a particular debt security are not available, the fair value will typically be determined with reference to observable market transactions in other related products, such as similar debt securities or credit derivatives. Assumptions are made about the relationship between the individual debt security and the available benchmark data. Where significant management judgement has been applied in identifying the most relevant related product, or in determining the relationship between the related product and the instrument itself, the valuation is shown in level 3.

Equity shares

Private equity investments include unit holdings and limited partnership interests primarily in corporate private equity funds, debt funds and fund of hedge funds. Externally managed funds are valued using recent prices where available. Where not available, the fair value of investments in externally managed funds is generally determined using statements or other information provided by the fund managers.

RBSH Group considers that valuations may rely significantly on the judgements and estimates made by the fund managers, particularly in assessing private equity components. Given the decline in liquidity in world markets, and the level of subjectivity, these are included in level 3.

Derivatives

Derivatives are priced using quoted prices for the same or similar instruments where these are available. However, the majority of derivatives are valued using pricing models. Inputs for these models are usually observed directly in the market, or derived from observed prices. However, it is not always possible to observe or corroborate all model inputs. Unobservable inputs used are based on estimates taking into account a range of available information including historic analysis, historic traded levels, market practice, comparison to other relevant benchmark observable data and consensus pricing data.

9 Financial instruments - valuation continued

Credit derivatives

RBSH Group's credit derivatives include vanilla and bespoke portfolio tranches, gap risk products and certain other unique trades. The bespoke portfolio tranches are synthetic tranches referenced to a bespoke portfolio of corporate names on which RBSH Group purchases credit protection. Bespoke portfolio tranches are valued using Gaussian Copula, a standard method which uses observable market inputs (credit spreads, index tranche prices and recovery rates) to generate an output price for the tranche via a mapping methodology. In essence this method takes the expected loss of the tranche expressed as a fraction of the expected loss of the whole underlying portfolio and calculates which detachment point on the liquid index, and hence which correlation level, coincides with this expected loss fraction. Where the inputs into this valuation technique are observable in the market, bespoke tranches are considered to be level 2 assets. Where inputs are not observable, bespoke tranches are considered to be level 3 assets. However, all transactions executed with a CDPC counterparty are considered level 3 as the counterparty credit risk assessment is a significant component of these valuations.

Gap risk products are leveraged trades, with the counterparty's potential loss capped at the amount of the initial principal invested. Gap risk is the probability that the market will move discontinuously too quickly to exit a portfolio and return the principal to the counterparty without incurring losses, should an unwind event be triggered. This optionally is embedded within these portfolio structures and is very rarely traded outright in the market. Gap risk is not observable in the markets and, as such, these structures are deemed to be level 3 instruments.

Other unique trades are valued using a specialised model for each instrument and the same market data inputs as all other trades where applicable. By their nature, the valuation is also driven by a variety of other model inputs, many of which are unobservable in the market. Where these instruments have embedded optionally they are valued using a variation of the Black-Scholes option pricing formula, and where they have correlation exposure it is valued using a variant of the Gaussian Copula model. The volatility or unique correlation inputs required to value these products are generally unobservable and the instruments are therefore deemed to be level 3 instruments.

Equity derivatives

Equity derivative products are split into equity exotic derivatives and equity hybrids. Equity exotic derivatives have payouts based on the performance of one or more stocks, equity funds or indices. Most payouts are based on the performance of a single asset and are valued using observable market option data. Unobservable equity derivative trades are typically complex basket options on stocks. Such basket option payouts depend on the performance of more than one equity asset and require correlations for their valuation. Valuation is then performed using industry standard valuation models, with unobservable correlation inputs calculated by reference to correlations observed between similar underlying.

Equity hybrids have payouts based on the performance of a basket of underlying where the underlying are from different asset classes. Correlations between these different underlying are typically unobservable with no market information for closely related assets available. Where no market for the correlation input exists, these inputs are based on historical time series.

Interest rate and commodity derivatives

Interest rate and commodity options provide a payout (or series of payouts) linked to the performance of one or more underlying, including interest rates, foreign exchange rates and commodities.

Exotic options do not trade in active markets except in a small number of cases. Consequently, RBSH Group uses models to determine fair value using valuation techniques typical for the industry. These techniques can be divided, firstly, into modelling approaches and, secondly, into methods of assessing appropriate levels for model inputs. RBSH Group uses a variety of proprietary models for valuing exotic trades.

