Syngenta demonstrates strength of portfolio in Brazil

Syngenta is today hosting a strategic crop update in Brazil for analysts and investors with a focus on Soybean, Specialty crops and Sugar cane. The combined sales potential of these three crops globally is around \$10 billion in 2020.

Soybean is the most efficient source of protein and is widely used as animal feed as well as for human consumption, biodiesel and industrial uses. Demand is growing strongly due to population growth and dietary change in emerging markets. Syngenta has a complete portfolio for soybean in all markets and is introducing new integrated solutions to help growers increase yield, productivity and return on investment.

Specialty crops are highly diverse with the largest opportunities coming from potato, cotton, fruits and plantations. Syngenta has built strong relationships with growers and the value chain globally and is leveraging its blockbuster chemistry while developing new business models such as NUCOFFEE®.

Sugar cane produced in Brazil will play a key role in meeting growth in demand, driven by ethanol and food uses. Syngenta is ideally positioned to help Brazilian growers increase productivity through its strong crop protection portfolio, innovative PLENE® platform and close collaboration with customers.

Introducing the event Mike Mack, CEO, said: “These crops are of major importance to Brazilian agriculture and are a key part of our business. They will play an important role in achieving our \$25 billion sales target in 2020. This week’s event will enable participants to see first-hand both the breadth of our technology and the scale of agriculture in Brazil. The offers we are showcasing also bear witness to our longstanding focus on sustainability and demonstrate that we are already actively working to implement the commitments contained in our Good Growth Plan.”