Exotic valuation inputs include correlation between interest rates, foreign exchange rates and commodity prices. Correlations for more liquid rate pairs are valued using independently sourced consensus pricing levels. Where a consensus pricing benchmark is unavailable, these instruments are categorised as level 3.

The carrying value of debt securities in issue is represented partly by underlying cash and partly through a derivative component. The classification of the amount in level 3 is driven by the derivative component and not by the cash element.

Other financial instruments

In addition to the portfolios discussed above, there are other financial instruments which are held at fair value determined from data which are not market observable, or incorporating material adjustments to market observed data.

For notes relating to this table refer to page 146.

Key points

- Level 3 assets of €1.6 billion decreased by €0.8 billion to €2.4 billion, and level 3 liabilities decreased to €2.1 billion in the year from €3.3 billion. This decrease in level 3 assets and liabilities is mainly due to settlements and sales, including the UK Transfers in the last quarter of 2011.
- Net transfers into level 3 assets of €54 million, reflects transfers of €163 million from level 2 to level 3 reflecting refinements of hierarchy level classification in 2011, this was partially offset by transfers from level 3 to level 2 of

€109 million due to the re-assessment of the impact and nature of unobservable inputs used in valuation models.

- Net transfers into level 3 liabilities of €139 million, reflects €166 million in transfers from level 2 to level 3 mainly in inflation swaps due to market illiquidity in the long term in the Australian Inflation swap market, this is partially offset by €27 million in transfers from level 3 to level 2 based on the re-assessment of the impact and nature of unobservable inputs used in valuation models.

Subordinated liabilities	6,336	4,225	6,127	5,250	13,955	13,175

The fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction. Quoted market values are used where available; otherwise, fair values have been estimated based on discounted expected future cash flows and other valuation techniques. These techniques involve uncertainties and require assumptions and judgements covering prepayments, credit risk and discount rates. Changes in these assumptions would significantly affect estimated fair values. The fair values reported would not necessarily be realised in an immediate sale or settlement. As a wide range of valuation techniques is available, it may be inappropriate to compare RBSH Group's fair value information to independent markets or other financial institutions.

The fair values of intangible assets, such as software development costs are not included in the calculation of these fair values since these are not financial instruments.

The assumptions and methodologies underlying the calculation of fair values of financial instruments at the balance sheet date are set out below:

The fair value of financial instruments which are of short maturity (three months or less) approximates their carrying value. This applies mainly to cash and balances at central banks, items in the course of collection from other banks, settlement balances, items in the course of transmission to other banks and demand deposits.

Loans and advances to banks and customers

In estimating the fair value of loans and advances to banks and customers measured at amortised cost, RBSH Group's loans are segregated into appropriate portfolios reflecting the characteristics of the constituent loans. Two principal

methods are used to estimate fair value:

- (a) contractual cash flows are discounted using a market discount rate that incorporates the current spread for the borrower or where this is not observable, the spread for borrowers of a similar credit standing. This method is used for the majority of GBM's lending portfolios where most counterparties have external ratings.
- (b) expected cash flows (unadjusted for credit losses) are discounted at the current offer rate for the same or similar products. This approach is adopted for lending portfolios reflecting the more homogeneous nature of these portfolios.

Debt securities

Fair values are determined using quoted prices where available or by reference to quoted prices of similar instruments.

Deposits by banks and customer accounts

Fair values of deposits are estimated using discounted cash flow valuation techniques.

Debt securities in issue and subordinated liabilities

Fair values are determined using quoted prices where available or by reference to valuation techniques and adjusting for own credit spreads where appropriate.

	2011 €m	2010 €m	2009 €m
Guarantees and commitments			
Guarantees (1)	19,901	24,458	33,568
Commitments (2)	22,378	37,995	51,520
	42,279	62,453	85,088

Notes:

- (1) RBSH Group is only called upon to satisfy a guarantee when the guaranteed party fails to meet its obligations. RBSH Group expects most guarantees it provides to expire unused.
- (2) RBSH Group has given commitments to provide funds to customers under undrawn formal facilities, credit lines and other commitments to lend subject to certain conditions being met by the counterparty. RBSH Group does not

expect all facilities to be drawn, and some may lapse before drawdown.

The table above shows the timing of cash outflows to settle financial liabilities, prepared on the following basis:

Financial liabilities are included at the earliest date on which the counterparty can require repayment regardless of whether or not such early repayment results in a penalty. If repayment is triggered by, or is subject to, specific criteria such as market price hurdles being reached, the liability is included at the earliest possible date that the conditions could be fulfilled without considering the probability of the conditions being met. For example, if a structured note is automatically prepaid when an equity index exceeds a certain level, the cash outflow will be included in the less than three months period whatever the level of the index at the year end. The settlement date of debt securities in issue given by certain securitisation vehicles consolidated by RBSH Group depends on when cash flows are received from the securitised assets. Where these assets are prepayable, the timing of the cash outflow relating to securities assumes that each asset will be prepaid at the earliest possible date.

Liabilities with a contractual maturity of greater than 20 years - the principal amounts of financial liabilities that are repayable after 20 years or where the counterparty has no right to repayment of the principal, are excluded from the table along with interest payments after 20 years.

Held-for-trading assets and liabilities - held-for-trading derivative assets and liabilities amounting to €18.7 billion (assets) and €17.6 billion (liabilities) (2010 - €27.6 billion assets and €32.8 billion liabilities; 2009 - €56.3 billion assets and €59.1 billion liabilities) have been excluded from the table in view of their short-term nature.

RBSH Group holds collateral in respect of certain loans and advances to banks and to customers that are past due or impaired. Such collateral includes mortgages over property; charges over business assets such as plant, inventories and trade debtors; and guarantees of lending from parties other than the borrower.

Loans that have been renegotiated in the past 12 months that would otherwise have been past due or impaired amounted to €194 million as at 31 December 2011 (2010 – €438 million; 2009 – €101 million).

12 Derivatives

Companies in RBSH Group transact derivatives as principal either as a trading activity or to manage balance sheet foreign exchange, interest rate and credit risks.

RBSH Group enters into fair value hedges, cash flow hedges and hedges of net investments in foreign operations. The majority of RBSH Group's interest rate hedges relate to the management of RBSH Group's non-trading interest rate risk. RBSH Group manages this risk to approved limits. Residual risk positions are hedged with derivatives principally interest rate swaps. Suitable larger ticket financial instruments are fair value hedged; the remaining exposure, where possible, is hedged by derivatives documented as cash flow hedges and qualifying for hedge accounting. The majority of RBSH Group's fair value hedges involve interest rate swaps hedging the interest rate risk in recognised financial assets and financial liabilities. Cash flow hedges relate to exposure to variability in future interest payments and receipts on forecast transactions and on recognised financial assets and financial liabilities. RBSH Group hedges its net investments in foreign operations with currency borrowings and forward foreign exchange contracts.

For cash flow hedge relationships of interest rate risk, the hedged items are actual and forecast variable interest rate cash flows arising from financial assets and financial liabilities with interest rates linked to LIBOR and EURIBOR. The financial assets are customer loans and the financial liabilities are customer deposits and LIBOR linked medium-term notes and other issued securities.

For cash flow hedging relationships, the initial and ongoing prospective effectiveness is assessed by comparing movements in the fair value of the expected highly probable forecast interest cash flows with movements in the fair value of the expected changes in cash flows from the hedging interest rate swap or by comparing the respective changes in the price value of a basis point. Prospective effectiveness is measured on a cumulative basis i.e. over the entire life of the hedge relationship. The method of calculating hedge ineffectiveness is the hypothetical derivative method. Retrospective effectiveness is assessed by comparing the actual movements in the fair value of the cash flows and actual movements in the fair value of the hedged cash flows from the interest rate swap over the life to date of the hedging relationship.

For fair value hedge relationships of interest rate risk, the hedged items are typically government bonds, large corporate fixed-rate loans, fixed-rate finance leases, fixed-rate medium-term notes or preference shares classified as debt.

The initial and ongoing prospective effectiveness of fair value hedge relationships is assessed on a cumulative basis by comparing movements in the fair value of the hedged item attributable to the hedged risk with changes in the fair value of the hedging interest rate swap or by comparing the respective changes in the price value of a basis point. Retrospective effectiveness is assessed by comparing the actual movements in the fair value of the hedged items attributable to the hedged risk with actual movements in the fair value of the hedging derivative over the life to date of the hedging relationship.

The following table shows the notional amounts and fair values of RBSH Group's derivatives.
